EMERGENCY ASSISTANCE TO NORTHEAST RAILROADS

TUESDAY, FEBRUARY 4, 1975

HOUSE OF REPRESENTATIVES,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D.C.

The committee met at 10 a.m., pursuant to notice, in room 2123, Rayburn House Office Building, Hon. Harley O. Staggers, chairman, presiding.

The CHAIRMAN. The committee will come to order.

Today we will open hearings on H.R. 2051 and S. 281, legislation designed to continue essential rail services in the Northeastern United States. I am sure that I speak for the committee when I say that we are all weary of going through the ritual of opening the "mortuary bill" for the Penn Central. This has happened during the last Congresses.

I am sure that I speak true that if this situation continues, there is a possibility of nationalization of railroads in this country. I would not want to see it and I don't believe any other member would want to see it. Inevitably if this continues, I believe that something of this sort will have to happen. But the emergency is such that we have to act now and that is the reason we are calling this early session here, even before we are fully organized in our committee. We are organized enough to go ahead with the full committee.

It seems as if we have had to act in a crisis on several positions, be it a strike, hurricane or bankruptcy. I was hopeful that the Reorganization Plan, a bill we passed in 1973, a landmark bill, which the Supreme Court upheld in September, would help things, but we are back here again. Both of the bills we are considering and virtually all the witnesses will ask for huge outlays of emergency cash for the Northeastern railroads.

We have been warned of the consequences of not supplying that authorization. Nevertheless, we would not be doing our duty if we did not carefully scrutinize these requests and study this very complex problem in depth.

Without objection, the text of H.R. 2051 and S. 281 shall be placed in the record at this point.

[Testimony resumes on p. 15.]

94TH CONGRESS
1ST SESSION

H. R. 2051

IN THE HOUSE OF REPRESENTATIVES

JANUARY 23, 1975

Mr. STAGGERS (for himself and Mr. DEVINE) introduced the following bill; which was referred to the Committee on Interstate and Foreign Commerce

A BILL

To amend the Regional Rail Reorganization Act of 1973 to increase the financial assistance available under section 213 and section 215, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. This Act may be cited as the "Regional Rail Reorganization Act Amendments of 1975".

SEC. 2. (a) Section 211 (a) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 721 (a)) is amended by deleting the phrase "for purposes of assisting in the implementation of the final system plan;" and inserting in its place "for purposes of achieving the goals of this Act;".

(b) Section 211 (c) of the Regional Rail Reorganiza-

Digitized by Google

tion Act of 1973 (45 U.S.C. 721 (e) (1)) is amended by deleting the phrase "carry out the final system plan" and inserting in its place "achieve the goals of this Act".

(c) Section 211 (f) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 721 (f)) is amended by deleting the phrase "goals of the final system plan" and inserting in its place "goals of this Act".

SEC. 3. (a) Section 213 (a) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 723 (a)) is amended by adding the following at the end thereof:

"Where the Secretary and the trustees agree that funds provided pursuant to this section are to be used (together with funds provided pursuant to section 215 of this Act, if any) to perform program maintenance on designated rail properties until the date rail properties are conveyed under this Act or to improve such designated properties, such agreement shall contain the conditions set forth in section 215 (b) of this Act.".

(b) Section 213 (b) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 723 (b)) is amended by striking out "$85,000,000" and inserting in lieu thereof "$185,000,000".

SEC. 4. Section 215 of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 725) is amended to read as follows:

Digitized by Google

"INTERIM AGREEMENTS

"SEC. 215. (a) PURPOSES.—Prior to the date upon which rail properties are conveyed to the Corporation under this Act, the Secretary, with the approval of the Association, is authorized to enter into agreements with the trustees of the railroads in reorganization in the region (or railroads leased, operated, or controlled by railroads in reorganization)—

"(1) to perform the program maintenance on designated rail properties of such railroads until the date rail properties are conveyed under this Act;

"(2) to improve railroad facilities and equipment of such railroads; and

"(3) to acquire railroad facilities or equipment for lease or loan to any such railroads until the date rail properties are conveyed under this Act, and subsequently for conveyance pursuant to the final system plan, or to acquire interests in such facilities or equipment owned by or leased to any such railroads or in purchase money obligations therefor.

"(b) CONDITIONS.—Agreements pursuant to subsection (a) of this section shall contain such reasonable terms and conditions as the Secretary may prescribe. In addition, agreements under paragraphs (1) and (2) of subsection (a) of this section shall provide that—

Digitized by Google

"(1) the Corporation shall not be required under title III of this Act to compensate a railroad in reorganization for any portion of the value of the properties subject to the agreement and designated under the final system plan for transfer to the Corporation which is in excess of the value of such properties determined on the basis of their physical condition as of the effective date of the agreement; and

"(2) in the event that property subject to the agreement is sold, leased, or transferred to an entity other than the Corporation, the trustees or railroad shall pay or assign to the Secretary that portion of the proceeds of such sale, lease, or transfer which reflects value attributable to the maintenance and improvement provided pursuant to the agreements.

"(c) OBLIGATIONS.—Notwithstanding section 210 (b) of this title, the Association shall issue obligations under section 210 (a) of this title in an amount sufficient to finance such agreements and shall require the Corporation to assume any such obligations. The aggregate amount of obligations issued under this section and outstanding at any one time shall not exceed $300,000,000. The Association, with the approval of the Secretary, shall designate in the final system plan that portion of such obligations issued or to be issued which shall be refinanced and the terms thereof, and that

Digitized by Google

portion from which the Corporation shall be released of its obligations.

"(d) CONVEYANCE.—The Secretary may convey to the Corporation, with or without receipt of consideration, any property or interests acquired by, transferred to, or otherwise held by the Secretary pursuant to this section or section 213 of this Act.".

SEC. 5. Section 303(c)(1) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 745(c)(1)) is amended by deleting the last word of paragraph (A); by deleting the period at the end of paragraph (B) and inserting "; and" in its place; and by inserting after paragraph (B) the following new paragraph:

"(C) what portion of the proceeds received by a railroad in reorganization from an entity other than the Corporation for the sale, lease, or transfer of property subject to an agreement under section 213 or section 215(a)(1) or (2) of this Act reflects value attributable to the maintenance or improvement provided pursuant to the agreement.".

Digitized by Google

5

portion from which the Corporation shall be released of its obligations.

"(d) CONVEYANCE.—The Secretary may convey to the Corporation, with or without receipt of consideration, any property or interests acquired by, transferred to, or otherwise held by the Secretary pursuant to this section or section 213 of this Act.".

SEC. 5. Section 303(c)(1) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 745(c)(1)) is amended by deleting the last word of paragraph (A); by deleting the period at the end of paragraph (B) and inserting "; and" in its place; and by inserting after paragraph (B) the following new paragraph:

"(C) what portion of the proceeds received by a railroad in reorganization from an entity other than the Corporation for the sale, lease, or transfer of property subject to an agreement under section 213 or section 215 (a)(1) or (2) of this Act reflects value attributable to the maintenance or improvement provided pursuant to the agreement.".

94TH CONGRESS
1ST SESSION

S. 281

IN THE HOUSE OF REPRESENTATIVES

JANUARY 30, 1975

Referred to the Committee on Interstate and Foreign Commerce

AN ACT

To amend the Regional Rail Reorganization Act of 1973 to increase the financial assistance available under section 213 and section 215, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Regional Rail Reorganization Act Amendments of 1975".

SEC. 2. (a) Section 211(a) of the Regional Rail Re-

★I

striking out "$85,000,000" and inserting in lieu thereof "$210,000,000".

SEC. 4. Section 215 of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 725) is amended to read as follows:

"INTERIM AGREEMENTS

"SEC. 215. (a) PURPOSES.—Prior to the date upon which rail properties are conveyed to the Corporation under this Act, the Secretary, with the approval of the Association, is authorized to enter into agreements with the trustees of the railroads in reorganization in the region (or railroads leased, operated, or controlled by railroads in reorganization)—

"(1) to perform the program maintenance on designated rail properties of such railroads until the date such rail properties are conveyed under this Act;

"(2) to improve rail properties of such railroads; and

"(3) to acquire rail properties for lease or loan to any such railroads until the date such rail properties are conveyed under this Act, and subsequently for conveyance pursuant to the final system plan, or to acquire interests in such rail properties owned by or leased to any such railroads or in purchase money obligations therefor.

Digitized by Google

"(b) CONDITIONS.—Agreements pursuant to subsection (a) of this section shall contain such reasonable terms and conditions as the Secretary may prescribe. In addition, agreements under paragraphs (1) and (2) of subsection (a) of this section shall provide that—

"(1) the Corporation shall not be required under title III of this Act to compensate a railroad in reorganization for any portion of the value of the properties subject to the agreement and designated under the final system plan for transfer to the Corporation which is attributable to the maintenance or improvement performed pursuant to the agreement. The Association and the special court shall, in determining value pursuant to section 303 of this Act, take into account the physical condition as of the effective date of the agreement; and

"(2) in the event that property subject to the agreement is sold, leased, or transferred to an entity other than the Corporation, the trustees or railroad shall pay or assign to the Secretary that portion of the proceeds of such sale, lease, or transfer which reflects value attributable to the maintenance and improvement provided pursuant to the agreement.

"(c) OBLIGATIONS.—Notwithstanding section 210(b) of this title, the Association shall issue obligations under section 210(a) of this title in an amount sufficient to finance

Digitized by Google

such agreements and shall require the Corporation to assume any such obligations. The aggregate amount of obligations issued under this section and outstanding at any one time shall not exceed $300,000,000. The Association, with the approval of the Secretary, shall designate in the final system plan that portion of such obligations issued or to be issued which shall be refinanced and the terms thereof, and that portion from which the Corporation shall be released of its obligations.

"(d) CONVEYANCE.—The Secretary may convey to the Corporation, with or without receipt of consideration, any property or interests acquired by, transferred to, or otherwise held by the Secretary pursuant to this section or section 213 of this Act.".

SEC. 5. Section 303(c)(1) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 745(c)(1)) is amended by deleting the last word of paragraph (A); by deleting the period at the end of paragraph (B) and inserting "; and" in its place; and by inserting after paragraph (B) the following new paragraph:

"(C) what portion of the proceeds received by a railroad in reorganization from an entity other than the Corporation for the sale, lease, or transfer of property subject to an agreement under section 213 or section

Digitized by Google

215(a) (1) or (2) of this Act reflects value attributable to the maintenance or improvement provided pursuant to the agreement.".

SEC. 6. Section 303(d) of the Rail Passenger Service Act (45 U.S.C. 543(d)) is amended by inserting immediately after the third sentence the following: "This limitation upon compensation shall not apply, however, in the event the Board determines with respect to one position that a higher level of compensation is necessary and is consistent with the general level of compensation paid officers of railroads in positions of comparable responsibilities, but in no event shall such compensation exceed $90,000 per annum.".

SEC. 7. (a) Section 207(b) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 717(b)) is amended (1) by inserting "(1)" immediately before the first sentence thereof, and (2) by adding at the end thereof the following new paragraph:

"(2) Whenever it has been finally determined, pursuant to the procedures of paragraph (1) of this subsection, that the reorganization of a railroad subject to reorganization under section 77 of the Bankruptcy Act (11 U.S.C. 205) shall not be proceeded with pursuant to this Act, the court having jurisdiction over such railroad may, upon a petition which is filed within 10 days after the date of enactment of this subsection by the trustees of such railroad, reconsider such

Digitized by Google

order. Such reorganization court shall (i) affirm its previous order or (ii) issue an order that the reorganization of such railroad be proceeded with pursuant to this Act unless it finds that this Act does not provide a process which would be fair and equitable. The provisions of paragraph (1) of this subsection are applicable in such reconsideration, except that (A) such reorganization court shall make its decision within 30 days after such petition is filed, and (B) any decision by the special court on appeal from such a decision shall be rendered within 30 days after such reorganization court decision is made. There shall be no review of the decision of the special court. The Association shall take any steps it finds necessary, consistent with time limitations and other provisions of this Act, to effectuate the consequences of such a revised order, including the preparation and submission of any necessary or appropriate supplements to the preliminary system plan.".

(b) Section 207 (a) (2) is amended to read:

"(3) The Office is authorized to hold public hearings on the preliminary system plan and to make available to the Association a summary and analysis of the evidence received in the course of such proceedings, together with its critique and evaluation of the preliminary system plan, not later than 60 days after the date of release of such plan. The Office is authorized to hold public hearings on any supplement to the

Digitized by Google

preliminary system plan and to make available to the Association a summary and analysis of the evidence received in the course of such proceedings, together with its critique and evaluation of such supplement, not later than 30 days after the date of release of such supplement.".

SEC. 8. Section 205 (d) (2) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 715 (d) (2)) is amended to read as follows:

"(2) employ and utilize the services of attorneys and such other personnel as may be required in order to properly protect the interests of those communities and users of rail service which, for whatever reason, such as their size or location, might not otherwise be adequately represented in the course of the reorganization process as provided by this Act.".

Passed the Senate January 29, 1975.

Attest: FRANCIS R. VALEO,

Secretary.

Digitized by Google

Mr. CHAIRMAN. The first witness this morning is the Honorable John Barnum, Acting Secretary of Transportation. Mr. Barnum, would you identify yourself and your position and the gentlemen with you, and you may proceed as you see fit. We hope if you have a large statement, you will insert it in the record and summarize.

STATEMENT OF HON. JOHN W. BARNUM, ACTING SECRETARY, DEPARTMENT OF TRANSPORTATION, ACCOMPANIED BY RODNEY EYSTER, GENERAL COUNSEL, AND ASAPH H. HALL, ACTING ADMINISTRATOR, FEDERAL RAILROAD ADMINISTRATION

Mr. BARNUM. Thank you very much, Mr. Chairman, and members of the committee.

I have with me this morning on my left Ace Hall, Acting Administrator of the Federal Railroad Administration, and on my right, the General Counsel of the Department of Transportation, Rodney Eyster.

With your permission I have a brief statement which I would prefer to present to the committee.

We appreciate this opportunity to appear before you today in support of the Department's proposed legislation entitled "The Regional Rail Reorganization Act Amendments of 1975" (H.R. 2051). We are particularly pleased that your committee has scheduled this hearing, for the problem addressed in this bill merits immediate attention. Indeed, I sincerely hope that we are in time.

We are presently confronted by a serious financial crisis among the bankrupt railroads of the Midwest and Northeast. This crisis is a result of a number of factors which have had a negative impact on both revenues and costs of those railroads. The initial factor was the November-December coal strike, which had a $5 million per week adverse impact on Penn Central revenues. Also, sharp declines in traffic in automobiles and metal products have accelerated the revenue loss. The Penn Central and Ann Arbor, in particular, have been victims of this downturn.

At the same time the bankrupt railroads are experiencing greatly increased operating costs. Penn Central paid 100 percent more for fuel and 30 percent more for maintenance of way materials in the first 9 months of 1974 than in the same period of 1973. Had Penn Central not been able to obtain approval of freight rate increases of approximately 18 percent during 1974, the 1974 deficit would have been considerably worse.

In late November the Department was informed of the critical nature of the railroads' financial posture. We examined the amount of authorized funds available to meet the coming cash crisis and allocated those funds on the basis of need as shown by projections available at that time. The Department also began consideration of, first, what cost-cutting items could be undertaken by the railroads, and second, what were the alternatives to additional direct cash assistance under section 213.

During the course of December we entered into agreements to provide assistance under section 213 with Penn Central for $30 million, with Lehigh Valley for $1.4 million, and with Ann Arbor for $250,000. The Central Railroad of New Jersey had already received a commit-

Digitized by Google

ment of funds for the first half of 1975. In addition, the agreement with the Lehigh and Hudson River was extended for the first half of 1975.

Concurrently, in December, the trustees of the Penn Central proposed that if additional assistance was not available to meet their 1975 cash needs, they would implement a "three-point" program consisting of (1) not paying wage increases due in 1975, (2) reducing its labor force by 4,500, and (3) reducing material purchases by $92 million. This program would have resulted in substantial reduction of their maintenance of way and maintenance of equipment programs. We found this unacceptable since it would result in the ultimate shutdown of the railroad due to unsafe operating conditions and unreliable service.

While the Department was conducting its evaluation of Penn Central's cash needs, Secretary Brinegar on December 30 asked the trustees to consider what other cost-cutting measures might be taken. The trustees replied the following day that the "three point" program was the only program within management's control which would produce the necessary cash savings, and that all other available measures had been taken.

On January 10, I responded to the trustees that the Department was concerned that the "three point" program not be implemented, that we would present a legislative proposal, and that we wanted to explore with them what other cost-cutting measures might be available. The trustees replied that they would not implement the program, but in the event aid were not forthcoming, traffic would be embargoed in the middle of this month in contemplation of a complete shutdown. I would like to submit copies of this correspondence for the record [see p. 21].

I should also report that in December we requested appropriation of the remaining $10.2 million authorized under section 213. Recognizing the critical need, Congress responded within 1 week of the request. Last month we agreed to amend the Penn Central grant agreement to provide an additional $12 million. We also agreed in January to provide an additional $750,000 to the Ann Arbor and an additional $595,000 to the Lehigh Valley. As of today there remains less than $4 million of the original authorization which has not been committed I should mention here that the entire amount authorized has been appropriated.

Attached to my statement is a current summary of the obligations and outlays of section 213 funds to date [see p. 24].

At this point, then, it seems clear that, unless additional funds are promptly made available, several of these railroads, particularly Penn Central, will be forced to cease operations as early as February 25. It is likewise clear that this cannot be permitted to happen until the planning process contemplated by the Regional Rail Reorganization Act of 1973 is completed. In addition, and of more immediate importance, the termination of rail service by these roads would have a crippling effect on the overall economy of the region and, indeed, the Nation.

In addition to section 213 of the act, section 215 authorizes the Secretary of Transportation, with the approval of USRA, to provide $150 million for the acquisition, maintenance or improvement of prop-

Digitized by Google

erties that will be in the final system plan. This was intended to enable DOT and USRA to get a head start on the substantial maintenance and rehabilitation task ConRail will face. Considerable difficulites have been encountered in implementing the section 215 program, particularly those caused by the uncertainties created by the constitutional litigation and the changing Penn Central maintenance program. To date we have guaranteed $3.4 million of obligations issued under section 215 for the acquisition of 12 locomotives by ConRail which have been leased to the Lehigh Valley.

The Department and the United States Railway Association have jointly developed a program based on applications submitted by the railroads for expenditure of the balance of the $150 million presently authorized under section 215. This program was approved on January 17 by the USRA Board of Directors, and the Department is now able to enter into the appropriate agreements. There has also been substantial agreement between the Department and USRA as to the use of the additional $150 million we are requesting for section 215.

The legislation we have proposed recognizes the close relationship between the need for cash assistance and the need for maintenance and improvement of rail properties. We anticipate that if the bankrupct railroads are to continue to provide service substantially at the level provided through 1974, and if extensive furloughs of personnel and sharp cutbacks in maintenance and improvements are to be avoided, there will be a need for additional assistance of approximately $300 million. This amount has been estimated for the period through the first quarter of 1976 and is based on the current revenue projections and cost estimates for that period.

The purposes of the proposed legislation are several. First, we propose to provide in section 213 and section 215 sufficient assistance to enable bankrupt railroads to continue to provide service. Second, it would enable the Department and the association to commence work on an expedited basis on the maintenance and rehabilitation of the properties destined for inclusion in the final system plan. Third, it would assure that to the extent such assistance adds any value to the properties maintained or improved with those funds, that increase in value will benefit ConRail or will be returned to the Government, and will not accrue to the estates of the railroads. Fourth, approximately $25 million of this assistance is intended to be utilized in performing deferred maintenance on the Northeast Corridor between Boston and Washington, for which there is not presently any other source of funds.

Finally, this legislation will make clear that loans may be made under section 211 prior to the effective date of the final system plan where such loans would assist in carrying out the goals of the act. This would allow ConRail to order materials in 1975 which will be needed once the final system plan is approved.

The new section 215 would increase the authorization from $150 to $300 million and would expand the purposes for which section 215 can be used in two significant areas. First, it will permit the Department and USRA to take over, in whole or in part, the regular track and roadway maintenance programed by a railroad in reorganization. The Department and USRA will be assuming expenses that the railroad would otherwise have to make to carry out its existing maintenance program, thereby reducing its forecasted cash needs.

Digitized by Google

Second, it will permit the Department and USRA to acquire for ConRail railroad facilities or equipment that a railroad likewise has planned to acquire, and thereby both reduce the railroad's cash needs and provide an asset for ConRail. In addition, the Department and USRA can acquire an interest in capital items, such as rolling stock subject to a conditional sale agreement or equipment trust certificate, by paying an installment on such agreement or certificate that the trustees would otherwise have to pay and acquiring a pro rata interest in the underlying equipment. Such action would directly reduce the railroad's projected cash needs, and also would provide equity for ConRail. A chart depicting the section 215 program is attached to my statement [see p. 25].

The proposed amendment to section 215 will assure that any value added to the properties as a result of such work will not be paid by ConRail. The existing provision was intended to make this assurance, but it presents difficult questions as to the valuation of properties maintained or improved under that section because it requires a determination of the value attributable to the improvements. It is very difficult to devise an analytical formula which would fairly measure what portion of the land of given rail property is attributable to the effectuation of given improvements in its physical condition. Thus, the present section 215 would proliferate litigation and there would be too much uncertainty as to whether it would result in adequate protection for the Government.

Our proposed amendment would obviate those problems by having the value of the properties which are subject to a section 215 agreement and transferred to ConRail determined in the final system plan on the basis of their physical condition prior to the maintenance or improvement brought about by the agreement.

It is important to note, since there has been some misunderstanding on the point, that our proposed amendment does not change the valuation process undertaken by the Association in any way other than by establishing that the physical condition used as the basis for the valuation of properties covered by section 215 agreements and transferred to ConRail is the physical condition of the properties on the effective date of the section 215 agreements. In all other respects value would be determined as of the date for the valuation of property transfered under the final system plan. We note that the Senate-passed bill, S. 281, requires a determination of the value attributable to maintenance or improvements performed under a section 215 agreement and, therefore, we recommend against adoption of the Senate language.

An additional deficiency in the existing language of section 215 is that it does not make any provision for recovering the value of maintenance or improvements to properties transferred under the final system plan to railroads other than ConRail. Therefore, our proposed amendment provides that, in the event the final system plan designates the conveyance of properties to such railroads, the trustees will be obligated to return to the Government the value added to those properties by maintenance and improvement financed under section 215.

As you know, funds provided under section 215 ultimately constitute obligations which must be assumed by ConRail. However, a

Digitized by Google

portion of the obligations to be issued under the amended section 215 will be for purposes which are not normally carried as capital debt, such as deferred maintenance. Therefore, we propose that USRA, with the approval of the Secretary of Transportation, indicate in the final system plan what portion of the debt should be carried by ConRail, considering its projected overall debt structure, and what portion should be canceled, resulting in effect in a grant. In our view if ConRail can bear such a debt, it should do so rather than have the taxpayer do so.

With respect to operating assistance, on the basis of projections developed by the Department and forecasts of the railroads now classified under the 1973 Act as railroads in reorganization we concluded last month that additional grant authority in the amount of $75 million was necessary for those railroads, plus $25 million for needed repairs on the Northeast Corridor. Therefore, the bill we submitted on January 17, H.R. 2051, proposed that the authorization contained in section 213 of the act be increased from $85 million to $185 million. In addition, that bill proposed that where such assistance is used to perform program maintenance or improvements on designated rail properties, it should be provided on the same terms and conditions as are required under section 215. Those terms and conditions are designed to assure that any value added by such maintenance and improvements goes to ConRail or back to the Government and not to the estates of the railroads in reorganization.

Since we submitted that bill to the Congress on January 17, we have concluded that two significant changes should be made to the bill to ensure that the bankrupt railroads will have sufficient operating assistance to continue to provide service. Amendments effecting these changes are attached to my statement [see p. 25].

The first change entails an increase of $30 million in the authorization under section 213. In projecting the need of the bankrupt railroads for financial assistance, we had assumed that an application pending before the ICC for a 7-percent rate increase would go into effect tomorrow. Just last Thursday, however, the ICC issued an order suspending that proposed increase. We are hopeful that the additional $30 million we propose will be adequate to compensate for the revenues that the bankrupt railroads would have derived from that increase had it gone into effect this month.

If the railroads are not successful soon in obtaining approval of such an increase, however, the additional funding we propose will not be sufficient. For example, if the bankrupt railroads fail to obtain approval of a 7-percent increase during the maximum 7-month period for the suspension of rates, we estimate that our proposed funding increase of $30 million will fall short of making up lost revenue by nearly $45 million.

The second major change to our bill entails the adoption of an amendment to section 213 containing a separate $25 million authorization for railroads not reorganizing under the 1973 act which operate rail properties that are likely to be transferred to ConRail or other railroads under the final system plan. The basic purpose of this amendment is to insure that the Erie Lackawanna can be afforded sufficient financial assistance to avoid a shutdown of its operations prior to implementation of the final system plan. Reversing the posi-

Digitized by Google

tion they took last year in court proceedings under section 207(b) of the 1973 act, the trustees of the Erie recently announced that the railroad cannot be organized independently under section 77 of the Bankruptcy Act within a reasonable time. In addition to seeking financial assistance under section 213, the trustees have proposed that the 1973 act be amended to permit the railroad to be reorganized under the 1973 act.

We agree that financial assistance should be made available to the Erie. We also believe that provision should be made for including employees of the Erie under the labor protection provisions of title V of the act and have drafted amendments to accomplish that. We do object, however, to the adoption of an amendment, such as the one contained in the Senate-passed bill, which would permit the Erie to become a "railroad in reorganization" for all purposes of the 1973 act.

First, we believe that such a provision is unnecessary for the Erie can and will be included in the planning process, and the final system plan can provide for the conveyance of its properties on a voluntary basis.

Second, we believe that such a provision would have two serious drawbacks. If the assets of the Erie Lackawanna become subject to mandatory conveyance under the final system plan, the possibility exists that the Government could become liable to the Erie's estate under the Tucker Act for both interim erosion of the estate pending implementation of the final system plan and for any court-determined shortfall in the adequacy of the compensation the Erie receives for its rail assets conveyed under the final system plan.

Also, such a provision might lead to time-consuming litigation by creditors or trustees of railroads already reorganizing under the act which could delay or impede the implementation of the final system plan and thereby seriously aggravate the need of these railroads for interim financial aid.

In addition to searching for ways to get the most effective results from the financial assistance provisions of the act, we have considered possible actions the ICC might take to prevent a cessation of the service provided by railroads in organization under the 1973 act. For example, we have looked into the possibility of the Commission's invoking its powers under section 601(e) of the 1973 act. Under that provision the Commission is empowered, on an emergency basis, to direct a carrier to move the traffic of another carrier over the other carrier's lines. There are important requirements associated with the issuance of such directions, however. These include the provision of compensation to the directed carrier to cover the difference between the costs and revenues associated with such operations. In this regard it should be noted that costs are defined in the statute to include a reasonable profit.

Another important requirement that must be satisfied under Section 601(e) is that there not be any substantial impairment of the ability of the directed carrier to serve adequately its own patrons or to meet its own outstanding common carrier obligations. Given (1) the immense scope of the rail service that would be discontinued if the Penn Central and other bankrupt railroads were to go into liquidation; (2)

Digitized by Google

the high costs that would be involved in directing other carriers to continue such service; and (3) the limited resources of neighboring carriers which might be directed to provide the service, we do not believe that it would be feasible to look to section 601(e) to provide the answer to a large-scale shutdown. In fact, in our judgment there is not any reasonable alternative to seeking additional authority to provide financial assistance for the continuation of services by the existing bankrupt carriers.

In conclusion, our proposed bill, amended as I have described, should enable the department and the association to deal flexibly and effectively with the two most pressing needs pending completion of the planning process—assuring continuation of rail service, and commencing an integrated maintenance and improvement program for properties that will be in the final system plan. These needs will be met in a manner which will maximize the benefit to ConRail and will not allow unjust enrichment of the estates.

Mr. Chairman, that concludes my prepared statement. I will be pleased to answer any questions the committee may have.

Thank you.

[Testimony resumes on p. 29.]

[The documents referred to follow:]

DEPARTMENT OF TRANSPORTATION,
OFFICE OF THE SECRETARY,
Washington, D.C., December 30, 1974.

Messrs. ROBERT W. BLANCHETTE,
RICHARD C. BOND, and
JOHN H. MCARTHUR,
Trustees of the Property
Penn Central Transportation Co.
Six Penn Center Plaza
Philadelphia, Pa.

GENTLEMEN: On November 20 your representatives informed me that the current cash flow forecast of the management of Penn Central Transportation Company is as follows: if the amount of maintenance performed on the railroad and the number of personnel employed are held at 1974 levels, the company will suffer a net cash outflow of some $280 million during the period which includes calendar year 1975 *and* the first quarter of 1976 ($157 million during calendar year 1975). I understand that the significant increase in the forecasted cash outflows over those of prior years is primarily due to an expected 7% overall decline in traffic as a consequence of the current slowdown in the economy.

Your representatives also informed me that management has presented a program which would contribute to a net cash inflow of some $53 million during 1975, and would decrease the net cash outflow for the entire period which includes calendar year 1975 *and* the first quarter of 1976 to some $78 million. I am told that the program depends to a large extent upon a significant reduction in maintenance expenses, both through a $92 million decrease in material purchases, and through a reduction in force of maintenance of way employees.

I am very concerned by the cash outflows forecast by Penn Central management. I have instructed my staff to conduct an independent evaluation of the situation and to present their cash forecasts to me as soon as possible. They have been in continual communication with management, and are prepared to give your representatives a preliminary analysis of management's forecast.

I am very troubled, however, that the only program which Penn Central management has so far presented for offsetting the revenue effects of the expected traffic decline appears to depend largely on short term measures which might in the long term prove detrimental to the ability of the Penn Central (or of ConRail) to provide necessary transportation services. Nowhere in the information provided to us is there any mention of cutbacks in the scope of non-maintenance operations, other than a reduction in force of 1,000 headquarters and yard non-operating transportation personnel, and the "possibility" of either not paying wage increases or of funding them through rate increases. Are there

Digitized by Google

not a wide range of other cost cutting measures which should be employed by a railroad faced with such a significant decline in its traffic?

We would be remiss in our obligation to the taxpayers if we do not ensure that every possible cost cutting measure either has been taken, or has been fully planned for implementation when the opportunity arises. Accordingly, I would appreciate receiving from you, and I am requesting by this letter, a detailed explanation of the program of cost cutting alternatives available to Penn Central, other than the three point program already provided, in view of the current and expected downturn in traffic. Further, I would appreciate knowing in detail what contingency plans have been made or what alternatives are available for further cost cutting should the traffic downturn be even worse than is now forecast. In this regard, I should note that members of my staff believe that recent developments in the automobile and steel industries indicate that a greater than 7% decline in Penn Central's 1975 traffic is indeed possible.

It would be of great assistance in completing our evaluation of the situation, and in formulating our recommendations to the President and the Congress, if we could receive your response as soon as possible, but not later than January 10, 1975.

Sincerely,

CLAUDE S. BRINEGAR.

* * *

PENN CENTRAL TRANSPORTATION CO.,
Philadelphia, Pa., December 31, 1974.

Hon. CLAUDE S. BRINEGAR,
Secretary, Department of Transportation,
Washington, D.C.

DEAR MR. SECRETARY: Your letter of December 30 notes the Trustees' cash flow forecasts which were provided to you on November 20 and indicates an awareness of the extremely serious cash problem which the Penn Central will face in the first quarter of 1975 and throughout the balance of the year. As you will recall when we visited you on November 20, you advised us not to institute certain cutbacks in programmed maintenance for 1975 and indicated that the Department would have a series of proposals to alleviate the serious cash shortages which are impending.

You state that you are troubled by the fact that you believe the only program the Penn Central management has so far presented for offsetting the revenue loss from the present traffic decline is a program to cut back on maintenance work. You ask whether there are any other cost-cutting measures which should be employed, and request a detailed explanation of alternative programs to cut costs.

Let me assure you that the severe cutback in purchases of materials and supplies and the reduction in maintenance forces is not the only program which the Penn Central management has proposed or adopted. It is, however, the only program within management's control which will produce the substantial cash savings necessary to avoid an immediate complete cessation of operations.

Your letter speculates that there may be a wide range of other measures that should be used. Those which are available to us have been and are being used. For example, in light of the declining volume of traffic, the number of employees presently handling that volume has declined from 80,381 in August, 1974, to 78,752 in December. We have cut the number of freight trains operated in December by almost 11,500 as compared with October, and reduced the number of yard crews by 8,500. We will continue to make similar reductions consistent with traffic levels wherever possible.

Where traffic sources dry up, we attempt to eliminate operations at those points entirely. However, major yard facilities for the interchange of traffic must continue to be operated even in the face of serious traffic losses, and the expense reduction therefore cannot approach the revenue loss. The figures which you were provided in November included the possible expense reductions premised on the then anticipated traffic decline. These forecasts have been and are being adjusted continuously to reflect changes in traffic levels.

As I am sure you are also aware, our ability to effect major additional cost savings by reductions in force is limited by the fact that over 75% of our employees have the benefit of merger protective provisions which require that they be paid whether or not they work. More importantly, Penn Central has been operating at minimum employment levels, and further major cuts in transportation or other expenses are simply not available, without seriously affecting

Digitized by Google

service. When the Penn Central entered reorganization in June, 1970, it had a total of 95,772 employees. As of the middle of this month, we have only 78,752, a reduction of almost 18% of our total employment.

Unlike major manufacturing concerns, we cannot build up a backlog of our product and shut down entire production lines. Consistent with our common carrier obligations and safe operation of the property, we can only make major short-term cost reduction in the one area we control—our maintenance program. Expenditures for the plant improvement or equipment acquisition have already been eliminated.

In short, every cost-cutting measure which we believe can reasonably be adopted and still operate either has been taken or is being implemented in light of our declining traffic.

Your letter also notes that your staff have made an independent evaluation of our forecasts and are prepared to give our representatives a preliminary analysis of those forecasts. Upon receipt of your letter last evening, I instructed our representatives to contact responsible officials of the Department and the Federal Railroad Administration to obtain that analysis and whatever suggestions are contained therein. I understand that that was done immediately.

Finally, I cannot emphasize too strongly the need for an immediate action program by the Department to alleviate the impending cash shortfall. Since we met on November 20, the cash situation on the railroad has worsened and the absence of external sources of cash will require even deeper cuts in maintenance expenses than were then contemplated. To avoid a complete cessation of operations by late February-early March the Trustees will have to implement management's program within the next ten days. Even on that spartan basis, system operations beyond the first quarter simply cannot be presently assured.

ROBERT W. BLANCHETTE, *Trustee.*

* * *

DEPARTMENT OF TRANSPORTATION,
OFFICE OF THE SECRETARY,
Washington, D.C., January 10, 1975.

Messrs. ROBERT W. BLANCHETTE, RICHARD C. BOND, and JOHN H. MCARTHUR,
Trustees of the Property of the Penn Central Transportation Co.
Philadelphia, Pa.

GENTLEMEN: Your letter of December 31, 1974 indicates that Penn Central has implemented cost-cutting measures to meet the serious cash problem which faces Penn Central in 1975 and the first quarter of 1976. You further indicated that despite these management actions, in the absence of external sources of cash, the Trustees will be forced, within the next few days, to implement severe cuts in maintenance expenses to avoid a complete cessation of operations by late February or early March. You requested the Department to develop an action program to alleviate the impending cash shortages facing the railroad and thus enable the Trustees to continue operations without having to invoke these maintenance cutbacks.

The Department is, of course, deeply concerned that Penn Central not implement any cutbacks in its maintenance program which might prove detrimental to the ability of Penn Central (or Conrail) to provide necessary transportation services. In this connection the Administration has developed a legislative proposal which will provide the resources necessary to sustain all the railroads, including Penn Central, which are reorganizing under the Regional Rail Reorganization Act of 1973 ("Rail Act") through the first quarter of 1976. This proposal involves increasing the amount of financial assistance available under sections 213 and 215 of the Rail Act, and amending section 215 of the Rail Act to enable the Government to deal more effectively with the financial and maintenance problems of the railroads reorganizing under the Act. We intend to submit this legislative program to Congress within the next week, and we will urge that Congress act promptly on the problem.

I trust that the foregoing assurance will enable the Trustees to continue rail operations without having to implement any severe cutbacks in the railroad's maintenance program. We wish to explore further with you or your representatives alternative cost-cutting measures which the management might be able to adopt to meet the railroad's cash needs.

Sincerely,

JOHN W. BARNUM,
Acting Secretary.

Digitized by Google

PENN CENTRAL TRANSPORTATION CO,.
Philadelphia, Pa., January 13, 1975.

Hon. JOHN W. BARNUM,
Deputy, Secretary of Transportation,
Department of Transportation,
Washington, D.C.

DEAR MR. BARNUM: The Trustees have received your letter of January 10, 1975 expressing the Department's deep concern that we not implement management's program of extensive employee furloughs and severe reductions in purchases and materials and supplies required to permit continuance of Penn Central rail operations beyond late February of this year. You indicate that the administration has developed a legislative proposal which will provide the resources necessary to sustain Penn Central through the first quarter of 1976.

Although we would much prefer to know the details of the administration's proposal before having to make our decision, we are cancelling the implementation of the management's program on the strength of your assurances. Our concern is that the administration's program be not only adequate, but also capable of winning prompt approval both by the Congress and the Reorganization Court.

It must be understood by everyone concerned however that our decision to cancel the reductions in employment and purchasing means that we are foregoing the only measures of self-help available to Penn Central to meet next month's cash shortage. Having deferred management's program since the first of December, we cannot now meet our cash needs by later instituting a similar program. The magnitude of any later self-help program to solve the cash shortage would be so extensive that continued rail operations could not be assured consistent with the requirements of safety. Thus if the aid contemplated by the program of the administration does not promptly make cash available to Penn Central it will be necessary to begin to embargo traffic mid-February, in contemplation of a complete cessation of rail operations for lack of cash in early March, as projected in the management forecasts which you have received.

Very truly yours,

ROBERT W. BLANCHETTE, *Trustee.*
RICHARD C. BOND, *Trustee.*
JOHN H. MCARTHUR, *Trustee.*

AMENDMENTS TO H.R. 2051

1. Section 3 of H.R. 2051 is amended to read as follows:

Sec. 3. Section 213 of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 723) is amended:

(1) by striking out "Emergency Assistance.—" and by inserting in lieu thereof "Railroads in Reorganization.—";

(2) by adding the following at the end of subsection (a): "Where the Secretary and the trustees agree that funds provided pursuant to this section are to be used (together with funds provided pursuant to section 215 of this Act, if any) to perform program maintenance on designated rail properties until the date rail properties are conveyed under this Act or to improve such designated properties, such agreement shall contain the conditions set forth in section 215(b) of this Act. There are authorized to be appropriated to the Secretary for carrying out this subsection such sums as are necessary, not to exceed $215,000,000, to remain available until expended."; and

(3) by amending subsection (b) to read as follows:

"(b) OTHER RAILROADS.—The Secretary is authorized, pending implementation of the final system plan, to pay to a railroad operating in the region, a substantial portion of whose rail properties is likely to be transferred to the Corporation or other railroads pursuant to the final system plan, such sums as are necessary for the continued provision of essential services by such railroad. Payments made under this subsection shall be subject to terms and conditions required with respect to payments made under subsection (a) of this section and such other terms and conditions as the Secretary establishes. There are authorized to be appropriated to the Secretary for carrying out this subsection such sums as are necessary, not to exceed $25,000,000, to remain available until expended."

2. Insert the following after section 5 of H.R. 2051:

"Sec. 6. Section 206(d) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 716(d)) is amended by redesignating paragraph (5) as paragraph (6), by designating the second sentence of paragraph (4) as paragraph (5), and by adding the following at the end of the redesignated paragraph (5): 'If the profitable railroad is in reorganization under section 77 of the Bankruptcy Act, its reorganization court must decide whether to authorize its trustees to make the offers authorized in the final system plan within 30 days after the effective date of the final system plan. Any appeal from that decision must be taken to the court of appeals within five days following entry of the reorganization court's order and must be decided by the court of appeals within 30 days after the entry of the reorganization court's order. There shall be no review in the Supreme Court of the decision of the court of appeals.'."

Digitized by Google

SEC. 7. Section 501(3) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 771(3)) is amended to read as follows:

"(3) 'protected employee' means any employee of (A) an acquiring railroad adversely affected by a transaction, (b) a profitable railroad operating in the region which transfers a substantial portion of its rail properties to the Corporation or to other railroads pursuant to the final system plan, or (C) a railroad in reorganization, who on the effective date of this Act has not reached age 65."

The CHAIRMAN. Thank you, Mr. Barnum.

I might say that we appreciate your getting through in the time that you did, because we are going to try to move as fast as we can on the bill.

I would like to ask you one question. You have proposed your own bill and then the Senate bill. Which one would you prefer in the present situation?

Mr. BARNUM. We would much prefer our own bill, Mr. Chairman. I think it avoids a number of the problems which the Senate bill creates.

The CHAIRMAN. Under section 213 of the act the trustees of the railroads in reorganization are obligated to maintain and provide service at a level no less than at the time of the enactment of the 1973 act as a condition for any 213 grant. Have the Penn Central trustees complied with that statutory condition in regard to the sum of $80 million they have received to date?

Mr. BARNUM. To the best of my knowledge they have. That specific condition has been made a part of the grant agreement to the Penn Central. It is true there have been instances where the Penn Central has not been able to maintain a section of track in the same condition it was in at the time of enactment. We have been looking at the properties and are requiring that slow orders be imposed at certain locations, and when that has occurred the Penn Central has moved to bring the track back up to condition. If you would like a better status report as to the condition of the Penn Central, we will attempt to provide that to the committee.

The CHAIRMAN. I wish you would.

[The following information was received for the record:]

EXCERPT FROM THE FINAL REPORT, "ROADWAY MAINTENANCE AND REHABILITATION PLAN PENN CENTRAL TRANSPORTATION CO."

An excerpt from the *Final Report, Roadway Maintenance and Rehabilitation Plan Penn Central Transportation Company*, submitted to the Secretary of Transportation on December 11, 1974, at his request by a team of Chief Engineers from six railroads operating principally outside of the Midwest and Northeast region, follows:

III. CURRENT PHYSICAL CONDITION

Several observations regarding the general condition of Penn Central Transportation Company fixed properties were made in the Preliminary Report dated November 20, 1974. Since an understanding of the current condition should be a prerequisite to acceptance of the Rehabilitation Plan, the most important of the comments made in the Preliminary Report need to be re-emphasized here.

Deterioration Is Accelerating

The level of maintenance of main and branch lines varies from good to very poor. Most yards are in poor condition, and some are in a deplorable state. Some of the plant is beyond repair in that it must be completely rebuilt if its use is to continue. The plant which merely requires repairs is generally deteriorating at an increasing rate. As a result, the cost of rehabilitation is growing. This is particularly true on lines and yard tracks carrying heavy traffic volumes where cross

Digitized by Google

tie, ballast, and drainage condition is so poor that rail is being lost from premature damage.

Rail Condition Is Unsatisfactory

Rail replacement on Penn Central during the last seventeen years has been at a rate which implies an average age of 257 years. This is at least five times the expected average life of rail, without considering requirements for growth in traffic, increased wear from heavier wheel loading and the desire for faster operating speeds. As a result, the need for rail on Penn Central is very high.

Rail end condition throughout the railroad is deteriorating. This is because of poor tie and ballast maintenance, loose and missing bolts and the lack of cross and surface grinding programs, among other factors. Poor drainage is a primary reason why tie and ballast conditions have deteriorated and led to bent and joint-battered rail. Much rail in the past was cropped without being properly end-hardened, and this has led to excessive joint batter.

The cutback in surfacing work in recent years, particularly the lack of spot surfacing, has also played a major role in accelerating rail wear.

On the heavy traffic lines, rail and other steel in turnouts, particularly at crossovers, has worn badly. The wear is particularly severe where fittings and fastenings are loose and missing, resulting in the overstressing of remaining fastenings and parts.

The Chief Engineers' Team observed numerous instances of rail worn beyond safe limits, especially on yard leads, curve tracks, and branches. Broken rails were common, as were broken angle bars, dangerously-worn and broken frogs and broken switch points. These conditions were observed in varying degrees throughout the property, including the heaviest-traffic lines as well as yard and industry leads.

Insulated joints, trackage in interlockings, and road crossing trackage as a general rule are poorly maintained, the result of skipping this work during the most recent pass-through with rail or tie and surfacing programs. Consequently, these areas have become the controlling factor governing whether the plant is safe and operational at desired speeds.

Cross tie condition is poor

During the last seventeen years, cross ties have been installed at a rate which implies a tie life of 87 years. This is probably close to three times the expected average life if all lines were to remain in service.

Tie condition on most lines is generally poor. This combined with bad drainage or extended surfacing cycles generates a track with poor riding quality.

Tie condition in nearly all yard and siding trackage is deplorable. There are many broken ties. Swinging joints, broken frogs, bent and broken rail—all are witness to the fact that ties have worn out or rotted away.

Ballast condition is good to poor

The worst ballast problem areas are in the interlocking plants, at other turnouts, and in yards; where drainage is poor or nonexistent; and at grade crossings. Improvement of the drainage is a must, followed by ballast cleaning. At many locations under welded rail, the ballast problem is not continuous but isolated, so that out-of-face ballast cleaning is not necessary.

On lines in the Northern, Western and Southern Regions, the ballast material generally is crushed limestone of very poor quality. After a time it pulverizes and becomes impervious to the passage of water. Ties lay in mudholes in the consolidated limestone ballast and constantly absorb the water during rainy times of the year. As a result, tie life is greatly reduced, so is rail life, and the cost to maintain track is higher than it needs to be.

By contrast, ballast on the Eastern, Central and Northeastern Regions normally is a type of trap rock containing mostly basalt or granite material, which is probably among the best ballast obtainable for railroad use. Ballast condition on this part of the railroad is generally good to fair.

Structures are deteriorating

The extent of deferred maintenance of structures on Penn Central is so serious that current budgets do not even allow for correction of known critical deficiencies. There are sizable needs in the immediate future for painting of steel structures, including catenary poles and signal bridges; application of bridge ties; repair of shop and way station buildings; repairs and replacements of water lines and fixtures; and repairs to masonry piers and expansion bearings.

Digitized by Google

Signal systems require rehabilitation

Position light signals are in poor condition and maintenance costs are high. Control cables for signals are in need of replacement throughout the system. When cable becomes defective due to splice failures or mechanical damage, it is usually replaced on top of or slightly below ground, making the cable subject to vandalism and further damage.

Many interlocking plants have air compressors for operation of electro-pneumatic switches with feeder lines to each switch. Extensive repairs would be needed; however, CTC proposals on many lines should be implemented instead of repair of existing systems. Much of the present interlocking and signal equipment is no longer available from manufacturers.

Communications are unreliable and costly

Penn Central supplements owned facilities with WATS lines and leased lines for data transmission. Quality for data transmission is a problem and the cost is high. Owned communication lines are subject to repeated failure and equipment is obsolete.

Electric traction systems require extensive repairs

The last time the catenary system was given extensive repairs was eight years ago. An estimated sixty percent of the clips holding the trolley wire presently need tightening. Much of the hardware is corroded and needs replacing, especially on the New Jersey Division.

Substation failures, such as power transformers and circuit breakers, have resulted in equipment being left out of service due to cost of parts or lack of force to repair, where the failure was not critical to operations.

Basic maintenance is inadequate

Because of the force reductions during the last several years, track forces engaged in basic maintenance work as opposed to rail, tie, surfacing, and other programs have dropped below the minimum effective level. For this reason, there is a pressing need for increased manpower in basic, non-program maintenance, while keeping program maintenance at a maximum level dictated by rail, ties, and other materials available. Only if it is possible to increase the amount of basic maintenance substantially will Penn Central arrest the decline of its plant.

One of the consequences of inadequate basic maintenance is that vandalism of fixed property and pilferage of materials, including rail and ties, are on an unprecedented increase. In numerous instances, we found ties, spikes, or tieplates on the rail, creating hazardous operating conditions. In some measure, the excess material on the ground has been due to poor housekeeping on the part of Penn Central, again, because of lack of funds. Increased surveillance is a must during this period of high prices to protect the railroad's property from loss or serious damage.

First priority is to arrest decline

From observations of the physical condition of the plant and projections of its continuing deterioration, it appears that it is beyond the capability of Penn Central to arrest the decline using funds available internally. By not arresting the decline, the eventual cost of rehabilitation will be much higher. This is because total disintegration of the track structure, bridges, and other plant will require complete rebuilding rather than mere repairs of components. Also, the longer the time required to rehabilitate the property, the greater the cost from transportation inefficiency, reduced equipment utilization, and shipper inconvenience.

Organization Needs Strengthening

Of great concern is whether the Penn Central maintenance organization will be able to manage effectively a rehabilitation program of the size described in the next section.

With few exceptions, there is a remarkable enthusiasm and spirit of dedication among the maintenance officers on Penn Central, at all levels. System and regional officers are well qualified as well and entirely capable of directing the rehabilitation programs.

However, a number of division officers down to supervisors of track are in need of varying amounts of training if the rehabilitation effort moves ahead. Even the most junior officer with little experience will, in most cases observed, make an outstanding maintenance officer. But while enthusiasm is abundant, knowledge

Digitized by Google

and experience is sometimes lacking. In particular, the Chief Engineers' Team was concerned with the need to improve the level of technical knowledge and to sharpen the judgment of supervisors about what is safe vs. unsafe.

While it may be difficult to think very far ahead in the crisis atmosphere many officers must operate, there also is a need to improve the planning and scheduling of forces and material. This seems to have been a problem the past year when opportunities arose to employ production gangs in basic maintenance because materials were delayed.

On Penn Central just as on any railroad, there is a continuing need to promote good maintenance practices and adherence to standards. In Penn Central production gangs there needs to be more attention paid to the quality of the work. This partly depends on the indoctrination of employees and supervisors in the proper work habits. While training is important, a proper attitude by the supervisor toward production vs. quality is also essential.

In basic maintenance with the maintenance standards which the level of current budgets would imply. Consequently, some of the plant tends to be over maintained while at other locations extremely dangerous conditions have developed that require immediate attention. Although it was not the intent of the Chief Engineers' Team to conduct a detailed safety inspection of the property, dangerous conditions were observed repeatedly. Training is needed now to deal with the problem of ignorance of what is required, after defining more precisely what functions are expected to be performed.

The CHAIRMAN. I must say I am concerned that the trustees come hat in hand to Congress for $250 million and yet object to the conditions being placed on how they use the funds. I want your help, counsel, to address the issue the trustees raised in the Senate, namely, would the court likely refuse to let the trustees use those funds if we impose your proposed conditions in section 215(b)(1)?

Mr. EYSTER. At the time of the Senate hearing there was some misunderstanding about the intent and effect of the language in our proposed bill. The concept we were trying to establish in our proposed language is one which I think the trustees are in agreement with. We have discussed the language a number of times, and I have shown them some new language as recently as 5 or 10 minutes before this hearing began.

Essentially our proposed attempts to lay down a ground rule for carrying out the principle which is presently in section 215. That principle is that taxpayer money goes into a track improvement or program maintenance project under 215, our concept is that ConRail, Consolidated Rail Corp. should not be required to compensate the estate of the railroad for the value of the improved property, but rather, would look to the condition the property was in before the taxpayer money was provided under section 215.

I think the trustees are in agreement with that and if we have language we can agree on as achieving that purpose, it is my understanding the trustees would recommend to Judge Fullam that the court approve an agreement under the 215 language.

The CHAIRMAN. Thank you.

Mr. Macdonald, any questions?

Mr. MACDONALD. Yes, I have just a couple, Mr. Chairman.

Mainly I don't quite understand where you say on the last page of your statement, "In this regard it should be noted that costs are defined in the statute to include a reasonable profit."

To whom?

Digitized by Google

Mr. BARNUM. To the railroad directed to perform the service. In this case, if the ICC were to direct the Norfolk & Western to operate the Penn Central, Norfolk & Western would be entitled to receive a reasonable profit for performing that service.

Mr. MACDONALD. What is your idea of a "reasonable profit"?

Mr. BARNUM. I would leave that decision to the ICC, which I think is the appropriate body for that purpose. I would suggest it should be in excess of the average profit being earned by railroads today. It would be a very difficult problem and it would be a very substantial sum in the case of anyone required to operate 20,000 miles of railroad, such as the Penn Central now has.

Mr. MACDONALD. I don't doubt that, being from an area that is very vitally affected by this matter, but we hate to see money follow money, which has been happening with no results. We have just been pouring money into the Penn Central and gotten very little back in return.

Mr. BARNUM. I share your concern, and that is indeed one of the reasons we recommend that the Congress act promptly to provide the kind of assistance that, first, can keep Penn Central operations going without having to provide another railroad a reasonable profit in doing so, and secondly, can, in effect, result in a downpayment for ConRail, rather than simply a payment in the form of a grant never to be seen again.

The CHAIRMAN. Mr. Devine.

Mr. DEVINE. As you know, my name is on this bill along with the chairman's, although there are a number of reservations we have. I would like to invite your attention specifically to that portion you address on page 12, having to do with the Erie Lackawanna. First of all, you are suggesting an amendment be offered which would provide, I think, $25 million in order to resolve some of their problems. My recollection, if it is correct, Erie said their immediate need for February was something like $15 million rather than $25 million. Why is there any divergence in that particular figure?

Mr. BARNUM. This statement was made prior to the Commission's action with respect to the 7-percent rate increase. The estimates that we now have for the Erie Lackawanna are $20 million in calendar year 1975, and an additional $5 million in the first quarter of 1976, or a total of $25 million.

Mr. DEVINE. Erie Lackawanna would prefer to be included under the same umbrella the Penn Central is. According to your statement on page 12, you object to including them under the act and on page 13 state the final plan can provide for the conveyance of properties on the volunteer basis. To whom would such conveyance take place?

Mr. BARNUM. Either to ConRail or to a solvent railroad in the area. Mr. Devine, I would urge you not to confuse two issues. We definitely would like to have sufficient funds available to keep the Erie Lackawanna operating throughout the planning period, through the first quarter of 1976. We are also prepared to have the act amended so that in the event of such a conveyance, the title V labor protective provisions would be available to the employees of the Erie. The only thing we resist is the idea of going back to the early days of the reorganization process under the 1973 act and constituting them as a "railroad in reorganization." The only benefit you obtain by virtue of

Digitized by Google

doing that is that USRA, by designating certain properties of the Erie, would be able to require their transfer to ConRail in exchange for ConRail stock or be able to offer them to some other railroad.

Under the procedures we would recommend USRA is equally well-positioned to show which Erie Lackawanna properties should be included in the final system plan, either for inclusion in ConRail or for acquisition by another solvent railroad. And in our judgment, and in our view of the work proceeding at USRA to date, we believe that the slight benefit that could be obtained by virtue of being able to control the transfer of the Erie Lackawanna properties is far outweighed by the very substantial risk that amending the act in the respects sought by the Erie Lackawanna trustees would reopen all of the constitutional litigation and put a cloud over the whole planning process.

It took 11 months to get to the Supreme Court the first time to find that the act is constitutional. We are running out of time. I don't think we should spend the next 6 months under a cloud waiting to find out whether the parts of the act the Erie Lackawanna trustees would add are constitutional, whether the planning process should require the transfer of that property, or whether the transfer is something Erie should negotiate with the Chessie System, ConRail or any other system.

Mr. DEVINE. Don't you think the proposed amendment to provide $25 million would be a one-shot deal, and when this money ran out would put them on the auction block? Do you know of any market for Erie Lackawanna?

Mr. BARNUM. I am not suggesting that ConRail has no interest in the Erie Lackawanna properties. If the Erie Lackawanna does not continue to use them, some of its properties would be useful in the ConRail system.

Mr. DEVINE. I take it it is your position you don't want them included under the same umbrella as Penn Central because of the possible litigation that would challenge the constitutionality of the whole act?

Mr. BARNUM. That is one reason. And the other reason is that if they are made a railroad in reorganization under the terms of the act, as both the special court and the Supreme Court have found, there would be an opportunity farther down the road for the creditors of the Erie Lackawanna to sue in the Court of Claims under the Tucker Act to recover both the erosion costs and the conveyance costs not met by compensation under the act.

Mr. DEVINE. Thank you. My time has expired.

The CHAIRMAN. The committee had some new rules that the gentlemen who come in last get to speak last, but we have not adopted our rules as of yet, so we will not put them in effect today. We have been experimenting as to how we do it. We will take the gentlemen as they are here now.

Mr. Rogers.

Mr. ROGERS. Just one question.

The total amount that you are recommending would last for all of 1975?

Mr. BARNUM. Calendar year 1975, and the first quarter of 1976. We selected that period of time because under the present schedule of the

Digitized by Google

Regional Rail Reorganization Act the transfer of the properties selected by USRA for ConRail takes place in the first quarter of 1976.

Mr. ADAMS. Would the gentleman from Florida yield?

Mr. ROGERS. Yes.

Mr. ADAMS. Isn't there a substantial risk, following up Mr. Devine's question, that if we tamper with the Northeast Rail Reorganization Act at all, as suggested by your amendment and as in the Senate amendment, that we risk litigation again from the creditors who have just lost in the Supreme Court? And why not amend the Emergency Rail Services Act of 1970, which is separate, to skid Erie Lackawanna through until we get the plan from ConRail and then deal with them?

I have little sympathy for Erie Lackawanna, because we told it to come in. They stayed out. It is their decision and, therefore, the bailing out process to me is only for the people in that area and not for Erie Lackawanna.

Mr. BARNUM. I agree with you, Mr. Adams, that the amendments in the Senate bill do create a substantial risk. I do not believe the amendments we proposed in our original bill or are proposing today, to provide financing for the Erie Lackawanna, would create that risk of litigation.

Mr. ADAMS. Why not go to the other act?

Mr. BARNUM. The Emergency Rail Services Act of 1970 originally authorized $125 million in loan guarantees and $100 million was allocated to Penn Central. I believe there is $19 million of loan guarantee authority available to us at this time. Any loan made pursuant to that act must be given priority under the Bankruptcy Act.

Mr. ADAMS. We could change that.

Mr. BARNUM. You could. You could change it along the lines of the Agnes Act, which authorized the Secretary of Transportation to enter into a loan agreement accepting for the Government, as I recall, the position of an unsecured prebankruptcy creditor. That loan could be made to Erie——

Mr. ADAMS. It would get it through until ConRail and USRA's plan was in effect and we could deal with them?

Mr. BARNUM. That is correct.

Mr. ADAMS. Thank you, Mr. Rogers.

The CHAIRMAN. The gentleman from North Carolina, Mr. Broyhill.

Mr. BROYHILL. These other members of the committee are asking legal questions. I would like to be clear as to exactly where this $250 million is going. In other words, how will that be allocated? Primarily for maintenance of ways, operating costs? Do you have a breakdown on that in the record, Mr. Secretary?

Mr. BARNUM. In the table attached to my statement, Mr. Broyhill, captioned "215 Program Summary," you will see how we would allocate, we and the United States Railway Association, the $150 million under the existing section 215. That appears in the first column.

The second column describes how we would allocate the $150 million that we urge the Congress now to add to section 215. As I said in my prepared statement, if the Congress does not adopt the amendment to section 215 to add the second $150 million, we and the United States Railway Association would go back and reconsider how to spend the first $150 million. In other words, if we had only $150 million to spend, we might not spend it the way set forth in the first column. That allocation anticipates having $300 million to spend.

Digitized by Google

With respect to the balance in section 213, a substantial part of that would have to be spent on maintenance and operating expenses.

Mr. BROYHILL. Thank you very much.

The CHAIRMAN. The gentleman from California, Mr. Van Deerlin.

Mr. VAN DEERLIN. Thank you, Mr. Chairman.

My question doesn't address itself, Mr. Barnum, to the central subject matter before us, but to an auxiliary matter. In response to a Department request, the Senate lifted the ceiling on the salary that can be paid to the principal officer in Amtrak. On the Senate floor, apparently, an $80,000 maximum imposed.

Mr. BARNUM. $90,000.

Mr. VAN DEERLIN. $90,000. Thank you. It was in this committee 3 or 4 years ago that the question of limitations first came up, after it was disclosed that the president of Amtrak had been retained at a Government salary second only to the President of the United States. Inasmuch as that recent vacancy has been filled subsequent to the start of action on the Senate side, I wonder if you would address yourself to the urgency of our accepting an amendment like this.

Mr. BARNUM. Mr. Van Deerlin, I think it is very important that the Amtrak Act be amended to permit not only the chief executive officer, but also the other senior executive officers of Amtrak, to be paid on a level that would be commensurate with salaries at other railroads. Our original proposal to the Congress in the last session was that the act be amended so as not to place a dollar limit on the salaries that could be paid to Amtrak executives, but rather to require the board of directors of Amtrak to set the amount with due regard to the amounts paid to the chief executive officers of the other railroads of the Nation.

We submitted to the Congress and this committee at that time a schedule showing what the chief executive and other senior officers of the other railroads of the Nation were being paid, so there would be a framework within which to consider the amounts that the board of directors might select. We think it is still desirable that the Amtrak Act be amended in that respect, with respect to all senior officials I would prefer there not be a dollar limitation. I do not think the fact that Mr. Paul Reistrup, of the Illinois Central Gulf, has accepted the position should change the underlying reason for amending the act. Whether or not it is necessary to embroil this committee or the House of Representatives in this issue at this critical time, I would urge you and the committee if, in fact, it is to be an issue, to put it aside and take it up at the time you consider whatever other amendments are necessary with respect to Amtrak.

I do not want to suggest by concurring in your delay of addressing this issue that we are not wholeheartedly in support of permitting Amtrak to compensate its executives on a basis that would make their salaries comparable to those of other railroad executives of the Nation. It is from those executives we must select the management of Amtrak. It is important we not be inhibited by what, in my judgment, is an unjust limitation that prevents us from having the pick of the crop.

Mr. VAN DEERLIN. The question that also suggests itself to whether we would not have similar difficulty filling the office of Secretary of Defense or even Secretary of Transportation if we considered that Government or Government-related employment had no inducements other than material.

Digitized by Google

Mr. BARNUM. That is a fair comment, but I would remind you, Mr. Van Deerlin, when this committee and the Congress addressed the question of what we should do with respect to the executives of the United States Railway Association, on the one hand, and ConRail, a private sector railroad, on the other hand, the judgment of the Congress was that it would be appropriate to limit the salaries payable to the officials of USRA, but it would not be appropriate to place any limitations on the salaries of the officials that were to run ConRail.

I would submit to you, Mr. Van Deerlin, Amtrak is more analogous to ConRail than to either the Secretary of Transportation or the Chairman of the United States Railway Association.

Mr. VAN DEERLIN. In the negotiations with Mr. Reistrup was there any assurance given him that the full force of the Department would be placed behind an effort to get this limitation raised?

Mr. BARNUM. Yes, sir. I gave him that assurance personally.

Mr. VAN DEERLIN. I see. I will admit, in a society that pays a 20-game winner in the American League more than the President or a Supreme Court Justice, that these are questions which don't lend themselves to hard and fast answers.

Thank you.

The CHAIRMAN. The gentleman from Kentucky, Dr. Carter.

Mr. CARTER. Thank you, Mr. Chairman.

I would like to ask you if you are familiar with the condition of rails and the ties on the Pennsylvania Railroad.

Mr. BARNUM. Only second-hand, Dr. Carter.

Mr. CARTER. What about the usage time of the rails? Is it true that they have been used five times as long as is usual for rails on other modern railroads?

Mr. BARNUM. That is a fair summary, yes.

Mr. CARTER. Is it true also that the ties on the railbeds are used three times as long as those on other comparable railroads?

Mr. BARNUM. I think that is also a fair summary. Of course, we are concerned with the rate at which the Penn Central has been replacing ties and rails. And they have been replacing them much more slowly than the railroads of the South and West.

Mr. CARTER. How many derailments did you have last year on Penn Central?

Mr. BARNUM. I can't give you the gross figure. I know when the Federal Railroad Administration shut down certain lines of the Penn Central, there were something like 487 derailments over a relatively short period of time, caused among other things by some 62 places where the FRA said they could not operate trains at any speed.

Mr. CARTER. Do you recommend the U.S. Government take over the railbed of this area?

Mr. BARNUM. I do not.

Mr. CARTER. All right, sir. I have a letter here from Erie Lackawanna, a copy of it, from the chairman, in which instead of asking for $25 million, they are asking for $15 million. You have increased that amount. For what reason?

Mr. BARNUM. That is correct. I believe that that letter may have been written prior to the action of the ICC last Thursday rejecting the 7-percent rate increase.

Digitized by Google

Mr. BARNUM. That is a fair comment, but I would remind you, Mr. Van Deerlin, when this committee and the Congress addressed the question of what we should do with respect to the executives of the United States Railway Association, on the one hand, and ConRail, a private sector railroad, on the other hand, the judgment of the Congress was that it would be appropriate to limit the salaries payable to the officials of USRA, but it would not be appropriate to place any limitations on the salaries of the officials that were to run ConRail. Mr. VAN DEERLIN. In the negotiations with Mr. Reistrup was there any assurance given him that the full force of the Department would be placed behind an effort to get this limitation raised?

Mr. BARNUM. Yes, sir. I gave him that assurance personally.

Mr. VAN DEERLIN. I see. I will admit, in a society that pays a 20-game winner in the American League more than the President or a Supreme Court Justice, that these are questions which don't lend themselves to hard and fast answers.

Thank you.

The CHAIRMAN. The gentleman from Kentucky, Dr. Carter.

Mr. CARTER. Thank you, Mr. Chairman.

I would like to ask you if you are familiar with the condition of rails and the ties on the Pennsylvania Railroad.

Mr. BARNUM. Only second-hand, Dr. Carter.

Mr. CARTER. What about the usage time of the rails? Is it true that they have been used five times as long as is usual for rails on other modern railroads?

Mr. BARNUM. That is a fair summary, yes.

Mr. CARTER. Is it true also that the ties on the railbeds are used three times as long as those on other comparable railroads?

Mr. BARNUM. I think that is also a fair summary. Of course, we are concerned with the rate at which the Penn Central has been replacing ties and rails. And they have been replacing them much more slowly than the railroads of the South and West.

Mr. CARTER. How many derailments did you have last year on Penn Central?

Mr. BARNUM. I can't give you the gross figure. I know when the Federal Railroad Administration shut down certain lines of the Penn Central, there were something like 487 derailments over a relatively short period of time, caused among other things by some 62 places where the FRA said they could not operate trains at any speed.

Mr. CARTER. Do you recommend the U.S. Government take over the railbed of this area?

Mr. BARNUM. I do not.

Mr. CARTER. All right, sir. I have a letter here from Erie Lackawanna, a copy of it, from the chairman, in which instead of asking for 25 million, they are asking for $15 million. You have increased that amount. For what reason?

Mr. BARNUM. That is correct. I believe that that letter may have been written prior to the action of the ICC last Thursday rejecting the 6-percent rate increase.

Mr. CARTER. This was on the 22d of January. That is possibly true. I notice you advise also the purchase of rolling stock, but you would retain title to that stock. That is, for the U.S. Government, is that correct? Or for ConRail?

Mr. BARNUM. That is correct.

Mr. CARTER. You would separate that from the ownership of stockholders, is that correct?

Mr. BARNUM. That is correct. That could come to pass in either of two ways. Let's take the situation where the railroad is currently making installment payments under an equipment-purchase agreement, and they have made five installments to date of $1 million each. There are five more installments of $1 million each to be paid.

We would make those payments and thereby acquire a one-half interest in the rolling stock.

Mr. CARTER. How long do you think it will take to get Penn Central on a paying basis, if ever?

Mr. BARNUM. Well, we don't envision trying to put the Penn Central per se on a paying basis. The USRA is wrestling with the question of what properties of the Penn Central and other railroads should be included in a system called ConRail, and the answer to the projections of profitability must be provided by the preliminary plan due February 26.

Mr. CARTER. You think it will be profitable by what time?

Mr. BARNUM. I spent this morning and will go back this afternoon to the United States Railway Association board meeting, where we are wrestling with those questions.

Mr. CARTER. Is this true? Is Erie Lackawanna in some areas parallel to Penn Central?

Mr. BARNUM. Yes; it is.

Mr. CARTER. Are you going to have them in competition?

Mr. BARNUM. Well, if the Erie Lackawanna is not able to reorganize on its own, and its properties become available either to ConRail or the Norfolk & Western or the Chessie, which also operate throughout the same region, whether or not the Erie Lackawanna line would continue in competition would depend upon the interest one railroad or another would have in providing that service.

In some parts of the region the Erie provides the fourth service. The Norfolk & Western, the Penn Central and Chessie are also there. The Erie is the only service available in other parts of the region.

Mr. CARTER. I didn't get your final answer, if you recommended——

Mr. BARNUM. As we look at it today, there are parts of the Erie Lackawanna that should be preserved in some rail system in order to provide competition.

Mr. CARTER. Thank you, Mr. Chairman.

The CHAIRMAN. The gentleman from Pennsylvania, Mr. Rooney.

Mr. ROONEY. In your testimony you talked about a 100-percent increase for fuel. Does your $250 million include increased costs for fuel which would result if we adopted the administration's energy proposal?

Mr. BARNUM. No; it does not.

Mr. ROONEY. What would you estimate that would cost?

Mr. BARNUM. Additional? I would give you an off-the-cuff estimate

Digitized by Google

that for the period of time we are talking about, that could cost the Penn Central about another $100 million.

Mr. ROONEY. You will be coming back in August for another $100 million?

Mr. BARNUM. Not unless the ICC disregards the very evidence of increased operating costs resulting from fuel costs and does not give the railroads rate relief.

Mr. ROONEY. I have seen an engineer's report on the condition of the Penn Central track and understand it would cost between $4 and $5 billion to rehabilitate their track over the next 10 to 15 years. Do you agree with that?

Mr. BARNUM. Yes. It was done by the chief engineers of six of the prosperous railroads of the Nation, and we in the department are grateful to them for doing it. Their figure was $4.6 billion, uninflated, and the analysis we have done substantially corroborates that need.

Mr. ROONEY. Where will this money come from if we are going to rehabilitate that track?

Mr. BARNUM. Either from the loan guarantee provisions of the Regional Rail Reorganization Act or from operating income.

Mr. ROONEY. Under section 212 your Department must keep exact records of the railroads involved that receive loans and grants. Have you done a very thorough study on this subject?

Mr. BARNUM. We have done a number of audits. The Department of Transportation has on several occasions sent its auditors to Philadelphia to audit the ways in which the Penn Central has applied the funds we have made available under those grants.

Mr. ROONEY. I have no further questions.

The CHAIRMAN. The gentleman from Kansas, Mr. Skubitz.

Mr. SKUBITZ. Mr. Barnum, on page 3 of your testimony you refer to a three-point program submitted by the trustees to save money. But your organization, in turn, found this unacceptable because it would result in unsafe conditions on the railroads. That isn't anything new. On these railroads, and I am thinking now in terms of some of the questions that Dr. Carter raised, because of unsafe conditions we have had any number of rail accidents, have we not, including several serious accidents on the Amtrack line? Is that not correct?

Mr. BARNUM. That is correct.

Mr. SKUBITZ. Now, under section 213, the act will allow $85 million for operating expenses. If I understood you correctly, all but $4 million of that has been used. Is this correct?

Mr. BARNUM. That is correct. I would not limit the applicability of section 213 to operating expenses, Mr. Skubitz.

Mr. SKUBITZ. I understand. You are asking for an additional $100 million, not only for operating, but maintenance; is that correct?

Mr. BARNUM. I think the original section 213 authorized us to use those funds for operating and maintenance. I would point out to you the first application of section 213 funds was used to make installment payments for equipment purchases.

Mr. SKUBITZ. What sort of equipment?

Mr. BARNUM. Boxcars, as I recall.

Mr. SKUBITZ. Big boxcars. I believe in some instances locomotives also, is that correct?

Digitized by Google

Mr. BARNUM. Those were acquired with a loan made under section 215, $3.4 million to Lehigh Valley.

Mr. SKUBITZ. You are asking for $100 million more for operating and maintenance; is that correct?

Mr. BARNUM. The proposal we sent to the Congress on January 17 asked for that amount. We are now asking that the $100 million be augmented in two respects: $25 million for the Erie Lackawanna and $30 million to make up for the funds that the railroads will not receive from what they had anticipated would be a rate increase.

Mr. SKUBITZ. Now, under section 215 this committee allowed $150 million, and that $150 million was to be used for maintenance, roadbeds, and things of that nature; isn't that correct?

Mr. BARNUM. It was for acquisition, maintenance, or improvement of rail facilities that would be included in the final system plan.

Mr. SKUBITZ. How much of that $150 million have you now used in roadbed improvements alone?

Mr. BARNUM. None has been spent to date for that purpose, but the chart attached to my statement outlines how we would expect to spend about $300 million, much of it on roadbed maintenance.

Mr. SKUBITZ. You expect to use it, but you have not used any of the $150 million we allocated for that purpose. And how much of that is left?

Mr. BARNUM. Well, we did use $3.4 million for locomotives for the Lehigh Valley.

Mr. SKUBITZ. About $147 million is still left; isn't that correct?

Mr. BARNUM. That is correct. The way in which that would be applied is set forth in the schedule attached to my statement.

Mr. SKUBITZ. You are now asking for an additional $150 million; is that correct?

Mr. BARNUM. That is correct.

Mr. SKUBITZ. So while the trains were being wrecked because of poor roadbeds, passenger trains being wrecked, and lawsuits are now pending, I presume either against the bankrupt railroads—which I don't think is correct—or against Amtrak, which may be covered by insurance, you did nothing? You did nothing about roadbed maintenance?

Mr. BARNUM. Well, it is not our responsibility to perform the maintenance.

Mr. SKUBITZ. I understand. You did not allocate any money for it. The bankrupt railroads could do nothing without money.

Mr. BARNUM. During this period the Penn Central was budgeting approximately $300 million a year for roadbed maintenance. I will be the first to admit that that was not enough. It was the prospect that that amount would be cut substantially and employees who could perform the maintenance would be laid off that led us to urge the Congress to supplement the amounts available.

Mr. SKUBITZ. I believe you just agreed with the chairman of our subcommittee that there was a study that would call for $5 billion to improve Penn Central alone.

Mr. BARNUM. Over 8 years.

Mr. SKUBITZ. So when we talk of $300 million that Penn Central allocated for 1 year, we are talking about peanuts?

Mr. BARNUM. It is a substantial investment in maintenance.

Mr. SKUBITZ. When compared to $5 billion it is peanuts.

Digitized by Google

Mr. BARNUM. In our opinion the amount should be and could be doubled.

Mr. SKUBITZ. Do you think you folks should have done something about Penn Central when you saw these wrecks on the lines, when there were Amtrak trains being wrecked. Is it your position that you were not responsible because, after all, Amtrak is not your responsibility and hauling freight is? And if roadbeds are to be fixed in order to carry Amtrak trains, then it is our responsibility to help maintain those roadbeds?

Am I wrong or not?

Mr. BARNUM. Well, I believe, Mr. Skubitz, it is the Government's responsibility initially to inspect the properties of the railroads and, where appropriate, to require that service not be continued until the properties have been repaired or at least slow orders imposed.

The Federal Railroad Administration did do both of those things with respect to substantial segments of the property.

Mr. SKUBITZ. But it isn't enough, Mr. Barnum, just to inspect. It is necessary to repair and if you don't have the money, and we have allocated money for that primary purpose, it seems to me you have been negligent in not doing something about it.

The CHAIRMAN. Your time has expired.

Mr. SKUBITZ. Will I be able to ask questions at the end?

The CHAIRMAN. The second time around.

Mr. Adams, the gentleman from Washington.

Mr. ADAMS. Thank you, Mr. Chairman.

Mr. Barnum, I want to ask you, first, if, under the Supreme Court decision, is it not correct that the Court has said that a reorganization plan can be forced on the Northeast railroads? They can be required to take stock and the plan will go into effect with the caveat that if the reorganization plan is not fair and equitable, the creditors can sue under the Tucker Act?

Mr. BARNUM. Yes.

Mr. ADAMS. So that we are in a position now to go forward with this act and, in effect, reorganize the existing Northeast railroads?

Mr. BARNUM. Yes.

Mr. ADAMS. Now, if the Erie Lackawanna is placed in that act, do you not agree that since there is a split between the creditors of that estate and the trustees and the original owners of the estate, there is a very good possibility that the creditors will litigate that act again, saying that the terms of reorganization have been changed?

Mr. BARNUM. I agree with you 100 percent, and I would suggest that not only the creditors of the Erie Lackawanna, but the creditors of the Penn Central.

Mr. ADAMS. The creditors of all of the estates would at least use this as a lever for going back to court?

Mr. BARNUM. They would.

Mr. ADAMS. Now, I want to avoid that. And I want to know whether or not you believe we could not amend another act which would be the Emergency Rail Services Act, and grant in effect nonrecourse trustee certificates to the extent—I believe there is some money left in that act, we might have to increase it—to give the Erie Lackawanna enough funds to at least get through until ConRail is in a position to make an offer to them?

Digitized by Google

Mr. BARNUM. Under the Emergency Rail Services Act of 1970 there are about $19 million that have not been committed; $100 million went to the Penn Central, $6 million has been committed, and $2 million actually given to the Central of New Jersey. I do not believe a separate appropriation act would be required to permit the Secretary of Transportation to make available the remaining amount.

Mr. ADAMS. Are you talking about the original act under which we gave money to the Penn Central?

Mr. BARNUM. The Agnes Act authority has expired, in that railroads had had to apply for funds within a certain time period.

Mr. ADAMS. All right——

Mr. BARNUM. May I apologize for taking more of your time, but the problem that might arise in the use of the Emergency Rail Services Act is it would only be a loan to the Erie Lackawanna. And the Erie Lackawanna court may not want to have——

Mr. ADAMS. I understand that. But if we dropped that down to the unsecured creditor level——

Mr. BARNUM. Or to the level of a prebankruptcy unsecured creditor. I might prefer to amend that authority so we could make a bridge loan of that nature, and at the same time amend section 213 so when the Appropriations Committee is able to appropriate additional funds under section 213, the Erie Lackawanna could be given a grant, albeit on the conditions set forth in 213, and repay the bridge loan.

Mr. ADAMS. Now I want to shift to your proposal for section 213 of the Regional Rail Reorganization Act, I have difficulty in opposing your request because you remember when we were doing that act, I recommended $285 million for interim operating money because $85 million would never work.

Mr. BARNUM. I am sure you are right.

Mr. DINGELL. Will you yield?

Mr. ADAMS. Yes.

Mr. DINGELL. Will you see to it we have drafting service from your agency on the point just previously discussed with Mr. Adams in his previous colloquy from you?

Mr. BARNUM. You are talking about the Emergency Rail Services Act?

Mr. DINGELL. Yes.

Mr. ADAMS. What I am concerned about is this: That you have asked for money to go through the first calendar quarter 1976. I am concerned about the fact that we seem to be faced with continuing litigation from creditors of these bankrupt railroads, and when we are considering the plan that comes up to the Hill at the end of July this year, that if we have just simply given away money all the year, and are continually giving away money, we are going to be faced for suits for interim erosion and additional collection.

Why should we give the total amount at this point rather than taking that into account since we are going to, obviously from your testimony just previously, have to go with another billion later on anyway?

Mr. BARNUM. Well, I am not as convinced as perhaps you are that we will have to go with another billion. I would——

Digitized by Google

Mr. ADAMS. In other words, if the energy bill goes through in some fashion, you indicated there would be another billion. I am concerned about how we deal with these people when ConRail is about to make its offers and we have, in effect, given away an additional number of billions of dollars before we even get to the wrestling stage?

Mr. BARNUM. I don't think of it as giving it away. Under section 215 we would, in fact, be making a prepayment for ConRail.

Mr. ADAMS. I am talking about the 213 section; 215 I understand.

Mr. BARNUM. Under section 213 we intend to impose the same conditions we did with the first $10.8 million we authorized under that section.

Mr. ADAMS. The creditors will litigate with you again?

Mr. BARNUM. They did before and lost before.

The CHAIRMAN. All right.

Mr. BARNUM. May I add one thing, because I think it is important to Mr. Adams' consideration as to whether or not you should take it in bites. I would remind him of the very fair comments made by Mr. Skubitz with respect to the opportunity to improve the properties of the Penn Central. One of the reasons we would like to see the committee approve the amendment increasing 213 at this time is to allow us to begin placing orders for ties and rails and rolling stock which are very much an important part of the rehabilitation of the property.

Not to do it at this time is going to delay the day when the Government is going to be able to start doing the kinds of things Mr. Skubitz would have us do.

Mr. ADAMS. You can't do that until you see the plans.

Mr. BARNUM. We can tell you right now that by getting in line for track and rail and waiting a year and a half for its delivery, when we have the plan we will know where to put it.

Mr. ADAMS. And spend your $150 million.

The CHAIRMAN. The gentleman from Texas, Mr. Collins.

Mr. COLLINS. Mr. Barnum, you are part of the administration and I am sure you have been reading this book we have all been reading called the Budget of the United States. It looks to me like we might run $100 billion in deficit up here. So what we are talking about before this committee is borrowed money. We are going to call on the taxpayers to borrow money to provide for this railroad.

I have sat in with this committee for several years and we have had one emergency after the other. And if this happened in the hospital, I think the doctor would recommend there be some kind of an operation or surgery. In this particular report, when the trustees recommend taking positive action, you all came out against it. They said they thought we should not pay wage increases due in 1975.

To me that seems pretty reasonable. This railroad is losing money. Why pay a wage increase?

Mr. BARNUM. Because, Mr. Collins, if they do not pay the wage increase other railroads of the Nation have negotiated with the unions, effective the first of this year, in my judgment there is a very substantial likelihood the railroad would stop operating.

You talk about a substantial deficit in the total Federal budget. That is true, $52 billion. It is that size because it projects a certain level of revenues and they are a reflection of the level of taxes, which reflect income. If the Penn Central stops operating, the national income

Digitized by Google

level will drop, the taxes will drop, and your budget deficit will increase. By making these modest investments to continue rail operations in these 17 States, you will do more to keep the deficit down than anything else.

Mr. COLLINS. You say the workers of these railroads are not willing to help or cooperate by holding the line on expenses, is that your statment?

Mr. BARNUM. I have not personally talked to the Penn Central or their unions. However, I have beeen advised by the Penn Central management that in the event they do not make the 1975 payments, increase the wages, there is a likelihood they will be struck. The management is here and could give you a first hand report on that question.

Mr. COLLINS. They made a statement here that they thought the labor force should be reduced by 4,500 people. Usually the first thing to do is try to eliminate any jobs that can be cut out. Why are you opposed to cutting these 4,500 jobs?

Mr. BARNUM. The 4,500 jobs listed there include 3,500 people that should be doing maintenance on this property. If the maintenance of way is not kept up, the whole operation will stop. Shippers will divert their traffic to other properties. Penn Central has already laid off a number of people on the operating side because the 7-percent decrease in its traffic has reduced the need for operating personnel. We would not like to see them decrease their work force on maintenance of way. There the demand is increased, not decreased.

Mr. COLLINS. As I recall, when this case first came up, the judge said he thought that about 5,000 miles of track should be discontinued. What was it the judge said? How many miles of dead track should be discontinued?

Mr. BARNUM. In a report submitted several years ago, the Penn Central trustees estimated a reduction of more than 5,000 miles.

Mr. COLLINS. Now, the Transportation Department came out against that. It seems to me if we would have discontinued that track and concentrated on the live active track, we would have active maintenance. Why were you against that?

Mr. BARNUM. That is not accurate. We were not opposed to their abandoning properties. We have supported the Penn Central in a number of its applications. The February 1, 1974, report submitted by the Department of Transportation pursuant to the Regional Rail Reorganization Act, recommended that over 5,000 miles be considered for abandonment. We did not at any time oppose the abandonment.

Mr. COLLINS. You just quoted the 1974 act, and I thought that was recommended by the Transportation Department, that service be continued as it was?

Mr. BARNUM. The Congress determined that during the planning process certain procedures should be followed before properties are abandoned. There is right in the act a separate provision that says how a railroad in reorganization may abandon its properties. Some abandonments have been performed.

Mr. COLLINS. Would you recommend in this act that we specify that 6.000 or 7,000 or however many miles it is—that they should be abandoned now? Should we put that in this bill now?

Mr. BARNUM. No, sir; I believe that is something the Congress should leave to the U.S. Railway Association.

Digitized by Google

Mr. COLLINS. Of course, it seems if we are putting the money up, we ought to put it up on a sound basis. Why shouldn't we act on abandonments now?

Mr. BARNUM. You have in the sense you have given to the U.S. Railway Association a mandate to extract from the 25,000-plus miles of the several bankrupt railroads a viable system. That will necessarily contemplate some abandonment.

Mr. COLLINS. Have any tracks been abandoned? And if not, why not?

Mr. BARNUM. Some have been.

Mr. COLLINS. All right. Thank you, Mr. Chairman.

The CHAIRMAN. The gentleman from Missouri, Mr. Symington.

Mr. SYMINGTON. Thank you, Mr. Chairman.

I simply want to commend the witness for his succinct and informed answers, and for being with us today. I have no questions at this time.

Mr. BARNUM. Thank you, Mr. Symington.

The CHAIRMAN. The gentleman from Nebraska.

Mr. MCCOLLISTER. These proposals that DOT makes are interim until ConRail takes over?

Mr. BARNUM. That is correct.

Mr. MCCOLLISTER. What is your estimate when the final system plan will be submitted to the Congress for approval?

Mr. BARNUM. The present schedule is July 26, 1975.

Mr. MCCOLLISTER. Do you believe that date will be kept?

Mr. BARNUM. Yes, sir.

Mr. MCCOLLISTER. Then as I recall the act, we have 60 days in which to approve it in the Congress?

Mr. BARNUM. That is correct; 60 legislative days.

Mr. MCCOLLISTER. So that perhaps by early December, surely by January, ConRail will be ready to go in some form or other?

Mr. BARNUM. That is our expectation.

Mr. MCCOLLISTER. All of this we are considering today and this week. Then based on the interim situation, does it not seem likely that these same conditions which have worsened the Penn Central and other Northeast rails are likely to continue, sir, when ConRail takes over, even though ConRail may be operating on less track and be able to concentrate their maintenance effort a little better? But don't these same economic conditions that have made the Penn Central situation so urgent carry over to ConRail?

Mr. BARNUM. Many of them do; that is correct. The increased cost of fuel and the downturn in the economy do. Certainly the downturn in the automobile business will greatly affect the properties remaining for ConRail.

Mr. MCCOLLISTER. How does it affect the Department of Transportation's estimate of ConRail being a viable profitable private entity?

Mr. BARNUM. USRA is taking these matters into account in estimating the operating revenue of ConRail.

Mr. MCCOLLISTER. Have you seen anything from the USRA? Any estimates?

Mr. BARNUM. I sit on the board of directors of USRA. We met all day yesterday and will meet today and next week in preparation of the preliminary system plan which is due to be published on the 26th of

Digitized by Google

February. The answers to the questions of what will be the viability of ConRail, what will be the cost of rehabilitation—at an estimated level, for this is a preliminary plan—will be made available on the 26th of February. It would be premature to make any guesses about it at this time.

Mr. McCollister. Mr. Chairman, I yield to the gentleman from Kansas.

Mr. Skubitz. Mr. Barnum, Mr. Adams raised the question of the Erie Lackawanna creditors proceeding under the Tucker Act if they were included under this bill. In response to that question, if I understood correctly, your answer was yes, that they could. Am I right?

Mr. Barnum. It depends on how you include them, Mr. Skubitz. If you permit the reorganization court that is presiding over the Erie Lackawanna——

Mr. Skubitz. If we were to——

Mr. Barnum [continuing]. To go back and make the determinations it might have made 120 and 180 days after the date of enactment of the Act, they would be in the same posture as the Penn Central, and the creditors would be in a position to make Tucker Act claims based on erosion and the conveyance of their properties.

Mr. Skubitz. I am no authority on the Tucker Act, but if we proceed to permit the Erie Lackawanna to come in as they want to now, the creditors could proceed under the Tucker Act.

Mr. Barnum. That is correct.

Mr. Skubitz. I think you added the phrase, "Yes, and the Penn Central people could, too"?

Mr. Barnum. That is correct.

Mr. Skubitz. That is nearly the statement I made on the floor when this bill was before us. The initial bill was on the floor, when I said "Don't be kidded, this thing is going to cost this country $10 billion to $12 billion before we get it into operation."

Now I would like to turn to the Penn Central just 1 second. Am I correct, or do you disagree, that if we had not acted, the Penn Central would have gone on the rocks?

Mr. Barnum. No question about it.

Mr. Skubitz. All right. And if I understand what you are suggesting now, you are stating that we don't want to take Erie Lackawanna in tight until the final systems plan is worked out, and that we will subsidize or provide additional funds to Erie Lackawanna in the interim. And then—is that correct?

Mr. Barnum. That is correct.

Mr. Skubitz. And then when we get the final systems plan worked out, you are not stating it this way, but we will pull the rock out from under Erie Lackawanna, force it into bankruptcy, and then be able to deal with them as we want to deal with them. Is that correct?

Mr. Barnum. No, it is not correct. They are already in bankruptcy.

Mr. Skubitz. Mr. Chairman, some way or other, I am going to get my questions in.

The Chairman. The time has expired.

The gentleman from Ohio, Mr. Carney.

Mr. Carney. I have been impressed by Mr. Barnum, Mr. Chairman. Do you think this bill itself is, is this another patch-plaster thing,

Digitized by Google

or a band-aid? Will we be back here next year? You are the successor to this group. Is Government going to be expected from now on out to keep adding every year money to these railroads and doing an inadequate job, in my opinion? Is this going to continue?

Mr. BARNUM. I certainly hope not, sir. I think the Congress, in passing the Regional Rail Reorganization Act, took the first necessary step to a long-term remedy for the railroads of this region. I think if the Congress would take the next step and enact something along the lines of the Surface Transportation Act which this committee and the House of Representatives passed in the last session, they would take the second very meaningful and necessary step without which reorganized railroads in the Northeast will not be able to survive. They need long-term loan guarantees available to them, and certain regulatory reform, without which railroads will not be able to survive.

Mr. CARNEY. You say unless what?

Mr. SKUBITZ. In addition to the act and the amendments we have suggested today, the Congress should also enact the Surface Transportation Act, which the House of Representatives did pass last session.

Mr. CARNEY. Thank you.

The CHAIRMAN. Mr. Lent, of New York.

Mr. LENT. Thank you.

I would like to yield my time to the gentleman from Kansas, Mr. Skubitz.

Mr. SKUBITZ. Getting back to my question again, Mr. Barnum. I stated that once we subsidized them until ConRail was established, and then I said we would pull the rug out from under them. What I meant was we would cease giving them any funds to carry on. And the net result would be then Erie Lackawanna would be out of the business or be forced to take bankruptcy.

Now, you said this is not correct. I ask why.

Mr. BARNUM. The Erie Lackawanna is already in bankruptcy. Technically, it is said to be in reorganization under section 77 of the stated that we would subsidize them until ConRail was established, Bankruptcy Act. It is in reorganization. What the Erie Lackawanna will have to do in any event is either to reorganize on its own, or dispose of its property to other railroads. The trustees have determined it cannot reorganize on its own.

But, Mr. Skubitz, excuse me. The properties of the Erie Lackawanna that do or could contribute to a viable rail system will be acquired, either by ConRail or by one of the other solvent railroads in the region. The only difference between what the Erie Lackawanna trustees urge and what we urge you to do is the Erie Lackawanna trustees would have the Congress require that the properties of the Erie Lackawanna be transferred to ConRail or to a solvent railroad as determined by the USRA, assuming the court first reaches the determination that the railroad cannot be reorganized within a reasonable period of time. We urge that you put the trustees in a position where they can continue to operate for a year and a half and at that time they can negotiate either with ConRail or the other railroads in the region that could very profitably pick up parts of the Erie Lackawanna system——

Mr. SKUBITZ. Which railroads? What railroads are you talking about?

Digitized by Google

Mr. BARNUM. The Chessie system or Norfolk & Western could use to great advantage parts of the Erie system in New York and New Jersey.

Mr. SKUBITZ. Very little.

Mr. BARNUM. I don't think that is quite accurate, Mr. Skubitz.

Mr. SKUBITZ. You say they are in bankruptcy today. They were forced there really. One of the big factors is the fact that one of their major contributors or users of the line was the automobile industry, isn't that correct? And they have lost that business.

Now, eventually they are going to go. Would it not make a lot more sense, at this moment, to consider this railroad, along with the others, in defining and establishing a final system, rather than going along later and picking up a part here and a part there? What you are saying, or I think you are going to say—is well, they will be able to come in under the Tucker Act and claim more money.

Mr. BARNUM. That is correct.

Mr. SKUBITZ. Now, if that is correct, let me ask my next question: How many miles of traffic has Penn Central got and how many miles has Erie Lackawanna got?

Mr. BARNUM. Penn Central has about 20,000 miles.

Mr. SKUBITZ. Now——

Mr. BARNUM. Erie Lackawanna has 2,800 miles in the State of New York, Pennsylvania, New Jersey, Ohio, Indiana, and Illinois.

Mr. SKUBITZ. We are talking about 20,000 against 2,000. What is the total number of cars Penn Central has as against Erie Lackawanna?

Mr. BARNUM. I would assume it is roughly in the order of 10 to 1.

Mr. SKUBITZ. And the number of employees?

Mr. BARNUM. It is about 10 to 1 also. The Erie Lackawanna employs 11,000 people. The Penn Central at last count, has around 95,000.

Mr. SKUBITZ. Under those circumstances, 10 to 1. As fas as the creditors are concerned, since Penn Central could go in and so could Erie Lackawanna, and we would have an opportunity to get this settled once and for all, aren't we talking about peanuts when we are talking about Erie?

Mr. BARNUM. You are. That is a critical point.

Mr. SKUBITZ. Let's get the job done right.

Mr. BARNUM. Let me tell you why. You are risking reorganizing the Penn Central, Lehigh Valley, CNJ, Ann Arbor and Reading under the Regional Rail Reorganization Act, all for the sake of meeting the trustees' desire that they be treated the same way. You are risking it because you are going to throw back into the courts the whole question of the constitutionality of the action. For the "peanuts" Mr. Skubitz, I suggest it is not worth the risk.

The CHAIRMAN. Time is up.

Mr. SKUBITZ. I will be back, Mr. Chairman.

The CHAIRMAN. The time has expired.

Mr. Metcalfe.

Mr. METCALFE. Thank you, Mr. Chairman.

I recall the importance of the railroads being essential to the economy of the United States, but I would like to associate myself with the questions and the remarks made by my distinguished colleagues, Mr. Collins, from Texas, and Mr. McCollister, from Nebraska, and Mr.

Digitized by Google

Carney, from Ohio. I have the same concern as to where are we going.

Now, if my memory serves me correctly, in the 91st Congress the Penn Central came to the Congress and asked for relief and received it. I was not a Member of Congress then. I do believe that it was the feeling in the 91st Congress that we had solved the problem.

Obviously we did not, because in the 93d Congress we had to pass the ConRail bill, or the Railroad Reorganization Act. And I am directing my remarks to this—do you come back all of the time? I have the feeling that as long as you can come to Congress and then make an intelligent presentation, as you have today, Mr. Secretary, that we are just in a perpetual motion, and we are not really resolving the need of the railroads to exist.

I am concerned that it rests not with the economy, in and of itself, but more with the management at the top level. I would like to have some assurance that there has been some drastic change, recollecting that ConRail is presently in court today, that next year, if we should grant the relief, that you won't be back. I know that you have said that on two previous occasions, but you are back. Could you address yourself to that?

Mr. BARNUM. Mr. Metcalfe, I am as reluctant to come back to the Congress and ask for more money as you are to have me come back. But I am bound, obviously, to apprise you of a very serious situation with respect to this railroad. It is our judgment that it is appropriate to apply taxpayer money to keep this property operating for a year and a half. In the last Congress you made a major step in adopting the Regional Rail bill, and your subcommittee and this committee, and the House of Representatives took a second step with the Surface Transportation Act. And we are going to be coming back again and again, unless the Congress enacts this session something along the lines of the Surface Transportation Act.

Mr. METCALFE. My concern is, and then I will be through, Mr. Chairman, my concern is the lack of proper leadership in all of these instances, and it seems to me that is where we ought to focus our attention. The Southern railroads can be successful, and then the Penn Central cannot be, and now the Erie Lackawanna cannot be, why is it? I submit to you, in my limited judgment, it is because of the top management. I am concerned with that.

Mr. BARNUM. Of course, one of the effects of reorganizing these several railroads will be to create the new corporation, ConRail, which technically is already in existence. USRA and the incorporators of ConRail, which consist of the Executive Committee of USRA, will be working on the selection of the management for ConRail.

A majority of the members of ConRail's Board of Directors will be Presidential appointees so long as more than 50 percent of the outstanding indebtedness of ConRail consists of debts owing to or guaranteed by the Government. We are as aware as you of the desirability of having topflight management. I was pleased in talking to the top engineers who went to the Penn Central property to learn of their enthusiasm for the middle management officials of the Penn Central they had met. So I do not think it is as pervasive a problem as perhaps your question suggests.

Mr. METCALFE. I yield to the gentleman from Florida.

Digitized by Google

Mr. ROGERS. I thank you for yielding.

Mr. Secretary, have you had any study done to see how these funds previously given to Penn Central and some of the others have been used? Have they been used in line with the assurances given to this committee and the Congress as to how they would be spent?

As I recall, they said they were going to fix up the lines before, and here you are coming back and saying you need this money to fix the lines again. It seems to me we are getting this repetition and nothing is being done. Nothing seems to have any impact. Have you done a study to see if the funds have been spent?

Mr. BARNUM. Several times we have ordered a review of Penn Central's application.

Mr. ROGERS. What are your findings?

Mr. BARNUM. They have been properly applied.

Mr. ROGERS. Could you furnish this committee with those findings?

Mr. BARNUM. Yes, sir.

[Testimony resumes on p. 93.]

[The following information was received for the record:]

REPORT ON AUDIT OF DEPARTMENT OF TRANSPORTATION EMERGENCY FINANCIAL ASSISTANCE TO THE PENN CENTRAL TRANSPORTATION COMPANY DATED NOVEMBER 6, 1974

The following report covers activities under the Emergency Rail Services Act of 1970 and the Emergency Rail Facilities Restoration Act.

The Report states that procedures used in affording financial aid under those Acts did not permit the auditors to determine whether funds provided to Penn Central were used in accordance with the provisions of the two statutes. For example, the Penn Central was not required to maintain separate accounting for the disposition of loan funds guaranteed under the Emergency Rail Services Act of 1970. However, on the basis of cash flow statements supplied to the Department periodically by Penn Central, funds provided the Penn Central were used only for expenses necessary to continuing rail operations.

With respect to the use of funds provided by the Department under section 213 of the Regional Rail Reorganization Act of 1973, we have no audit report comparable to the one on the two Acts cited above. However, a report is being prepared by Department auditors on Penn Central's cash management processes and subsequently, reports will follow on the use of section 213 funds.

REPORT ON AUDIT OF DEPARTMENT OF TRANSPORTATION EMERGENCY FINANCIAL ASSISTANCE TO THE PENN CENTRAL TRANSPORTATION COMPANY

EXECUTIVE SUMMARY

The Office of Audits, OST, performed an audit of the emergency financial assistance provided to the Penn Central Transportation Company (Penn Central) under the Emergency Rail Services Act of 1970, and the Emergency Rail Facilities Restoration Act of 1972. The purpose of the audit was to determine: (a) whether the proceeds from the guaranteed loans and the direct loans provided to Penn Central were used in accordance with provisions of the laws, and the terms and conditions established by the Department of Transportation (DOT); and (b) the effectiveness of the Federal Railroad Administration's (FRA) activities in monitoring and reporting on Penn Central's use of the emergency financial assistance.

A. Emergency Rail Services Act of 1970

An adequate determination could not be made as to whether funds provided to Penn Central under the Emergency Rail Services Act were expended in accordance with the Act and the Guaranty Agreement and were used solely for expenses necessary for continuing essential transportation services, or that other revenues of the railroad were used to the fullest extent for such expenses as required by the Act.

This determination could not be made because FRA did not require Penn Central to identify those expenses necessary for essential transportation services or maintain separate accounting for the disposition of loan funds. In addition, FRA neither required nor received any data which could be used for monitoring loan fund expenditures.

Penn Central co-mingled the proceeds of the sale of the guaranteed loan certificates with other railroad revenues, and consequently, the loan monies could not be identified to any specific railroad expenditures.

For future financial assistance programs, Penn Central should be required to submit information on the specific uses of funds and maintain records identifying the receipt and specific expenditures of funds.

Digitized by Google

B. Emergency Rail Facilities Restoration Act

A determination could not be made as to whether funds provided to Penn Central under Emergency Rail Facilities Restoration Act had been used in accordance with the provisions of the laws and terms and conditions established by FRA since there were no records to indicate the condition of Penn Central tracks, equipment or facilities prior to Hurricane Agnes or immediately thereafter. Also, no work has begun for the restoration of the Penn Yan line even though FRA directed the Trustees to proceed with the restoration, and failure to act could be considered a default under the loan agreement.

FRA's monitoring efforts did not provide a technical evaluation of the storm damages, nor were progress reports of repair and restoration of the damaged facilities prepared. For future financial assistance programs, FRA should issue monitoring procedures and assign responsibility for on-site technical surveillance of the work to be done.

Digitized by Google

REPORT ON
AUDIT OF DEPARTMENT OF TRANSPORTATION
EMERGENCY FINANCIAL ASSISTANCE
TO THE PENN CENTRAL TRANSPORTATION COMPANY

I. INTRODUCTION

We have completed an audit of the emergency financial assistance provided to the Penn Central Transportation Company (Penn Central) under the Emergency Rail Services Act of 1970, and the Emergency Rail Facilities Restoration Act of 1972. The purpose of the audit was to determine: (a) whether the proceeds from the guaranteed loans and the direct loans provided to Penn Central were used in accordance with provisions of the laws, and the terms and conditions established by the Department of Transportation (DOT); and (b) the effectiveness of the Federal Railroad Administration's (FRA) activities in monitoring and reporting on Penn Central's use of the emergency financial assistance.

The audit included a review of the work performed by the Interstate Commerce Commission (ICC) auditors, the CPA firm of Haskins and Sells, and Penn Central's internal auditors. The ICC alone, from 1970 thru 1973, expended approximately 4500 mandays involving as high as 22 individual auditors, while Haskins and Sells' Calendar Year 1973 financial audit took 2365 mandays with a peak force of 131 auditors.

II. SUMMARY OF RESULTS OF AUDIT

A. Emergency Rail Services Act of 1970

We were unable to adequately determine whether funds provided to Penn Central under the Emergency Rail Services Act were expended in accordance with the Act and the Guaranty Agreement. We could not determine whether the proceeds from the sale of certificates were used solely for expenses necessary for continuing essential transportation services, or that other revenues of the railroad were used to the fullest extent for such expenses as required by the Act.

This determination could not be made because FRA did not require Penn Central to identify those expenses necessary for essential transportation services or maintain separate accounting for the disposition of loan funds. In addition, FRA neither required nor received any data which could be used for monitoring loan fund expenditures.

Penn Central co-mingled the proceeds of the sale of the guaranteed loan certificates with other railroad revenues, and consequently, the loan monies could not be identified to any specific railroad expenditures. As an alternative, we audited payrolls and all other operating expenditures incurred by the Railroad during the periods in which the sale proceeds

Digitized by Google

from the loan certificates were drawn down. The total operating expenditures during the drawdown periods were accounted for. Although the payroll expenses related to this period could not be entirely verified due to incomplete personnel records, we found no evidence to indicate that expenditures during this period were applicable to other than railroad operations.

We recommend that for future financial assistance programs, Penn Central be required to submit information on the specific uses of funds and maintain records identifying the receipt and specific expenditures of funds.

B. Emergency Rail Facilities Restoration Act

We were not able to determine that funds provided to Penn Central under Emergency Rail Facilities Restoration Act had been used in accordance with the provisions of the laws and terms and conditions established by FRA since there were no records to indicate the condition of Penn Central tracks, equipment or facilities prior to Hurricane Agnes or immediately thereafter. We were able to verify expenditures for repairs and restoration of railroad property identified by Penn Central as damaged by storm Agnes, except for certain labor, materials, and overhead amounting to $355,264 which were not adequately supported by cost information. Also, no work has begun for the restoration of the Penn Yan line even though FRA directed the Trustees to proceed with the restoration, and failure to act could be considered a default under the loan agreement.

FRA's monitoring efforts did not provide a technical evaluation of the storm damages, nor were progress reports prepared on the repair and restoration of the damaged facilities. We recommend that for future financial assistance programs, FRA issue monitoring procedures and assign responsibility for on-site technical surveillance of the work to be done.

I. DISCUSSION OF RESULTS OF AUDIT

A. Emergency Services Guaranteed Loans

1. Accounting for Loan Expenditures

Our audit of the expenditures of the proceeds from the sale of trustee certificates disclosed that:

a. There was no requirement by FRA for Penn Central to keep a separate accounting of the loan expenditures, thereby ensuring better control of the funds, and allowing for a monitoring system that would ensure that the funds were used in accordance with the intent of the Act;

Digitized by Google

b. payroll expenses relating to the periods of loan expenditures could not be entirely verified due to incomplete personnel records; and

c. the total operating expenditures during the draw-down periods of the loan funds, except for payroll, were accounted for, but we were unable to adequately determine whether the funds were used solely for expenses necessary for continuing essential transportation services, or that other revenues of Penn Central were used to the fullest extent for such expenses as required by the Act.

The proceeds from the sale of the trustee certificates guaranteed by DOT under the Emergency Rail Services Act of 1970 (Act) were placed in escrow accounts in the following banks pending release by the United States District Court:

Bank	Amount
Philadelphia National Bank	$ 33,500,000
First Pennsylvania Banking & Trust Company	33,500,000
Industrial Valley Bank & Trust Company	33,000,000
Total	$100,000,000

Penn Central withdrew the proceeds, upon approval of the court, during the periods January through April 1971, and July and August 1972, and they were co-mingled with other railroad revenues through deposits in regular bank accounts. As a result, the proceeds could not be identified to any specific railroad expenditures but could only be related to certain expenditures such as payroll, railroad retirement taxes and Federal withholding taxes:

Digitized by Google

Date	Type of Expenditures	Withdrawals	Related Expenditures
1/28/71	Payroll	$ 15,000,000	$ 3,507,658
1/29/71	Railroad Retirement Taxes		12,816,229
2/16/71	Retroactive Payroll	20,000,000	19,540,485
2/16/71	Payroll		8,606,569
2/25/71	Federal Withholding Taxes		9,572,696
2/25/71	Payroll		4,145,502
2/26/71	Payroll	15,000,000	1,282,489
3/2/71	Payroll	10,000,000	9,824,539
3/3/71	Federal Withholding Taxes		1,549,930
3/30/71	Payroll	5,000,000	8,431,836
4/1/71	Payroll	10,000,000	3,666,095
4/2/71	Payroll		8,553,960
7/31/72	Railroad Retirement Taxes		12,578,735
7/31/72	Federal Withhold Taxes		1,385,455
8/1/72	Payroll	10,000,000	8,856,306
8/3/72	Payroll	15,000,000	3,318,849
TOTALS		$100,000,000	$117,637,333

Since the proceeds could not be identified to specific expenditures, we could only determine their use by reviewing all expenditures made during the period in which the proceeds were withdrawn. The review included: (1) the payrolls, as shown above, and (2) all other operating expenditures made in the period involved (Exhibit A).

a. Monitoring the Program

The Guaranty Agreement and the Agreement on Terms and Conditions, did not require Penn Central to maintain records specifically identifying expenditures of proceeds from the sale of the trustee certificates. For monitoring purposes, the FRA received from Penn Central financial data such as monthly cash flow statements and quarterly balance sheets. The FRA reviewed these statements to evaluate Penn Central's financial condition, but had no data specifically identifying Penn Central's expenditures of the proceeds from the sale of the trustee certificates. Consequently, FRA could not determine whether the proceeds were used for continuing essential transportation services as required by the Act.

b. Review of Payroll

While the computation of payroll expenses were found to be accurate, verification of employees' pay rates, occupations, and employment status could not be ascertained, in all cases, because of incomplete personnel records.

Digitized by Google

The review covered ten payrolls paid by Penn Central during the period it withdrew the proceeds from the sale of the trustee certificates. The payrolls totaled $59.8 million and included 262,000 paychecks to both Train and Engine (T&E) employees and Other than Train and Engine (OTE) employees.

The review of time documents, computer runs, and net payroll indicated that: (1) no overlapping or duplicate effort was reported or paid, (2) entries on payroll records were correct, (3) gross pay amounts were correctly calculated, and (4) paychecks issued agreed with net payrolls. The review of employee time records showed certain discrepancies resulting from procedural weaknesses such as inaccurate reporting of off-duty time and lunch breaks, but were isolated incidences and not significant.

We examined available personnel records applicable to the payrolls to determine the accuracy of the employees' pay rates, occupations, and employment status. For the employees included in the payroll review, we examined the Service Record Cards which are major control documents and used to record changes in employment status such as occupation, location, pay rate, dates off duty or terminated, and pertinent remarks. The Service Record Cards were incomplete in numerous instances and did not include the necessary data to verify that: (1) all employees had been in an active employment status during the period of our audit, or (2) the pay rates or occupations on the time cards were accurate. No other personnel documents were available to provide the missing information.

Penn Central's Director of Personnel acknowledged that the personnel records were incomplete and indicated that this situation resulted from the merger of the New York Central, New Haven, and Pennsylvania Railroads into the Penn Central in 1968. Each railroad had different personnel organizations and practices. At the time of the merger, a plan to centralize the personnel function was considered, but did not materialize. He also indicated that a continuous reduction in personnel department staffing was a contributing factor.

c. Review of Expenditures Other than Payroll

Penn Central expended $227.9 million in operating expenditures, excluding payroll, during the period the proceeds from the sale of the trustee certificates were withdrawn and co-mingled with other railroad revenues.

The expenditures were reviewed to determine whether the proceeds were used for the purpose of continuing essential railroad operations in accordance with provisions of the Act. Transactions covering accounts payable, direct material and contingent payments

Digitized by Google

(travel) were selected for review and detailed supporting documents for each transaction were examined. We found no unusual transactions or evidence that the expenditures were not applicable to railroad operations.

2. Recommendations

We recommend that future financial assistance agreements between FRA and Penn Central include provisions requiring:

a. maintainence of detailed records identifying the receipt and specific expenditures of the funds, and

b. submission of information on the specific uses of the funds in such detail and at such intervals as is necessary to facilitate continuous monitoring of the assistance programs.

B. Emergency Rail Facilities Restoration Loan

We were not able to determine that funds provided to Penn Central under the Emergency Rail Facilities Restoration Act had been used in accordance with the provisions of the laws and terms and conditions established by FRA since there were no records to indicate the condition of Penn Central tracks or equipment prior to Hurricane Agnes or immediately thereafter. We were able to verify the expenditures for repairs and restoration of railroad property except for certain shop labor, materials, and overhead as set forth below. During our physical inspection of damaged areas, we found that Penn Central's maintenance and inspection records with respect to the storm damage were unreliable in assessing the extent of damages and the repairs and restoration work performed.

1. Accounting for Restoration Costs

Penn Central established a system of work order accounts to identify storm damage expenditures as summarized in Exhibit B. Our accounting review disclosed that:

a. Maintenance of Way expenditures for facilities' repairs were adequately documented and substantiated.

b. Expenditures incurred for capital improvements relating to the restoration of destroyed bridges were also recorded properly.

c. Maintenance of Equipment costs for repairs of locomotives, cabooses, freight cars, and other equipment were identified through work orders; however, the railroad accounting system did not provide adequate cost information. Certain expenditures amounting to $355,264 could not be substantiated because:

Digitized by Google

(1) labor and material costs were not always identified to specific locomotives and cabooses repaired,

(2) rates for the computation of costs for rehabilitated or used material as well as material overhead charged to repair work were not adequately supported,

(3) cost additives for fringe benefits and shop expense charged to repair work were not adjusted to reflect differences between actual rates and applied rates, and

(4) payments to foreign railroads for repairs of storm damaged cars were not offset by receipts by Penn Central for repairs of freight cars damaged on foreign tracks, resulting in an overstatement of A.A.R. Billings.

d. No costs have been incurred for the restoration of the Penn Yan Industrial line. Failure to restore this line to service is a violation of the loan agreement.

Maintenance of Way-Repairs

Maintenance of Way (M of W) costs accumulated by Penn Central pertain to all repair work on track, communication and signalling, electric traction equipment, buildings and bridges, and other roadway repairs on more than 90 lines which were damaged as a result of the flooding. M of W repair costs included in the loan application and audited through April 30, 1974, consisted of expenses charged to emergency work orders established for Hurricane Agnes for the following repairs:

Repairs	As of Loan Application	As of 4/30/74
Track	$2,966,058	$3,229,130
Communication & Signals	1,005,260	1,097,140
Buildings and Bridges	567,639	651,886
TOTALS	$4,538,957	$4,978,156

Audit emphasis was on costs incurred in the Harrisburg Division in the Eastern Region and the Allegheny Division in the Central Region, since the major portion of restoration repairs was done in these two areas. We also used the two divisions as a basis for selecting seven specific lines which were coordinated with the physical inspection of facilities.

An analysis of specific transactions related to expenditures for repairs disclosed no adverse findings. Each transaction was adequately

Digitized by Google

substantiated by supporting documentation, charges were properly computed, and expenditures were identified and related to flood damage repairs.

Capital Improvements

Capital expenditures for seven projects for the rebuilding of destroyed bridges were included in the original loan application. Altogether there were ten capital projects charged for storm damage expenditures as shown in Exhibit B.

Total capital expenditures and incidental expenses audited through March 31, 1974 were $8,325,790 of which $7,014,100 (84%) was charged to the restoration of the Shocks Mills bridge. A breakdown of these costs for the seven capital projects is:

Project No.	Location	Construction Costs	Incident Expenses	Total Costs
BH 55	Mountville, Pa.	$ 62,785	$ 144	$ 62,929
BH 56	Millersburg, Pa.	40,018	7,587	47,605
BH 57	Shocks Mills, Pa	6,761,217	252,883	7,014,100
BH 61	Corning, N.Y.	1,092,261	1,023	1,093,284
BH 62	Lawrenceville, Pa.	35,350	2,200	37,550
BH 63	Tioga, Pa.	2,751	45	2,796
BH 92	Selinsgrove, Pa.	65,952	1,574	67,526
TOTALS		$8,060,334	$265,456	$8,325,790

Our review of detail cost data in the Authorization for Expenditures (AFE) files for the seven capital projects disclosed that the monthly cost summary sheets used in the preparation of the loan application were adequately supported.

Penn Central's internal audit procedures were considered adequate for the review of labor, material, and equipment rental costs based on our evaluation of nine internal audit reports of major repair contracts for damaged bridges. No exceptions were noted in six of the reports, while three disclosed audit exceptions of $32,587 due to Penn Central and $1,363 due to contractors. However, proper adjustments were made in subsequent payments to contractors.

Our review also included an evaluation of the basis for cost increases in the restoration of the Shocks Mills bridge over the Susquehanna River (Project No. BH 57) located on the A&S Branch of the Harrisburg-West Division. The original AFE dated July 13, 1972, estimated the cost of restoration to be $4.5 million, while a revised AFE submitted April 11, 1973, increased the estimated cost by $2.6 million to $7.1 million.

Digitized by Google

The increase in costs was attributable to two major factors. First, additional core borings which could not be made until the existing structure was demolished, showed the need for deeper and more costly pier footers than orignally anticipated. This increase in scope of construction accounted for an additional $1.7 million. Secondly, the remaining cost increase was attributable to damage and delays caused by floods during reconstruction, subsequent to Hurricane Agnes. From November 8 through December 14, 1972, record rains resulted in high water which washed out the construction causeway on different occasions causing loss of material and equipment, and an extensive amount of downtime for labor and equipment.

Penn Central's normal contracting procedures provide for competition in awarding contracts, however, due to the emergency situation created by Hurricane Agnes the normal bid procedures were foregone. Penn Central awarded and negotiated contracts for the restoration of the Shocks Mills bridge and Corning bridge without formal advertising to expedite the restoration of service on these primary freight carrying lines.

Penn Central selected Spearin, Preston, and Burrows, Inc. for the restoration of the Shocks Mills bridge because this contractor had extensive experience in water works, performed work in the past, and had access to manpower and equipment to begin work immediately. Winkelman Co. was selected as contractor for the Corning bridge also because of its reputation and immediate availability to begin construction.

While the contracts were awarded without competitive bidding, we feel that in the circumstances, proper procedures were used in the way of preliminary engineering studies and price negotiation.

In our opinion, all expenditures incurred for capital improvements were recorded properly.

Maintenance of Equipment

Maintenance of Equipment (M of E) costs covered extensive repairs of 20 diesel electric locomotives at the Altoona and other shops, minor repairs of 285 diesel electric locomotives at various terminals, extensive and minor repairs and inspections of 31 electric locomotives, inspection and repairs of 14 cabooses, and various repairs to machinery and other equipment.

Total M of E costs expended through April 30, 1974 were $3,126,237 which consisted of:

Digitized by Google

1. Heavy duty repairs of locomotives, cabooses, and freight cars at the Altoona Heavy Repair Shops and costing $794,458.

2. Bills received by the A.A.R. Billing Bureau for repairs of storm damaged cars by foreign railroads and settlements for destroyed cars totaling $163,846.

3. Various repairs of railroad equipment performed at terminals and yards throughout the regions costing $2,167,933.

a. Altoona Charges

Total M of E costs incurred in the Altoona Heavy Repair Shops were $794,458 as of July 1973, with no subsequent additional costs. Our review was concerned primarily with repair costs recorded under two major shop orders as follows:

#55100 - repair of 14 diesel electric locomotives	$724,800
#33003 - repair of 14 cabooses	40,648
TOTAL	$765,484

We examined accounting documents and procedures for costs of repairing the locomotives and cabooses, and analyzed charges for labor, material, fringe benefits, shop expenses, and material overhead. The review disclosed:

(1) Labor and Material

Penn Central's details of expenses incurred for repairing flood water and wreck damage to locomotives and cabooses, included in Attachments 1 and 8 to the loan application, identified labor and material costs to specific units. However, labor and material charges to shop orders #55100 and #33003 were not always identified with specific locomotives and cabooses repaired. Unidentified costs were allocated among the other units in the same ratio as identifiable costs. While only 1% of the labor and material charges for locomotives repairs were not identified to specific units, 54% of the caboose labor charges and 65% of the caboose material charges were not identified to individual units and were allocated among the 14 cabooses.

Also, $222,204 of the $323,934 material charges for repairs of the locomotives and cabooses was rehabilitated material used during the period September 1, 1972 through July 31, 1973.

Digitized by Google

The rehabilitated or used material charged to the storm damage shop orders was computed at 57% of the cost of new material which represents the weighted average cost of rehabilitating used material. However, we could not determine the reasonableness of the 57% rate nor had Penn Central evaluated the adequacy or accuracy of this rate which has been applied consistently since 1971.

(2) Fringe Benefits

Fringe benefits of $43,271 for the repair of locomotives and cabooses were computed at a rate of 30.06% of direct labor costs and were adequately supported by Penn Central.

While the 30.06% rate was applied to the storm damage shop orders, there was no adjustment to reflect the actual fringe benefit rate of 29.38% in 1972 and 33.05% in 1973. However, the difference between the applied rate and actual rates for the period audited was considered relatively insignificant.

(3) Shop Expense

Shop expense, representing indirect labor, material, and miscellaneous costs associated with the operation of the repair shop, totaled $68,630 for the repair of the locomotives and cabooses. This expense, computed as a percentage of direct labor, was charged at a 48.9% rate during 1972 and a 45.0% rate during 1973 based upon the prior year actual rate. These rates were adequately supported by Penn Central. Although the actual shop expense rate was 45.0% for 1972 and 1973, there was no adjustment to reflect the 3.9% difference between the shop overhead (48.9%) applied during 1972 and the actual shop overhead (45.0%) computed for 1972.

(4) Material Overhead

Material overhead for the repair of locomotives and cabooses was $18,681, and represented costs related to the purchasing, handling, and storage of material. This overhead was computed at 4.5% of the cost of new and rehabilitated or used material through August 31, 1972, and at 11% of the cost of only new material since September 1, 1972.

The 4.5% rate was determined in January 1967 but could not be adequately supported by Penn Central. The 11% rate was based on limited cost data adjusted for estimates and assumptions. Therefore, the 4.5% and 11% material overhead rates are questionable since Penn Central's accounting system does not provide adequate cost data for determining the actual material overhead rates incurred.

Digitized by Google

b. Association of American Railroads Billings

The Association of American Railroads (A.A.R.) adopted a manual formulating interchange rules among member railroads. The manual specifies the responsibilities for the repairs and settlement of damaged cars between the car owner and the handling line. Participating companies bill each other through the exchange of A.A.R. Billing Repair Cards. Penn Central processes all billings from other railroads (payables) and all billings to other railroads (receivables) at the A.A.R. Billing Bureau in Altoona, Pennsylvania.

Total M of E payments by the A.A.R. Billing Bureau through April 30, 1974, were $163,846. This represented Penn Central's payments to foreign railroads for repairs of storm damaged cars and settlements for destroyed cars which were on Penn Central lines at the time of Hurricane Agnes.

	Type	Cars	Amount
(i)	Cars Repaired by Foreign Roads	161	$153,772
(ii)	Settlement of Destroyed Cars	2	10,074
	TOTALS	163	$163,846

We reviewed special computer runs of all flood damage cars payable and identified total expenditures accounted for by Penn Central. We verified repair costs to A.A.R. Billing Bureau Cards and authorizations for foreign roads to make repairs. With one minor exception, all repair billings were in accordance with A.A.R. rules. Also, payments to the Erie Lackawanna and Western Maryland Railroads for settlement of the destroyed cars were proper and in accordance with A.A.R. rules.

While the payments to foreign roads and repairs for storm damaged cars were verified, the extent of receipts by Penn Central for repairs of cars damaged on foreign tracks and billed to the handling lines could not be determined. Penn Central did not maintain similar computer runs of receivables for repairs of storm damaged cars billed to other railroads, nor could they readily identify the detail billing records since documents were co-mingled with all other billings. As a result, payments to foreign lines were not offset by receipts from foreign roads to reflect net payments through A.A.R. billings.

Digitized by Google

c. Regional Costs

The majority of M of E costs were incurred by the various regional repair shops and yards for the flood damage repairs of locomotives, freight cars, machinery and other equipment and charged to specific work orders. Total expenditures incurred by the regional repair shops through April 30, 1974, were $2,167,933. The various elements of costs were properly accounted for by Penn Central.

We also evaluated an adjustment of $987,772 made in May and June 1973 to reflect charges for rehabilitated material consumed in the field for repairs to equipment. This material was originally charged to ordinary expense rather than extra-ordinary expense identified for storm damage. The supporting documentation for the journal entry adjustments indicated that Penn Central's accounting procedures were adequate to reflect the proper amount of material charges.

Normally, costs for rehabilitated material are recorded by the Altoona Heavy Repair Shops through work orders, while the regional shops do not consider costs for rehabilitated material used in repairs. However, Penn Central dispensed the normal procedures and requested the regions to charge out rehabilitated material to account for all storm damage costs. Therefore, we investigated the possibility of duplicating storm damage costs for rehabilitated material consumed in the regions and charges by the Altoona Heavy Repair Shops for rehabilitated work performed on used parts.

An adjustment of $81,282 was made in July 1973, to correct duplicate charges for rehabilitated material initially captured under Altoona shop work orders and again when the material was consumed by the regions. Accordingly, all Altoona shop orders totaling $78,459 for rehabilitation of freight car wheels, air brakes and bodies, and locomotive tractor motors, generators, and components were eliminated from the M of E costs. The remaining $2,822 eliminated represented the rehabilitation of used material performed in shops other than Altoona. Penn Central had recognized the duplicate charges for rehabilitated material and had taken satisfactory corrective action.

In general, the accounting treatment of regional charges for equipment repairs was considered satisfactory.

d. Penn Yan Industrial Line

The terms and conditions of the loan agreement dated August 13, 1973, provided for the prompt restoration of all essential damaged facilities. Included was a provision which required the Trustees of Penn Central to restore service over 1.3 miles of their Penn Yan Industrial Line.

The remaining $2,822 eliminated represented the rehabilitation of used material performed in shops other than Altoona. Penn Central had recognized the duplicate charges for rehabilitated material and had taken satisfactory corrective action.

In general, the accounting treatment of regional charges for equipment repairs was considered satisfactory.

d. Penn Yan Industrial Line

The terms and conditions of the loan agreement dated August 13, 1973, provided for the prompt restoration of all essential damaged facilities. Included was a provision which required the Trustees of Penn Central to restore service over 1.3 miles of their Penn Yan Industrial Line.

The estimated cost of restoring service over the track was $150,000. This amount was included in the $1,199,289 balance available from the total approved FRA loan of $17,645,542.

The Trustees had applied to the Interstate Commerce Commission (ICC) to abandon the Penn Yan line. On November 16, 1973, the Trustees requested FRA to approve its proposal to defer construction to restore service until weather conditions permitted in the following spring, hoping that the ICC would act upon the abandonment application. FRA denied the request on January 14, 1974, and required the Trustees to proceed with the necessary restoration since the ability to abandon the line was uncertain with the enactment of the Regional Rail Reorganization Act of 1973 and the fact that ICC could no longer entertain the abandonment application.

On February 5, 1974, the Trustees advised FRA that construction of a connection between the Sodus Bay secondary track and the essential portion of the Penn Yan track was expected to begin around April 1, 1974, prcviding that weather conditions permitted and that material could be acquired and assembled at Penn Yan. However, construction did not begin as scheduled, and FRA directed the Trustees on April 18, 1974, to proceed with the restoration immediately, and reminded them that failure to promptly restore this track may be considered a default under the loan agreement and may jeopardize their eligibility for further financial assistance under programs administered by DOT.

Work Order #60257 was established on August 15, 1973, to accumulate costs for the restoration of the Penn Yan track from mile post 5.2 to 6.5. We reviewed the Work Order Detail Lists through May 31, 1974, and found that there have been no charges to the work order.

Since there has been no indication that work has begun or when the track will be restored, we believe that FRA should continue to monitor Penn Central's progress on restoration and decline to provide any further financial assistance until this condition has been met.

2. Inspection of Facilities

Our physical verification of repair and restoration included an on-site inspection of railroad facilities in selected areas along seven main lines and branches in the Harrisburg and Allegheny Divisions, a review of Penn Central's divisional maintenance records, and an evaluation of FRA's monitoring activities over the repair and restoration program. We concluded that:

Digitized by Google

a. Penn Central has substantially completed the repair and restoration work at the selected sites, and the lines and facilities are in operation,

b. Penn Central's maintenance records for the period during the storm recovery were generally inadequate to substantiate the extent of the damage and the quality of repairs and maintenance,

c. FRA's monitoring efforts did not provide a technical evaluation of the storm damages, and

d. FRA did not prepare progress reports on the repair and restoration of the damaged facilities.

We were unable to technically determine or evaluate (1) the condition of the selected track and factilities prior to Hurricane Agnes, (2) the extent of damages to the selected points inspected, or (3) the quality of subsequent repairs and restorations. We relied on divisional documents, photographs, and the knowledge of Penn Central representatives as to the extent of damages at the selected sites and the corrective repair and restoration work. As a result, we were able to determine only that the areas identified by Penn Central as damaged by Hurricane Agnes were subsequently repaired or restored and are in operating condition.

We did not physically inspect locomotives and freight cars for practical reasons, but reviewed the related documentation and reports available at the Altoona and Enola repair shops. We determined through Penn Central's Instant Car Locator (ICL) system that a representative number of repaired locomotives and freight cars were in current use. Through these procedures, we determined that repairs and restoration of rolling stock had been completed. However, we were unable to technically determine (1) the condition of the locomotives and cars prior to Agnes, (2) the extent of damages, and (3) the adequacy of subsequent repairs and restorations.

a. Physical Inspection of Facilities

(1) Philadelphia to Harrisburg Main Line

Damage to this 104-mile line was primarily in the Harrisburg station and yard where most of the facilities and equipment were under about four to five feet of water. In addition, Penn Central performed extensive alterations and renovations to facilities and equipment in this area to accommodate freight traffic rerouted through Harrisburg because of the collapse of Shocks Bridge on the A&S Branch.

a. Physical Inspection of Facilities

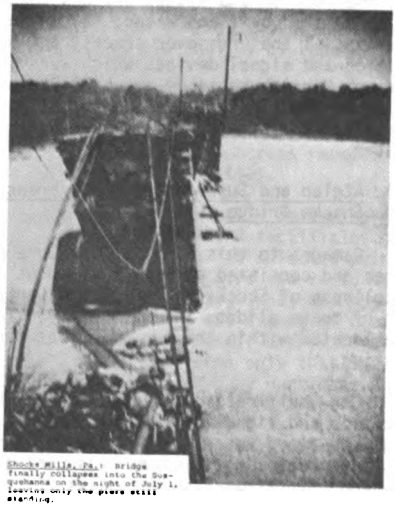
(1) Philadelphia to Harrisburg Main Line

Damage to this 104-mile line was primarily in the Harrisburg station and yard where most of the facilities and equipment were under about four to five feet of water. In addition, Penn Central performed extensive alterations and renovations to facilities and equipment in this area to accommodate freight traffic rerouted through Harrisburg because of the collapse of Shocks Bridge on the A&S Branch.

Our verification included (a) an inspection of various track, communication and signal devices in the Harrisburg station identified as damaged by flood water; (b) an inspection at Rockville, Pennsylvania, of the crossover tracks, including applicable switches, communication and signal devices which were installed for trains rerouted through Harrisburg to by-pass the Enola classification yard; and (c) an inspection of the electric diesel sandpit in the Harrisburg yard renovated to replace the regular facility in Enola which was damaged by flood water.

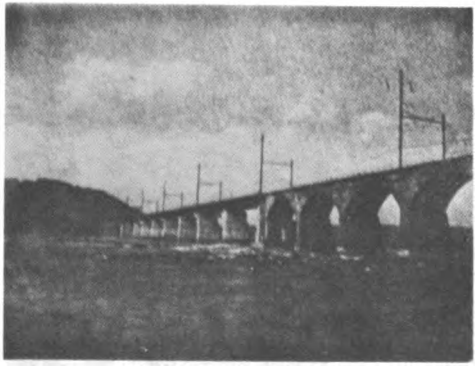
(2) Atglen and Susquehanna (A&S) Branch Including Shocks Bridge

Damages to this 50-mile line were concentrated within a 20-mile area and consisted primarily of about 15 washouts or slides and the collapse of Shocks Bridge. Penn Central representatives indicated that four of these slides, including one 30 feet deep and 200 feet long, were located within the two miles between Shocks Bridge and Shocks Interlocking.



Our verification included (a) an inspection of the track, communication and signal devices at the Interlocking identified as damaged by flood water, and (b) an inspection of the track at the four slide areas identified by Penn Central. In addition, our inspection included the restoration to Shocks Bridge. Penn Central's representatives indicated that on July 1, 1972, the center sections of this bridge collapsed due to damage caused by flood waters. This severed the main freight link from all eastern and southern points to the Enola classification yard. As a result, Penn Central was required to reroute the traffic along the Columbia Branch through Harrisburg. This damage identified by Penn Central is pictured below:

Shocks Mills, Pa.: Bridge (right) began to sag. This bridge over the Susquehanna is the main freight link from all Eastern and Southern points to Enola Yard.

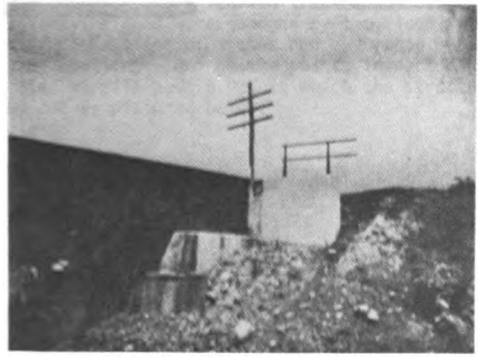


Digitized by Google

17

Chiche Mills, Pa.: Bridge finally collapses into the Susquehanna on the night of July 1, leaving only the piers still standing.

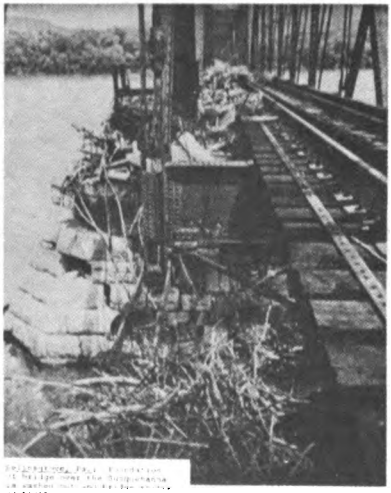
Our inspection of the bridge (pictured below) on June 3, 1974, disclosed that it has been restored and is currently in operation as the main freight link through Enola Yard.



Digitized by Google

(3) Harrisburg to Buffalo Main Line

This 308-mile line consisted primarily of approximately 12 track washouts or slides and the washout of the north span of the bridge (pictured below) at mile post 112.03.



Our verification of the repairs and restorations of this line was limited to the bridge at mile post 112.03. As shown below, this bridge has been restored.

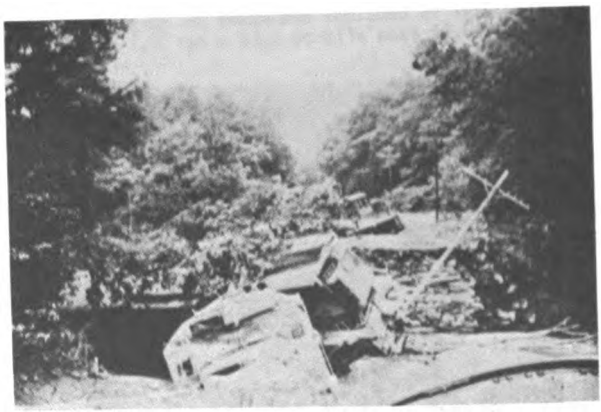
Digitized by Google

(4) Selinsgrove Secondary Branch

The damages to this 14-mile branch line consisted of four washouts, one slide, and damage to one bridge. Our inspection covered the 14 miles of track and included an inspection of the washout and slide areas and the bridge at mile post 44.04 (pictured below).

Digitized by Google

As shown in the picture below, this bridge has been repaired and restored to service.



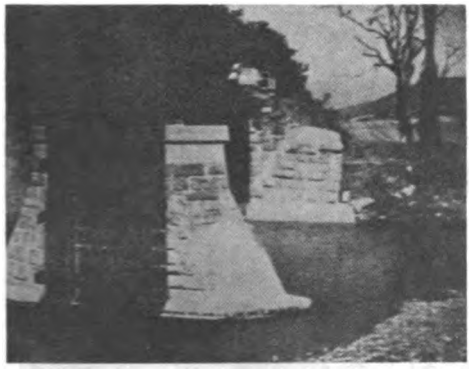
(5) Wilkes-Barre Branch

Damage was heavy along this 60-mile branch line. The washouts and slides were numerous leaving track suspended or covered with debris. Also, several bridges were damaged by the flood waters, resulting in the weakening or dismantling of arches and abutments. Our inspection covered 50 miles of the line. One of the points inspected was the under-grade bridge located at mile post 5.02, in which the structure was completely washed out as pictured below.

Digitized by Google

21

This area (pictured below) was repaired and in operating condition.



Digitized by Google

We also inspected the bridge at mile post 16.49 on this line (pictured below). The flood waters separated the abutment at the east end of the bridge and caused the foundation to be partially washed away. In addition, the pier and west abutment were damaged.

The east end abutment and foundation (pictured below) were repaired. Also, pressure grouting and pointing was performed on the pier and the west end abutment and the bridge is currently in operation.

Digitized by Google

The inspection also included the flood water damage to the stone arch bridge at mile post 29.67 as pictured below. The Penn Central representative indicated that the washed out west end abutment weakened the entire arch. The track and roadbed for several hundred feet approaching the structure were also damaged.

Penn Central removed the remains of the stone arches and replaced them with a steel span structure (pictured below). The bridge is currently in operation.

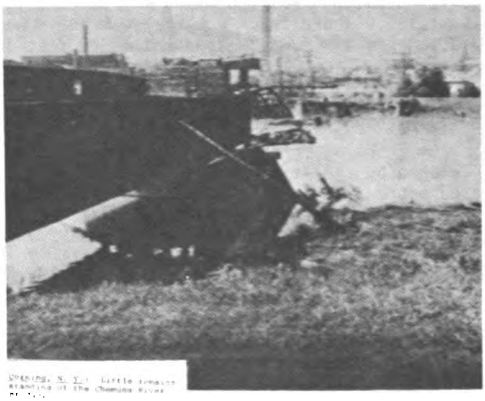
Penn Central removed the remains of the stone arches and replaced them with a steel span structure (pictured below). The bridge is currently in operation.

(6) Harrisburg to Altoona Main Line

There were approximately 19 washouts, three slides and one bridge damaged by Hurricane Agnes on this 127-mile main line. Our verification was primarily directed toward selected repairs and restorations made at (a) mile post 119.16 where Penn Central representatives described the washout to the number 3 track as approximately 15 feet in length and 5 feet deep leaving the track suspended without any support, (b) mile post 118.86 where it was reported that the number 4 track was washed out for 1000 feet in length to a depth of 5 feet, and signal devices were damaged, (c) mile post 147.5 to the number 3 track where we were informed that the washout was approximately 50 feet long and 20 feet deep, (d) mile post 165.0 where track number 3 was again washed out, and (e) mile post 210.0 where track was washed out 1,000 feet long and up to 10 feet deep.

(7) Corning Branch



There were approximately 62 washouts, 30 slides, and 13 bridges damaged by the storm on this 180-mile branch line. Our inspection covered approximately 80 miles of the line and the Corning Bridge. This included (a) six washout and slide areas along the 80 miles traveled, and (b) track installed at mile post 92.97 which prior to Hurricane Agnes was an undergrade bridge over a city road. The Penn Central representatives indicated that since the portions of the road which passed under the tracks as well as the railroad bridge were washed out, the Public Utilities Commission and the city agreed to have the road closed. This enabled Penn Central to rebuild the track as a normal roadbed instead of rebuilding the bridge.

47-319 O - 75 - 6

Digitized by Google

In addition we inspected the Corning Bridge at mile post 71.4 which was a stone arch structure prior to the flood. Penn Central restored it by incasing the piers with steel and widening the piers approximately two feet around to reinforce the remains of the piers. Like the Shocks bridge, the main portion of the bridge was built using steel spans and steel girders over the reinforced piers and is currently in operation.

The damage to the Corning bridge and the completed repair and restoration are shown below.

The damage to the Corning bridge and the completed repair and restoration are shown below.

While we could verify the cost of repairs and restoration of storm damage, and confirm that the lines and equipment had been restored for traffic, we could not assess the quality of the restoration and repairs.

The present condition of the track follows a pattern. Higher revenue main lines were in stable condition sustaining speeds up to 45 miles per hour. Branch lines were good to poor depending on the amount of revenue producing freight traffic. Corning Branch, for instance, a busy branch, is kept in repair to maintain trains at 30 miles per hour or more. Wilkes-Barre Branch, used primarily to service the Delaware and Hudson Railroad, is poor, with areas of unstable track just passable for trains at 5 to 10 miles per hour. There are still areas on this branch where the storm damage has not been repaired. There are still some sliding and soft spots on the Selinsgrove Secondary Branch. Even the Atglen and Susquehanna Branch, a heavy industrial branch, while purported to be in stable condition, has weak areas and some not yet repaired from the storm. We witnessed, on this line, a near derailment when a compromise joint and rail cracked on both sides under a moving freight train near Shock's Bridge. The track was immediately put out of service. The Montandon Industrial Line, a one customer line, is in poor condition and has been maintained only to take trains up to 10 miles per hour.

Preventive maintenance by Penn Central has been deferred since before the merger. Track maintenance at the present time consists of whatever efforts are required to keep the lines open with priority given to high density routes. By Penn Central statistics, the number of slow orders issued has risen from 558 in the beginning of 1971 to 2,084 as of June 1, 1974, affecting 8,151 miles of raod (Exhibit C). Derailments caused by track, equipment, and other causes number 2,538 for the first five months of 1974 (Exhibit D).

b. Railroad Maintenance Records

Repairs and restoration work in the wake of the storm was done under emergency conditions. There were no cost estimates made of the damaged areas nor engineering studies for restoring facilities except capital improvements. Damage was assessed by teams of inspectors traveling throughout the Divisions. Reports were made to Division offices by telephone, with requests for work crews, material, wrecking equipment and whatever was needed. Headquarters was kept informed by the Division offices in the same manner, i.e., verbally.

Three basic sources document the extent and location of damage caused by the storm: (1) photographs, (2) flood damage reports, and (3) work order documents. Photographs taken of the flood damaged areas provide the best description of the extent of damage. Photographs, however, were not taken of all the flooded sites.

Digitized by Google

Flood damage reports provide a written description of the extent and location of storm damage. These reports were instituted immediately after the hurricane, and were updated every twelve hours for the first few days. The reports identify the rail line, the mile posts, and the type of damage. However, the reports, which were prepared hurriedly from information passed along verbally through the divisions, are inaccurate in many instances, and contain poor estimates of the extent of damages. The third source of documentation relates to the actual repair work. These documents include material invoices, time cards for manpower use, etc., and are associated with the various work orders that accumulate the cost of repairs and restoration. These are the source documents for the accounting records. Our comments on the accounting for storm damages are set out in paragraph III. B.1. of this report.

In attempting to evaluate track conditions prior to the storm damage, we found that track inspection records for that period were not available. We were informed that it was Penn Central's policy to keep track inspection records only one year. The only documentation relating to track conditions was the Track Maintenance Charts. These charts, by track sections, show the last time maintenance was performed in the categories of: (1) grinding, (2) welding, (3) surfacing, (4) ties, (5) bars, (6) rail, (7) ballast cleaned, and (8) joints straightened. The charts are a history of maintenance but do not give track conditions at any given time.

c. FRA Monitoring Activities

The FRA has no history of the condition of Penn Central's tracks, equipment, or facilities prior to Hurricane Agnes, nor technical evaluations of the repairs and restoration work done since the storm. The FRA Philadelphia Regional Office had not been assigned responsibility for monitoring the loan program, and as such did not have technical records of the storm damage nor inspection reports of the progress of restoration and replacement of damaged facilities. Some surveillance had been performed prior to the loan by the FRA Office of Safety Track Inspection Force; namely, an aerial survey of the flood damaged areas on July 3, 1972, and a ground inspection of the areas a year later. The inspection force reported that the existing on-ground conditions were as represented by Penn Central. No documentation was made available to support this conclusion.

3. Recommendation

We recommend that:

Digitized by Google

a. For future programs involving financial assistance affecting railroad maintenance or capital improvements, FRA clearly assign responsibility for on-site technical surveillance of the work to be done under the program.

b. FRA issue procedures for monitoring future loan programs to assure that the funds provided will be used to accomplish the intended purpose.

IV. MANAGEMENT REACTION TO RESULTS OF AUDIT

A. FRA Official Comments

The FRA indicated that generally the audit observations and recommendations were well taken and consideration will be given to recommendations in the development of guidelines for administering future Federal assistance programs. However, FRA disagreed with the observations and recommendations on FRA's administration of the Emergency Rail Services Act of 1970, and the Emergency Rail Facilities Restoration Act of 1972, maintaining that the audit comments reflect an unfamiliarity with the applicable laws, and a lack of understanding of the responsibilities of various FRA offices.

The FRA contends that the audit conclusions are unsound and maintains that the proceeds of the guaranteed trustee certificates were spent in accordance with the Act and the terms and conditions of the guarantee, were fully documented through cash flow information submitted by Penn Central, and there was no reason for requiring the trustees to deposit the proceeds from the certificates in a segregated account.

The FRA further maintained that the condition of Penn Central's track and equipment prior to the Agnes storm had no relevance to the administration of the loan program, and the only concern of the "Agnes" Act was to provide the financial assistance necessary to restore essential railroad operations. For the same reasons, FRA contends that there was no need for technical evaluations of the storm damages nor were progress reports necessary for the restoration work. FRA also contends that the quality of the restoration work was beyond the scope of the auditors' responsibilities and an audit determination in this area was not necessary since the Act does not

Digitized by Google

establish a quality level of restoration. (The full text of the FRA response is contained in EXHIBIT F as an attachment to this report.)

B. Auditor Comments

The auditors were well aware of the applicable laws pertaining to the Penn Central Federal assistance programs, the terms and conditions of the agreements, and the background actions leading to the programs. These particular areas were thoroughly researched by the auditors. The data obtained is summarized in Section V of the audit report and was used as the guidelines for performing the audit.

In addition to ensuring compliance with the applicable laws, agreements, etc., the auditors have the responsibility of determining the degree of reliance that can be placed on the controls established, in this case by Penn Central, over the expenditures of emergency funds earmarked for specific purposes. An auditor must deal with the facts, and while at times may give an opinion based on reasoning, there must be sufficient and relevant evidence obtainable to provide a factual basis for an audit determination. It follows that, because the trustee certificate proceeds were not identified to specific expenditures by Penn Central, the auditors could not render an unqualified audit opinion as to their ultimate use. It also follows that, while the auditors were able to review the accounting for the expenditure of funds under the direct loan program, they were unable to make an audit determination as to whether the funds were used for program objectives since no means were available to measure the extent of damages that Penn Central claimed was caused by the storm.

The FRA indicated there was no need to have the trustees deposit the proceeds from the certificates in a segregated account and maintain separate accounting for the disposition of the funds. Such an accounting procedure provides for effective internal control of such funds and has been used to good advantage in both industry and Government. As a matter of fact, the Interstate Commerce Commission (ICC) has followed this practice in guaranteeing loans to railroads. In a bankrupt situation, where there are terms and conditions attached to a loan action requiring specific use of loan funds, sound business practices are necessary to provide practical program administration.

Digitized by Google

For FRA to rely wholly on reviews of corporate financial statements and cash flow data prepared by Penn Central is not considered sufficient to monitor the Federal assistance program. If Penn Central had been required to maintain separate accounting, FRA would have been in a position of not only assessing Penn Central's overall cash position, as was the case, but to monitor the loan funds as they were being expended and to ensure that the funds were used solely for expenses necessary for continuing essential transportation.

The FRA disagreed with the audit conclusion on the disposition of the direct loans furnished under the "Agnes" Act and indicated there was no requirement under the Act for technical input into the Federal assistance program.

The auditors recognize that the Act does not specifically provide for such input, but good management practices should provide for an independent assessment of the extent of storm damages to railroad track and equipment and an evaluation of the resources necessary to restore the facilities to working order.

During a physical inspection of railroad facilities, even though accompanied by FRA and Penn Central personnel, the auditors were unable to verify what specific work (other than capital improvements, i.e., bridges) had been done under the Federal assistance program. The majority of information as to storm damage and the extent of restoration work was gained verbally from Penn Central representatives. The FRA representative was not familiar with either the storm damage or the restoration work. Under such conditions as well as the unavailability or unreliability of field maintenance and inspection records the auditors were unable to determine if Penn Central used the loan funds solely for storm damage and not for normal maintenance and repairs as well. This situation was corroborated with Penn Central officials after the inspection trip.

The primary issue raised by the auditors involves the extent to which the Penn Central Federal assistance programs were administered by the FRA. An integral part of effective program administration consists of technical evaluations of the work to be done. This is an accepted practice in Government where programs entail a measurable end product.

Digitized by Google

There was no evidence that the FRA Office of Safety, which has technical expertise, provided in-depth input into the program either from Headquarters or from the Philadelphia Region which has inspection cognizance of the territory where the majority of the storm damage occurred. As cited in the audit report, only an aerial survey of the flood damaged areas was made right after the storm and a ground inspection a year later. These reports only evidenced general observations of the situation and not technical evaluations of the damages. Without such evaluations of the damages and on-going site inspections with periodic reporting by FRA Office of Safety of the progress and type of work being done by the railroad, FRA had to rely only on information prepared and submitted by Penn Central officials.

In the absence of reliable technical data, the auditors attempted to determine the pre-storm condition of railroad property as a basis for comparing the extent of restoration of certain track locations where the damage and the extent of repairs were verbally identified by Penn Central divisional representatives. This technique was used not for qualitative analysis but an attempt to verify that stretches of track verbally identified as damaged were in fact damaged and repaired under the loan program. The auditors were unable to do this for the reasons cited in the audit report.

V. BACKGROUND

The Department of Transportation has provided emergency financial assistance to Penn Central pursuant to provisions of the Emergency Rail Services Act of 1970 (guaranteed certificates) and the Emergency Rail Facilities Restoration Act (direct loans) approved October 27, 1972.

Financial assistance under these Acts was made available to railroads undergoing reorganization under Section 77 of the Bankruptcy Act. The Penn Central filed a petition for reorganization June 21, 1970, in U. S. District Court for Eastern Pennsylvania. The petition was approved by the Court and Trustees were appointed on July 22, 1970, to manage the property of Penn Central. By March 1974, assistance provided to Penn Central was:

Digitized by Google

LEGISLATION	TYPE OF ASSISTANCE	AMOUNT (MILLIONS)
Emergency Rail Services Act of 1970	Guaranteed Certificates	$100.0
Emergency Rail Facilities Restoration Act	Direct Loans	17.6
	Total Assistance	$117.6

The Emergency Rail Services Act of 1970 authorized the Secretary of Transportation to guarantee payment of principal and interest on certificates issued by the Trustees of the Penn Central under the following conditions:

A. The proceeds from the sale of certificates would be used solely for meeting payroll and other expenses which, if not met, would preclude continued provision of essential transportation services by the railroad.

B Other revenues of the railroad, including proceeds from the sale of assets, would be used to the fullest extent possible for such expenses.

C. The guaranteed certificates would be treated as an expense of administration and receive the highest lien on the railroad's property and priority in payment under the Bankruptcy Act.

On January 26, 1971, a guarantee agreement was signed by the Secretary of Transportation, as Guarantor, and the Trustees of Penn Central for the creation and issuance of:

A. $50,000,000 certificates due January 15, 1976, at 6.5 percent interest, known as the 1976 Certificates.

B. $50,000,000 certificates due January 15, 1986, at 7.05 percent interest, known as the 1986 Certificates.

The Federal Reserve Bank of New York was appointed fiscal agent for the authentication, registration, transfer, exchange and other services connected with the certificates. Authority to monitor the program was delegated to the Federal Railroad Administrator by the Secretary of Transportation.

Digitized by Google

The Emergency Rail Facilities Restoration Act authorized the Secretary of Transportation to make direct loans to Penn Central for damages to facilities and equipment as a result of the natural disaster, more specifically known as Hurricane Agnes, which occured during the month of June 1972. The storm struck at points along more than 4,000 miles of railroad right-of-way. Floods cut the main lines in eastern and central Pennsylvania and portions of Maryland and southern New York State. About 80 Penn Central branch lines, secondary and industrial tracks were damaged by slides and washouts, while 25 railroad bridges were demolished and 23 others damaged.

The principal condition imposed on Penn Central under the Act was that the funds would be used solely for restoring and replacing railroad facilities, equipment, or services which were determined to be essential to public service including, without limitation, bridges, track, track structures, signal and communication systems, and rolling stock, or for the reimbursement of expenditures for such restoration or repairs.

On August 13, 1973, the Trustees entered into a loan agreement with the Federal Railroad Administrator, acting on behalf of the Secretary of Transportation, for an approved amount of $17,645,542 in direct loans payable over a twenty-year amortization period at 5.5 percent interest.

VI. SCOPE

We reviewed the legislation, policies, and procedures pertaining to the Federal Railroad Administration and as applicable to the railroad emergency loan programs, and the controls instituted by FRA and Penn Central over the use of the emergency loan funds.

Our audit included (a) a review of the Penn Central accounting records and supporting documentation to determine the propriety of transactions involving funds provided by DOT pursuant to the legislation, (b) a physical verification of additions, restorations, and improvements made to Penn Central facilities and equipment in storm damaged areas, and (c) a review of FRA operations to determine whether the results of the programs have been achieved.

Our procedures included selective testing techniques of Penn Central's transactions, and the use of DCAA's time-share computer to obtain random samples for statistical testing of Penn Central's payrolls. We coordinated our work program with the Philadelphia Audit Region of the Interstate Commerce Commission, and with Haskins and Sells, Penn Central's CPA firm.

The Emergency Rail Facilities Restoration Act authorized the Secretary of Transportation to make direct loans to Penn Central for damages to facilities and equipment as a result of the natural disaster, more specifically known as Hurricane Agnes, which occured during the month of June 1972. The storm struck at points along more than 4,000 miles of railroad right-of-way. Floods cut the main lines in eastern and central Pennsylvania and portions of Maryland and southern New York State. About 80 Penn Central branch lines, secondary and industrial tracks were damaged by slides and washouts, while 25 railroad bridges were demolished and 23 others damaged.

The principal condition imposed on Penn Central under the Act was that the funds would be used solely for restoring and replacing railroad facilities, equipment, or services which were determined to be essential to public service including, without limitation, bridges, track, track structures, signal and communication systems, and rolling stock, or for the reimbursement of expenditures for such restoration or repairs.

On August 13, 1973, the Trustees entered into a loan agreement with the Federal Railroad Administrator, acting on behalf of the Secretary of Transportation, for an approved amount of $17,645,542 in direct loans payable over a twenty-year amortization period at 5.5 percent interest.

VI. SCOPE

We reviewed the legislation, policies, and procedures pertaining to the Federal Railroad Administration and as applicable to the railroad emergency loan programs, and the controls instituted by FRA and Penn Central over the use of the emergency loan funds.

Our audit included (a) a review of the Penn Central accounting records and supporting documentation to determine the propriety of transactions involving funds provided by DOT pursuant to the legislation, (b) a physical verification of additions, restorations, and improvements made to Penn Central facilities and equipment in storm damaged areas, and (c) a review of FRA operations to determine whether the results of the programs have been achieved.

Our procedures included selective testing techniques of Penn Central's transactions, and the use of DCAA's time-share computer to obtain random samples for statistical testing of Penn Central's payrolls. We coordinated our work program with the Philadelphia Audit Region of the Interstate Commerce Commission, and with Haskins and Sells, Penn Central's CPA firm.

The audit was performed at Penn Central Headquarters, Philadelphia, the Alleghany and Harrisburg Divisions, and the Altoona Heavy Repair Shops in Pennsylvania. We reviewed activities during calendar years 1971, 1972, and 1973, the periods of financial assistance.

VII. PERSONNEL CONTACTED

A listing of key FRA and Penn Central Railroad personnel contacted during our audit is attached as Exhibit E.

VIII. AUDIT COUNSEL

We will be pleased to provide audit counsel on any matter discussed in this report.

Albert S. Mayolo
Manager, Headquarters Audit Operations

Mr. ROGERS. Have all of the moneys been spent appropriately?

Mr. BARNUM. Yes, sir.

Mr. ROGERS. Have they fixed the rails as they should have?

Mr. BARNUM. They have been applied as required under the grant agreements entered into with the Penn Central, to continue rail operations. I cannot tell you they were able to fix all the rails. The agreements that we have made with the Penn Central trustees did not contemplate they would fix all the rails.

Mr. HEINZ. I would like to talk particularly about the question of the Erie Lackawanna Railway and its potential for inclusion under the Rail Reorganization Act. One of the possible concerns that strikes me that we might have is that if we accept the proposition that we should wait to include the Erie Lackawanna, it is possible that a further determination of their assets, liquid as well as fixed, if you will, might take place, and that the resulting shell would be an even more difficult organization to include within a regional rail reorganization plan.

Can you tell us whether there has been any serious diminution of the basic resources of the Erie Lackawanna during the last year, during which period they elected to go under chapter 77 rather than come in under the act, as they had an opportunity a year or so ago?

Mr. BARNUM. In response to your question, there has been, in fact, a deterioration in their situation. That is why they have concluded they cannot reorganize under section 77 of the Bankruptcy Act. In our judgment they could not have reorganized successfully under section 77 even when the court concluded that they could. And we submitted to that court the data available to use that suggested that they could not reorganize under the act.

With respect to your first comment, I do not agree. Your statement was that if you proceed as we would urge you to proceed, there is a danger that the Erie Lackawanna will deteriorate more during the next year than it would if you proceeded as the trustees urge you to.

I submit there is not any difference with respect to maintenance—the physical condition of the Erie Lackawanna—whether you proceed their way or our way. The only difference between the two is that under the procedure urged by the trustees, USRA could require transfer of Erie Lackawanna properties to ConRail. Under the procedure we urge they could not require a transfer. But they can and, indeed, are being included in the preliminary system plan, and I assume the final system plan will designate properties of the Erie Lackawanna that should be included in the rail system in the Northeast.

The only difference between the two approaches are the points I made in my prepared statement. First, by proceeding in the manner preferred by the Erie Lackawanna, the Government will be subjected to claims under the Tucker Act and, secondly, the whole planning process may be thrown into a state of confusion.

Mr. HEINZ. One pertinent question, it seems to me, is it possible for the trustees under chapter 77 to, let's say, go out and decide to pay off as many creditors of the Erie Lackawanna as they possibly could, thereby giving as much of the Erie Lackawanna back to those creditors prior to a time when they might come in under the act? Is that possible for them to do that without going to jail?

Digitized by Google

Mr. BARNUM. It would only be possible if they were able to submit to the reorganization court a plan of reorganization which contemplated continued operation as a railroad. They have concluded they cannot submit such a plan. Their alternatives are two: They could either terminate the reorganization and go into liquidation, or they could dispose of certain parts of the property under section 77(o) of the Bankruptcy Act and use the proceeds from those sales to pay down on some of their debt.

Mr. HEINZ. I don't wish to put words in your mouth, but it sounds as if it might be possible for the trustees to embark on a course where there would be a lot less left. I also understand you don't think that a terribly likely possibility, it would always be up to the court to approve such a plan. In the limited available time, let me ask one last question.

The CHAIRMAN. One last one.

Mr. HEINZ. That is this: Would the Department of Transportation have any objection to the Congress making available to the Erie Lackawanna the following kind of proposition, namely, an election that they could come in under the Rail Reorganization Act, but as part and parcel of that election they would waive whatever right they had under the Tucker Act?

Mr. BARNUM. That would have to be an election made not only by the Erie Lackawanna trustees, but by all of the creditors of the Erie Lackawanna. I suggest that is a rather desperate hope.

The CHAIRMAN. The time of the gentleman has expired. The gentleman from Maryland, Mr. Byron.

Mr. BYRON. I have one question, Mr. Secretary. Do you see any delay in some of the local transactions that are going on now? I have reference to one. I think under discussions over on the Eastern Shore of Maryland where Southern Railway may acquire part of the Penn Central line, is that going ahead?

Mr. BARNUM. The acquisition is not going ahead. Its under consideration.

Mr. BYRON. Will anything occur in this legislation delay which will significantly retard the progress of that?

Mr. BARNUM. The only thing in the legislation before you that would have an effect on that particular question, I suppose, are the following: First, some of the rehabilitation that might be accomplished or some of the equipment that might be improved under our proposal might impact that region. I don't know specifically whether that properly would be rebuilt, but that is a possibility.

What could impact that region would be a delay in the implementation of the final system plan under the Regional Rail Reorganization Act, the starting up of ConRail in January, and the transfer of properties of the bankrupts to other railroads, such as the Southern, by further constitutional litigation, such as undoubtedly would arise in the event the act were tampered with in a way that it reopened the whole question as to whether it was a uniform act under the bankruptcy clause of the Constitution. That would delay indefinitely the transfer of the properties to the Southern or any of the other railroads that have expressed an interest in acquiring such properties.

The CHAIRMAN. I am going to divert for one question from the gentleman from New York, Mr. Hastings.

Digitized by Google

Mr. HASTINGS. I have one question I will ask. The time schedule concerns me. Penn Central announced its letters of embargo are scheduled to go out on the 14th of February if they do not receive assistance from the Federal Government. It becomes apparent the House of Representatives will probably not complete action prior to the legislative recess scheduled to start this coming Friday. Do you agree with the Penn Central position unless they have this legislative assurance and a guarantee of the money, that service will be curtailed by the 14th or after the 14th of February?

Mr. BARNUM. Well, I can't assure you that that dire prediction is absolutely true.

Mr. HASTINGS. What is your feeling? Do you support generally their position?

Mr. BARNUM. We are proceeding on the assumption that it has a significantly high degree of likelihood that it would be foolhardy to disregard it. We think there is a very high likelihood that that is exactly what will happen. We do not think, with all due deference, that it is too late for the Congress to adopt the amendments prior to the recess. There is a separate problem as to whether the Appropriations Committees could meet in time to approve the additional funds that would be necessary under section 213.

Mr. HASTINGS. You will agree then it is a dangerous gamble for the Congress to take a recess without completing action on this as it relates to the continuation of service by Penn Central?

Mr. BARNUM. Yes, sir.

Mr. HASTINGS. Thank you.

The CHAIRMAN. Mr. Moorhead.

Mr. MOORHEAD. Mr. Secretary, one of the things that concerns me is there are so many miles of this railroad that are considered nonprofitable and still the railroad is being compelled to operate it. From the testimony you gave earlier, I believe it is about a third of all the traffic that Penn Central has is really in the nonprofitable area.

Would it be possible if they were allowed to abandon this track, that they could operate profitably as a railroad? They could operate in the black?

Mr. BARNUM. It is possible, but not within the time frame we are talking about. In other words, even if you were to authorize the abandonment overnight of one-third of the lines, and we are not talking about that much, that would not return sufficient cash to Penn Central to permit it to continue to operate during the year and a half we are talking about.

Mr. MOORHEAD. When ConRail takes over, are they going to be compelled to operate all of this trackage, or can they cut down to the point where they have a profitable railroad to operate?

Mr. BARNUM. The act specifically directs USRA to design a profitable rail system out of the properties of the bankrupts.

Mr. MOORHEAD. They are ordered to design it. That doesn't mean that design necessarily has been adopted?

Mr. BARNUM. That is going to be up to the Congress, when the final system plan is submitted. That is entirely correct.

Mr. MOORHEAD. No one wants any traffic abandoned in their area.

Mr. BARNUM. That is equally correct. But the Congress did provide in title IV of the Regional Rail Reorganization Act both a procedure

Digitized by Google

and funding authorization for subsidies to help State and local governments continue the operation of properties that USRA does not designate for continued rail service

Mr. MOORHEAD. In this ConRail, as you have it proposed, going to be a Government-subsidized railroad, or is it one that will be able to take care of its own financial needs?

Mr. BARNUM. Initially it is going to rely very heavily upon loans guaranteed by the Government. USRA will make those funds available to ConRail, and that will be the vast bulk of ConRail's initial debt.

Mr. MOORHEAD. I understand there are certain portions of the track that Penn Central has that other railroads would perhaps like to have taken over and believe they can operate on a financially successful basis. In the long run will it be better for this country if that track remained in private service under railroads that could operate efficiently, and at a profit, or is it better to let the whole thing go into a Government-subsidized organization that really isn't within private enterprise?

Mr. BARNUM. Well, I do not equate with nationalization an entity that is able to use Government-guaranteed loans, for example. What the Regional Rail Act contemplates is creation of a privately owned operating entity, ConRail, the stock of which will be owned by the estates of the bankrupt railroads that contribute properly to ConRail. The only respect in which ConRail will differ from any of the other privately owned railroads is that under the Regional Rail Reorganizational Act ConRail has access to $1 billion of federally guaranteed loans, but it is debt that will have to be paid off in the normal course and is not in essence any different from what the other railways of the Nation would be able to incur under the Surface Transportation Act, to wit, by borrowing money guaranteed by the Federal Government. I do not think of that as a subsidy in the way of grants being made to Railroads.

It is to contribute to the subsidized operation. It is not at all the same kind.

Mr. MOORHEAD. How long would you expect it to be before ConRail would be able to operate totally free of the need of Government help of any kind?

Mr. BARNUM. This is the very question which the USRA is addressing now in the preparation of the preliminary system plan to be published on the 26th of February.

The CHAIRMAN. The time of the gentleman has expired. The Chair would like to make a request now that we continue on for a short time, but that we come back at two o'clock for consideration of this bill instead of the consideration of our rules. We will put that off to a later date.

I think this is an emergency and I think we need to get it done. Is there any objection to that?

Mr. HEINZ. Before we will be able to take any legislative action, would it not be the case that we must complete our organizational meeting and adopt at least some rules of procedure to operate under? Otherwise it will be impossible for this committee, without being subject to a point of order on the floor, to present any legislation.

The CHAIRMAN. I believe we can proceed under the rules of the House when we do not have the regular rules, and they are always in order, and I think we can do as we said.

Digitized by Google

Without objection we will come back at two o'clock, but we will continue for a few short minutes. I am turning the Chair over to the gentleman from Massachusetts. Our next questioner is Mr. Ottinger from New York.

Mr. OTTINGER. Thank you, Mr. Chairman.

I want to congratulate you for your really brilliant and very knowledgeable testimony here this morning and for the fine job you are doing in a most difficult situation. There are a couple of things I think there are some misconceptions on and I would like to clarify on a kind of broad scale.

First of all, I understand the moneys we are being asked to provide or authorize here are solely for operating expenses and for maintenance of way of the railroads and are not in any way reachable by creditors of the railroads; is that correct?

Mr. BARNUM. The funds that we are recommending be made available would be available for operating, maintenance and for acquisition of property that would ultimately go into the ConRail system, such as rails, ties, equipment to install rails and ties, and rolling stock. The property that would be purchased clearly could not be reached by the creditors. The right of way, however, is subject to a lien by the creditors. Unless we protest the enhancement in value by the conditions we have suggested in our amendments to sections 213 and 215, so that ConRail would not have to pay for it a second time in acquiring the property, the enhancement would go to the creditors. And that is precisely why we have urged that when we are authorized to enter into an agreement to upgrade property, the increase in the value of the property not be made available to the creditors, but rather to the benefit of ConRail.

Mr. OTTINGER. Ordinarily when a corporation goes through a bankruptcy proceeding, it is discharged of all of its debts. I take it that the problem we confront here is that we can't complete that process without running the risk of having the property of the railroads sold off and no longer available for rail purposes; is that correct? That is why we have to step in here at this juncture.

Mr. BARNUM. Well, your question really goes more to the situation we had when the Regional Rail Reorganization Act was passed. It was true at that time that if the Congress had not stepped in and permitted a multibank railroad reorganization in a single court, the likelihood was that each of the railroads would have had to liquidate perhaps all of its property because it could not reorganize independently. That is precisely why the Congress collected the reorganizations into a single proceeding and authorized the funding for the rehabilitation of the properties so that what came out could be reorganized as a railroad.

Mr. OTTINGER. Do you have any estimate of the exposure because of the Supreme Court decision in the transfer of these properties to ConRail? I take it there is a swap or property for stock. And the Court said we would, to the extent that that arrangement might operate unfairly with respect to the creditors, that we would assume those liabilities. Do you have any estimate of what the plant is on there and what the degree of exposure is? I have heard everything from $13 to $130 billion.

Digitized by Google

What is the realistic liability to which we are exposing the Government?

Mr. BARNUM. The court described two possible liabilities. One is liability for what is called erosion—liability for the effect of continuing the operation of the railroads as railroads during the redesign process. In my judgment the reorganization courts would have, indeed each of them has, required continued operation of the railroads, and, in fact, what we have been doing under section 213, and propose under 215, has made those railroads lose less money during the planning periods than they would have otherwise. If anything, the creditors owe us.

With respect to the conveyance liability, it was our judgment when the act was enacted initially, that the going concern value of the viable parts of the bankrupt properties was the highest and best use of those properties, and their being collected in a single viable corporation, the stock of which would be returned to the estates of the bankrupts, would adequately compensate the estates of the bankrupts. That is still our judgment.

Mr. MACDONALD [presiding]. I hope I don't sound like a broken record, but we have been burned twice now, and I was wanting your assurance, Mr. Secretary, that if the people of New England rebuild once again the roadbeds that have been the cause of much of the delay and many of the problems that we have, that we won't have to go through it another time with nothing to show for it.

Mr. BARNUM. Well, I will give you what assurance I can, Mr. Chairman. Of course, some of the rail properties in New England are not bankrupt. The Maine Central and the Delaware & Hudson are not bankrupt, and the State of Vermont is operating a railroad in that part of the region. The Boston and Maine is in reorganization, but has elected not to reorganize under the Regional Rail Act.

None of these will benefit directly from what we are recommending to you at this time. There are substantial properties of the Penn Central, the old New Haven in the New England region, that will be upgraded. Indeed, one of the projects we propose to fund under our proposal is the upgrading of the line between New York and Boston.

Mr. MACDONALD. My last question: Even though you say that the benefits will flow, does that also mean there will be no New England money spent on roadbeds up there?

Mr. BARNUM. No. I think some of the funds we are making available to the Penn Central, or would want to be able to make available to them, would be spent in the New England region. I know categorically that some of the properties on the main line from New York to Boston, for example, will be ungraded as a result of the program we have recommended to you.

Mr. MACDONALD. And that is no matter how local people decide to vote? If that is left to local decision, it will not matter how they vote? They are going to get the money in any event?

Mr. BARNUM. What we are urging the Congress to do now will not trigger any local decisions as to where the money will be spent. What the Congress did in the Regional Rail Reorganization Act was to authorize $90 million a year for 2 successive years which the States in the region could use along with matching funds to continue operations or to acquire properties of railroads that would otherwise be abandoned.

Digitized by Google

The provision we are recommending the Congress to adopt that is intended initially to apply to the Erie Lackawanna would be available to the Boston Maine if that railroad determined it needed financial assistance during this period.

Mr. MACDONALD. It is not forced on them if they do not want it?

Mr. BARNUM. Absolutely not.

Mr. MACDONALD. Thank you.

Mr. Rinaldo, I apologize for interrupting your time.

Mr. RINALDO. Thank you very much.

I want to commend the Secretary for his excellent testimony. I feel that from the district I represent this legislation is certainly worthwhile, necessary, and most desirable. But I have some questions, very basic questions.

I think we should look beyond the legislation in question and get to the heart of this type of subsidization. What we are doing time and time again is asking the taxpayer to foot the bill. I want to give an example of one city in my district where, in effect, the constituents get hit not only with higher Federal taxes, but get hit again on their local property taxes.

The Central Jersey Railroad's tax delinquency to the city of Elizabeth, N.J., dates back to 1967. They now owe the city $1.5 million in back taxes. In addition there also is a $75,000 assessment for paving and sewer work.

Penn Central has been delinquent since 1970. They owe more than $200,000 in back taxes. The interest owed by these two railroads alone to the city of Elizabeth exceeds $445,000.

The city of Elizabeth has been fighting this matter and has been unsuccessful in collecting any of the back taxes because the railroads have been protected from foreclosure of their property assets. State law in New Jersey requires taxes from railroad property to be carried as anticipated revenue. As a result of this fact, the city is faced to make up for the unpaid taxes by increasing the local property tax rate for all property owners.

Before we vote on this matter, where more money is going to be poured into the railroads, and where they are going to take it for purportedly good uses, I would like to know whether or not any provisions are being made for the payment of back taxes.

Mr. BARNUM. There are.

Mr. RINALDO. Could you please explain?

Mr. BARNUM. I understand that the Penn Central and some of the other railroads have negotiated settlements of some of their tax delinquencies. In our consideration of the cash flow of those railroads and the needs for additional funding under section 213, we have taken into account those obligations that the trustees had incurred.

We have recognized them as legitimate claims on the estates, just as we have recognized claims for back wages. And the funding we are making available to the Central of New Jersey and Penn Central, which we would now urge Congress to increase, in fact permits those railroads to make those settlement payments to your constituents and the other towns.

Mr. RINALDO. I assume you mean they are negotiating with the Court?

Mr. BARNUM. With the approval of the Court.

Digitized by Google

Mr. RINALDO. All right. One other point: While I can say that I agree with most of your testimony, to be perfectly honest about it, I disagree completely when you say there should be no dollar limitation on salaries of officials in Government supported entities. I think this is completely wrong. I very strongly feel that there should be salary ceilings on those officials.

With this type of certainly needed and desirable legislation, we should not be bothered with a contentious, as you put it, and controversial issue unrelated to the crises of the Northeast railroads. I raise this point because of the Senate amendment which increases the salary of the Amtrak president from the current level of $60,000 to what I feel is a staggering $90,000.

When you consider the economic state of the Nation, and the problems we are having with the economy in our fight against inflation, I think it would be a grave mistake to increase any Government official's salary by 50 percent. For those reasons I would hope that not only this committee, but you would also agree that this type of encumbrance should not be included in this legislation.

If it comes up as a separate matter, that would be fine, because I would be perfectly willing to vote against it at that time.

Mr. MACDONALD. Mr. Brown.

Mr. BROWN. Thank you, Mr. Chairman.

Mr. Secretary, I am sorry I was not here when the session started, but we were in the process of organizing the Government Operations Committee.

What consideration is to be given to a railroad which was eligible, but did not choose in the statutory time limit to be brought into Con-Rail under this plan?

Mr. BARNUM. Considerable consideration must be given to both of those questions. There is a specific direction in the statute that in designing the preliminary and final system plans USRA shall look at the impact on rail competition. And USRA is specifically required to consult with the Attorney General and the Federal Trade Commission concerning the specific consequences of the plan.

Also, under section 206(d)(3) of the act, at any time USRA would authorize the transfer of property of a railroad in reorganization to a railroad not reorganizing under the Act, ICC review of that transfer is required under section 5 of the Interstate Commerce Act and USRA must specifically consider whether the transfer would have a substantial adverse effect upon ConRail or on any carrier in the region which is not reorganizing under the Act.

Mr. BROWN. Now, if Erie is not embraced in the ConRail plan, am I correct in understanding they will be eligible for loans for operating purposes?

Mr. BARNUM. Under the proposal we have made, they would be. But I would like to clarify the statement "not embraced in the Con-Rail plan." Under out proposal, the Erie Lackawanna properties would appear in the ConRail plan. The only difference between what we urge you to do and what the Erie Lackawanna trustees urge you to do is that under our proposal, the fact they are included in the USRA design for the region does not require the trustees to hand over the property. The trustees on the other hand, want to be told they must hand over the property without any choice.

Digitized by Google

But the Erie Lackawanna will be in the preliminary system plan, and the lines appropriate for continuation by ConRail will be designated in the final plan.

Mr. MACDONALD. The House is in session, but I think we probably can go another 4 minutes or so.

Mr. BROWN. Thank you. I will complete my questions by that time.

Mr. MACDONALD. If I am in the chair, the gentleman will be the first recognized when we come back.

Mr. BROWN. Are you suggesting terminating now or continuing for a couple of minutes?

Mr. MACDONALD. It depends on the length of the question.

Mr. BROWN. If I may be the first to question at 2 o'clock, I would be delighted to stand at this moment.

Mr. MACDONALD. If I am in the chair, I will be the first to recognize you, with pleasure, the gentleman from Ohio.

Mr. BROWN. Let me ask two more questions now, and then I will hope to resume at 2 o'clock.

What happens to the Erie after the ConRail plan goes into effect? I gather you are not eligible under the law to continue to loan the money to operate competitively, if they are not in the plan?

Mr. BARNUM. Again I have to come back to that term "in the plan." The real distinction is whether their transfer is mandated by virtue of the plan. In any event, our proposal would permit the Erie Lackawanna to continue operating between now and the time of conveyances under the final system plan.

Mr. BROWN. But you could not loan the money after that point?

Mr. BARNUM. Not under this act, nor could we loan money to any other railroad. We could do it only to ConRail itself. But the Surface Transportation Act would provide substantially the same kind of authority to make federally guaranteed funds available to Erie Lackawanna or whatever railroad were to acquire Erie. But the trustees have told us the Erie Lackawanna cannot reorganize on its own, so its properties would have to be acquired by some railroad.

Mr. BROWN. You will eventually have to bring them into the plan and embrace their properties in some way or another in the ConRail plan, isn't that fair?

Mr. BARNUM. There are two aspects to the ConRail plan. One is the design of ConRail. Let's assume for present purposes that USRA concludes that ConRail should be a single railroad embracing those properties of the bankrupts that can be combined into a viable rail system. In addition to the ConRail design, the preliminary and final system plans will also show where properties of bankrupt railroads could better be combined with solvent railroads to provide competition.

Those would be in the plan just as much as the designated properties that are part of ConRail, Inc., if you will.

Mr. MACDONALD. I would think this is an appropriate place to discontinue. We will continue at 2 o'clock.

[Whereupon, at 12:25 p.m., the committee recessed, to reconvene at 2 p.m. of the same day.]

AFTER RECESS

[The committee reconvened at 2 p.m., Hon. Harley O. Staggers, chairman, presiding.]

Digitized by Google

The CHAIRMAN. The committee will come to order and it is my understanding when the committee stopped, we were in the midst of a question by Mr. Brown. I will recognize Mr. Brown.

Mr. BROWN. Thank you, Mr. Chairman.

Mr. Secretary, as we were discussing the future of the Erie Lackawanna and the circumstance which exists wherein it is not part of the ConRail system now, but is in a bankrupt status. You indicated, I think, that the Erie Lackawanna would be planned into the ConRail plan, but it would not be taken into the ConRail plan at this point or you did not favor that.

Now my question is, really, if eventually, why not now?

Mr. BARNUM. Well, we certainly contemplate that USRA would, in the submission of the preliminary system plan, indicate those parts of the Erie Lackawanna which should be continued in service, either as a part of ConRail or as a part of another competitive service. In the latter instance they might be acquired either by the Norfolk & Western or Chessie System or consolidated with the Delaware & Hudson, which is in the same region.

Mr. BROWN. At any rate the area would have to be dissolved and you can't dissolve it after ConRail started?

Mr. BARNUM. That is the same as is true of all other railroads in the organization. It wouldn't be any different. The only difference between the treatment suggested to you whereby you make the Erie Lackawanna a railroad in reorganization, is that it would lie within the power of USRA to take or to dictate which parts of the Erie Lackawanna would be included in the ConRail system.

USRA would not have any greater right to dictate acquisition of other parts of the Erie Lackawanna by any other railroad such as Norfolk & Western and the Chessie System, whereas if you do not amend the act to allow the Erie Lackawanna to become a railroad in reorganization, it would be the Erie Lackawanna trustees who would have to negotiate sale of those parts of its system that were sought either by ConRail or by ConRail's competitors, the Chessie and Norfolk & Western.

In the latter instance, the Court would have to pass upon the compensation that was proffered to the Erie Lackawanna trustees whether by ConRail or by one of those profitable railroads and the Court would determine the appropriate value; that would be that. If you allow the Erie Lackawanna to be a "railroad in reorganization," once USRA determines that certain parts of the property shall be taken for the system, whether to be included in ConRail or acquired by other solvent railroads, if and to the extent that the compensation tendered to the Erie Lackawanna trustees in the form of common stock of ConRail is not adequate to compensate the creditors of Erie Lackawanna, then under the Supreme Court's decision they would have a claim in the Court of Claims for the shortfall.

What I am suggesting that you do is put the Erie Lackawanna trustees in a position where they can negotiate a sale for the same value of their property as the creditors ultimately would get if the property were taken. The difference is that when the corporate entity acquires the property, it would pay full value, whereas if the Erie is a railroad in reorganization, the taxpayer would pay the difference, and that is what we recommend against.

Digitized by Google

Mr. BROWN. One final question, if I may.

I understand you. In the 1974 report of USRA it was suggested as an alternative the creation, an alternative to ConRail, the creation of a separate fixed plant entity to acquire and rehabilitate with Government funds the rights-of-way of railroads in the Northeast. What is your opinion of that suggestion which would appear to rationalize the Federal Government's relationship with the rights-of-way of the various modes of transportation, because we maintain the highways, the barge lines, airways, and so forth?

Mr. BARNUM. From the outset the USRA has considered as an alternative way of restructuring the railroads in the Northeast and Midwest the formation of a separate corporation to own the facilities over which the railroads might operate. They are still considering it and I imagine the preliminary system plan will include an analysis of that possibility. But the idea of separating the two entities does not necessarily entail ownership by the Federal Government of the entity that owns the right-of-way.

I think there is a very major difference, in fact in my judgment a controlling difference, between having the Federal Government finance State-owned highways over which anybody may operate—all of the trucks and buses and you and I in private cars—on the one hand, and what I think you suggest, that is, that the Federal Government own the right-of-way over which one railroad might operate.

Mr. BROWN. Over which any airline might fly?

Mr. BARNUM. Yes.

The CHAIRMAN. Now, we have a time conflict here and I am trying to accommodate some witnesses, if I can, and I might ask you, Mr. Secretary, to step aside, if I can, because we want to get the evidence of Mr. Stafford in here and his plane is leaving.

Mr. BARNUM. I will be pleased to accommodate him any way you like, Mr. Chairman.

The CHAIRMAN. Yes, because the Commissioner needs to give us some answers. We will come back to you.

Mr. Stafford, take the chair, please. Would you insert your statement in the record and try to summarize it, if you would, please.

STATEMENT OF HON. GEORGE M. STAFFORD, CHAIRMAN, INTERSTATE COMMERCE COMMISSION, ACCOMPANIED BY FRITZ KAHN, CHIEF COUNSEL, AND JOHN A. GRADY, DIRECTOR, BUREAU OF ACCOUNTS

Mr. STAFFORD. Yes, if I may. May I introduce our General Counsel, Mr. Fritz Kahn; and John A. Grady, Director of Bureau of Accounts. If I may place our statement in the record for your consideration, fine [see p. 104].

I would like to make two or three comments that seem to have been pretty much discussed at a number of occasions this morning. There is no practical way under the act that we can take over and force another railroad to operate all of the Penn Central or any other major railroad under this act. We found this out by trial and error. We thought perhaps, when we asked for the authority originally, we could.

We appear only able to make it work on small railroads because the

Digitized by Google

directed roads invariably have all kinds of problems and most of them are already in bankruptcy themselves and those not in bankruptcy want to be absolutely assured that their income is to be guaranteed, and I have been even told by one of the major railroads that "I will take you through the courts if this is what you tell me I have to do."

So I would not want this committee to be under the impression that that act have given us authority, that it would suffice in a real crunch. It just will not. We were able to take care of the one very small road very recently with the help of DOT's money that it had available for front-end expenditures.

There has been some question about our views on the Erie Lackawanna being included. We feel that it should be. While we recognize the inherent dangers of perhaps having the entire case reopened, the litigation of the act reopened, we feel that there are some advantages to doing this, and we have to take that chance.

Now, the reason for the Commission's being in favor of EL's being included in the Northeast railroad rather than being kept out is that we feel that it has to be part of planning in the Northeast-Midwest rail system to insure that the Boston Maine and other New England roads have an outlet, a friendly connection into the Midwest and/or New York areas for not only competitive reasons, but for their own lifeblood.

We talked about "Let's just keep them alive and then later we can buy in if we want to." But it was my judgment when I voted this way in the USRA meeting that the best way was to include EL from the start to be sure there was a system, competitive system, worked into the Northeast-Midwest with a proper competitive outlet with a friendly carrier from the Northeast.

There were a number of statements made from the desk here this morning about the catastrophe that the ICC brought on by our turning down that 7-percent rate increase the other day. There were a number of reasons why the ICC turned down that rate increase, but whether we had turned it down or not made absolutely no difference to the Penn Central or any of the other Northeast railroads in bankruptcy. By their own admission in a petition filed before the Commission, they would have had little if any chance for gaining any income because the Chessie System refused to take the rate increase, thereby creating a competitive situation in which those roads that needed the revenue badly could not take the increase and still get traffic.

So whether we gave them a rate increase or not, after the Chessie decided it did not want that rate increase or would not take it, this, for all practical purposes, closed the door on any rate increase, any income or a rate increase for those roads that need it so badly in the Northeast.

I have spoken on the section 1(16)(b) problem, the 7-percent increase, so if you have questions, I will be glad to answer them.

[Testimony resumes on p. 117.]

[Chairman Stafford's prepared statement and attachments follow:]

STATEMENT OF GEORGE M. STAFFORD, CHAIRMAN, INTERSTATE COMMERCE COMMISSION

Mr. Chairman, members of the committee, the committee has requested our appearance here today in connection with its consideration of a bill, H.R. 2051, designed to make more government funds available to ease the economic stress

Digitized by Google

of the Penn Central and other rail carriers being reorganized pursuant to the system plan for the purposes of carrying out the goals of the Act.

In short, the bill is designed to enable all railroads involved in that reorganization to continue to provide essential transportation services during the planning process and to perform maintenance and improvements that are necessary for safe and efficient operations.

Specifically, the bill amends sections 211, 213, 215, and 303 of the Rail Act. The amendment to section 211 is to clarify the U.S. Railway Association's (Association) authority to make loans prior to the effective date of the final system plan for the purpose of carrying out the goals of the Act.

The amendment to section 213 would increase the amount of money authorized for interim relief by $100 million. It would authorize the imposition of the conditions set forth in new section 215(b) where the funds are to be used for maintenance or improvement of the designated rail properties.

The bill would revise the obligational authority under section 215 of the Rail Act by increasing the limit on the authorization for the Association to issue obligations from $150 million to $300 million. Moreover, it would permit the Secretary, with the approval of the Association, to enter into agreements with the trustees of railroads in reorganization in order to (1) perform program maintenance, (2) improve railroad facilities or equipment, and (3) acquire railroad facilities or equipment for lease or loan to railroads in reorganization until the date rail properties are conveyed under the Rail Act.

Unlike section 215 of the Rail Act, H.R. 2051 would amend that section so as not to require the Secretary to issue "regulations setting forth procedures and guidelines for the administration of this section" *prior* to entering into these agreements, nor would it require, as does the existing statute, that the agreements be for the acquisition of facilities which are "necessary to improve property that will be in the final system plan" and that the Secretary "specifically identify" the improvements to be made under the agreements. Rather, the Secretary is given the apparent necessary flexibility to impose reasonable terms and conditions in the agreements; however, where the agreements or advance of emergency funds are for either program maintenance or for improving facilities or equipment, the agreements must contain the conditions set forth in section 215(b) of the bill. Generally, those conditions are styled to conserve for ConRail or the government the increased value of the properties resulting from the agreements under section 215 or from the advance of emergency funds under section 213.

Other amendments would permit the Association, with the approval of the Secretary, to designate in the final system plan the obligations incurred pursuant to section 215 which will be refinanced by Conrail and those obligations from which Conrail will be released. Additionally, the Secretary can convey to Conrail, with or without consideration, any property or interest acquired under sections 213 and 215.

Finally, section 303 of the Rail Act would be amended so as to empower the Special Court to decide, in situations where property maintained or improved with section 213 or section 215 funds is sold, leased or transferred pursuant to the final system plan to an entity other than Conrail, what portion of the proceeds is value attributable to such maintenance or improvement.

As you are aware, the Penn Central presently faces financial problems so severe that it has announced its intention to issue an embargo for inbound traffic effective on February 14. This imminent shutdown of operations would have immediate, disastrous consequences for the Northeast. Thus, we fully support H.R. 2051, which would provide the necessary emergency funding to keep the Penn Central operation.

There are no viable alternatives to a shutdown of Penn Central operations except Congressional authorization of emergency financial aid. It has been suggested that another alternative is for the Commission to utilize its emergency authority under section 1(16)(b) of the Interstate Commerce Act to direct another railroad to take over the defunct operations of the Penn Central. We think it important to emphasize that section 1(16)(b) simply could not be successfully utilized for this purpose. There are several reasons why this is the case.

First is the matter of cost. Under H.R. 2051, the Penn Central is simply being provided with sufficient financial aid to continue its operations, but the cost under section 1(16)(b) would be substantially greater. These costs are com-

Digitized by Google

prised of three basic elements—(1) the payment to the directed carrier of a reasonable profit for its performance of directed service; (2) the reimbursement of those costs which are not met by revenues under directed service; and (3) the payment of rents to the Penn Central for the use of its equipment and facilities.

To illustrate the cost of directed service, we have computed several of the expenses attendant to the operation of the Penn Central. Foremost is the reimburement of those losses incurred by the directed carrier in the performance of the directed service. At present, Penn Central has informed us that it anticipates losses for 1975 of $340 million. Of course, this cost would be met whether Penn Central's operations are continued by virtue of a grant under section 213 of the Rail Act or a section 1(16)(b) service order. However, there are several additional expenses which would be incurred if Penn Central's operations are maintained pursuant to the Commission's authority. A substantial additional expense includes a reasonable profit to be accorded the directed carrier which, based upon a reasonable return on historical revenues, could amount to as much as $64 million for the maximum 240-day period of directed operations. Another cost peculiar to directed service is the payment to the defunct carrier of sums for the use of its properties. This sum does not lend itself to ready computation due to such variables as the portion of the system to be operated and the constitutional minimum that the government may be required to accord the Penn Central estate for its use of these properties.

These two costs are the most salient; however, there are other additional expenses peculiar to directed service which will also be incurred, such as administrative costs incident to the directed carrier's assumption of Penn Central's operations.

In sum, section 1(16)(b) will prove to be the more costly of the two alternatives for purposes of maintaining Penn Central's operations.

Another very serious problem in ordering directed service of the Penn Central is the availability to a directed carrier of the necessary funds to commence the operations and continue them until payment by the government. Presently, the provisions of section 1(16)(b) provide not startup funds whatsoever. Instead they establish a procedure whereby the directed roads can be compensated for the directed service only after the termination of the effectiveness of the service order.

The massiveness of the losses of the Penn Central over the last several years demonstrate the great financial burden that would be placed on any railroad that was directed to take over these operations. In this regard, it should be noted that section 1(16)(b) precludes the Commission from issuing any emergency order directing such takeover service if such an order "would substantially impair the ability of the carriers so directed to serve adequately its own patrons or to meet its outstanding common carrier obligations." Given the very large amounts of money that a directed railroad would have to expend to take over the Penn Central, it appears that such an action would "substantially impair" that carrier's ability to carry on its own service in an adequate manner.

From an operational standpoint it may be possible to continue the Penn Central's system in its entirety if a carrier could be found which could incur the substantial losses discussed above. However, no such carrier exists. Consequently, from a financial standpoint it would be necessary to divide the system among several carriers. This, in turn, presents extensive operational problems which would quite simply destroy the level of efficiency which presently exists on the Penn Central. Several of the operational difficulties are the division of revenues among more than one directed carrier; the rerouting of traffic among the directed carriers; the division of work forces among the directed carriers; and lastly, the allocation of equipment and expenses among the directed carriers.

The Commission stands ready to utilize its directed service authority and in fact recently has done so with respect to the defunct Lehigh-New England Railway Company, a small carrier in Northeastern Pennsylvania.

But as the short discussion above indicates, the problem and costs attendant to a directed service operation of the magnitude contemplated in the instant case make its use in this situation impractical. Thus, as I stated at the outset, the emergency funds made available by H.R. 2051 are essential to the continuation of Penn Central's operation.

Concerning funds presently available, the latest information we have with respect to the disposition of the funds available under section 213 of the Rail Act shows that there is less than $4 million remaining which is uncommitted.

Digitized by Google

I am submitting a copy of the status of the section 213 fund for the record (Exhibit A).

Pursuant to the authority conferred in section 215 of the Rail Act, the Department of Transportation and the Association have jointly developed a program for disbursement of the $150 million provided for in that section. I am submitting for the record a list of the carriers participating in the section 215 agreements and the respective amounts of money involved (Exhibit B).

The need for additional funds can be gleaned from examining the cash position of some the carriers involved in the reorganization under the Rail Act.

We receive cash reports on a daily basis from the Penn Central and the Central of New Jersey. Weekly cash reports are received from the Lehigh Valley and monthly reports are received from the Erie Lackawanna and the Boston and Maine. The latter two railroads are now not included in the Rail Act; however, the trustees of the Erie Lackawanna are seeking to be reorganized under the Rail Act, and the Senate has passed an amendment that would permit the trustees of Erie Lackawanna to petition the Reorganization Court to issue an order allowing the Erie Lackawanna to be reorganized under the Rail Act.

The cash reports received by us show that these railroads are generally unable to maintain a consistent, positive cash flow despite their ability as railroads in reorganization to defer payments on certain prebankruptcy debt and interest (excluding equipment obligations) and property taxes. In order to maintain operations, some of these railroads, particularly the Penn Central, Central of New Jersey and the Lehigh Valley have needed substantial funds from outside sources in the nature of government grants and sales of Trustees Certificates.

We believe the ability of the bankrupt railroads to maintain an adequate cash position from operations will be severely strained in 1975 as a result of the following: (1) the present continual steep decline in traffic volume; (2) the increase in costs from the continuing inflation, particularly higher railway labor costs, resulting from the recently announced settlement with four unions, which may set the pattern for the remaining unions; and (3) the need to correct the ever-increasing maintenance deficiencies.

I am submitting cash flow summaries for those bankrupt railroads for which we receive cash reports and which will become part of the new Conrail and for the Erie Lackawanna (Exhibit C). A cash forecast for the Penn Central for 1975 and the first quarter of 1976 is also submitted (Exhibit D). The projected cash deficit for the Penn Central for 1975 is $209 million and for the first quarter of 1976, the projected deficit is $42 million, not including a $50 million payment on a maturing Government Guaranteed Trustee's Certificate due January 15, 1976. A certain deficit for 1975 of $6.1 million is forecast by the Lehigh Valley Railroad. By the end of this month the Erie Lackawanna predicts an $8 million cash deficit, and the Central Railroad of New Jersey forecasts a $7.2 million deficit by the end of the first quarter in 1976 (Exhibit E).

As a result of our decision in Ex Parte No. 305, *Nationwide Increase of Ten Percent in Freight Rates and Charges, 1974*, the Commission has been able to compile data from the railroads that summarizes deferred maintenance and delayed capital improvements. The data shows that as of June 30, 1974, the reporting railroads claimed total deferred maintenance of $2.9 billion, of which about $2.6 billion represents deferred maintenance on roadway and $0.3 billion in equipment. Delayed capital improvements totaled about $4.3 billion and was almost evenly divided between roadway and equipment. A substantial portion of these figures is attributable to the railroads in reorganization. I am submitting for the record a resume of the deferred maintenance and delayed capital improvements of the railroads in reorganization as of September 30, 1974 (Exhibit F). It is estimated that the rate increase of 10 percent authorized in Ex Parte No. 305 will generate revenues of $1.2 billion during the new year, most of which must be utilized for deferred maintenance and delayed capital improvements as stipulated in the order in that proceeding. The Ex Parte No. 305 figures illustrate the substantial nationwide problem that exists with regard to deferred maintenance and capital improvements.

Because of the serious need of the railroads in reorganization to use the revenues derived from this increase for operating expenses, the Commission has relieved these carriers from the requirement that they utilize these revenues for deferred maintenance and capital improvements. However, we believe that Ex Parte No. 305 and H.R. 2051 are consistent in that they both recognize and address the need for improvement in rail facilities. Moreover, the fact that the railroads in reorganization have been relieved of the requirement that they use their increased

Digitized by Google

revenues for deferred maintenance and capital improvements perhaps increases the logic of making the additional section 213 funds available for program maintenance and facility improvements.

I would like to take a moment to comment on the amendment to section 205 (d) (2) of the Rail Act was passed by the Senate.[1] This amendment could be construed to mean that the function of the Public Counsel's Office will be expanded to include not only the statutory functions of the Rail Services Planning Office, but also all other aspects of the reorganization process provided by the Act, including, presumably, proceedings before the Association and all of the courts involved in the reorganization process.

While it is true that the Commission's Rail Services Planning Office (RSPO) and the Public Counsel staff that has been employed by that Office, have made a valuable contribution to the planning process under the Rail Act, we believe, for several reasons, that the broad Senate amendment of section 205(d) (2) is inappropriate. By broadening RSPO's authority to employ attorneys to work on all aspects of the reorganization process, the amendment would create serious confusion as to RSPO's role under the Rail Act. RSPO is assigned certain specific functions under the Rail Act in order to ensure that the views of the users of rail service receive adequate consideration in the planning process.

Under the Rail Act, as presently structured, the positions of rail users are already effectively represented by RSPO and its Office of Public Counsel through the established statutory channels. In light of this effective representation, we seriously question whether the broad language of the Senate amendment is necessary and whether it would not provide authorization for repetitious and needlessly expensive activities.

This is not to say that if a specific need for additional public representation existed that the Commission would oppose curative legislation. On the contrary, the Commission undoubtedly would support legislation specifically designed to meet that need. For example, it has been suggested that there is a need for public representation by RSPO in state rail plan proceedings. Apparently a need does in fact exist, and we would support a statutory amendment, which specifically provided for such representation. However, we see no need for the sweeping language of the Senate amendment.

In conclusion, based upon the financial data that we now possess, it is clear that additional financial assistance will have to be made available in order to avoid a shutdown of essential rail service and to maintain and improve the plant and facilities of properties which may eventually be taken over by ConRail.

Thank you for this opportunity to present the views of the Commission on this legislation. That concludes the presentation of my formal statement. I and those members of the Commission's staff who are with me will attempt to answer any question you may have.

Exhibit A

STATUS OF GRANT FUNDS AUTHORIZED BY DOT[1] AS OF JANUARY 24, 1975

	Funds committed by DOT	Total funds drawdown	Balance available for drawdown
Penn Central Transportation Co	$62,500,000	$45,500,000	$17,000,000
Central Railroad Co. of New Jersey	12,245,000	9,353,000	2,892,000
Lehigh Valley Railroad Co	5,000,000	5,000,000	
Lehigh & Hudson River Railway Co	341,000	200,269	140,731
Ann Arbor Railroad Co	1,000,000	800,000	200,000
Total	81,086,000	60,853,269	20,232,731
Less authorized	85,000,000		
Less committed	81,086,000		
Balance available	3,914,000		

[1] Section 213 of the Regional Rail Reorganization Act of 1973 authorized the Secretary of Transportation to provide up to $85 million in emergency assistance to railroads in reorganization pending implementation of the final system plan.

[1] The amendment deleted the language in section 205(d)(2) of the Rail Act which reads ". . . in the course of hearings and evaluation which the Office is required to conduct and perform under other provisions of this Act." and inserted therefor ". . . in the course of the reorganization process as provided by this Act."

Digitized by Google

EXHIBIT B

SECTION 215 LOANS

Under the Regional Rail Reorganization Act of 1973, Congress authorized interim assistance of up to $150 million for rehabilitation before the Consolidated Rail Corporation starts operations. The Secretary of Transportation is authorized, with the approval of the United States Railway Association (USRA), to enter into agreements with railroads in reorganization for this purpose.

The amounts authorized by USRA are as follows:

Penn Central Transportation Co	$144,100,000
Lehigh Valley Transportation Co	3,400,000
Central Railroad of New Jersey	2,500,000
Total	150,000,000

The government has guaranteed $3.4 million of obligations issued for the acquisition of 12 locomotives which have been leased to the Lehigh Valley Railroad. The Department of Transportation is presently in the process of negotiating agreements with the Penn Central Transportation Company and the Central Railroad of New Jersey.

EXHIBIT C

PENN CENTRAL TRANSPORTATION COMPANY

CASH FLOW SINCE REORGANIZATION

Since reorganization, Penn Central has been unable to generate a positive cash flow despite Court ordered deferment of payments on (1) pre-bankruptcy debt principal and interest (excluding equipment obligations); (2) leased line rentals; and (3) property taxes, and despite a continuous and substantial deferment of maintenance and capital expenditures.

The railroad, in fact, would have had to cease or curtail operations during the past four years, if not for the receipt of substantial amounts of cash from non operating sources, such as 1) $100 million from the sale of Government guaranteed Trustee's Certificates in 1971 and 1972; 2) $17.5 million received from non recurring sources in 1972; and 3) $50.5 million of grant funds from DOT received between January 1, 1974 and January 23, 1975.

In addition to the above described funds the railroad has consistently resorted to various cash management measures in order to avert a cash shortage. These measures include the following: (1) deferral of payments on accounts payable; (2) deferral of payments on equipment obligations by taking advantage of applicable grace periods and (3) advance receipt of funds from Amtrak for passenger service operations. See page 2.

A summary of cash flow from 1971 to January 23, 1975 follows:

CASH FLOW SUMMARY

[In millions]

	Year 1971	Year 1972	Year 1973	Year 1974	Jan. 1, 1975 to Jan. 23, 1975
Total cash receipts	[1] $2,542.8	[2] $2,572.6	[3] $2,766.2	[4] $3,051.1	[5] $190.8
Total cash disbursements	2,521.4	2,588.8	2,750.1	3,074.0	194.0
Cash excess or (decrease)	21.4	(16.2)	16.1	(22.9)	(3.2)
Cash balance—Beginning of period	18.9	40.3	24.1	40.2	17.3
Cash balance—End of period	40.3	24.1	40.2	17.3	14.1

[1] Includes $75 million received from issuance of Government guaranteed trustee's certificates.
[2] Includes remaining $25 million attributable to issuance of trustee's certificates.
[3] Includes $17.5 million from nonrecurring sources, i.e., property sales and withdrawal of funds from a contingen compensation reserve fund.
[4] Includes $30.5 million of grant funds from DOT pursuant to Railroad Reorganization Act of 1973.
[5] Includes $15.0 million of grant funds ffom DOT pursuant to Railroad Reorganization Act of 1973

CASH FORECAST—JANUARY 1, 1975 THROUGH THE FIRST QUARTER 1976

The most recent long-range cash forecast released by Penn Central dated December 3, 1974, shows that the railroad projects a cash deficit of almost $157 million for the year 1975. See Attached schedule PC–2.

However, this forecast has been revised significantly although a schedule similar to Exhibit PC–2 has not been prepared. Penn Central's financial officer recently informed us that the projected cash deficit for 1975 has been increased to $209 million, as a result of a further large drop in automobile traffic and the revenue losses attributable to the coal strike. In order to cover the projected $209 million 1975 cash Penn Central contends that it needs an additional $167 million of grant funds in excess of the $42 million already committed by DOT for 1975.

Another $42 million is projected to be needed in the first quarter of 1976. This does not include cash needed for a $50 million payment on a maturing Government guaranteed Trustee's Certificate due January 15, 1976. The second $50 million installment is due January 15, 1986.

The forecast shown in Exhibit PC–2 which has been revised as described above is based upon the following assumptions:

(1) Traffic volume will decline 7% from 1974 levels. The above described revised forecast took into account further traffic decline in automobiles and coal.

(2) Rate increases of 7% and 5% will take effect on April 1 and September 1, 1975.

(3) A new labor contract will be settled by and paid beginning January 1, 1975. The terms of the recently announced tentative labor agreement would raise the original forecasted increase by only $700,000 for the year 1975.

(4) Maintenance expense will be at 1974 levels.

(5) An ordinary loss of $341.2 million is projected for 1975, which would be the largest ordinary loss in the carrier's history and substantially larger than the operating deficits reported for 1972, $197.9 million, 1973, $189.0 million, and the first ten months of 1974, $130.1 million.

(6) Although a $15.7 million negative cash balance is forecasted for the end of December 1974, the 1975 forecast is predicated upon a zero cash balance at January 1, 1975. The railroad averted a 1974 year end deficit by cash management.

(7) The forecast also assumes that no funds will be derived from nonoperating sources, such as Government grants. However, as indicated previously, $42 million of grant funds were committed by DOT for 1975.

Penn Central's cash forecast for 1975 is predicated upon a sharp decline in the nation's economy. Although the magnitude of the cash deficits may be overly pessimistic, the railroad, even when the economy has been strong, has not been able to operate without the receipt of substantial sums from nonoperating sources.

PENN CENTRAL TRANSPORTATION CASH POSITION, YEAR 1974

1974	End of month cash balance: Actual	Previously forecasted (in millions)	Grant funds received during month	How cash crisis at end of month was averted
January	$30.6	$27.5		
February	32.5	(3.0)		Deferral of payments attributable to the following: (1) accounts payable $12.0; (2) interline freight balance due other railroads, $8.0; (3) retroactive incentive per diem $4.4; (4) equipment obligations and by taking advantage of applicable grace periods $7.8.
March	15.1	1.1	$10.7	Deferral of payments on accounts payable $13.0 and grant funds received during month, $10.7.
April	14.4	(6.2)		Deferral of payments on accounts payable $14.0.
May	17.5	11.8	9.8	Deferral of payments on accounts payable $10.0 and grant funds received from DOT $9.8.
June	16.7	1.5		Deferral of payments on accounts payable $7.0.
July	17.9	6.8		Deferral of payments on accounts payable $14.0.
August	17.6	(15.3)		Advance receipt of funds from Amtrak $10.4 and Metropolitan and Connecticut Transit Authority $10.9, and deferral of payments on accounts payable $6.0.
September	24.2	(3.1)		Advance receipt of funds from Amtrak, $11.2 and deferral of payments on accounts payable.

PENN CENTRAL TRANSPORTATION CO., CASH REPORT—WEEK ENDED JANUARY 24, 1975

I. COMPARISON OF ACTUAL AND FORECASTED CASH BALANCES

The daily cash balances, from Monday, January 20, 1975 to Friday, January 24, 1975 were as follows:

[In millions]

	End of day cash balance		Actual versus estimated excess or (deficiency)
	Actual	Estimate	
January 20	$26.0	$21.1	$4.9
21	21.3	19.3	2.0
22	17.8	15.4	2.4
23	14.1	11.4	2.7
24	19.2	14.7	4.5

The actual cash balance at January 24, 1975, was $4.5 million in excess of forecasted, primarily because $3.7 million of cash received from affiliated companies in connection with tax allocation agreements was not previously forecasted by the railroad.

A breakdown of cash receipts and cash disbursements for the week ended January 24, 1975 appears on page 5.

II. FORECASTED CASH POSITION—JANUARY 1975 AND FIRST QUARTER 1975

Penn Central's cash forecast for the month of January 1975 shows that a positive cash balance is expected for each day of the month, except for January 31, 1975, when a $3.8 million cash deficit is projected. However, this forecast is already predicated upon the following assumptions:

(1) Draw down of $20 million of grant funds from DOT, as follows: $5 million on January 3, $10 million on January 14 and $5 million on January 28. The railroad received $15.0 million of such funds between January 1, 1975 and January 24, 1975.

(2) Advance receipt of funds from Amtrak, $12.0 million on January 24, for February 1975 passenger service. The railroad received $11.7 million on January 24.

(3) Deferral of payments on accounts payable throughout the month, ranging from a minimum of $7 million to a high of $11 million.

(4) Deferral of payments on equipment obligations, in order to take advantage of applicable grace periods.

On the basis of these assumptions, the railroad expects to have sufficient cash to perform normal operations in January. Further cash management will avert the projected small $3.8 million end of month cash deficit.

DOT has agreed to provide Penn Central with an additional $12 million of grant funds, which the railroad plans to draw down on an "as needed" basis, in either late January or early February. Only $3.9 million of the $85 million of grant funds authorized by the Regional Rail Reorganization Act of 1973, was remaining and uncommitted as of January 24, 1975 (See Exhibit A).

Penn Central anticipates a critical cash position in February. A financial officer of the railroad indicated that at least $50 million of additional funds from outside sources will be needed in February and March in order to provide sufficient cash for operations during the remainder of the first quarter of 1975.

III. CASH FORECAST—JANUARY 3, 1975, THROUGH THE FIRST QUARTER 1976

The most recent long-range forecast released by Penn Central, dated December 3, 1974, shows that the railroad projects a cash deficit of almost $157 million for the year 1975, see page 6.

Digitized by Google

However, a Penn Central financial officer has just informed us that the projected cash deficit for 1975 has been increased to $209 million, as a result of a further large drop in automobile traffic and the revenue losses attributable to the coal strike. In order to cover the projected $209 million cash deficit, the railroad estimates that it needs an additional $177 million of grant funds in excess of the $32 million already committed by DOT for 1975.

About $42 million is projected to be needed in the first quarter of 1976. This does not include cash needed for a $50 million payment on a maturing Government Guaranteed Trustee's Certificate due January 15, 1976. The sceond $50 million installment is due January 15, 1986.

The railroad's forecast is based upon the following assumptions:

(1) Traffic volume, which was originally projected to decline 7% from 1974 levels, is now expected to decline even further, due to further large drops in automobiles and coal. Heavy stockpiling of coal by shippers, in anticipation of a strike in November 1974 has resulted in lesser than anticipated coal traffic in early 1975.

(2) Rate increases of 7% and 5% will take effect on April 1 and September 1, 1975.

(3) A new labor contract will be in effect in 1975, similar to the recently announced tentative labor agrement with four unions. See Part IV for a description of this agreement.

(4) Maintenance expense will be at 1974 levels.

(5) The railroad originally projected an ordinary loss of $341.2 million for the year 1975, which is now higher as a result of the anticipated larger decline in automobile revenues. This would be the largest ordinary loss in the carrier's history and substantially larger than the operating deficits reported for 1972, $197.9 million, 1973, $189.0 million, and the first eleven months of 1974, $156.9 million.

(6) The forecast also assumes that no funds will be derived from non-operating sources, such as Government grants. However, as indicated previously, $32 million of grant funds were committed by the Department of Transportation for 1975.

Penn Central's cash forecast is predicated upon a sharp decline in the nation's economy. Although the magnitude of the cash deficit may be overly pessimistic, the railroad, even when the economy, has been strong, has been unable to operate without the receipt of substantial sums from non-operating sources.

IV. TENTATIVE WAGE AGREEMENT

Four railway labor unions tentatively agreed to a new contract with the railroad industry, covering the three years beginning January 1, 1975. The agreement calls for wage increases of 10% effective January 1, 1975, 5% on October 1, 1975, 3% on April 1, 1976 and 4% on July 1, 1977. In addition cost of living adjustments would be paid on January 1 and July 1 of 1976 and 1977. Fringe benefits are also included in the settlement.

If this agreement sets the pattern for the other rail labor unions, Penn Central estimates that its labor costs in 1975 will increase $130 million and at least $180 million for 1976. Retroactive back pay due for the month of January 1975 will require a $9 million lump sum payment.

V. TRAFFIC VOLUME

Total carloadings for the first three weeks of 1975 were 14.5% lesser than for the same period of 1974. Subtsantial declines were reported for the railroad's major commodities, coal down 18.1%, food and kindred products down 20.4%, transportation equipment down 40.9% and pulp, paper and allied products down 35.6%.

VI. DAILY CASH BALANCES—JANUARY 1975 AND PRIOR THREE MONTHS

See attached Exhibit B.

EXHIBIT E

CASH NEEDS

LEHIGH VALLEY RAILROAD CO.

As of January 28, 1975, the Lehigh Valley has drawn down all of the $5 million of grant funds committed by the Department of Transportation, as follows:

Date and purpose:	*Amount*
September 1974: To fully pay deferred wage increases	$3,000,000
Dec. 28, 1974: General operations	700,000
Jan. 24, 1975: General operations	1,300,000
Total	5,000,000

Lehigh Valley estimates that it will need additional grant funds of $6,078,000 for the remainder of 1975 in order to maintain operations.

ERIE LACKAWANNA RAILWAY CO.

Erie Lackawanna Railway Company projects an $8.3 million negative cash flow during the month of February, thereby causing the estimated $280,000 positive cash balance at February 1, 1975 to decline to a $8.0 million deficit at the end of the month. The railroad estimates that it will need about $10 million of grant funds by the end of February 1975 in order to avert a cash shortage at that time and enable normal operations to continue during the first six months of 1975.

CENTRAL RAILROAD CO. OF NEW JERSEY (CNJ)

Through January 28, 1975, CNJ received grant funds totalling $9,353,000, of which $7,970,000 was drawn down during 1974 and $1,383,000 in January 1975. Available to CNJ, as of January 29, 1975, were $2,892,000 of grant funds, already committed by the Department of Transportation.

In order to avert a cash shortage, CNJ estimates that it will need about $3.6 million of additional grant funds for the year 1975, plus an additional $3.6 million for the first quarter of 1976, as indicated by the following:

[In millions of dollars]

	Year 1975	1st quarter 1976
Estimated negative cash flow	[1] 7.9	3.6
Less: grant funds received and to be received, as of Jan. 29, 1975	[2] 4.3	
Cash needed to avert a deficit	3.6	3.6

[1] Estimated cash deficit at Dec. 31, 1975, $8,700,000 less actual positive cash balance at Jan. 1, 1975, $824,000.
[2] Total of (1) $1,400,000, actually received between Jan. 1, 1975, and Jan. 24, 1975, and (2) remaining grant funds available for drawdown $2,900,000.

The CHAIRMAN. You answered one of them of mine, in fact, that of the ICC not approving the rate increase. Is there any regulation change you think you need from the Congress to help you to help the railroads?

Mr. STAFFORD. Help us to help these railroads?

The CHAIRMAN. Yes, sir.

Mr. STAFFORD. I think the restructuring program you have, with the additional money that is being asked for today, is a proper approach. We cannot enrich the other railroads in this country because of the shortage of funds of the Northeast railroads, and the rate increases come to us on the basis of their being interrelated among all of the railroads.

The CHAIRMAN. Would you let me interrupt right there because I am trying to find out, if there is something you need that we can make this coordinate in a legislative way.

Mr. STAFFORD. Mr. Kahn, would you want to speak on that?

Mr. KAHN. I just want to note for the record, Mr. Chairman, that the Interstate Commerce Commission supported much of the Surface Transportation Act, particularly the funding provisions, title I, I believe.

The CHAIRMAN. You think that would help you if this had passed the Congress?

Mr. KAHN. We think it would have helped the railroads materially, yes.

The CHAIRMAN. Mr. Dingell.

Mr. DINGELL. Thank you, Mr. Chairman.

The CHAIRMAN. I might say I hope we can get through with this gentleman because this gentelman has to catch a plane.

Mr. DINGELL. I will try to stay within my 5 minutes, Mr. Chairman.

The CHAIRMAN. Fine.

Mr. DINGELL. Mr. Chairman, your comments that you could not direct another railroad to take over the function of the entire Penn Central is eminently correct, however, you do have powers under the Rail Reorganization Act to direct utilization of Penn Central track, equipment, and so forth, by operation of another railroad to provide emergency and critical service; is that a fact?

Mr. STAFFORD. We have that authority.

Mr. DINGELL. Have you made any studies or prepared for utilization of that power?

Mr. STAFFORD. We have had meetings and tried several times to make this work. Would Mr. Brooks like to speak on this? He is our expert.

---

[1] Excluding the Boston and Maine corporation, a railroad in reorganization, which has elected not to be subject to the Rail Reorganization Act of 1973.

[2] Data shown represents deferred maintenance and delayed capital expenditures as of June 30, 1974. This railroad has not yet filed its report for Sept. 30, 1974.

Source of data: Reports filed by the respective railroads as required by the Interstate Commerce Commission in connection with Ex Parte 305, Nationwide Increase of 10 Percent in Freight Rates and Charges, 1974. For reporting purposes, deferred maintenance is defined by the Commission to be the accrued deterioration or deficiency in the physical operating condition of railroad track structures, cars and locomotives, and other property used in the provision of transportation service resulting from the failure and/or inability to properly maintain plant and equipment, which produces an adverse effect on railroad operations to an extent that services to shippers have been rendered partially or wholly inadequate and/or has resulted in diminishing the railroads' competitive ability.

Delayed capital expenditures represent actually planned, specifically identified capital improvements necessary for the provision of adequate or improved transportation service to shippers and which had not been undertaken, scheduled, or otherwise committed because funding or financing was not, or projected to be, available through June 30, 1975. They exclude improvements in progress and those scheduled or otherwise committed and recognized in capital budgets in effect or applicable on June 1, 1974. These capital improvements are further identified as delayed expenditures which would (1) add to or improve the carriers' plant and/or equipment so as to increase its usefullness, capacity, durability and efficiency, and (2) which are capitalizable in the property accounts in accordance with the Commission's accounting regulations.

Digitized by Google

Mr. DINGELL. I think it would be much more helpful if you submit to us a monograph on this point. I get the distinct impression you already foreclosed in your own mind the utilization of this power. That I think would be most critical.

Mr. STAFFORD. For major efforts. We will supply the requested information.

[See letter dated February 6, 1975, with attachments, from Kenneth H. Tuggle, Acting Chairman, ICC, p. 119, this hearing.]

Mr. DINGELL. You have the problem in the Northeast that has to be met. I think you can arrange to alleviate that problem.

Mr. STAFFORD. We have arranged for the Lehigh and New England in that we were able to set that up under that program so that it would continue to operate.

Mr. DINGELL. Well, you have, for example, coal and fuel supplies in certain heavy industries—steel and that sort of thing—and have you made plans to meet these needs under that section if need be?

Mr. STAFFORD. This has been all part of the conversation about "how could we do this" with another railroad who may be bankrupt.

Mr. DINGELL. I would feel more confident if you had conversations that went to greater depth in how to do this. I would think you could make a specific statement today you have performed a particular planning function directed at accomplishing this particular preparatory action.

Mr. STAFFORD. I mentioned one healthy railroad among a number of others I had, along with one gentleman in the room today, that meeting where we were suggesting that one of them was going to have to take over a segment of another bankrupt line. The one representing the very healthy road was the one who assured me that I would have to take him through the courts of the land to get him to move on that.

Mr. DINGELL. Well, that may very well be. However, the power essentially is there and if you need some embellishment, we would comply.

Mr. STAFFORD. On a short-term action, major action, there needs to be a guarantee of front-end pay instead of after-the-fact—and with a profit, I might add.

Mr. OTTINGER. Will you yield?

Mr. DINGELL. Yes.

Mr. OTTINGER. I would like to see, in writing to this committee, the plans which you are making.

Mr. STAFFORD. All right.

[See letter dated February 6, 1975, with attachments, from Kenneth H. Tuggle, Acting Chairman, ICC, p. 119, this hearing.]

Mr. DINGELL. I must confess I am not of the view you have done planning at all for utilization of this power, either to ascertain what is economically feasible, or proper or what is legally in your capacity to do. What about your scrutiny of the costs, and so forth? It seems that this committee is continually deluged with demands for money from Penn Central on an emergency basis.

Every time I hear the words "Penn Central" I think of a figure of $250 million, which is usually the amount they want. Can you tell us what you have reported in disclosure provisions in ICC to watch these people, to see they don't go bankrupt some night when you go to bed?

Digitized by Google

Mr. STAFFORD. We have regular reports, some on a daily and weekly and monthly basis, and I would like Mr. Grady, Director of the Bureau of Accounts, to speak to it.

Mr. DINGELL. Yes.

Mr. GRADY. I might say that each week we send up to the House Commerce Committee the report of the Penn Central and have done it for about the last 9 months. It is a quick look at the cash projection. I believe the last one that was sent up was for the week ending January 24 and that memorandum pointed out the problem of embargo by February 18.

Mr. DINGELL. You say that on January 24 you sent us word, "We are going to have an embargo on the week of the 14th." That was readable in the newspaper the same day or the same week. I think your obligation is—well, haven't you folks—or what were you doing in December?

Mr. GRADY. I think we were sending up reports at that time starting the problem, the cash needs of Penn Central. I think a review of those reports would indicate actually the Penn Central was, in fact, going to have a cash problem and had a cash problem.

Mr. STAFFORD. I believe the railroad itself was reporting direct to Congress. It was reporting direct to the Department of Transportation, direct to USRA, about their growing problems, too.

Mr. DINGELL. How much money does the railroad need to get them through July 1 of this year? How many millions?

Mr. GRADY. I don't have July 1. I actually have for the year 1975 and that has been revised to $209 million.

Mr. DINGELL. $209 million would get them through July 1?

Mr. GRADY. No, through December 31.

Mr. DINGELL. Of this year?

Mr. GRADY. Yes, sir. I might add to that, that in thinking about the cash needs of the Penn Central, I think it is important to actually consider that in forecasts of the $209 million it is predicated upon an increase in rates of 7 percent effective April 1, 1975, which actually translates into $85 million—that is, of revenues—and also a further increase effective September 1, 1975, of 5 percent, which translates into revenue of $34 million.

So, in total I am saying to you, sir, the $209 million, absent any increase in rates, is then actually translated to $328 million.

Mr. DINGELL. Well, just for the record, if you please, how much will it take to get through July 1? I think we are in a problem of sending out piles of money to Penn Central.

[Testimony resumes on p. 127.]

[The following letter and attachments were received for the record:]

INTERSTATE COMMERCE COMMISSION,
OFFICE OF THE CHAIRMAN,
Washington, D.C., February 6, 1975.

Hon. HARLEY O. STAGGERS,
Chairman, Committee on Interstate and Foreign Commerce,
House of Representatives, Washington, D.C.

DEAR CHAIRMAN STAGGERS: At the Committee hearing on H.R. 2051 held on February 4, 1975, the Commission was asked by several Members of the Committee to provide certain information. The enclosed material is intended to be responsive to those requests.

The material is divided into three subject areas—the Commission's assessment of the Penn Central's likely cash deficits for various time periods from now

Digitized by Google

through the first quarter of 1976 and the procedures used by the Commission to make its assessment; the Commission's view of the likely economic effect of a Penn Central shutdown on the Northeast region and the country in general; and a description of what the Commission has done to implement its section 1(16)(b) emergency authority and the problems that it has encountered in the actions that it has taken to date.

I believe that this material is fully responsive to the requests made by the Members at the February 4 hearing, and I hope it is helpful to the Committee. Please let me know if the Commission can be of any further assistance in this matter.

Sincerely yours,

KENNETH H. TUGGLE, *Acting Chairman.*

FORECASTS OF PENN CENTRAL'S FUTURE CASH DEFICITS

At the hearings on H.R. 2051, questions were raised concerning the Commission's evaluation of financial data prepared by railroads, particularly those of forecasts of the Penn Central.

As a result of the court decision in *Burlington Northern v. I.C.C.*, 323 F. Supp. 273, affd. 462 F.2d 280, cert. den. 409 U.S. 891, the Commission is usually denied access to financial forecasts. However, Penn Central does furnish earnings and cash flow forecasts although at times not on a current basis. It is often necessary, therefore, that we prepare forecasts of our own. However, the carriers' forecasts are a useful tool and the court's decision could be overcome in part by a condition in Government loans or grants requiring the railroads to make available to the Commission all of its forecasts including all documents supporting those forecasts.

The forecasts of Penn Central submitted with Chairman Stafford's prepared statement compared favorably with those the Commission had prepared and evaluated. Penn Central's forecast shows large cash deficits for the year 1975 and the first quarter 1976. We believe it to be reasonable and based upon valid assumptions except for the inclusion of the 7% rate increase effective April 1, 1975 and a 5 percent increase on September 1, 1975. The forecast shows:

> Substantial cash deficits as follows: $100 million at June 30, 1975; $160 million at September 30, 1975; and $220 million at March 31, 1976.
>
> The projected cash deficits would be even greater if rate increases assumed by the railroad for 1975 were not realized. Absent these rate increases, the cash deficits would be $127 million at June 30, 1975; $230 million at September 30, 1975; $300 million at the end of 1975; and $400 million at the end of the first quarter of 1976.

To assure the accuracy of the Penn Central financial data our auditors maintain a continuing surveillance of the railroad's records and the basis for these forecasts. In addition the cash balances are monitored daily. The following is a description of the monitoring activities conducted by the Commission in order to evaluate the financial position of the Penn Central.

In our evaluation of the financial position of a carrier there are three main areas of study; economic factors, the physical condition of plant and equipment and financial factors. These three areas are interdependent on each other and are not studied in a vacuum or in a separate and distinct manner. The information that is obtained from our review of these areas is coordinated and utilized in our evaluations.

An economic study or review of territories served by the individual railroads is made. These reviews include the trends in population, industrialization, agriculture, and income. Forecasts on the above items are then made which evaluate the estimates of the traffic that can be expected to be generated from the region. Both short (2 to 3 years) and long term forecasts are then prepared.

A study of the territory served establishes the base in which the railroad must operate. Part of Penn Central's problem is the loss of industry in the Northeast to other sections of the country. On the other hand, Southern Railway has benefited from the industrialization of the South. In our review we also consider information from statistics released by the Department of Labor and Commerce.

Although the railroads carry hundreds of different commodities, many railroads are dependent on a relatively few in order to survive. For example, the Monongahela Railway Company derives over 90% of its revenues from coal alone. If the mines served by the Monongahela were closed for any reason, permanently or temporarily for a protracted period, bankruptcy of the railroad could easily

Digitized by Google

result, causing economic hardship to communities served by this railroad. Therefore, commodity statistics are studied for each railroad with great care paid to any changes in trends. The economic studies attributable to regions and trade association economic studies are used in making forecasts. While trade associations are generally overly optimistic, they are particularly good in assessing trends by geographic regions.

In addition, the rate structures of important commodities are analyzed in order to determine profitability and competitiveness. The profit generated per carload of autos is considerably higher than that for coal so it is extremely important to know on a commodity by commodity basis where a railroad is gaining or losing traffic in order to make projections about future profitability.

Also reviewed are traffic volume data, by commodity, in regard to the percentage originated, terminated and received from connections. Changes in these percentages can be a clue in determining a railroad's competitiveness and changing economic conditions in its territory.

In order to assess a railroad's competitive standing, we utilize the information derived from the previously discussed regional and commodity studies and we attempt to answer the following questions:

Is the railroad maintaining its overall share of the traffic generated in its territory?

Is the railroad maintaining its share of traffic by commodity generated in its territory?

How does the railroad's market share compare with its competitors? What are the trends?

How does the service offered by the railroad compare with its competitors?

How do the rates charged by the railroad compare with its competitors?

What steps are being taken by management to meet or beat competition and increase its market share?

Since the product that the railroads sell is "ton miles", for which they are paid on the basis of moving a commodity a certain distance, the condition of the physical plant largely determines a railroad's capacity, the quality of its service and its overall competitive position. Because of the overall efficiency of a car on rail, it can take a long time for deferred maintenance of a railroad to become evident.

Eventually it will, but during the years maintenance is deferred earnings are overstated. This practice results in borrowing cash from the future. Thereafter, future earnings may not be sufficient to provide the cash needed to correct maintenance deficiencies, and inadequate and inefficient service continues.

By means of engineering studies, historical studies and data provided by the railroads, the life span of much of the material used on a railroad's right of way has been established within a fairly narrow range. The railroads, in their annual reports to the Commission, show the actual units replaced for the year of several of the following main items needed for a proper track structure.

The number of cross ties a railroad has in place together with the number replaced are reported each year. The average life of a cross tie is about 37 years, thus a replacement rate of 2½% of total ties is considered adequate. By analyzing tie replacements for the past 20 years, we can evaluate whether the historical replacement rate is adequate. By comparing actual replacement rate with our assumed adequate rate of 2½%, we can estimate the amount of deferred maintenance since we know how much it costs to put a cross tie in place, currently about $20 per tie.

The same procedures discussed above are used to evaluate rail replacement. Rail has a useful life of about 55 years and it costs about $70,000 a mile to install. In order to get a fair picture and not overstate deferred maintenance, our evaluation of rail replacement is based upon equated track miles, which is a smaller number than the total track mileage operated and is derived by weighting mileage attributable to main line, secondary track, branch, yard and siding track.

Ballast replacement in terms of physical units are not reported to the Commission, although the annual cost (dollarwise) of replacing ballast is furnished. However, if a railroad is deferring ties and rail renewals, ballast replacement is also deferred. By estimating an average deficiency in the replacement rate for rail and cross ties over a period of 20 years, a reasonable estimate can also be made for the total dollar amount of ballast deferrals.

When railroads defer maintenance to any great extent, they usually have to reduce the speed of trains operation until the deficiency is overcome. These

Digitized by Google

slow orders are currently being reported to the Commission in connection with reports required by Ex Parte 305. The percentage of mileage under slow orders and the tend are closely monitored. Slow orders are not as reliable an indicator of deferred maintenance as an evaluation of cross tie and rail replacement levels because a railroad can eliminate a slow order by changing the posted speed.

Accidents and derailments are a good indicator of deferred maintenance. A certain number can always be expected but a sharp rise is an indication of trouble. Trends in costs attributable to accidents and derailments are also monitored.

The amount and condition of a railroad's freight cars and locomotives are a vital measurement of a railroad's capacity and ability to offer service. The following information is used to evaluate the physical quality of a carrier's equipment:

(1) The total number of equipment operated;
(2) The average age of equipment;
(3) The average capacity of each car and total capacity of the fleet;
(4) The percentage of rolling stock owned to leased;
(5) The bad order ratio (the percentage of cars needing repairs to the amount owned and leased); and
(6) Equipment rental charges.

All of the above is done not only in the aggregate but by type of car. Trends are carefully monitored and are related to the regional and commodity studies to ascertain whether the railroads have sufficient ejuipment to meet the needs of shippers along their line. This is also an indicator of competitive position.

An evaluation of each Class I railroad's financial condition is made quarterly, based upon quarterly income statements and balance sheets filed by the carriers. By means of certain financial indicators, each Class I railroad is categorized as being in satisfactory, marginal or poor financial condition. The classification is then compared with that of previous quarters to determine the extent changes have taken place. Particular attention and concern is given to those railroads showing a decline in financial rating.

These quarterly financial statements are also reviewed and analyzed to show cumulative figures for the year to date. These figures are analyzed to evaluate the quality of earnings and the basis for preparing or evaluating projections of future earnings.

Revenue figures are checked against the carloading figures for each railroad to determine whether revenues are in line with traffic levels. Revenues per carload are calculated in order to determine trends and the effects of any rate increases. Continual declines in revenues per carload could indicate a deterioration in traffic mix, fierce competition, or both. Comparisons are made with preceding quarters and the same year earlier periods.

Maintenance of roadway figures are reviewed as to adequacy and comparability with earlier periods. A yearly rate figure (adjusted for quarterly differences) is calculated to provide comparison with prior year figures where the adequacy of maintenance levels is more or less known as a result of the procedures previously discussed in the section on the physical condition of roadway. Adjustments are also made to correct for inflation.

Maintenance of equipment expenditures are analyzed in much the same way as for roadway outlined above.

Transportation expenses are compared to traffic levels and are computed on a per carload basis. This is then compared with prior periods to determine if any trends are developing. Wage increases are factored in. Deteriorating trends (increase in expense per carload) could be a sign of declining efficiency, change in traffic mix, deferred maintenance or even poor management. Trends in transportation costs per carload are very useful in making forecasts.

Taxes, while compared quarterly for forecasting purposes, are more thoroughly analyzed at the end of the year. Property taxes are closely reviewed.

Equipment rents are compared to traffic levels to determine if a railroad is depending too heavily on the use of other railroads' cars. This can and has resulted in car shortages, causing losses in traffic and competitive position.

Also, heavy dependence on long term leases results in an understatement of fixed charges, or an overstatement of coverage. It also distorts the balance sheet which is discussed below.

The ration of fixed charges to the balance available for fixed charges is computed. Trends are determined to see if default of interest payments are likely which could result in bankruptcy.

Digitized by Google

Non-operating income is also reviewed and compared with prior periods because a substantial increase in non-operating income could be wholly responsible for a rise in net income, thereby masking an actual decline in income from carrier operations.

In reviewing the balance sheet we review items such as:

The ration of current assets to liabilities.

Cash and equivalents measured in the number of days as it relates to expenditures.

The relationship of long term debt to equity.

The capitalization in relation to the property account.

Leases, which are fixed liabilities of the company, are capitalized, where possible, to give an adjusted picture of total long term debt.

The quality of receivables and delay in collection are evaluated.

Economic Impact of Penn Central Shutdown

A complete and abrupt shutdown of the Penn Central would have a disastrous economic effect on the population and economy of both the Northeast region and the country as a whole, especially in view of the current economic recession with no improvement in sight.

As the Nation's second largest rail carrier with its more than 17,000 miles of track carrying freight through 17 states of the Northeastern United States, the Penn Central loss of freight traffic would severely affect the auto, food, and other manufacturing industries, since it serves more than 50 percent of the Nation's manufacturing plants and moves more than a million tons of freight every 24 hours.

Commuter passenger service in Boston, Philadelphia and New York are operated by this carrier for a total of close to a quarter of a million passengers daily.

It is estimated that a complete and abrupt shutdown of that railroad would have its impact primarily in the Northeast. The best estimate is that the result of a shutdown would be a 5.2 percent decrease in the rate of economic activity in the Northeast and a 4 percent decrease for the rest of the Nation. An eight-week shutdown would cause the real GNP, in view of the current recession, to fall at a rate of between —9.3 and —9.6 percent (annualized rate) as compared to the —9.1 percent decline (annualized rate) recorded in the 4th quarter of 1974. The GNP growth rate would therefore be expected to fall by an additional 3–5 percent, due to an 8-week shutdown.

Viewing the effects of a shutdown from an industrial sector standpoint, the following chart demonstrates the impact of an 8-week shutdown on industries in the Northeast:

EFFECTS OF PENN CENTRAL SHUTDOWN

Industrial sector	Percent reduction within sector	Reduction in value added factor (in millions of deflated (1958) dollars)[1]
Wholesale and retail trade	13	142
Chemicals and products	31	24
Prim. nonferrous metals	38	23
Prim. iron and steel	10	20
Electric energy	13	17
Motor vehicles	7	15
New construction	6	14
Printing and publishing	9	12
Food products	5	9
Rubber and plastics	8	7

[1] Value added is a generally used indicator of economic activity. It is comprised of wages and salaries, interest, and rental payments originating in that industry.

In calculating these figures, the following factors were taken into account. It is difficult to completely substitute other modes for some heavy bulk commodities, mainly coal, iron ore, non-metallic minerals (sand and gravel), chlorine, lumber and grain, by non-rail modes; however, these commodities do not move at present both by truck and by barge in varying quantities. It is, for example, technically

Digitized by Google

feasible and quite common to move both lumber and grain by truck although such moves are increasingly uneconomical compared to rail as size of shipment and length of haul increases. With the water mode, the limiting factor is accessibility to the waterways. Special analyses were made of mode substitution for coal and iron ore in the Northeast. There was found to be relatively limited substitution of water for rail on coal movements. In the North Central States where coal is used most extensively, there are few waterways adjacent to generating plants. In New England where many power plants are on the water, they now use oil (or receive coal by water already); there remain only four plants in New England which use coal as the principal fuel. There would appear to be some possibility for barge substitution on iron ore although at the expense of increased circuity. It should be mentioned that most lines carrying these heavy bulk commodities over long distances are densely patronized lines which would continue to operate. In the analysis, it was not assumed that any of these commodities would be impossible to carry by non-rail modes but rather that a significant proportion could not be carried in the short run because of a lack of suitable equipment.

Technically, substitution of *intermodal* moves for current all rail moves in low volume lots, i.e., two or three cars per day per shipper, is practical today for both merchandise and bulk materials. This would substitute largely motor carrier moves for that portion of the all rail currently occurring on light density lines. Merchandise traffic is currently moved in piggyback service by utilizing efficient mainline haul service with truck pickup and delivery into light density areas. Intermodal service for bulk commodities, while not as well developed commercially as merchandise traffic, is currently being provided and expanded. The major constraint to short term implementation of greater increased use of either merchandise or bulk intermodal service exists in the need to expand both terminal and equipment capacity.

Commission Implementation of Section 1(16)(b) Emergency Authority

The Regional Rail Reorganization Act established a comprehensive planning process for reorganization of financially troubled railroads in the northeast and mid-west region. That Act created the U.S. Railway Association and within the ICC the Rail Services Planning Office to conduct this planning process and provided those organizations with funds totaling approximately $50 million to carry out their planning.

Section 601(e) of that Act, which added section 1(16)(b) to the Interstate Commerce Act giving the Commission certain emergency powers to direct rail service, was not intended to provide a solution to the northeast problem in the event of the failure of the general process. In keeping with that intent, section 601(e) speaks in terms of a temporary and very costly method of continuing limited, essential rail services.

Section 601(e) provides the means whereby service might be continued for a brief period, for instance, should Penn Central, for whatever the reason, be obliged to discontinue service on certain lines. If Penn Central were forced to do so, the Commission would consider the individual lines in terms of the essential character of their transportation service and could order another carrier to operate the service found to be essential.

Should Penn Central go forward with its present proposal to discontinue all service over its system before the end of February, we do not believe section 601(e) provides a feasible or adequate alternative to the legislation proposed by the Administration.

The Commission is fully cognizant of the potential devastating effect of a cessation of all service by the Penn Central. The Commission further intends to continue its cooperation with the other parties involved in the planning process and also to move forward with its own internal planning under section 601(e).

Soon after the enactment of the Regional Rail Reorganization Act of 1973, the Commission established a Northeast Rail Task Force which was directed to consider and plan for emergency situations that might require the Commission to take action under the powers newly given it in section 601(e) of the Regional Rail Reorganization Act. That provision amends section 1(16) of the Interstate Commerce Act by adding a new subparagraph (b) and will be referred to throughout this memoranda as section 1(16)(b).

One of the initial undertakings of this Task Force regarding section 1(16)(b) was the institution of a pilot project in cooperation with a major rail shipper

Digitized by Google

with numerous facilities located on the lines of Penn Central, many of which are heavily dependent on rail service. This pilot project was begun with the expectation that, in order to reduce expenses, the Penn Central might decide to cease providing service on certain of its unprofitable branch lines and that service on some or all of such branches might be so essential as to require a directive under section 1(16)(b). It was antipicated by the cooperating shipper that such a situation was likely to arise.

As a first step in this pilot project, direct contacts were made with high officials of Penn Central, and cooperation and advance information with regard to cessations of service were sought. The Task Force was given assurances that the Commission would be given full and early warning when such a cessation was contemplated; no such cooperation has been forthcoming with regard to the present situation.

Armed with pledges of assistance from the Penn Central, the Task Force scheduled two field trips to examine first-hand the operating situation on branches of the Penn Central which serve facilities of the pilot project shipper. The first field trip, in July 1974, covered the area of the Bonhampton Branch off the Penn Central New York Philadelphia mainline near Edison and Metuchen, New Jersey. The Bonhampton Branch not only provides switching service for adjacent industries but also contains the Ford classification yard where cars are switched for several industrial parks along the PC mainline.

In addition to demonstrating the poor condition of the track and facilities of even those Penn Central lines which carry considerable traffic, the observations of the Task Force on the Bonhampton Branch reemphasized the almost total interdependence of branch and mainline operations. Obviously, a cessation of service on a particular branch requires revisions in operations on contiguous mainlines and in more distant yards. To direct another carrier to perform the transportation service on a particular branch necessitates even greater operational dislocations. Assuming that operations on the mainline were to be continued by the original carrier, that carrier would either have to agree to continue to drop or pick up cars for the branch from its through trains at the proper siding or receiving yard, or an arrangement would have to be developed whereby the traffic originating or terminating on the branch would be marshalled at the connection between the original and directed carriers. The former arrangement would undoubtedly be more efficient but would probably require some compensation to the original (mainline) carrier, while the latter would clearly involve a great increase in switching time and cost. Consideration must also be given to the equipment to be used in conducting the branch operation. If an agreement between the carriers could be reached, rental of all equipment previously used in the branch operation would be advisable, with such rental expenses as a reimbursable cost, but in lieu of such a rental agreement, a directed carrier would have to have excess equipment of its own to be used in operation of the branch and possibly in movements between the branch and the actual connection of the lines of the directed and original railroad. All such operational adjustments would, of course, add to the overall cost of conducting an already unprofitable operation by a carrier unfamiliar with the situation. Though these observations were made solely with respect to a single branch, their ramifications for system operations are apparent.

The second field examination of the Task Force covered PC facilities serving two plants of the pilot project shipper in Ohio, near Columbus and near Mansfield. As both of these facilities are served almost directly off Penn Central mainlines, they represent a somewhat different set of operational problems. Cars for both facilities are switched from nearby classification yards along the main line by switching crews from those yards which move the cars from the yard to the plant along the main line tracks. Thus, directed service to either of these plants would require the hiring by the directed carrier of both main line and yard crews, which would add directly to the cost of that service. Consideration of the rail service to these facilities reemphasized the interdependence of main line and local service seen in New Jersey. To continue only main line service without distribution of cars to and from classification or switch yards, which are often no more than additional tracks directly off the main line, would create impossible congestion, and the movement of cars to and from such yards requires detailed coordination with mainline movements.

While the Task Force has not encountered an actual cessation of service by Penn Central on a branch line or to a particular facility which required action

Digitized by Google

under section 1(16)(b), in September and October 1974, the Task Force was engaged in emergency planning for a threatened cessation of service on the entire Central of New Jersey system. The CNJ situation makes it apparent that problems of directed service on branch lines are many times magnified for an entire rail system and that planning for directed service over an entire system involves many additional considerations.

In applying its experience derived from the CNJ process and the PC branch line pilot project, the Task Force has approached its efforts with regard to directed service over the entire Penn Central system from several directions. Initially, consideration was given to the feasibility of directing that operations be conducted under section 1(16)(b) in essentially the same manner and to essentially the same extent as presently performed under Penn Central management. Under this option, the question immediately arises as to what other railroad, in a service area in which connecting railroads are almost all in reorganization themselves, could or would undertake such directed operations, especially in light of the specific statutory requirement that performance of a directed service shall not "substantially impair the ability of the carrier so directed to serve adequately its own patrons or to meet its outstanding common carrier obligations" (Section 1(16)(b)(B)). As discussed in greater detail below, the relative enormity of the Penn Central system, its increasing daily operating losses, and the weak condition of many of its connecting railroads, in conjunction with the lack of provision in section 1(16)(b) for an initial influx of Federal start-up funds, indicates that performance of directed service over the entire Penn Central system by a single directed carrier would be virtually impossible.

However, one common carrier by railroad which would not be restricted in its service of its own patrons by imposition of a directed service order would be the newly-incorporated Consolidated Rail Corporation. This carrier is not yet an operating entity and is, in reality, little more than a board of directors. To direct the Consolidated Rail Corporation to operate over the Penn Central system would and could do little more than impose that carrier, in name only, over a continued PC operation. At the moment, the Consilidated Rail Corporation has no readily available source of funds with which it could meet start-up costs or daily operating deficits, though potentially a loan from the United States Railway Association under section 211 of the RRRA could be forthcoming. A direction to the Consolidated Rail Corporation would certainly provide that entity with valuable operating experience and would preserve all properties which would eventually be acquired by it, but as noted below, the add-on costs in addition to mere operating deficits might be considered prohibitive.

The Task Force has given more intensive consideration to having two or more carriers perform directed operations over separate portions of the Penn Central. The Penn Central system could be divided on the basis of different criteria, such as major traffic flows or Penn Central internal divisions. From traffic density and directional data available to the Task Force, it is apparent that, in very general terms, Penn Central is primarily an east-west carrier, with most traffic moving toward the northeastern consumer areas. Most of this traffic flow is concentrated on several major main lines, namely Chicago-Cleveland-Buffalo-Boston, Chicago-Fort Wayne-Pittsburgh-Philadelphia, St. Louis-Indianapolis-Columbus-Pittsburgh, St. Louis-Indianapolis-Columbus-Cleveland and Washington-New York-Boston along the Northeast Corridor. While these flows emphasize Penn Central's general east-west orientation, there is obviously a large amount of crossing of major flows and multi-directional feeder traffic and a limited number of origin-destination points at which most movements over Penn Central converge. Any division of the Penn Central on this east-west traffic flow basis (with, hypothetically, one directed carrier operating a north portion and another the south) would be complicated by these factors which would lead, as noted below, to excessive duplications and employment and increased costs.

Penn Central's existing internal operating divisions often bear little resemblance to current operating realities and have been given only minimal consideration as a viable basis for division of Penn Central among directed carriers. Later discussion herein indicates that the problems of and constraints imposed by utilization of such divisions would unduly complicate directed service without providing concurrent operating benefits.

While demonstrating the predominance of east-west movements on the Penn Central, the traffic flow data analyzed by the Task Force shows certain key points through which such flows pass. Consideration is being given to artifically

Digitized by Google

dividing the Penn Central along generally north-south lines through such points. These divisions could offer greater potential for directing carriers operating primarily outside the region to perform the PC operations, could limit somewhat the points at which interchanges would have to occur, and could thus avoid some costly delays, but, as enlarged upon at a later point, actual interchanges would be greatly increased, the number of employees and amount of equipment utilized would rise, and shipment delays would occur.

Section 1(16)(b), when read in conjunction with the pertinent legislative history, emphasizes the continuation under its auspices of only essential services and at the lowest possible cost to the Federal government. In recognition of this intent, the Task Force has also examined the possibility of directing service over limited portions of the Penn Central system. An immediate problem arises in determining what is essential enough to warrant directed service: what is essential or critical to a single patron using Penn Central service on a branch line may not appear in the same light to a more detached analyst, and what may today appear to the Interstate Commerce Commission to be nonessential in terms of temporary directed service may, under the criteria to be applied by the United States Railway Association to which we are not yet privy, be included in the rail properties to be acquired by, and which should thus be preserved for, the Consolidated Rail Corporation.

Several reduced forms of the Penn Central which could be operated under a section 1(16)(b) directive are, however, under active consideration. Penn Central itself has, on prior occasions, recommended that its system be reduced to either a 15,000 or 11,000 mile core of essential lines. Either core system would maintain service to much of the traffic currently moved by Penn Central. Yet, it is questionable whether either of these reductions in actual mileage would make the Penn Central that much more manageable under directed service by a single carrier.

In light of the many serious problems which would arise from the issuance of a directive for a single railroad or even several railroads to operate the present Penn Central, the option of operating only major main lines and terminal areas is under intensive analysis. Such a directed operation would, of course, be intended merely to maintain traffic flows into and, to a more limited extent, out of the area served by the Penn Central and thus reduce the ripple effect of a cessation of service on railroads which connect with Penn Central. However, operation of only main lines and terminals could prove to be of very temporary benefit without further operations of switching and industrial facilities. Terminal to terminal operations along main lines only could result almost immediately in impossible congestion, with traffic inbound to the Penn Central moving in but not being distributed and only a limited amount of outbound traffic which originates immediately contiguous to a terminal point moving out.

A perhaps more popular variation of the main line only approach is also being considered whereby certain branches, industries, or stations of particular importance could be served on a greatly reduced basis. Attention is currently directed toward coal mines and their dependent industries, facilities which rely heavily on bulk movements by rail, and movements of rail-bound commodities.

The Task Force has long been aware of the overwhelming economic and social ramifications of a cessation of rail service by the Penn Central, which, despite its continuing economic woes and deteriorating service, remains the second largest rail carrier in the Nation. While the effect of such a shutdown upon industries and shippers relying upon its freight service would be devastating, both intercity and commuter rail passengers are also heavily dependent upon continued operation of the Penn Central system.

Should the Penn Central management make a determination that certain of its services should be curtailed, section 1(16)(b) could provide a method by which a portion of those services would be maintained, upon a finding that such services are essential. However, because of the character and enormity of the Penn Central itself, because of the findings required by and specific funding provisions of section 1(16)(b), and because of the specific financial and operational difficulties described herein, a directed operation does not appear, at the present time, to be a feasible alternative to the increased funding of the overall planning process envisioned by the Regional Rail Reorganization Act.

The CHAIRMAN. The gentleman from Ohio.

Mr. DEVINE. Mr. Chairman, I want to ask you a general question

Digitized by Google

because of the fact you have been on the Interstate Commerce Commission for in excess of 5 years. Most of us that are called upon to cast a vote on this matter, and other related matters as far as Penn Central, are always confronted with the question: "Why in the world are there very healthy railroads in this country such as Southern and Union Pacific and some others, yet Penn Central and the crowd in the Northeast are always coming here hat in hand, crying for more and more?"

It must be poor management or something and can you give us an opinion from ICC based on your 5 years in living with this matter?

Mr. STAFFORD. Yes, sir. In fact, I have a feeling it has gone back further than 5 years, because it was just as I became Chairman that they went under.

But, in the first place, you are right, they had some rather questionable management, as we understand it, but more than that it is the nature of the beast, so to speak. In the days when coal was king and the railroads could handle their usual basic commodity of coal, they had an ongoing income, a base income that rode them through most of the crises.

But once the environmental problems hit, then much of the coal that was being carried here in the East was no longer considered to be what it was. This cut the basic income for the railroad.

Second, a great deal of the heavy manufacturing that in years past was in this area has moved out of the Northeast into other areas of the country, and there has been a changeover into manufacturing of the type that was more susceptible to truck movement and/or other competing forms.

Then, the Northeast railroads just do not have any long-haul operations. They have so many high-priced terminal areas to serve.

Mr. DEVINE. What you are saying is environmental factors plus competition from the trucking industry would not apply to the healthy railroads as well?

Mr. STAFFORD. It does apply to the healthier railroads, and some are healthy. Union Pacific's latest report shows a 12-percent rate of return.

Mr. DEVINE. I am trying to get this for the record, Mr. Chairman, and you would add to that, of course, the fact you said they had some real serious management difficulties?

Mr. STAFFORD. They did have.

Mr. DEVINE. Do you think they have been resolved in any sense?

Mr. STAFFORD. I think they have been resolved to a great extent, but it is very difficult to run a railroad when you cannot spend any money. You can't deplete the creditors' interest, and you must be sure that all of the actions you take as a manager of a railroad are actions that are supposed to take care of the money, and you forget some of the service problems that go with this.

Mr. DEVINE. Thank you, Mr. Chairman.

The CHAIRMAN. The gentleman from New York, Mr. Murphy.

Mr. MURPHY. Mr. Stafford, briefly describe what is involved in a closed-end procedure.

Mr. STAFFORD. Closed-down procedure?

Mr. MURPHY. About the tariff regulation.

Mr. STAFFORD. When you embargo, which is what they say they will

Digitized by Google

have to start doing, when you embargo the traffic, that means there will be no more of the Penn Central moving freight into Philadelphia or New York or any of these places. They are going to have to depend on alternate forms of transportation, the trucking, water carriers where possible, any form, but they cannot—again by Court order—deplete the creditors' money that is in that railroad.

Mr. MURPHY. But must they apply to ICC for 30 days' notice and certain other statutory regulation requirements?

Mr. KAHN. The regulations of the Interstate Commerce Commission which are found, Mr. Congressman, at 49 CFR 1006 simply require that notice be given to the shipping public, and no length of time is specified in the regulation.

Mr. MURPHY. There is no 10-day or 30-day requirement?

Mr. KAHN. No, because the embargo provisions actually were designed to deal with emergency situations. If there is a derailment on a line, or a line has been disrupted, and the railroad very rapidly must issue an embargo to preclude additional shipments coming along.

Mr. MURPHY. The ICC or court or any other body has nothing to say about it?

Mr. KAHN. The Commission does have the opportunity to determine whether the embargo notice is reasonable, but beyond that, I think, it has very little or no jurisdiction, Mr. Congressman.

Mr. MURPHY. What are our plans for sustaining critical operations of the railroad, not the whole operation, but just critical operations?

Mr. STAFFORD. That pretty much speaks to Congressman's Dingell's comment a few moments ago, that perhaps we should be able to meet some critical situation in a special line into perhaps Philadelphia or a special line into some particular coal mine, something of this kind. These matters have already been under consideration by our Bureau of Operations. But we keep running into the financial problem in that those lines that could handle it and are connected are generally some other bankrupt line in many of the cases, and unless they have a front-end payment, instead of a grant of 90 days after they have started, then they may put in a bill.

They cannot afford to move in and start operating because they are already strapped trying to keep grinding their railroad with the limited income they have in bankruptcy.

Mr. MURPHY. But you will have a plan for operation in those critical situations?

Mr. STAFFORD. We won't have a successful plan for completely taking over the operation of Penn Central if it shuts down.

Mr. MURPHY. The Justice Department has communicated with the committee in support of the ICC's position not to expand the role of the Office of Public Counsel within the Rail Service Planning Office. As the Chairman of the ICC, do you have any control of the action of Public Counsel of the Rail Service Planning Office or over the director of that office?

Mr. STAFFORD. There is George Chandler sitting back there, who used to be on my staff, and that counsel works for him now. But, yes, I suppose I do, through the fact that it is, because it is funded through our funding process. So, yes, I guess I could say something of some concern, except I recognize that Congress was insisting as nearly as possible that this be an autonomous office.

Digitized by Google

Mr. MURPHY. But their funding is rather narrow and wanted to be sure that that funding was not diverted to the purposes other than that intended?

Mr. STAFFORD. That is right. The confusion that may result is why we suggest that you not go along with the Senate amendment on that.

The CHAIRMAN. The time of the gentleman has expired. Dr. Carter.

Mr. CARTER. Thank you, Mr. Chairman.

Mr. Chairman, I believe in your statement you state that Penn Central this year will lose $340 million; is that correct?

Mr. GRADY. Since the forecast we had originally made, actual forecast, was $340 million, and it is not $280 million, normal operating loss.

Mr. CARTER. Of course, I believe coal production in our country is at an alltime high.

Mr. STAFFORD. Can I make a comment?

Penn Central obviously has a problem with equipment. They have been able to get outside help to rebuild some 70-ton coal cars, but they have another 1,500 they were hopeful that we would help with the funding of, but USRA has made a determination that that would be counterproductive and is proposing to go for 100-ton cars, to build new 100-ton cars, so they are limited to some extent by not having all of the cars they need.

Mr. CARTER. In other words, coal is being mined at an alltime record rate, it seems to me that Penn Central certainly should not be losing that much money with Pennsylvania being one of the largest coal-producing States.

Mr. STAFFORD. I know, but the automobile is really a very high income product for railroads and that is down considerably.

Mr. CARTER. But if affects Southern, too, and Southern still makes money.

Mr. STAFFORD. No, not as much.

Mr. CARTER. As a matter of fact, what about Union Pacific?

Mr. STAFFORD. Yes, I just said Union Pacific had, I believe, 12 percent.

Mr. CARTER. What about Erie Lackawanna? Why are they going bankrupt? Could you explain that? Was it the same type of management that we had at Penn Central?

Mr. STAFFORD. Well, they have had the same problems, to some extent, coal, and automobiles to a great extent, and all of these things have created difficulties, plus that which I was saying about the East as a whole. They have had good management.

Mr. CARTER. They had good management?

Mr. STAFFORD. Yes.

Mr. CARTER. I rather doubt that. I think if it had good management, certainly they should show a little profit when Southern. Union Pacific, and these other companies make such profits as they do.

Mr. STAFFORD. Well, keep in mind, and I am from the West myself, but you have long hauls out there.

Mr. CARTER. Long hauls in the South, too.

Mr. STAFFORD. And considerable long hauls in the South, but here in the East it is a different story.

Mr. CARTER. Yes, sir. It is a sad story.

Mr. STAFFORD. Yes; it is.

Digitized by Google

Mr. CARTER. It is a sad story in the history of our country. We hear a lot about productivity and also referring to the workingman not producing as much as other people, but doesn't that lack of productivity begin at the head, at the top of the companies as well? Don't we have some dead timber, deadwood there?

Mr. STAFFORD. I don't know.

Mr. CARTER. Thank you, Mr. Chairman.

The CHAIRMAN. The gentleman from Washington State, Mr. Adams.

Mr. ADAMS. Mr. Stafford, I gathered you support the proposition that we should grant the additional amount of money to the Penn Central?

Mr. STAFFORD. Yes, sir.

Mr. ADAMS. I understand also that you believe that the Erie Lackawanna should be included in the Northeast reorganization plan?

Mr. STAFFORD. Yes.

Mr. ADAMS. Did you hear the colloquy this morning I had with Mr. Barnum to the effect this may cause that entire plan to then be put under an injunction?

Mr. STAFFORD. Yes. This was discussed in the board meeting.

Mr. ADAMS. What conclusion did you arrive at?

Mr. STAFFORD. The conclusion—well, I would rather leave it to the president of the board to speak on that when he follows me here at the table, because I am sure they kept a specific record on what was said.

Mr. ADAMS. Is that the conclusion of the ICC?

Mr. STAFFORD. The Chairman of the ICC, as a member of the board, supported the majority side, which was the view of the president of the USRA.

Mr. ADAMS. Don't you believe that we should wait before giving the total amount of money to the Penn Central until the USRA plan is presented to Congress so we will have, in effect, a bargaining position with the creditors of these various bankrupt lines at that point?

Mr. STAFFORD. That is no problem, real problem. There is no real problem with that so long as we have the money to keep operating.

Mr. ADAMS. Can one of your staff tell me what your payroll projections are, not what the losses are, but what is necessary in order that that they make their necessary payroll payments of money to maintain their equipment to continue through October of this year?

Mr. STAFFORD. May we supply that for you? Do you have that?

Mr. GRADY. The forecast here, it actually forecasted this.

Mr. ADAMS. Let's put it this way. I know what their forecast is. Do you have an independent one as the regulatory agency in charge of the operations?

Mr. STAFFORD. I guess the answer to that would be "No."

Mr. ADAMS. Have you made an independent investigation of the present status of the Penn Central as far as its cash flow is concerned and the basic operating needs between now and the end of the year?

Mr. STAFFORD. We make a continuing review; I actually wouldn't characterize it as a complete investigation, but it is a kind of financial oversight and it is done more or less on a short-range basis and not a real evaluation of the exactness of the long-term forecasts.

Mr. DINGELL. Will you yield?

Are you aware that the Northeast rail legislation specifically mandates you folks down at ICC to watch that? Why aren't you doing it then?

Digitized by Google

Mr. STAFFORD. We are up to that point.

Mr. DINGELL. Well, you are apparently not, because you can't answer the question of the gentleman from Washington.

Mr. GRADY. The question was a special investigation?

Mr. ADAMS. No; I want to know if you have an independent set of figures that come from the regulatory agency, as opposed to a submission from the interested parties, as to the amounts necessary to meet payroll and other expenses through October of this year? I use October because the USRA plan is supposed to be up here by August, and we are supposed to consider it in September. What I am leading up to is, we are going to take a big bath with this bill on the House floor and we are going to take a big bath with the public when it comes up and I want to be very certain the members of this committee and other Members of Congress have some factual background that comes from a number of sources as to what the need is so that we are in a position to defend ourselves.

Mr. GRADY. I can respond to that, Congressman. I can say that the thing we do is a financial oversight, the evaluation of the assumptions used in projections, and if we find the projections are unreasonable, then we take exception to that projection.

Now we have evaluated the assumptions used in the forecast. As I previously actually pointed out, a problem that in my judgment is a problem of the magnitude in the projections, well, that is a rate increase matter. We can inquire of some of the dollars and operating expenses, but I think the big dollars are in the evaluation of the rate increases. We will supply further information for the record.

[See letter date February 6, 1975, with attachments, from Kenneth H. Tuggle, Acting Chairman, ICC, p. 119, this hearing.]

Mr. ADAMS. Now you have turned down the rate increase; isn't that correct?

Mr. GRADY. Pardon?

Mr. ADAMS. The rate increase has been turned down; has it not?

Mr. STAFFORD. Yes. But, as I said before, the Penn Central and most of the other Northeast railroads could not have realized a cent from a rate increase as long as the Chessie continues to say "We are not going to take a rate increase." It is a competitive situation and the railroads themselves all filed petitions with us indicating—and that was on December 20, I believe—that a rate increase would in no way be helpful.

Mr. ADAMS. All right, the Norfolk & Western—did that railroad also decline it?

Mr. STAFFORD. No.

Mr. ADAMS. They did not?

Mr. STAFFORD. No.

Mr. ADAMS. Answer this and then I will stop, Mr. Chairman.

Mr. STUCKEY. Could I yield the balance of my time to the gentleman?

The CHAIRMAN. I will come back to him in a minute, but go ahead and ask your question.

Mr. ADAMS. Is the Erie Lackawanna in its original status a subsidiary owned by a subsidiary of the Norfolk & Western?

Mr. GRADY. That is right. It is owned by the Dereco Co., which is owned by N. & W.

Mr. ADAMS. Then we have a situation where one of the major outside profitable lines in this area is requesting that we take over a subsidiary which has gone down, is that right?

Digitized by Google

Mr. GRADY. Yes.

Mr. ADAMS. Or that we supply money to it?

Mr. GRADY. Yes.

The CHAIRMAN. The gentleman from Kansas, Mr. Skubitz.

Mr. SKUBITZ. Thank you, Mr. Chairman.

I have one or two questions. What you are really telling us today is that the Penn Central is in a spot today regardless of how it got there; that unless this committee acts, the Penn Central is going to close down?

Mr. STAFFORD. That or the Government is going to have to take us, and they are practically doing that.

Mr. SKUBITZ. If it does close down, insofar as the Midwest is concerned, it will be disastrous because we won't be able to move our things to the East, and the Easterners will not be able to move it to the West. That is the problem before this committee.

My next question is, you do favor inclusion of—I am not so sure I do or don't at this moment—but I am asking questions and I am trying to get answers.

Mr. STAFFORD. The answer is, "Yes; we favor it."

The CHAIRMAN. Mr. Stuckey.

Mr. STUCKEY. Mr. Chairman, I yield my time to the gentleman from Washington.

Mr. ADAMS. Mr. Stafford, it has been proposed by trustees of the Penn Central that they will embargo certain freight and that they would have to start shutting down operations. From your independent regulatory position and from your check on the cash flow, to follow up on my prior question, on what dates will this occur?

Mr. STAFFORD. The 14th, I believe.

Mr. GRADY. That should be February 25.

Mr. ADAMS. In other words, you are stating to us they cannot meet their February 25 payroll, is that correct?

Mr. GRADY. Yes, sir.

Mr. ADAMS. Is it possible for, in your opinion, one of the agencies of the Government, either Department of Transportation or either under the Emergency Rail Services Act, to grant them any funds out of the $19 million left in that fund in order to continue in operation through that payroll?

Mr. Kahn, if you want to reply.

Mr. KAHN. The money under the Emergency Rail Services Act of 1970 would not appear to be available because of the requirement that the Government as a guarantor of the trustees' certificate would become a preferred creditor.

Mr. ADAMS. Let me have that again, why, because they become a preferred creditor? Wouldn't that be possible in order to meet that payroll?

Mr. KAHN. Because it is very likely that the sale of the trustees' estate certificates would be opposed by the creditors of Penn Central, on the theory that it would further dilute their interests.

Mr. ADAMS. Well, if it were opposed by them, could the trustees still do it?

Mr. KAHN. If able to persuade the judge to authorize the sale, I would think so; yes, sir.

Digitized by Google

Mr. ADAMS. We are dealing with a very severe time problem here, and I want to know if there is any other alternative that you know which will give us the opportunity to pass such legislation as necessary to keep them operating?

Mr. KAHN. As I am sure you know, Congressman Adams, that same legislation, the Emergency Rail Services Act of 1970, did include a provision enabling the Secretary of Transportation to lease properties of the Penn Central in the event of actual or threatened cessation of essential services, so I believe that perhaps that remains a possibil of essential services, so I believe that perhaps that remains a possibility.

Mr. ADAMS. Now, I have a question that follows up on my original one of the ownership of the Erie Lackawanna. If it were to come into this act, it could then be operated over by profitable railroads who were ordered to do so by the ICC. You have indicated before that you didn't think this was a very good solution and that it would not work out for the general Northeast system. Do we not have a problem that since the Erie Lackawanna, originally a subsidiary of the Norfolk & Western, then the only three profitable connecting systems that go into that area are the Norfolk & Western, the Chessie, and the Southern, that you would be faced with a potential conflict of the Government placing Erie Lackawanna into this system and then allowing the one that originally operated it to operate over the tracks at a profit when they have not been able to operate their subsidiary at a profit?

Mr. KAHN. That is an inherent problem, of course. But I believe it is the thinking of the majority of the USRA Board that the problem of the Erie Lackawanna can be dealt with better, more effectively, if it could be forced into one or more of the structures. I believe a majority of the Board of USRA does not believe the possibility that pieces of Erie Lackawanna might be purchased either by ConRail or by profitable lines in the area offers a realistic alternative.

Mr. ADAMS. You do not think the exchange provisions or the other provisions would be ample to deal with the problem of the Erie Lackawanna then?

Mr. KAHN. That is correct.

Mr. ADAMS. Now, taking your regulatory hat as opposed to your USRA hat, I want to know if you think the same way.

Mr. KAHN. The Commission briefly considered the matter in preparation for today's appearance and decided in support of the position of the USRA.

Mr. ADAMS. In other words, the regulatory commission has no position to take with us other than that we should go along and place Erie Lackawanna into this system and then put a total amount of money into the system so the whole thing will turn over?

Mr. KAHN. We perhaps would not phrase it that way, but the answer would have to be "Yes."

Mr. ADAMS. I phrased it that way deliberately. Thank you. Mr. Chairman.

The CHAIRMAN. The gentleman from New York, Mr. Hastings.

Mr. HASTINGS. I thank you, Mr. Chairman.

Digitized by Google

Let me see if I can get your statement into perspective here. On the final page, page 13, you say:

> It is clear that additional financial assistance will have to be made available in order to avoid a shutdown of essential rail service and to maintain and improve the plant and facilities of properties which may eventually be taken over by ConRail.

So you are stating that the consequences of the failure of this Congress to produce this legislation could very well result in the shutdown of the Penn Central?

Mr. STAFFORD. Right.

Mr. HASTINGS. Now as relates to the question of time and I asked the question this morning of Mr. Barnum, the scheduled date is February 14, if by the end of the week this Congress does not pass the legislation and goes away, what do you expect to have happened by the 14th and the following week?

Mr. STAFFORD. I would expect just what they say, they will start embargoing.

Mr. HASTINGS. There is no provision, as I understand from Mr. Murphy's question, for you to establish a 10-day or 30-day waiting period, is that correct?

Mr. STAFFORD. That is correct.

Mr. HASTINGS. Then the financial impact, and let me ask you to comment, what would be the impact on industries throughout the Northeast and unemployment and economy in this country, what in your judgment would be the impact?

Mr. STAFFORD. Just like any major closedown that you have, the unemployment rolls will grow and the Nation's business—even more than just a business closing down, the Nation's business comes to a halt.

Mr. HASTINGS. Then is it fair to say we are facing a critical problem?

Mr. STAFFORD. Yes.

Mr. HASTINGS. There is no question about using that terminology, a critical problem in this country, unless the Congress acts?

Mr. STAFFORD. I consider it a critical problem.

Mr. SKUBITZ. May I ask if that is not quite correct, Mr. Chairman. If they close down, you have the authority to send the trains over that line to pick up the trade?

Mr. STAFFORD. Congressman, our problem is, and we advised a few moments ago about it, we have found, through our efforts, that it just does not work in any major sense. We were able to do it in a very small sense on the Northeast road just the other day, but that was a very small situation where the Department of Transportation was able to find the funds to front end the operations; in other words, to give the other railroad the money to keep them operating over the line.

Mr. SKUBITZ. I got news for you. If you operate the way we are now, you operate under big disadvantages.

Mr. HASTINGS. I appreciate your yielding back. Does the judge have anything to say about shutdown of Penn Central?

Mr. KAHN. I am unaware the trustees have brought the matter before Judge Fullam.

Digitized by Google

Mr. HASTINGS. Would he have jurisdiction on the question, however?

Mr. KAHN. I would assume so. I would assume before the railroad would actually be able to issue the embargo notice, it would have to present the matter to Judge Fullam.

Mr. HASTINGS. That will remain as a question mark as to what he might do?

Mr. KAHN. Yes.

Mr. HASTINGS. In relation to Erie Lackawanna, if I understand, you say you favor inclusion of Erie Lackawanna in the ConRail system?

Mr. STAFFORD. Yes, and the majority of the Board and the Commission supported my statement.

Mr. HASTINGS. Now USRA, in a letter recently to the chairman, Mr. Staggers, said they felt the litigation would only refer to the amendments provided by this legislation relating to Erie Lackawanna and not to the entire act itself, as concern has been expressed, rightfully so by Mr. Barnum, and do you share that feeling that the litigation would probably only relate to the amendments rather than to the whole constitutional question again?

Mr. KAHN. Yes. The principal issue, as I am sure you know, the principal issue that we litigated before the Special Court and Constitutional Court was the question of the availability of the Tucker Act remedy.

That matter now appears to be settled. We do not perceive that the amendment which we endorse will reopen that question.

Mr. HASTINGS. The only legitimate concern.

Well, thank you, Mr. Chairman.

The CHAIRMAN. The gentleman from North Carolina, Mr. Preyer.

Mr. PREYER. I have no questions at this time, Mr. Chairman.

The CHAIRMAN. The gentleman from Texas, Mr. Collins.

Mr. COLLINS. Mr. Chairman, I appreciate having you here with us today. I was interested in one or two points and am disturbed about the fact this railroad continues to be a bankrupt operation. One thing that I do not understand is giving them a blanket salary increase instead of relating it to a merit basis of achievement or productivity. Is there any basis you know of where this salary increase is on merit or more productivity?

Mr. STAFFORD. Are you talking about Amtrak?

Mr. COLLINS. I am talking about 1975, Penn Central.

Mr. STAFFORD. You are talking about the general pay increase?

Mr. COLLINS. That is right, if they are going to give this bankrupt railroad a 1975 pay raise identical to efficient, profitable railroads, I ask are they giving them one just because everybody is getting one.

Mr. STAFFORD. Yes, sir, it is an industrywide negotiation.

Mr. COLLINS. Who did that negotiation? Did you have anything to do with that?

Mr. STAFFORD. We have absolutely nothing to do with labor.

Mr. COLLINS. Are you familiar with the total trackage? If the Penn Central didn't have to operate dead tracks, it would make it easier for them to hit the black in this operation. How many tracks or miles of tracks did Judge Fullam suggest they consider?

Mr. KAHN. The trustees proposed the abandonment of approximately 5,000 or 6,000 miles of their 20,000-mile system, but at that time

Digitized by Google

Penn Central estimated that out-of-pocket savings would come to only about $20 million a year, so the out-of-pocket savings of curtailing the operations over these lines would not be significant.

Where the money begins to build up, however, is in the cost of rehabilitating those lines to acceptable levels.

I think that is the heart of the Penn Central problem, a broken down railroad system sadly in need of rehabilitation.

Mr. COLLINS. You agree that Penn Central was considered a model as far as maintaining its tracks?

Mr. KAHN. No, sir.

Mr. STAFFORD. It may have been many years ago.

Mr. COLLINS. Yes, many, many years ago, but today all we talked about is the fact that the tracks are in very, very sorry condition.

Mr. STAFFORD. They are.

Mr. COLLINS. Now it would seem to me to be better to concentrate on the tracks where you have mileage that is making money which are active tracks, and get all of this dead trackage closed up and out of business. How many miles of track did they actually close?

Mr. STAFFORD. The USRA Board has been meeting on it and they will have their initial report before the Congress late this month.

Mr. COLLINS. Yes.

Mr. STAFFORD. And that will be in the report when it comes up.

Mr. COLLINS. Every time it comes up every Congressman with 10 miles of track in his district runs down to introduce a bill to delay it. We ought to tie it in once and for all and eliminate the dead trackage. How much actually has been eliminated? Has any?

Mr. STAFFORD. Since when?

Mr. COLLINS. Since we have discussed this bankruptcy situation.

Mr. STAFFORD. In the last 5 years, it is my recollection that it has been close to 1,900 miles.

Mr. COLLINS. Of the 8,000 miles?

Mr. STAFFORD. Total all over the country.

Mr. COLLINS. Well, the rest are not sick like Penn Central. How much with them?

Mr. STAFFORD. We have been held up through another action. The environmentalists took us to court in New York.

Mr. COLLINS. What do environmentalists have to do with whether a railroad track ought to be operated or not?

Mr. STAFFORD. Well, it has been used for many reasons. I don't say it is all bad, but it has thrown a monkey wrench into our operations, keeping us from our work.

Mr. COLLINS. You don't see any action the way the thing stands now unless the Congress requires action? When are these tracks going to be closed, the 6,000 miles of Penn Central?

Mr. STAFFORD. I don't know that 6,000 miles are going to be closed or what that amount will be, but you will have the initial report from USRA later this month.

Mr. COLLINS. Thank you very much, Mr. Chairman.

The CHAIRMAN. The gentleman from New York, Mr. Ottinger.

Mr. OTTINGER. Mr. Chairman, I was not at all satisfied with your answers to the questions from my colleague from New York, Mr. Murphy, with respect to your ability to hold up any discontinuance of

Digitized by Google

service on the Penn Central. Why on earth do you treat this as an emergency provision under the same provision which would apply if a train had broken down on the tracks and you have to ask without notice, rather than as an ordinary discontinuance of service in which there is a delay?

Do I perceive you provided it in the law and regulations?

Mr. KAHN. The normal abandonment provisions affecting the railroads were superseded by provisions of the Regional Rail Reorganization Act. The ICC presently has no jurisdiction to pass on the abandonments in the Northeast area.

Mr. OTTINGER. There is no provision in law under which you can hold up a railroad's proposed discontinuance of service for any situation, emergency or otherwise?

Mr. KAHN. The jurisdiction was conveyed to the United States Railway Association, or USRA, so that while we don't have that power, the USRA does have that power.

Mr. OTTINGER. Yes, sir. Do you know what those provisions are?

Mr. KAHN. The provisions are in section 304(f) of the Regional Rail Reorganization Act.

Mr. OTTINGER. I will be glad to yield to my colleague.

Mr. FLORIO. Has there been a request by ICC for such statutory authority to give you safeguard protection or safeguard authority to stop some of this?

I am negatively impressed with the agency's inability to deal with what is a unilateral decision by a railroad to stop and you apparently have nothing to say about it. Have you tried to do anything further about your statutory authority?

Mr. KAHN. I think the fact remains, Mr. Congressman, the railroad will stop running because of lack of money.

Mr. FLORIO. That is a position put forth, but my point is, don't you feel that there should be some mechanism available to you to examine this matter?

Mr. KAHN. The Congress sought to deal with the problem of the railroads in the Northeast comprehensively in the Regional Rail Reorganization Act and discontinuance of operation pending the promulgation of the final system plan was a matter entrusted to USRA.

Mr. FLORIO. And the answer is you have no such authority?

Mr. KAHN. No, sir.

Mr. OTTINGER. You said you make regular audits, pass them up here.

You have power to criticize or comment on those and have you ever, in fact, made a statement to us that the representations of railroads are inaccurate?

Mr. GRADY. Within the last couple of years?

Mr. OTTINGER. You may answer.

Mr. GRADY. I should like to clarify the question, that is in the last couple of years or prior to the bankruptcy?

Mr. OTTINGER. I will say at any time, but of course the last couple of years are the most critical.

Mr. GRADY. Well, I think the bankruptcy, the clash with the staff was extremely critical. The involvement in Penn Central had some diversified activities and felt these activities contributed toward their problem and I think we spoke out on them.

Digitized by Google

Actually, subsequently, under the stewardship of the trustees we have been kind of critical of some of the forecasting techniques or earlier forecasting techniques, but I think they have sharpened their skills and their forecasting and so, well, I guess the answer is in the last couple of years the answer would be "no, we have not."

The CHAIRMAN. The gentleman from California, Mr. Moorhead.

Mr. MOORHEAD. Mr. Chairman, in answer to some earlier questions you stated that if the railroad was able to cut back the 6,000 miles of nonprofitable lines, they would only save about $20 million a year. We are told we need $245 million at least for them to operate through the first quarter of 1976.

Why is this railroad so terribly unprofitable? Why is it costing so much more money than other railroads to operate in the country if they can't even operate at a profit after they lose all of their nonprofitable trackage?

Mr. STAFFORD. Well, first those other railroads that you speak of have been extremely well-managed, most of them, and they have very long hauls, most of them, and the long haul, without a great number of terminals to be served at such close distances, makes a great deal of difference.

So the long haul railroads, with few terminals, have a much better go at making money.

Mr. MOORHEAD. How is this new railroad system you are planning going to be able to operate this thing at a profit ever?

Mr. STAFFORD. Perhaps it is a little difficult to speak when we have not come out with the report. You may want to speak more to the point with the president of USRA, who will follow me.

That will hopefully be guided more to a profit.

Mr. MOORHEAD. Wouldn't it be a little better system to turn portions of this Penn Central Railroad over to other railroads that can operate at a profit where there is a management that can take it over and wants to take it over?

Mr. STAFFORD. If this does not work, that will probably be what will happen, or the Government will take it over.

Mr. MOORHEAD. How many billions of dollars down the line, though?

Well, I have no further questions.

Mr. KAHN. Mr. Moorhead, I think you will learn from the trustees of the Penn Central this afternoon that they probably would not be here, but for the combination of the crippling coal strike and the reductions in the automotive industry. Both coal and the automotive industries are important sources of traffic for Penn Central, and Penn Central, while cutting back its operations, was not able to reduce its costs commensurate with its reductions in income.

Mr. MOORHEAD. Well, have they been compelled to do things by your Commission that they should not have been compelled to do so, they couldn't do and still operate as a regular business?

Mr. KAHN. I know of nothing.

Mr. MOORHEAD. No further questions.

Mr. GRADY. I have something to add to your comments about the Penn Central.

The CHAIRMAN. You may finish that answer.

Mr. GRADY. I think it is interesting to note we have problems and the problems seem to focus around the Northeast or the East and we have

Digitized by Google

major motor carriers in that area that are also in financial difficulty and it might be indicative of the problem.

The CHAIRMAN. The gentleman from Colorado, Mr. Wirth.

Mr. WIRTH. Mr. Stafford, I know you have to leave, and can you tell us where you are going to go?

Mr. STAFFORD. Well, to Florida. I have a speech.

Mr. WIRTH. Who are you speaking to?

Mr. STAFFORD. To the Board of Governors of the American Trucking Association.

Mr. WIRTH. Might I just register for the record at this point that it seems to me that we in the Congress and this committee are being backed into a very severe corner in terms of providing $250 million to a railroad.

Mr. STAFFORD. Yes.

Mr. WIRTH. And you are Chairman of the Interstate Commerce Commission and heading off to Florida to speak to the Truckers Association.

Mr. STAFFORD. Well, it is a long-time commitment which I had and it is not something recent. I will send you a copy of the speech, sir, if you would like that.

Mr. WIRTH. I much would rather have you here for these proceedings, which is much more important to the economy of this country.

Mr. STAFFORD. I am at the call of the committee and if the committee desires me to stay, I will certainly do so.

Mr. WIRTH. Fine. Can you tell me if the Penn Central Railroad that we are in the process of subsidizing to the point of $250 million, is that a subsidiary of a larger corporation?

Mr. STAFFORD. Yes, the Penn Central is a subsidiary of the Penn Central Holding Co.

Mr. WIRTH. Does the Penn Central Co. have other subsidiaries?

Mr. STAFFORD. Yes. Do you recall what they are?

Mr. KAHN. Well, there are two other subsidiaries, the Great Southwest.

Mr. GRADY. That is not right.

The Penn Central Co. subsidiary, is that the question?

The Penn Central Transportation Co. has subs under it, but actually the Penn Central Holding Co. has one minor sub and its major sub, of course, is the Transportation Co. The balance of the subs fall under the Transportation Co., as with Great Southwest, which is a Pennsylvania Co., which is a solvent holding company below the Transportation Co.

Mr. WIRTH. I am confused.

Mr. GRADY. Well, you have the Penn Central Co., a holding company, which is essentially a shelf organization and the stock in the hands of the public is held in the company and that company owns the Transportation Co., and then the Transportation Co.—well, the Transportation Co. owns the Pennsylvania Co. and actually the Great Southwest.

Mr. WIRTH. Do you know about the Pennsylvania Co. and other companies?

Mr. GRADY. Yes.

Mr. WIRTH. And you know about their profit structure?

Digitized by Google

Mr. GRADY. Yes.

Mr. WIRTH. Are there other profitable subsidiaries as opposed to the railroad or parent or holding company?

Mr. GRADY. Yes.

Mr. WIRTH. And is there any way in which a taxpayer in this country might assume it would have been possible for the holding company to spinoff their profitable operations into one company and let the taxpayers of the country take a bath in relation to railroad operations?

Mr. GRADY. I don't think the holding company can actually do it, but I believe there is some court decision that prohibits the Pennsylvania Co. from passing any of its assets up to the Transportation Co.

Mr. WIRTH. Is there anything that this committee can do about that to make sure that the more profitable assets can, in fact, be moved to the railroad in such a way that this $250 million could be picked up in some other fashion?

Mr. GRADY. I think the problem is that the stock of the Pennsylvania Co. is pledged to the bank and there are some legal aspects of this that actually prevent that from happening until its legal obligation has been met and I believe there is something like a $300 million loan where the stock of the Pennsylvania Co. has been pledged to the banks and most of these assets that you would be speaking about would actually come below that tier.

Mr. WIRTH. Thank you.

The CHAIRMAN. The gentleman from Indiana, Mr. Sharp.

Mr. SHARP. No questions.

The CHAIRMAN. The gentleman from Michigan, Mr. Brodhead.

Mr. BRODHEAD. No questions.

The CHAIRMAN. The gentleman from North Carolina, Mr. Hefner.

Mr. HEFNER. One question and I know you want to go to Florida and I would like to go with you, if I may. One question for my own information and I yield the remainder of my time to Mr. Moffett.

Mr. Hastings asked the question if we don't vote one penny to Penn Central, in essence they will cease operations. Have you done any surveys or can you give me some idea of what impact this could have on the economy on unemployment, and on the gross national product of this country? Do you have any figures, sir, for the impact if we don't vote one penny to Penn Central?

Mr. STAFFORD. I do not have figures before me at this time although I can supply some.

[See letter dated February 6, 1975, with attachments, from Kenneth H. Tuggle, Acting Chairman, ICC, p. 119, this hearing.]

Mr. HEFNER. We have heard in Senate testimony that it could raise unemployment to 12 percent. We heard this and we heard it could cost a number of dollars to the economy and how it would affect it this way and that way. In essence we have been told that if we do not act within the next week or 2 weeks, Penn Central will close down and Congress will be taken to task for adding another 5 percent unemployment to the country. I don't think this is exactly a fair situation to be placed in.

Mr. STAFFORD. No, it is not. That is right.

Mr. HEFNER. But you do not have figures?

Mr. STAFFORD. Not at this time.

Digitized by Google

Mr. HEFNER. I yield the remainder of my time to Mr. Moffett.

The CHAIRMAN. Mr. Moffett.

Mr. MOFFETT. Mr. Stafford, I have just a couple of loose ends that I would like to pick up on.

First of all, the relationship between the rejected rate request and this proceeding has been brought up previously. Where would a citizen find the information on that rate request and the Commission's decision?

Mr. STAFFORD. We will be happy to supply you with all of the information about it.

Mr. MOFFETT. Is that true for a citizen, an average citizen?

Mr. STAFFORD. Yes, an average citizen can walk in and get the information.

Mr. MOFFETT. Maybe you are not aware of it, but during the luncheon hour my office attempted to get that information and we were told one had to go to the Commission and copy it down. I would suggest that we make the information more readily available.

Mr. STAFFORD. We will have one in your office this afternoon, whatever it is, and is there something specific?

Mr. MOFFETT. I simply wanted to study it during the noon hour, since this issue has been raised. I want to examine the Commission's reasons for turning down the request. That is all.

Mr. STAFFORD. All right, I will see it is sent up to you.

Mr. MOFFETT. Not only for a Member, but I think it should be made available for citizens also.

The second question, Mr. Stafford. Again, this relates to the business of hearings on shutdowns.

Mr. STAFFORD. I have a copy of the order here, if you would like that. That is what we put out, or that is the information that is available.

Mr. MOFFETT. But the order does not really give you reasons.

Mr. STAFFORD. I have forgotten what it says right now.

Mr. MOFFETT. The order does not give your reasons, but isn't there a decision rendered by the Commission?

Mr. KAHN. I didn't hear the question.

Mr. MOFFETT. Is a decision rendered by the Commission when you turn down a rate request, or when you approve one? The decision is printed, is it not?

Mr. KAHN. In mimeograph, you have it published. With respect to ex parte 310, general rate increase, I should note as the railroads of the country came in and sought special permission from the Commission to publish their tariff in this particular format, and all we did was find they had not made a case for our granting special permission for the procedure they proposed, and it was not justified under the circumstances. This is without prejudice to them.

Mr. MOFFETT. I understand that. The second question relates to your involvement in terms of a discontinuance of service. Can you or can you not hold a hearing on the embargo? If the Penn Central says on February 14 it wants to shut down, and I think there is still confusion on that, might you hold a hearing?

Mr. KAHN. The Commission can always hold a hearing, but it has no effective remedy in the circumstances where Penn Central is faced with inability to meet the payroll on February 25 and the Commission can enter all of the orders it chooses and cannot do anything to enforce such an order.

Digitized by Google

Mr. MOFFETT. Do you plan on holding a hearing?

Mr. STAFFORD. I had not planned on holding a hearing. This is a rather useless thing, useless item when it is money that will determine their actions. I am hopeful that some way may be found of funding this, but I don't know what it would be.

Mr. MOFFETT. Let me speak to that then and ask you some questions on it quickly. The RSPO, which falls within your Commission, issued a report on January 10, I believe, commenting on the USRA's report of October, I believe it was, and in that report they indicated they felt both DOT and USRA had construed too narrowly the notion of profitability, if you will, and had construed too narrowly, or ignored, in fact, the goals of the act, section 206.

Now, do you share the view that perhaps they have not paid enough attention in their preliminary plan—and I understand the preliminary system plan comes out on February 26—but to date do you share the view that USRA and also DOT, have too narrowly construed the legislation and, in fact, in seeking to abandon lines in the Northeast, for example, have perhaps not taken social profitability into consideration; in other words, the firms are left without rail service and so forth.

I am speaking to the Rail Reorganization Act, I think you understood that, but do you share the view that RSPO appears to have adopted?

Mr. KAHN. I think the judgment of the Rail Services Planning Office was somewhat premature. They were basing that simply on the analysis or the methodology devised by the USRA in dealing with the light density line problems. The Board of Directors of USRA, on which Chairman Stafford sits, has been very mindful of taking into account the additional factors, disruption to the local community, environmental considerations, and the like.

Mr. MOFFETT. Well, they were also reflecting comments of the citizenry, weren't they?

Mr. KAHN. Again, based upon methodology of the light density line analysis.

Mr. MOFFETT. I have one more question. Do you favor the separate fixed plan entity proposal that the Government take over eventually the railbeds?

Mr. STAFFORD. I would rather not set up that kind of corporation for the Government to take over.

Mr. MOFFETT. It sounds like an inevitability and I get that impression.

Mr. STAFFORD. It may be, but it is the next step then to nationalization.

The CHAIRMAN. Mr. Florio.

Mr. FLORIO. In deference to your schedule I will ask one question.

Mr. STAFFORD. I already missed it.

Mr. FLORIO. Following up on the previous question, you gave what I thought was a good argument as to why this program will inevitably fail. You talked about environmental considerations which in some way would stop coal and shorthaul operations in the Northeast. I was wondering, in reference this morning to the National Mass Transportation Act, if the rationale for that is not the same as we we have in the Northeast, that is, it is naive to expect an operation such as this to ever operate in the black and that maybe we are going to have to face the

Digitized by Google

fact we are talking about continuing programs of governmental operating and capital subsidies. Are we being naive in expecting it to work or perhaps we should face the fact it will not work and address ourselves directly to the issue of Government operating or capital subsidies on a continuing basis.

Mr. STAFFORD. I think there is a basis for what you are saying, but I hope we are not working with that in mind.

Mr. FLORIO. Do we have Plan No. 2 ready?

Mr. STAFFORD. Oh, we have a plan. USRA has a plan in mind and we hope, all of us hope it is going to be a profitable program but, as the Acting Secretary of Transportation said this morning, that it would be a program that would require continued Federal funding for some period of time.

Mr. FLORIO. My question is, do we have Plan 2, ready, if in fact Plan 1 does not work out? Is there someone at ICC who is working on what the next step is?

Mr. KAHN. The USRA preliminary plan will be out February 26 and will discuss the matter comprehensively.

Mr. FLORIO. Which matter?

Mr. KAHN. The ability to fashion a rail system in the East that will be viable and, if not, why not. In turn, the Rail Services Planning Office of the Interstate Commerce Commission will be conducting hearings throughout the area on the preliminary system plan and itself will offer comments on that. So there will be a second opportunity to have public input on these very important issues.

The USRA will prepare the final system plan and the Interstate Commerce Commission will comment on it, and then it will come to Congress. By that time I think there will be a thorough dialogue on these issues.

Mr. FLORIO. I am not sure that really is the point. What I want to know is whether anyone is working on a plan in lieu of the situation you just described. That is to say, we are putting all of our eggs in one basket and hope we can have a profitable rail system. If it is not probable, then we will work it out later. Is that essentially what you are saying?

Mr. STAFFORD. I think enough information is being gathered in USRA, that if that eventuality came about, it would be possible.

The CHAIRMAN. The gentleman from Pennsylvania, Mr. Heinz.

Mr. HEINZ. Mr. Chairman, I have no questions at this time.

The CHAIRMAN. The gentleman from California, Mr. Moss.

Mr. MOSS. Mr. Chairman, what is the nature of the authority you have in auditing railroads, this one, or any other? Is it very broad?

Mr. STAFFORD. Yes.

Mr. GRADY. Yes, I think it is broad, except for one aspect.

Mr. MOSS. Would you tell me that aspect?

Mr. STAFFORD. That aspect is that the auditors are precluded from obtaining financial forecasts.

Mr. MOSS. All right. Then have you, on this particular railroad, undertaken any special surveillance under your auditing authority?

Mr. STAFFORD. Yes, we have, sir, but we have not been denied the financial forecast of the Penn Central.

Mr. MOSS. You have not been denied it?

Digitized by Google

Mr. STAFFORD. Yes, sir, we have not been denied that.

Mr. Moss. So you have had available all data you feel that are necessary to make an evaluation of the true condition of this railroad and of the competence of the management of this railroad; is that correct?

Mr. STAFFORD. Yes.

Mr. Moss. Have you concluded then that the trustees, who operate as officers of the court and also as representatives of the creditors, are giving this railroad at this time the best possible management obtainable?

Mr. STAFFORD. It is an extremely difficult question to answer.

Mr. Moss. I realize that and that is why I asked it.

Mr. STAFFORD. If you wanted my judgment?

Mr. Moss. That is what I want and that is all I expect you to give me.

Mr. STAFFORD. I would say in my judgment that the answer would be "yes," I think they are doing all that they can do under the trying times and circumstances.

Mr. Moss. Do you feel you are fully conversant with the reasons for the crisis in the cash flow, that it is all attributable to declining traffic, or that any portion of the problem relates to management judgment itself?

Mr. STAFFORD. Yes, I think so, sir. I think we have evaluated the Penn Central by a month-to-month, week-to-week basis, and of course as you got into financial matters, you can evaluate management.

Mr. Moss. That is precisely the point. Have you evaluated on a month-to-month, week-to-week basis using their figures or yours?

Mr. STAFFORD. It is on their figures, evaluating the assumptions and accepting their figures.

Mr. Moss. Were these assumptions prepared by auditors different than those previously preparing assumptions for Penn Central under its prior management?

Mr. STAFFORD. The auditors that they now have are actually a different set of auditors than they had actually prior to the bankruptcy.

Mr. Moss. Are the auditing principles under which they operate today different than those under which they operated prior to the change in management?

Mr. STAFFORD. Well, again in my judgment, yes.

Mr. Moss. Could you tell us the nature of the difference in the principles which underlie the auditing now going on than those which were followed under the previous management?

Mr. STAFFORD. If I had to characterize it, I would say that the prior management maximized income and there was no cash there in the till. They used every accounting device to have the financial statements appear to be better than the results of that, again in my judgment.

Mr. Moss. Maximizing?

Mr. STAFFORD. Yes, maximizing.

Mr. Moss. Is there a possibility of their minimizing here?

Mr. STAFFORD. Again, in my judgment, I don't think so.

Mr. Moss. Thank you.

The CHAIRMAN. I want to thank you gentlemen for coming and giving us the benefit of your views. I would like to ask this question before you go.

Digitized by Google

In regard to the discontinuance now of a service, under section 304 (f) of the Northeast Railroad Reorganization Plan it expressly provides the USRA must approve of abandonment or discontinuance. I cannot see how Penn Central can embargo without Government permission.

Do you have any response to that?

Mr. KAHN. That would be my reading of 304(f).

The CHAIRMAN. Thank you kindly for coming and giving us your views.

Now, Mr. Barnum, you may come back.

STATEMENT OF HON. JOHN W. BARNUM ET AL.—Resumed

Mr. BARNUM. Yes, sir.

The CHAIRMAN. The gentleman from Colorado will continue his questioning of Mr. Barnum.

Mr. WIRTH. Mr. Barnum, thank you very much for your patience and I must say I personally am very encouraged to hear someone in front of us as well prepared as you are.

Mr. BARNUM. Thank you.

Mr. WIRTH. As I understand, we are talking about a request for $250 million, is that correct?

Mr. BARNUM. More than that in light of the suggestion that $25 million be added for Erie Lackawanna and an additional $30 million for section 213 to take into account the fact the rate increase was not put into effect in February.

Mr. WIRTH. We are talking about $305 million. Who arrived at the figure?

Mr. BARNUM. That was arrived at by the Department of Transportation on the basis of data supplied to us by the various railroads in reorganization.

Mr. WIRTH. Was the ICC involved in helping to develop those figures?

Mr. BARNUM. No; they were not.

Mr. WIRTH. If you were an independent management consultant and came in and looked at these data, do you think it is reasonable to assume you might arrive at a different figure than $250 or $305 million?

Mr. BARNUM. Well, I could have easily arrived at the conclusion that more money should be authorized under section 215 so that the Penn Central and other railroads in reorganization could go ahead with the rehabilitation and maintenance that those railroads clearly need. The judgment that went into the decision on this particular figure is what is the amount we should ask of Congress at this time before the new system is in place?

Mr. WIRTH. Are you assured in your mind this $250 million figure or the $305 million figure is the correct figure and that you will not be coming back to the Congress in the next year for more funds?

Mr. BARNUM. All I can do is give you my best judgment as of this time, Mr. Wirth. The figure is predicated in part on a prediction by Penn Central their revenues will decrease in the coming year by about 7 percent. In our judgment that is a minimum decrease in revenues.

To the extent their revenues decrease by more than 7 percent, we may very well need to find other ways in which either to cut costs or to meet the requirements for additional funds.

Digitized by Google

Mr. WIRTH. We also have the factor of the $100 million increase that we talked about this morning in terms of the energy proposals of the President.

Mr. BARNUM. I was going to ask permission of the Chair to correct the record in that respect. During the recess I inquired of Penn Central just what the impact of the likely increase in cost of fuel would be on the Penn Central. I was advised by the Penn Central officials here that for their system a 1-cent increase is equal to $5 million a year. Now, a $50 million cost would go to the bottom line, of course, if there were an average fuel cost increase, let's say, of 10 cents per gallon.

I am further advised they have already taken into account about $30 million of that $50 million, so that instead of the $100 million figure I gave you this morning, it would be $50 million total cost to the Penn Central, $30 million of which has already been taken into account in their estimate of their needs. In addition, however, there would be the increased needs of the other railroads.

Mr. WIRTH. We could be talking about $325 million, $20 million on top of the $305 we just arrived at?

Mr. BARNUM. If you assume that none of the new cost increases in fuel were to be passed on to tariff increases, that is correct.

Mr. WIRTH. We heard from ICC about two rate increases coming up, one worth approximately $80 million and the second worth about $35 million.

Mr. BARNUM. I think that is approximately correct.

Mr. WIRTH. OK, they were assuming those rate increases in their figures?

Mr. BARNUM. The Penn Central was assuming the rate increases. The absence of the 7-percent rate increase cost the Penn Central at a rate of about $10 million a month.

Mr. WIRTH. We are really talking about what could be a very flexible figure, running from a minimum of $250 million, adding the 55 and 20 for fuel and rate increase assumptions, I mean it could be as much as $150 million more than the $250 million we originally talked about?

Mr. BARNUM. That is very fair. I must say I am quite mindful of your concern and that of other members of the committee about repeated requests for additional funds for Penn Central, and it would be easy for me on each occasion to come in with a big balloon figure and safely say I would never come back again. And it would be a big balloon. But I think it is better from your viewpoint and ours that we make as tough an analysis on each occasion as we can. Of course we have to recognize that circumstances might change.

Mr. WIRTH. One final point. I notice in Mr. Stafford's testimony he was talking about a loss to Penn Central of $340 million this year and it was corrected at the time of his testimony to $380 million, and there is a $40 million slip on the figure there. You know the skepticism on the figure and I don't know what we can do to pin it down on this hearing.

Mr. BARNUM. It is pretty tough. For example, it is snowing outside now and if it snows 4 feet, I am pretty sure the estimates we have of Penn Central's loss will be understated.

Mr. WIRTH. It seems to me there is something about the salary of the individual running this railroad, some controversy about his salary. Could you explain that?

Digitized by Google

Mr. BARNUM. The only thing before the committee at the present time is the amendment in the Senate bill authorizing Amtrak to compensate its chief executive officer up to $90,000 a year instead of at the present ceiling of $60,000. That does not have anything to do with the Regional Rail Reorganization Act as such.

Mr. WIRTH. Do you think there is merit in the idea of awarding the man or woman running a system such as this on some kind of performance contract, if they meet certain deadlines or meet certain expectations they would be rewarded appropriately rather than setting a ceiling on their salary?

Mr. BARNUM. Indeed that is the way in which the board of directors of a corporation ideally should treat its senior executive. I think it would be very difficult for the Congress to set out a specific formula whereby the board of directors would be able to determine how much to award the president of Amtrak or the chief executive of Amtrak.

Don't forget, unfortunately we are not talking about a profit-making organization. The question with Amtrak is not how much of a profit they make, but how much support do they need from the Federal taxpayers?

Next year it will probably be in excess of $350 million. That is just in operating losses. In our judgment it is highly desirable to put Amtrak in a position to compensate its executives so as to be able to get the best executives in the railroad community to run Amtrak.

The question has been raised, "Why should he be compensated any more than the Secretary of Transportation?" I suggest that the position of the president or chief executive officer of Amtrak is a very different position than the position of Secretary of Transportation or other official of the Government. He is meant to be running a for-profit corporation although, in fact, it is not operating at a profit. ConRail will be a for-profit corporation and. consequently, there is no ceiling on the salary of its chief executive. But you can contemplate what we are talking about when you compare next year's predicted $350 million deficit at Amtrak and the proposed $30,000 increase in salary for the chief executive officer. Another difference is that it is desirable to retain Amtrak executives for a longer period than the average political appointee, which is around 2 years.

Mr. WIRTH. I agree there is a lot of symbolic value in it and I suggest if we put that kind of loan on an individual salary and it does seem to cause a lot of attention and interest, we might be able to say to an individual, say reward him inversely, not a profit sort of thing, but reward him if his company loses less money than we expect.

Mr. BARNUM. It ought to be run from the executive officer through the board on down, the way a for-profit corporation is run, with due consideration given to cost efficiency and profit levels, in my judgment.

Mr. WIRTH. Thank you, Mr. Barnum.

The CHAIRMAN. The gentleman from Indiana.

Mr. SHARP. Mr. Secretary, I wondered about the protection of the interests of the public on this subsidy. As I understand it, the subsidy we are asked to vote on now will be protected in the sense it automatically returns to ConRail; in other words, it becomes an asset of theirs?

Mr. BARNUM. That is corect. All of the funding that will be provided under section 215 will, in effect, be down payments for assets that will be acquired by ConRail, whether they are ties or rails or equipment

Digitized by Google

to install ties or rail or rolling stock. To the extent section 215 money is used to improve the value of a strip of track, for example, the increase in value will inure to the benefit of ConRail and not to the benefit of the estate.

We would like to do the same thing to the extent possible with the funding provided under section 213. All of the funds spent under 213 are not susceptible to that recovery and it will be necessary that some be outright grants.

Mr. SHARP. I assume the previous subsidies from the Government are not the type for which recovery is made?

Mr. BARNUM. Under section 213, the first payment we made was $10.8 million to the Penn Central in respect of installments falling due in February last year for some rolling stock. That represents an equity interest that the Secretary of Transportation will transfer to ConRail when it starts up. The balance of the funds expended under section 213 were made available in the form of grants. Much of it was made available to perform specific tasks which, in turn, have improved the operating efficiency of the railroad. One such project I have in mind involved the Central of New Jersey and to the extent that the operating efficiency of the Central of New Jersey was improved by virtue of that grant, the Central of New Jersey now needs less funds to continue to operate.

Mr. SHARP. As I understand the answer you gave to one of the gentlemen earlier, it is envisioned that ConRail or it is hoped that it will operate without continuing subsidy from the Government, but will have loans to get it in a position of being profitable, and this, I assume, we can interpret as initially being a subsidy to ConRail?

Mr. BARNUM. It is in the sense it is a federally guaranteed loan, but it is precisely the same thing that the Surface Transportation Act contemplates for railroads throughout the Nation.

Mr. SHARP. Thank you very much.

Mr. Chairman, I would like to yield the balance of my time to Mr. Moffett.

Mr. MOFFETT. Mr. Barnum, you are a member of the USRA board?

Mr. BARNUM. The Secretary of Transportation is a statutory member.

Mr. MOFFETT. That board will be involved, I assume, in formulating the preliminary system plan that will be issued on February 26?

Mr. BARNUM. That is correct.

Mr. MOFFETT. There are various provisions in Public Law 93-236 for public participation all along the way and following the issuance of the preliminary system plan it is my understanding there is a 60-day period for public comment; is that true?

Mr. BARNUM. That is correct.

Mr. MOFFETT. And following the issuance of the final system plan later on in the year, there will be public hearings; is that correct?

Mr. BARNUM. The final system plan will be considered by Congress and the ICC will submit to the Congress a report on the final system plan.

Mr. MOFFETT. But there is no direction in the legislation for public hearings on the plan?

Mr. BARNUM. Not on the final system plan, sir.

Mr. MOFFETT. I see.

Digitized by Google

Mr. BARNUM. Those hearings are on the preliminary system plan in anticipation of preparing the final system plan.

Mr. MOFFETT. I think it is safe to assume you favor public participation in this project all the way?

Mr. BARNUM. Very definitely and by individuals and States and by local organizations. This has been very helpful in the USRA planning process.

Mr. MOFFETT. I, like many other Members of Congress, am urging my constituents to take part in this and yet I wonder, if, in a sense, they are not facing a stone wall on some of the concepts and options that USRA supposedly is considering. I refer specifically to the idea of the Government taking over the roadbeds, and your statement this morning and Mr. Stafford's statement that you already are opposed to that option, the separate fixed plan entity option. You seemed to indicate earlier, if it were a separate corporation, it might be different, but I am talking about the Government taking over the roadbed. But in a sense then you are not going to be influenced, you say, by public comments.

Let's suppose there were a torrent of comment saying, "We want the Government to take over the roadbeds." You wouldn't be swayed by that?

Mr. BARNUM. There is a difference between listening and being persuaded, sir.

Mr. MOFFETT. What is your position? Is it firm on that?

Mr. BARNUM. The Regional Rail Reorganization Act mandated that USRA consider the formation of a for-profit corporation by exchanging all equity in the for-profit corporation for properties of the bankrupt railroads, specifically contemplating that one or more Con-Rails would be established to run a rail system.

Congress, in adopting that act, did not make any reference to the railroads. So construed narrowly, the mission of USRA is to carry out the responsibilities set forth for it in the Regional Rail Reorganization Act.

I agreed with the other members of the USRA Board that in addition to the strict mandate, USRA should indeed consider other solutions that may be available to present railway problems.

Mr. MOFFETT. It is true one of the options considered is a separate fixed plan entity?

Mr. BARNUM. That is true, but that can, of course, be a privately owned corporation just like the operating company can be.

The CHAIRMAN. The gentleman from North Carolina, Mr. Hefner, or, well, Mr. Brodhead.

Mr. BRODHEAD. Thank you, Mr. Chairman. I yield to Mr. Moffett.

Mr. MOFFETT. Thank you, Mr. Brodhead.

I would like to continue with this line of questioning a moment and I would like to pin down what is being considered in terms of the separate fixed plan entity. I have a feeling it is important in order to determine exactly what we are doing today and what we are considering to be consistent with that public law. Is there some consideration being given, not to a separate corporation, but to the Government taking over the roadbeds?

Mr. BARNUM. The question has been raised, but I do not think it is the appropriate way to solve the problem in the Northeast and I will oppose it.

Digitized by Google

Mr. MOFFETT. But there is some consideration being given it?

Mr. BARNUM. The matter is being discussed.

Mr. MOFFETT. That is good. Now, as far as the RSPO is concerned. they have criticized, as I read the January 10 report, the preliminary views; they have criticized both the DOT, as I mentioned to Mr. Stafford, and you may have heard. Both DOT and USRA were taking too narrow a view of the goals of the act, not giving enough attention, for example, to environmental considerations, and by that I mean what the environmental alternatives to rail are—and there are environmental implications and—perhaps not giving a wide enough definition to profitability.

Would you like to comment?

Mr. BARNUM. That is their judgment. It is not mine.

Mr. MOFFETT. You disagree with it?

Mr. BARNUM. I do.

Mr. MOFFETT. Now, as far as the role of the ICC is concerned, this was raised again by Mr. Stafford. There seems to be some contradiction between what you said this morning and what he said this afternoon as far as the relationship between the rate requests being turned down and your contention that $30 million extra was needed because the rate increase was turned down. Do you care to make further comment on that?

Mr. BARNUM. I don't think Mr. Stafford disagreed with my conclusion that an additional $30 million should be included in the act to make up for the rate increase not being approved. I did not, in my testimony this morning, suggest that the ICC's refusal to approve the 7-percent rate increase is the reason we are here.

All I said this morning was that it increased the amount of funds that would be necessary for the bankrupt railroads to continue operating until such time as a rate increase is granted, if indeed it is granted at all.

Mr. MOFFETT. You don't feel there is contradiction between your testimony and his on that point?

Mr. BARNUM. No; I think we are entirely consistent in this respect.

Mr. MOFFETT. One final point, Mr. Barnum. Again I realize we are not considering this now, but it is being considered in the Senate and Mr. Wirth raised it and it deserves to be raised again, I think. Mr. Brinegar in a letter to Senator Magnuson indicated that that amendment relating to the Amtrak salary ceiling was justified and in his words the administration requested this measure for one good reason—that it will save money.

He also refers to it as an "anti-inflationary measure." Now, would you consider rail service to be an essential service, an essential public service?

Mr. BARNUM. Certainly some of it is.

Mr. MOFFETT. Would you say that one who is engaged in a management position in rail service could be construed to be engaged in public service even though it may not be paid for entirely by the Government?

Mr. BARNUM. I am sure you could. I am sure that many of the railroad officials of the Nation feel that their job day-in and day-out is a public service, and I agree with them.

Mr. MOFFETT. Well, it certainly happens, I would think, that people

Digitized by Google

leave jobs in corporations, say to become schoolteachers and take pay cuts or leave jobs in corporations to go into local government and take pay cuts. Is this too much to expect from the new head of Amtrak or other Amtrak officials engaged in public service, that it is a buyer's market and there is a lot of talent in this country? Why do we have to have an unlimited ceiling and pay people $90,000 a year?

Mr. BARNUM. Because I don't think, in selecting the chief executive of a corporation that is currently losing $350 million of the taxpayers' money, we should limit the number of people who are available for selection as the chief executive officers to those that are so dedicated to public service they are willing to take a salary cut of 50 percent.

There is a management dictum you should pay an executive in accordance with how much a mistake he might make will cost and I suggest that if you followed that dictum in the case of Amtrak, $90,000 is a very modest sum.

Mr. MOFFETT. Thank you.

The CHAIRMAN. The gentleman from North Carolina.

Mr. HEFNER. I realize, Mr. Secretary, the importance of our railroads and how the collapse of Penn Central will affect my State. There are only a couple of questions I would like to ask.

Let me refer back to Mr. Wirth's question. You alluded to it, and you said that you had made a phone call on this during the luncheon hour. There is $20 million that this 1-cent tariff could effect; that is, 1 cent could effect a $20 million increase to Penn Central?

Mr. BARNUM. $20 million over and above the Penn Central estimate that was provided to us and which had been provided to the committee. Penn Central already had taken into account in its estimate the other $30 million which, in the course of a year, a 10-cent increase in the cost of fuel would cost the Penn Central.

Mr. HEFNER. You are taking this into consideration based on the fact that should the President's energy proposal go through Congress there could be 10 cents added onto fuel prices? Have you taken that into account in your proposal?

Mr. BARNUM. No; we have not included that $20 million in our proposal because it is our expectation the ICC would approve a rate increase sufficient to cover the increased cost of fuel as it did on the occasion of the oil embargo when fuel costs doubled overnight.

Mr. HEFNER. Have you taken into consideration also any inflation we may have for the remainder of 1975? If we have inflation that exceeds what you anticipate, will you be back sometime, say, in July or October, asking for more money for Penn Central?

Mr. BARNUM. We have attempted to take that into account and have, of course, taken into account the cost of wage increases. We have tried to fix costs as precisely as we can, that is, the cost of the ties and rails we would be buying, since we would contemplate placing those orders in the very near future. And to the extent that the cost of rails, for example, is tied to some wage increase increase in the steel industry or to some other cost increase, perhaps we would end up with fewer rails for the same number of dollars, but the program as such would still be a valid program.

Mr. HEFNER. That is my interest. I would like to know if what we are talking about here is hundreds of millions of dollars and if in 6

Digitized by Google

months we will be talking about an additional $100 million. This is my first visit here to the annual Penn Central "pilgrimage," so to speak, and I would like some assurance that if we vote on this proposal, we will be through with it until at least next year.

Mr. BARNUM. I would like to be able to give you an ironclad guarantee in that respect, but I mentioned on earlier occasions we are proceeding on certain assumptions, such as a 7-percent downturn in traffic, and if the downturn exceeds that, our revenue assumptions will be too low.

There are other things that can affect the operation of the Penn Central, and I didn't mean to be frivalous when I talked about a snowstorm. A big storm could have a serious impact on Penn Central, just as the Agnes flood did. There are many ways in which the Penn Central economics could be affected. The automobile industry is a major contributor to the traffic of Penn Central, and if the automobile industry is turned around by virtue of automobile bonuses and that traffic downturn is turned back up, we will have a different situation.

These things are not within our control. All we can do is give you our best estimates today.

The CHAIRMAN. Thank you. I think everybody has had an option to ask questions of the Secretary. Is there anyone else with further questions?

The gentleman from Kansas has a question.

Mr. SKUBITZ. I have one question. Mr. Barnum, this morning during our discussion before we were rudely treated by my colleague who wanted to interrupt to ask questions, you had agreed that the claims of the creditors of the Erie Lackawanna were peanuts compared with the claims of Penn Central. Then you raised our interest on the question of the constitutionality of this question.

Now, I would like to explore that just a minute with you. I want to get your views on it because it disturbed me. I am hoping that the fellows representing URSA are listening, because I want them to rebut what you say.

Now, if there is a constitutional question involved by the taking in of the Erie Lackawanna, who is going to bring the action? What grounds is it going to be on and if it is an injunctive action of some sort, will it be based on just the inclusion of the Erie Lackawanna or will it be on the whole act or will it be against further planning by the USRA?

Mr. BARNUM. Your reference to peanuts this morning, Mr. Skubitz, was to the relative size of the Erie, I thought.

Mr. SKUBITZ. Not the peanuts, but let's get to the constitutional question you talked about.

Mr. BARNUM. I would like to clarify that, because what I was referring to at least was the size of the Erie Lackawanna and specifically the relative contribution of the Erie Lackawanna properties to the total reorganization process. I was not speaking of the claims of the creditors of the Erie Lackawanna, and when I talked about 2,800 route-miles and 11,000 cars and so on, as being roughly 10 percent of the size of the Penn Central. The point there was that the costitutional litigation that might result from including Erie Lackawanna as a railroad in reorganizational could jeopardize the whole ball game and I didn't want to see this Congress do it for the sake of what

Digitized by Google

in our judgment is the relatively small contribution that would be made by virtue of being able to control the property of the Erie Lackawanna, as distinguished from merely designing it into the system and negotiating for it.

If you rewrite the act so as to make the Erie Lackawanna eligible to become a railroad in reorganization and, in effect, put them in with the railroads whose bankruptcy courts determine within 120 days after the act was enacted that they could not reorganize on a profitable basis and written 180 days after enactment determined they could effectively be reorganized under the act, what you have done is to open the door to resumption of constitutional litigation by the same people who in the Penn Central and other reorganization courts contended that the Regional Rail Reorganization Act was not constitutional, that it was not a uniform bankruptcy act as contemplated by the Constitution, and that it did not provide a fair and equitable process.

Now, a question was asked by Mr. Hastings earlier, I think a question I would like to have you focus upon. He asked:

If you amend the Act now to permit Erie Lackawanna to be treated as a railroad in reorganization, is it not more likely, if that addition were determined to be improper, that merely that amendment would be struck down as unconstitutional and the balance of the Regional Rail Reorganization Act would be left intact?

Yes, I think that would be the likely ultimate outcome if a court decided that the amendment was unconstitutional. But two points: First, I don't acknowledge saying that by amending the act at this time you will make the act unconstitutional. I say that any such litigation should fail.

But, second, what I am saying is that amending the act now to make the Erie Lackawanna a railroad in reorganization will give the creditors who attacked the act in the first instance another opportunity to attack it, to reopen the litigation, not just concerning the Erie Lackawanna, but concerning the Penn Central and how these Erie Lackawanna amendments will affect Penn Central and its ability to reorganize on a fair and equitable basis. The damages that the courts in those proceedings will enter injunctions, whether temporary injunctions or otherwise between now and the time the final system plan is submitted to Congress in July is such that I think the addition of the authority to control the Erie Lackawanna is simply not worth the candle.

We should recognize that USRA once was enjoined with respect to how far it could proceed, and if the court determined it would not be fair to permit USRA to submit a final system plan to the Congress for its consideration until the court had a full opportunity to examine the question of whether the act, as amended, gave the creditors, and not just Penn Central or Erie Lackawanna creditors, but all of the creditors, an opportunity to have their claims heard, you might find that the whole procedure under the act could be enjoined for 6 months or a year.

You see, in considering whether the act was constitutional the first time, the courts examined whether the procedures under the act were likely to be fair and equitable to the creditors and the Special Court, in particular, laid emphasis on the fact that in its judgment the act was constitutional for two reasons.

They said, first, there is a Tucker Act remedy available in the event the creditors are not adequately compensated by transfer of the

Digitized by Google

ConRail stock. But the Court also said that the existence of the Tucker Act remedy in and of itself is not enough to make the act constitutional. Therefore the Special Court, a very erudite court and one that will pass on this question again, looked to see whether the procedure under the act and what it knew then as to the viability of ConRail created a sufficient likelihood that the creditors of the bankrupt railroads would get adequate compensation the first time, not by virtue of going under the Tucker Act, but by virtue of acquiring ConRail stock.

If we have to litigate the whole question again, whether the Regional Rail Reorganization Act, as amended, is likely to have a fair and equitable result for creditors, even if the court would conclude in the end, "Yes, it would," you have had months of litigation; and even if it concludes in the end, "No, it wouldn't by virtue of the addition of Erie Lackawanna" and, therefore, strike out only the part of the act which allowed the inclusion of Erie Lackawanna, and leaves the rest of the act standing, we would be many months down the road and in our judgment the possible advantage of controlling the Erie would not be worth the risk.

Mr. SKUBITZ. You are iffing the whole thing.

Mr. BARNUM. The whole thing is iffy and I suggest to you that if you amend the act to keep the Erie Lackawanna going throughout the process without treating them exactly like other railroads in reorganization, the USRA still is going to plan inclusion of Erie Lackawanna property in the system through its transfer to ConRail or other solvent railroads, and the only difference you have is that instead of giving stock for the property, you put the Erie Lackawanna to the job of negotiating the sale of the property.

Mr. SKUBITZ. The thing that interests me just a little, and maybe I don't understand it properly, that from Chicago clear into Youngstown or that area the Eire Lackawanna might be the best line to follow, rather than either one of the Penn Central roads.

Mr. BARNUM. Well, it is clearly duplicative.

Mr. SKUBITZ. If we do what you do, we would plan the whole thing and work in reverse.

Mr. BARNUM. I don't want to prejudge what the preliminary plan will say with respect to which Erie Lackawanna properties should be included in the preliminary system, and I think you should query USRA on this point when they are here, but I think it is fair to say very little of the Erie Lackawanna's properties will be needed for inclusion in ConRail, very little, and not the properties you mention from Youngstown to Chicago which are substantially a duplicate of the Penn Central mainlines.

There are three systems for that part of the country—Penn Central, Norfolk & Western and Chessie, and the Erie Lackawanna is not a necessary ingredient to a competitive rail system in that area.

The CHAIRMAN. Thank you. If there are no further questions, that is it.

Mr. DINGELL. I would like to ask Mr. Barnum a couple of questions. I think he made a very sensible statement when he inferred that it was his personal policy that the Erie Lackawanna ought to be kept out until closure. I would assume it is also the administration's position?

Digitized by Google

Mr. BARNUM. That is the administration's position. It was arrived at by the Department of Justice, on the basis of the danger of litigation, and by the Department of Transportation, taking into cognizance the advantages and disadvantages of includnig it in a system of reorganization.

Mr. DINGELL. I specifically request of your drafting service to see that either the House or Senate bill is appropriately amended to assure that position is implemented.

Second of all, you indicated a potential substantial liability here and I would like you to indicate to us, not what is the bounds of it, but any reasons why we ought not just simply give DOT enough money to assure that the railroad will continue running through July 1 so that we can have a fresh look at it at this time with a little bit more careful preparation than we have had, because all of a sudden we came back here and were told to send Penn Central another $250 million, and you recall we heard this once before.

What is your view on that and how much would it take?

Mr. BARNUM. Well, I think it would be desirable to enact all of the provisions we have recommended to you.

You may have heard the questioning this morning concerning section 215 funds and how they would be used. The $300 million would be used to place orders for ties and rails and equipment which, if ordered now, would be available to ConRail when it comes into being. It is not money you are giving away to creditors of the bankrupts, but a down payment for the new ConRail system.

I think it is very desirable that we get started on that process.

Mr. DINGELL. You are suggesting we commence that forthwith?

Mr. BARNUM. I do, indeed.

Mr. DINGELL. What is the total amount, however, that would be necessary to carry it through July 1 in funds? I personally propose to limit this to July 1.

Mr. BARNUM. Well, if you limited it to July 1, what you would be talking about is merely what the cash shortfall of Penn Central would be between now and that time. We estimate that would require about $100 million. You would not be achieving for yourself the flexibility to make payments to Penn Central in respect of maintenance programs or the acquisition of equipment which the Penn Central should otherwise be making, but because we would be making them would relieve the Penn Central of a cash obligation.

I think if we address the question of what is the appropriate way to keep them going, we would have to make grants, but should also make other payments that would be available ultimately to ConRail. If you merely put more money on the table in the form of grants, you will never see a dime of it again.

Mr. DINGELL. That is the point that makes me apprehensive. If you please, what safeguards are needed to assure in legislation, either the House bill or Senate bill, that there be no fattening up of the residue of the estate to the advantage of the trustees and the creditors and to the disadvantage of the United States and ConRail? How much of an amendment is needed to the bill for this point and, if so what amendment is necessary, either the Senate or House bills, if you please?

Mr. BARNUM. We believe the language we submitted in the original bill which was introduced by the chairman and Mr. Devine meets that point. We think the language adopted by the Senate on this

Digitized by Google

point would create confusion and is not as clear as you would want to see it for the proposition you urge. Therefore, we urge that you revert to the language in the House bill.

We have been discussing with representatives of the Penn Central certain modications of the language which would in our judgment achieve the same objective and we will submit it to you for your consideration.

It is important that it be crystal clear that none of the expenditures or none of the enhancements of property that are achieved by virtue of these expenditures inure to the benefit of the creditors. That is our purpose and we will supply any language you desire to achieve that end.

Mr. DINGELL. Throughout your testimony you referred to the potential Tucker Act liabilities of the United States. You have been referring to that as a potential and not as a device toward creating any legislative history or creating vested rights in Penn Central, Penn Central's trustees or creditors.

I assume we are in agreement on this because I want the legislative history of our announcements and pronouncements today to be very clear we are not moving forward with an eye toward having further litigation which will enrich the estate, at least this particular member—I am not looking forward to having this legislation moving forward to enrich the body of the estate to such degree that it would benefit the creditors beyond that which was already in the estate at the time that the estate went bankrupt.

Mr. BARNUM. That is correct, Mr. Dingell.

One moment this morning when you were absent from the Chamber, I was aksed a question as to the parameters of the Tucker Act liability by virtue of extension of the act and the act in its present form. I gave my opinion to the effect there was not any such liability and that the erosion that might be incurred is not something that ultimately should be borne by the taxpayers and that the difference between the going concern value of the properties as we expect they will be awarded to creditors in the form of ConRail stock would adequately compensate them for those properties and, therefore, there would not be a Tucker Act judgment.

Mr. DINGELL. I asked particularly for the fact we are creating legislative history. Now, with regard to the additional grants which will be made by amendment to the statute, so it will be clearly interpreted by the court if the matter comes into the hands of the courts, as it no doubt will.

Mr. BARNUM. Of course, the Tucker Act question arises only if the committee considers it desirable to put Erie Lackawanna into the system as a railroad in reorganization.

Mr. DINGELL. I think your point on that was eminently sensible, and it is a pleasure to have you before us.

Mr. BARNUM. Thank you.

The CHAIRMAN. Any further questions? If not, I want to thank you in behalf of the committee, and I thank you. You very well explained your part in this, Mr. Barnum. I want to congratulate you.

Mr. BARNUM. Thank you, Mr. Chairman, and I would like to thank you and members of this committee, to which I welcome so many new and obviously well-informed members.

Digitized by Google

This is going to be a very difficult piece of legislation to mark up. It is very complicated, and I commend you for addressing it so promptly and urge you to keep it moving.

The CHAIRMAN. We will try to do that and thank you very kindly.

At this time we will have Mr. Arthur D. Lewis, chairman of the board of United States Railway Association, come forward.

Mr. DINGELL [presiding]. Mr. Lewis, if you will identify yourself and your associate at the witness table, we will be most pleased to receive your statement.

I would suggest that you file your entire statement, and we will receive your additional comments, or summary, as you might wish.

STATEMENT OF ARTHUR D. LEWIS, CHAIRMAN OF THE BOARD, U.S. RAILWAY ASSOCIATION, ACCOMPANIED BY JORDAN JAY HILLMAN, GENERAL COUNSEL

Mr. LEWIS. I am Arthur Lewis, chairman of the United States Railway Association, accompanied by our general counsel, Mr. Jordan Jay Hillman.

The fundamental issue we pose is that if Congress wants a competitive system of transportation in an area bounded on the west by Buffalo, extending down through eastern Pennsylvania, upper New Jersey, the New York metropolitan area, New York State, and to provide a competitive system of transportation from New England to the West, that it should give very serious consideration to including the Erie Lackawanna Railroad as a "railroad in the reorganization" under the Regional Rail Reorganization Act.

We do not believe that you can forecast the alternatives that might exist if the properties of the Erie Lackawanna are not subject to mandatory conveyance.

The Erie Lackawanna properties east of Buffalo are critical to establishing competition in that area and we do not see a control of the situation that is involved with a resolution of the assets of the railroad in the section 77 proceedings in the reorganization court.

We think, also, that if competition is desired and if it cannot be brought into being by a utilization of the assets of the Erie Lackawanna, that the potential effect on the profitability of the ConRail system can be substantial.

We also believe that the litigation which could take place during the period of planning is of such nature that it would be concluded by the time that our planning processes would be concluded, and that the likelihood of a delay in the planning process would be minimized.

On the other hand, if we present to Congress as a final system plan a system that does not provide competition in the area that I mentioned, we don't know what the alternatives would be and the delay in the process that might exist.

I am willing to accept any cross-examination you might have.

[Mr. Lewis' prepared statement follows:]

STATEMENT OF ARTHUR D. LEWIS, CHAIRMAN OF THE BOARD, UNITED STATES RAILWAY ASSOCIATION

My name is Arthur D. Lewis. I am chairman of the board of the United States Railway Association. I appreciate this opportunity to explain to the committee why the association now believes that the effective planning of a regional rail

Digitized by Google

system makes it desirable that there be the opportunity for a judicial reclassification of Erie Lackawanna as a "railroad in reorganization" under the Regional Rail Act.

As the committee knows, when the Regional Rail Act was enacted, there were eight major railroads in section 77 proceedings in the Northeast/Midwest region. They were the Penn Central, Lehigh Valley, Central of New Jersey, Lehigh and Hudson River, Reading, Ann Arbor, Erie Lackawanna, and Boston and Maine. The Regional Rail Act provided for a review of the prospects for each of these section 77 railroads by its reorganization court and the special court. The purpose was to identify those that were to be reorganized under the Regional Rail Act and those that were to continue under section 77.

In each case, except for the Boston and Maine and the Erie Lackawanna, it was finally determined that reorganization would proceed under the Regional Rail Act. In those two cases the reorganization courts determined that their railroads could be reorganized on an income basis under Section 77 within a reasonable time and that their reorganizations should continue outside the Act. These determinations were not appealed to the Special Court and became final.

Since that time the Association's planning has been based on the premise that an Erie Lackawanna system separate and independent of ConRail would provide a kind of competitive balance within the region which came closest to what Congress was likely to require as part of any regional plan. In particular, Erie Lackawanna provides important access to major rail markets in Eastern Pennsylvania, Northern New Jersey and Metropolitan and upstate New York and New England. It links these markets with major markets and rail connections to the West, particularly through Chicago.

Erie Lackawanna's Trustees now consider that carrier no longer capable of reorganizing on an income basis within a reasonable time. In such case, the further possibility is presented of the liquidation of its rail properties on a piecemeal basis. The Association views this possibility with concern. If an independent Erie Lackawanna cannot serve in the competitive role we have envisioned for it, the Association may find it difficult to find effective alternatives absent the availability of its rail properties under the processes of the Regional Rail Act.

If the Committee wishes that I go into further aspects of the potential use of Erie Lackawanna's rail properties at this time, I could do so. In one sense, however, I feel under some constraints since the Association's Board has had no opportunity to reach any final specific determinations under the Preliminary System Plan of the most useful transfers of Erie Lackawanna rail properties. In general, however, if Erie Lackawanna is not capable of independent existence, our aim would be to link its major eastern markets to viable major mid-western gateways.

If arrangements cannot be negotiated with other independent profitable railroads, it would also be possible to transfer essential Erie Lackawanna rail properties to ConRail. Such transfers might increase the viability of ConRail as compared to the independent operation of Erie Lackawanna rail properties—whether by Erie Lackawanna itself or other railroads. Such added financial benefits to ConRail, however, could involve the sacrifice of substantial competition.

If the sacrifice of competition is conceived by the public and Congress to be too great, certain other devices can be created by the Association to increase competition, including the development of competitive options involving the Erie Lackawanna properties—or perhaps, in the extreme, to construct a new and separate rail system to that envisioned as ConRail to provide this competition on the Erie Lackawanna routes.

We are presently of the view that in reaching a reasonable balance among the goals of the Act, Congress in this situation would opt for the direct competitive use of Erie Lackawanna's rail properties. But if in fact the will of Congress is to the contrary and it prefers to resolve the balance in favor of added ConRail viability, that alternative would still be available given Erie Lackawanna's status as a "railroad in reorganization". In either case the Association thinks it essential, if Erie Lackawanna is unable to reorganize successfully on its own, to be able to include its rail properties within the conveyancing provisions of Section 303 of the Regional Rail Act.

Our conviction is based on what we understand to be the basic alternative legal consequences resulting from Erie Lackawanna's status either as a "railroad in reorganization" or as a "profitable railroad".

With Erie Lackawanna as a "railroad in reorganization" its rail properties can be fully integrated into a Final System Plan independent of the complex Section 77 approval procedures which would otherwise come into play. Conversely, if it is left as a "profitable railroad" under the Regional Rail Act, the

Digitized by Google

disposition of its rail properties, as we understand it, is seemingly subject to initial ICC approval as part of a plan of reorganization, and then to reorganization court affirmation of that plan. Either approval phase, if subject to conflicting views of interested parties, could delay any decision considerably beyond the statutory time table for a Final System Plan. In such case the entire regional system could be subject to the uncertainties surrounding the ultimate availability of Erie Lackawanna rail properties. Indeed if that carrier, as a so-called "profitable railroad", remained ineligible for any adequate form of federal financial assistance under the Regional Rail Act and was truly incapable of independent reorganization, we might be faced with the forced liquidation of its rail properties. That process could include whatever property dispositions which might serve to maximize values available for the estate and its creditors—without regard to public rail service needs.

The Association, in viewing Erie Lackawanna's rail properties as important to the structuring of a sound and adequate regional rail system, is fully aware of the arguments which been made regarding the possible exposure of the government to increased Tucker Act liability. Basically, we fail to see how the inclusion of Erie Lacakawanna as a "railroad in reorganization" could substantially affect the matter.

First, it should be assumed, as we certainly believe will be true, that consistent valuation principles and methods will be used throughout. In such case, initial Tucker Act exposure without Erie Lackawanna, if any, should be increased, if at all, by roughly no more than the ratio that Erie Lackawanna's rail properties transferred under Section 303 bears to the totality of properties so transferred, including those of the vastly larger Penn Central system.

Second, we realize that it has been argued that the courts have upheld the Regional Rail Act because of a combination of a Tucker Act remedy and a "sufficient possibility" of ConRail viability. The basis for such views are found principally in Judge Friendly's Special Court opinion. I note also, however, that writing in dissent from the Supreme Court's decision, Justice Douglas seemed to premise his conclusions in part on his apparent belief that "all the parties" have conceded the lack of any prospect of ConRail's profitability. I would only add that the Association is not included among any such parties. In any case no one can say that "the possibility" of ConRail viability was wholly irrelevant to the judicial proceedings. However, we do not read the opinions of the Special Court, or of Justice Douglas, as being predicated on the particular factor of Erie Lackawanna's status under the Regional Rail Act. If this matter was considered at all, Erie Lackawanna's independent competitive role as a "reorganizable" railroad could only have been viewed at the time as a negative factor in ConRail's viability.

We recognize that litigation seeking to bring into issue once more the validity of the entire reorganization process of the Regional Rail Act is a possibility that could arise from any amendment. Such litigation would be possible in connection with amendments which have at least been suggested to confer on Erie Lackawanna the financial advantages of Sections 213 and 215 and Title V without imposing the conveyancing obligations of Section 303. But as to all such litigation, we believe the courts would focus on the validity of the amendment itself and not, once more, on the entire Act. The validity of the Act's reorganization processes have been fully litigated before the Special Court and the Supreme Court. They have been found to be "fair and equitable". They have been held constitutional. Let us suppose then that some demonstrable injury to certain interests could conceivably be proved to result from the possible reclassification of Erie Lackawanna, or any other carrier similarly situated, as a "railroad in reorganization". We would assume in such case that it would be the amendment, as the source of the injury, which would be enjoined, and not the entire reorganization process of the Act, which has already been upheld.

The Association has done its best to evaluate the risks of litigation with the risks of Erie Lackawanna going under with its rail properties free from the planning controls of the Regional Rail Act. It is our view that a possible delay in ultimate Congressional approval of a Final System Plan could be greater as a result of no amendment, given Erie Lackawanna's present status as a "profitable railroad", than possible temporary delays occasioned by further litigation, if any, in the wake of an amendment.

Moreover, we think it is important to keep in mind that the proposed amendment would not establish Erie Lackawanna as a "railroad in reorganization" by

Digitized by Google

Congressional fiat. It would instead submit the issue for judicial determination in a manner much like the procedures previously upheld by the Special Court and Supreme Court. If the courts should disagree with the views of Erie Lackawanna's Trustees as to that railroad's reorganizability, then the matter is ended. On the other hand, should they concur in the Trustees' views, then for the reasons I have stated, the United States Railway Association thinks it important for Erie Lackawanna's reorganization to proceed under the Regional Rail Act.

Mr. DINGELL. Thank you very much.

The Chair will recognize my good friend and colleague, Mr. Skubitz.

Mr. SKUBITZ. You don't agree, Mr. Lewis, with the statement made by Mr. Barnum regarding the big constitutional issues that may be involved or the litigation. Is that right?

Mr. LEWIS. Well, I think that he indicated that the constitutional issues would be resolved favorably. We agree with that. We do not agree that it would be a long and time-consuming process in the disposition of the case.

Mr. SKUBITZ. Is it your feeling that by the inclusion here you are in a much better position to draw up a final system plan than you are by simply providing the existing law and then waiting to a later date to try to fit the Erie Lackawanna into your plan?

Mr. LEWIS. We think the only way we can be assured of the utilization of the Erie Lackawanna property is to have it come in. We don't think there is any process outside of the plan that will guarantee that, or even assure it.

Mr. SKUBITZ. That is all, Mr. Chairman.

Mr. DINGELL. Mr. Wirth.

Mr. WIRTH. No.

Mr. DINGELL. Let me inquire here, have you consulted chiefly, sir, with your legal counsel with regard to the potential liability of the United States under the Tucker Act if we include the Erie Lackawanna at this time, either to the creditors of Erie Lackawanna, or creditors of Penn Central or some of the other railroads in bankruptcy that are potentially includable in the plan?

Mr. LEWIS. Yes.

Mr. DINGELL. Perhaps the Chair could request his judgment on this.

Mr. HILLMAN. Mr. Dingell, we recognize all of the theoretical points which have been made, and trying to place them in a proper context we conclude that the inclusion of the Erie Lackawanna should not in any circumstances have any substantial effect on the total amount of a possible Tucker Act judgment.

Mr. DINGELL. Go ahead, sir.

Mr. HILLMAN. I was saying, Mr. Dingell, we conclude there should not be any substantial, significant effect on any possible Tucker Act judgment.

With respect to the first part of your question dealing with the Erie Lackawanna creditors and the possible incremental effect of a Tucker Act judgment, I would note the point that was made very effectively this morning, I believe by Mr. Skubitz, that given the relationship of the size of the Erie Lackawanna, whether it be by trackage, by employees, by any measure of value of rail properties, by total assets, to the Penn Central system and the other railroads in reorganization, that relationship in itself should suggest that the Erie Lackawanna is a relatively small factor.

Digitized by Google

I think it can be safely assumed that the U.S. Railway Association in its valuation procedures and techniques will follow a consistent pattern in dealing with rail properties of all of the railroads.

So that the incremental effect of bringing the relatively small Erie Lackawanna system and its rail properties in part into the plan should be minimal with respect to any possible total Tucker Act judgment.

Now, with regard to any additional Tucker Act liability with respect to claims of creditors of other railroads, I believe it is very difficult to foresee any possibility of increased Tucker Act exposure. When the special court in particular considered the possibilities of ConRail profitability, it did so in the context of an independent Erie Lackawanna system which would provide important competition to ConRail.

Now, there are two ways in which the Erie Lackawanna rail properties, basically, can be used if it were a railroad in reorganization.

Either it can be used to assure the continuance of a competitive system, which should not further impact the earnings of ConRail, or, if it should prove necessary in the final analysis to bring Erie Lackawanna eastern properties in particular into ConRail, because of the lack of buyer, the result one would assume would be to increase the viability of ConRail, which would have the benefit of those longer hauls on its own system.

For these reasons it is difficult for me to perceive how the exposure, or the potential exposure of a government to a Tucker Act judgment, could be significantly affected, either with respect to Erie Lackawanna creditors or the creditors of any other estate.

Mr. DINGELL. Could I ask this question? Isn't it possible to accomplish the same end without bringing them in as a railroad in reorganization, just simply buying up pieces at Erie Lackawanna?

Mr. HILLMAN. No, sir. While I believe in theory it might be possible, I believe as a practical matter it could not likely be accomplished for this reason.

The Erie Lackawanna isn't like any other so-called profitable railroad, and I use the term as applied in the statute, in that before any transfers of rail properties from Erie Lackawanna as a profitable railroad can be made, they must be approved through the entire reorganization process under section 77 to which Erie Lackawanna is subject.

As we see it, this very likely involves the approval of the transfers as part of a reorganization plan by the ICC, subject to affirmation by the reorganization court.

At this time we have no understanding or no assurance as to what divisions or conflicts there might be among the various classes of creditors or equity holders on the Erie Lackawanna. We have no conception, except from past experience, as to how long it might take to complete an ICC approval of a plan of reorganization, together with the affirmation of any such plan by courts.

Our problem boils down to this——

Mr. DINGELL. The Erie Lackawanna is a subsidiary of a profitable railroad, are they not?

Mr. HILLMAN. Its stock is held apparently by a profitable railroad. What the value of that stock may be at the present time is difficult to tell, of course. But the road is being operated by its trustees.

Digitized by Google

The problem, if I may say, Mr. Dingell, posed by your question, is this, and this is also what Mr. Lewis has referred to: That with this kind of delay in the disposition of the Erie Lackawanna properties, you may have this situation when the final plan is put into effect: first, that there has been no decision under the Erie Lackawanna reorganizations procedures as to how those properties can be transferred; second, Congress has approved a final system plan without those properties; third, the matter has come before the special court for valuation, and that valuation will include the value of the consideration going to all of the other creditors.

If the Erie Lackawanna properties should ultimately be disposed of in one way or another, it might be in a way which provided competition to ConRail, or it might be in a way that augmented ConRail's own earnings.

That factor at that time could not be taken into account by the special court because there could not be a completed regional plan. And that is one problem with which we foresee great difficulty.

Mr. DINGELL. Thank you very much.

Mr. SKUBITZ. Sir, do you think that a Chicago-Buffalo run of the Erie Lackwanna is an important part of a viable railroad system?

Mr. LEWIS. No, sir; not the entire distance. The distance from Marion, Ohio, to Buffalo is reasonably important to ConRail, but not critical. The only thing that is critical——

Mr. SKUBITZ. From Marion to Buffalo. We are talking about a little over half of it; is that right?

Mr. LEWIS. Yes, sir. Well, not in terms of total mileage, because there is extensive mileage throughout New York State and the New Jersey-New York area that is north-south. There is extensive mileage.

Mr. SKUBITZ. I see; that is right.

Mr. LEWIS. It is the carrier that gives a competitive balance to the northeastern part of the country. Without it, we don't have that. That is the critical element.

If Congress is willing to certify a final system plan that does not have that competition assured, then it can take this course. But if it is concerned about that, then to that degree of concern it should be concerned about this problem.

Now, I would like to say one thing more. There is nothing that says the reorganization court must sell this property to ConRail or to any other railroad.

If it goes on the blocks, it goes on the blocks to anybody who can use that property at any point for whatever purposes it wants to use it.

Mr. SKUBITZ. They can sell it to anybody else they want, but they would lose the benefit.

Mr. LEWIS. If it didn't go to the profitable railroad, the possibility there would be an arm's-length relationship and negotiation between the trustees and a profitable railroad during this planning process is remote.

The CHAIRMAN. The gentleman from North Carolina.

Mr. HEFNER. Just one question.

Do you have any interest or has anyone expressed any interest in buying the bankrupt railroad, Erie Lackawanna? Is there indication that anybody is interested in buying this railroad in the foreseeable future?

Digitized by Google

Mr. LEWIS. No, sir, there is none at all.

The CHAIRMAN. I would just like to say that during the 1973 consideration of the act, we never considered at all anything about the Erie Lakawanna. It was never brought up for inclusion in that act at all.

I would like to know, has the USRA a recommendation on how this will affect the 10,000 employees of that railroad? Will we need to raise the title V funds if we include the Erie Lackawanna in the act?

Mr. LEWIS. As I understand, Mr. Chairman, the recommendation by the Department of Transportation is to include one way or another the employees in the protection provisions of the act whether they come in as a railroad in reorganization or not.

Now, as to the amount of money required, there is no way at this point to determine whether the amount would be increased by working with the Erie Lackawanna as a railroad in reorganization or not.

I cannot tell you that. But as I understand it, the provisions here that have been requested by the U.S. Department of Transportation would amend the act to provide that kind of protection in any event.

The CHAIRMAN. I would think it would be very important that the welfare of 10,000 employees should be looked about.

Mr. LEWIS. As I understand it, whether it is brought in as a railroad reorganization or left outside, according to the proposals of the Department of Transportation, the employees would be protected.

Mr. HILLMAN. If I might comment on that, if one can talk about the possibilities of litigation, I suppose we feel that our imaginations can lead us to see just as great a chance for a possibility of litigation in connection with the DOT proposal to confer on the Erie Lackawanna benefits under the act, such as 213, 215, and title V aid for employees, without imposing the obligations that go with the mandatory conveyances. Because in one sense it could be at least argued, and I am not stating this as a final position, but at least in one sense it could be argued that this, too, is a differential treatment of a single railroad unlike the treatment given to any other railroad.

And, we feel in line with your questioning that the surest way of putting the Erie Lackawanna employees in the same class as the employees of all other railroads in reorganization, would be to have it classified as a railroad in reorganization.

The CHAIRMAN. But if it is included into this act, I am sure that we would have to put in some more funds. And I think the employment of those 10,000 members should be protected one way or another.

The gentleman from Colorado has a question.

Mr. WIRTH. If we were to include the Erie Lackawanna, what would the annual cost to the Government be of that?

Mr. LEWIS. $25 million.

Mr. WIRTH. $25 million?

Mr. LEWIS. You are speaking of the interim period between now and the end of the year?

Mr. WIRTH. Yes.

Mr. LEWIS. I believe that that probably is a reasonable guess. It is predicated upon an upward trend of traffic in the last half of this year.

Mr. WIRTH. It would be in the ball park of $25 million?

Digitized by Google

Mr. LEWIS. Yes.

Mr. WIRTH. As I understand it, the Erie Lackawanna is a subsidiary of a parent corporation.

Mr. LEWIS. Dereco Co.

Mr. WIRTH. Do you have any idea what the annual profits of Dereco Co. is in a given year?

Mr. LEWIS. No; I have not. But I know the Norfolk & Western has written the value of the common stock of this company off the books 100 percent.

Mr. WIRTH. I come from the State of Colorado, very distant from the concerns of the Erie Lackawanna, although I am sure a number of products from Colorado run on that railroad.

A number of people in my district would be concerned about the process by which the Erie Lackawanna can be spun off and then, in turn, subsidized by the Government at a time when the parent corporation is profitable. Isn't that a reasonable layman's question to ask?

Mr. LEWIS. The ability of a corporation to fail and have limited liability of the stockholders of that corporation is a fairly standard law. My general counsel here can talk to that.

Mr. WIRTH. Assume that is so. Are you convinced as the chairman of the board of the U.S. Railway Association that the process by which the Government allows this to happen and examines what goes on in the Erie Lackawanna is an adequate process? Do you think there should be changes whereby we look at a Penn Central or Erie Lackawanna to assure that there is as clear a break for the public as possible, or that we are not in a lot of various bookkeeping devices or monitoring and losing a great deal of money?

Mr. LEWIS. Yes, sir. We have not had as much time to study the Erie Lackawanna problem as we have the Penn Central, because we have been studying it for about 8 months in great detail. But the analysis we have made of the books convinces us that they have given us a conservative figure. It is not an optimistic figure.

Mr. WIRTH. I find myself looking at the Penn Central and Erie Lackawanna, and I am sure there will be a number of others coming up at which we are looking at very, very significant deficits.

I have a haunting feeling this is an area in which we ought to change jurisdictions from the ICC to FTC, perhaps, in terms of the way the stock is controlled, or ought to conduct a full-fledged investigation as to where the money is going in the railroads.

Would that make sense to you, in terms of sound public policy?

Mr. LEWIS. I would like to suggest that such public policy considerations start with our filing of the preliminary system plan and perhaps a final plan which does address itself to a greater extent to the whole problem of the rail industry in the United States and specifically to the problem of the carriers in the Northeast.

I think it can put the matter of additional law into some better perspective. But I certainly think that it is timely in this country that we address ourselves to the very serious problems of the interrelationships between all forms of transportation and the effect of public policy so negative against the rail industry. It is a very serious problem.

Mr. WIRTH. Thank you.

The CHAIRMAN. The gentleman from Kentucky, Mr. Carter.

Mr. CARTER. I thank the distinguished chairman.

Digitized by Google

I will only ask about one question, since it is a pretty rough one.

You think public policy has been strongly against the railroads?

Mr. LEWIS. I think public policy has caused some of the real problems of the railroad industry. The rail industry has lost its competitive position in this country in the last 50 years, and one of the reasons causing this has been the effect of public policy. It has also contributed to the problems of bankruptcy in the Northeast.

Mr. CARTER. How do you account for the good position of Southern Railroad, for instance?

Mr. LEWIS. If you have an industry that averages a given rate of return on invested capital, you are going to find some by virtue of their route structure that will do better than others. And others by their route structure and other circumstances will do worse.

Actually, the Southern happens to be simply one of the finest managed companies in the country, but also happens to be managed in one of the fastest growing regions in the country.

It is located in an area that fortunately lost the Civil War and doesn't have excess trackage that is existent in the Northeast. It is a line that inherently has certain advantages. But among other things, it has an absolutely excellent management.

In the Northeast we have had problems in addition to management, problems that affect those carriers to a greater degree than the southern carriers and western carriers.

Mr. CARTER. Then you think inherent factors influenced Penn Central's bankruptcy more than its management; is that correct?

Mr. LEWIS. I would say underlying conditions were fundamentally more important, yes, sir.

Mr. CARTER. You think that probably public policy affected Penn Central; is that correct?

Mr. LEWIS. Well, public policy in conjunction with the fact that simultaneously you had rapid technological developments in other forms of transportation which in addition to public policy caused a major deterioration in the competitive position of these carriers.

Mr. CARTER. Wouldn't you agree there was very poor management of Penn Central?

Mr. LEWIS. During the period of its—yes, I will have to agree to that.

Mr. CARTER. Do you agree further that there is a great deal of spinoff from Penn Central into other areas, and from the core of the Penn Central area into other diverse developments, some of which were quite profitable? Isn't that correct?

Mr. LEWIS. I am sorry, I didn't understand the question, sir.

Mr. CARTER. Well, Penn Central itself or the Penn Holding Co., which was established, I believe, in 1847, has many diverse holdings, if I understand correctly, I think perhaps that they lost interest in the main investment and concentrated on others to the detriment of the railroad.

Mr. LEWIS. I don't think there was any question about that.

Mr. CARTER. Personally, I must say I feel it was extremely poor management that accounted for much of the difficulty there.

Mr. LEWIS. I cannot argue with that, sir.

Mr. CARTER. I am glad we agree with that. I didn't understand your statement at first.

Digitized by Google

The CHAIRMAN. The gentleman from Connecticut, Mr. Moffett.

Mr. MOFFETT. Mr. Lewis, just for the record, since I asked the other two questions, how do you regard the RSPO's apparent unhappiness with the way that the USRA and the DOT have construed the original as a matter of fact?

Mr. LEWIS. Well, I think our construction of it, sir, is correct.

Mr. MOFFETT. How would you define profitability under the act in terms of the unprofitable branch lines that are being suggested, or by which it is being speculated?

Mr. LEWIS. Our basic formulas are to attempt to determine which of the branch lines develop incremental cash revenue sufficient to cover the incremental cash costs, and if they don't do that, then we believe that constitutes a test of viability. And we are currently dealing with the extent to which lines are brought into this system that do not meet what we would consider that test.

Mr. MOFFETT. I understand that.

Now, you are also familiar, I am sure, with section 206 of the act.

Mr. LEWIS. Yes, sir.

Mr. MOFFETT. It regards the final system plan. Section 206A8 speaks about the minimization of job losses and associated increases in unemployment and community benefit costs in the area presently served by rail service.

Now, I think that the House is going to approve something in the way of relief, because of this particular factor. I know in my district we can't afford to take a chance on losing rail service. But we can't afford it now and we can't afford it next year, either.

So, what I am asking you is, is it not conceivable that you can have a line on which there are factories that employ people and maintain jobs, but that under your definition could be construed as unprofitable, and if so, then what?

Mr. LEWIS. There are subsidy provisions in the act.

Mr. MOFFITT. I understand that.

Mr. LEWIS. Part of the criteria for which the subsidy would be used would be to cover the losses on branch lines on which the economic impact would be serious.

Mr. MOFFETT. How does the loss cover the economic impact if a factory is closed?

Mr. LEWIS. The States would join with the Federal Government to provide subsidies to keep the line in being.

Mr. MOFFETT. Do you think that the State capability of doing that, my State or any other, is adequate?

Mr. LEWIS. I am not able to pass judgment on the ability of the States to develop this program, although I will say that in terms of the total expenditures for the support of transportation facilities throughout the region, the added support for rail branch lines is de minimis.

On the other hand, in terms of the actual net profit for a ConRail or ongoing system, it is extremely important. There is sufficient subsidy money in the act, we believe, to cover the entire amount.

Mr. MOFFETT. If it could be shown there is not sufficient money and that plants are going to close if lines are abandoned, would you support amending the legislation to insure that we broaden the definition of profitability?

Digitized by Google

Mr. LEWIS. What we would like to do is amend the legislation to provide an increased level of subsidy.

Mr. MOFFITT. Thank you.

The CHAIRMAN. Thank you kindly, Mr. Lewis, for coming and giving us the benefit of your views.

Without objection, the Chair wishes to place in the record, as though read, statements submitted by Congressman J. Edward Roush of Indiana and Joseph P. Vigorito of Pennsylvania.

STATEMENT OF HON. J. EDWARD ROUSH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF INDIANA

Mr. ROUSH. Mr. Chairman, I am grateful for the opportunity to present my views before this committee on the question of whether or not the Erie Lackawanna Railway should be included under the provisions of the Rail Reorganization Act of 1973. It seems to me that there are two important aspects of the question.

(1) Is the inclusion of the Erie Lackawanna essential to the economic well-being of the considerable area served by the Erie Lackawanna?

(2) Will the continued operation of the Erie Lackawanna facilities under the terms of whatever system is finally proposed as ConRail contribute to the economic viability of the ConRail system?

The second of these questions is easiest to deal with.

Of the seven bankrupt railroads initially listed in the Rail Reorganization Act of 1973, the Erie is the second largest both in terms of miles of road operated and in terms of operating revenues. Erie trackage totals 2,979 miles and represents 5.5 percent of all rail trackage in the 17-State northeastern region and 1.4 percent of all rail trackage in the United States. Erie operating revenues represent about 2 percent of the total for the country.

In the Northeast region, when all systems are considered, Erie ranks fourth behind Penn Central, the Chessie System, and the Norfolk & Western in terms of miles of trackage operated. It is difficult to imagine a viable plan for the Northeastern rail system which does not include the Erie Lackawanna as a major part.

Congress recognized this in 1973 when the Erie Lackawanna was designated for inclusion in the basic reorganization of bankrupt railroads. It might be tempting to suggest that since the management of Erie Lackawanna were eager to prevent the Erie from being included under the act less than 1 year ago, we should not be too anxious to include the Erie Lackawanna now. Such an argument would be, essentially an argument that the Erie should be penalized for attempting to reorganize on its own. Frankly, I believe that the entire system of rail transportation in the Northeast would have been improved if the Erie Lackawanna had been successful in its attempts to reorganize under Chapter 77 of the bankruptcy regulations and had emerged as a strong private carrier capable of complementing and competing with ConRail. It now appears that this will not be the case. However, this apparent failure to successfully reorganize should not be the occasion for losing the assets of the system and the economic benefits brought to Indiana, Ohio and New York by the operation of the Erie Lackawanna facilities.

Digitized by Google

I think it is quite probable that certain segments of the Erie system will be declared unprofitable after analysis by the United States Railway Association. It should be pointed out, however, that we will not have the benefit of this analysis until the Erie Lackawanna is included under the system.

Finally, let me turn to the economic well-being of the area served by the Erie, and in these remarks I shall concentrate on my own district, the Fourth District of Indiana; and I shall begin with comments about my own home town, Huntington.

There is located in Huntington two major industries that depend on the service provided by the Erie Lackawanna. The Majestic Co., a manufacturer of furnaces and other home heating equipment, depends on the Erie Lackawanna for shipment of products and for receiving materials used in its manufacturing operations. It is fair to say that Majestic would be damaged, perhaps critically, if the Erie was not there for shipping and receiving.

There is also a large religious publishing company. Our Sunday Visitor, which depends on the Erie for shipments of the paper used in its operations. Its costs would rise significantly if an alternate source of transportation had to be found. There are numerous smaller examples in Huntington alone.

In addition, 200 to 300 employes of the Erie Lackawanna reside in my district. In times of high unemployment, it is almost intolerable to think of adding 20 or 30 people to the jobless roles. An additional 200 or 300 is out of the question.

The Erie Lackawanna is also utilized by numerous grain elevators, in business to funnel the corn and wheat and soybeans produced in northeastern Indiana to major grain marketing centers where the products can be added to our Nation's food supply or exported to improve the Nation's trade position. While the crops would still be grown and the grain shipped without rail service, the increased cost of transportation would, in the end, result in a pressure to raise the price of food on grocery store shelves and reduce the competitive position of American grain in international markets.

In consideration of the importance of this vital transportation resource to my district, the northeastern region of the United States, and ultimately to the Nation, I urge that the inclusion of the Erie Lackawanna Railway, under the provisions of the Rail Reorganization Act of 1973, be approved.

Thank you, Mr. Chairman.

STATEMENT OF HON. JOSEPH P. VIGORITO, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF PENNSYLVANIA

Mr. VIGORITO. Mr. Chairman, I urgently request the adoption of the legislation to incorporate the Erie Lackawanna into the Regional Rail Reorganization Act.

In my testimony I intend to explore the following: the legal considerations involved in the proposed amendments to section 207(b) of the 1973 act, the urgent cash need of the Northeast railroads; the impact of recession on recovery of the Erie Lackawanna, and the possible human suffering if there is dissolution of any of the Northeast railroads.

Digitized by Google

As you are aware, there are several legal issues which have been raised about the proposed amendments to the 1973 Rail Reorganization Act. It is my understanding that the Erie Lackawanna Railway Co. attempted to reorganize under section 77 of the Bankruptcy Act. However, because of serious cash-flow problems caused by the deepening recession, Erie Lackawanna has found it no longer possible to reorganize under section 77 of the Bankruptcy Act. Now the Erie Lackawanna has only two alternatives. One, it can go bankrupt; or two, it can be incorporated under the Rail Reorganization Act. The second alternative, which is the only acceptable one, however, requires that the Congress amend Section 207(b) of the 1973 law so that the Erie Lackawanna can be restored to the status of "railroad in reorganization," which is necessary for the continued operations of essential transportation services. It is clear that the Erie Lackawanna is no longer a profitable railroad and should not be expected to operate as one, and indeed cannot continue to long function as one.

One of the critical reasons for this legislation is to help ease the urgent need for cash to continue the minimum standards of railroad delivery systems. For example, at present the Erie Lackawanna is only making such repairs that are absolutely necessary to keep the rail cars operating. In the last year Erie Lackawanna's percentage of main line under "slow orders" has increased from 3 percent to more than 20 percent, which means that Erie Lackawanna is in imminent danger of falling into total disrepair. We in Congress must insure adequate delivery systems of our marketable goods. One way to insure this in the Northeast is by upgrading the Erie Lackawanna into a truly serviceable railroad, once again.

Finally, I believe that we in Congress must consider the human suffering that will occur if we do not take the action presently pending before this committee. The Erie Lackawanna estimates that 10,000 of its employees would be added to the unemployment rolls if it is not incorporated into the rail reorganization. It should be remembered that the maximum railroad employees receive in unemployment compensation is $63.50. Also, within a few days following dissolvement of the railroad, additional layoffs would occur affecting the employees of shippers who formerly used the Erie Lackawanna. Surely, we have a public responsibility to the people who work for and are served by the Erie Lackawanna to avert the tragic impact of the tremendous job loss which would occur if this railroad failed.

In closing I would like to relate that my District has been greatly impacted by the present curtailment of Erie Lackawanna services. Erie Lackawanna has closed its principal car repair facility at Meadville, Pa., which has created extreme economic suffering in that community. As a result, I appear here to seek your expeditious and positive consideration of the legislation presently before the committee.

The CHAIRMAN. That concludes the session for today. The committee will stand adjourned until 11 o'clock tomorrow morning.

[Whereupon, at 5 p.m., the committee adjourned to reconvene at 11 a.m., Wednesday, February 5, 1975.]

EMERGENCY ASSISTANCE TO NORTHEAST RAILROADS

WEDNESDAY, FEBRUARY 5, 1975

HOUSE OF REPRESENTATIVES,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D.C.

The committee met at 11:50 a.m., pursuant to notice, in room 2123, Rayburn House Office Building, Hon. Harley O. Staggers (chairman) presiding.

The CHAIRMAN. The committee will come to order.

We will start in with our witness this morning, the Honorable Robert W. Blanchette of the Penn Central Transportation Co., and Charles A. Horsky, counsel for the trustees. Is that all you have with you?

Mr. BLANCHETTE. I can introduce my entourage. Seated at my immediate right is Mr. Jervis Langdon, president of the railroad. At his right is Mr. Paul Duke, the general counsel of the railroad. At my immediate left is Mr. Ernest R. Varalli, our assistant vice president in charge of the budget and the forecast, and on his left is Mr. Charles Horsky, special counsel to the trustees.

The CHAIRMAN. All right, sir, you may proceed.

STATEMENT OF ROBERT W. BLANCHETTE, TRUSTEE, PENN CENTRAL TRANSPORTATION CO., ACCOMPANIED BY CHARLES A. HORSKY, COUNSEL FOR THE TRUSTEES; JERVIS LANGDON, PRESIDENT; PAUL DUKE, GENERAL COUNSEL; ERNEST R. VARALLI, ASSISTANT VICE PRESIDENT; BUDGET AND FORECAST

Mr. BLANCHETTE. Mr. Chairman and members of the committee, it has been suggested, sir, with your leave, that I deposit my testimony of record and that I summarize it in the interest of time.

The CHAIRMAN. If you would, that would be fine with the committee [see p. 174].

Mr. BLANCHETTE. We appreciate the opportunity to be here, sir, and our testimony deals with three points. The first point is the immediate short-range cash outlook for the Penn Central, and the necessity in the absence of any outside assistance, to begin an orderly cessation of operations in the middle of this month. The inability to meet the payroll at the end of the month is what creates this imminent cash shortfall.

We are, sir, as I am sure everybody realizes, judged on only the basis of hindsight. And if on February 25 the railroad must stop because our employees are not paid, and we have not taken precautionary measures to avoid vandalism, to avoid cars being stranded

47-319—75——12

Digitized by Google

throughout the 20,000 miles of our system, we will then have been judged to have been reckless and irresponsible with the property of the estate.

The second point, sir, deals with the cash outlook for the railroad between now and the first quarter of 1976 when it is anticipated that ConRail, or the final system plan, will come in operation. I am going to revise my testimony slightly as a result of the figures that we received from the Department of Transportation's testimony. I am going to revise it in a way that they are compatible.

The Secretary of Transportation has projected that the railroad will suffer deficiency in cash through the first quarter of 1976 of some $252 million. When we wrote our testimony it was on the basis of the Senate testimony of the DOT, and as we read Mr. Barnum's figures yesterday, that figure of $222 million in our testimony appears to be $252 million. But there are several very important qualifications to this.

First, unlike Mr. Barnum, our figures, and they have been verified, show only maintenance and repair at the 1974 level of operations. There is no $25 million in there to improve the northeast corridor, not a penny to improve anything. It just keeps the railroad operating to meet its payroll and its fuel costs, and there is very, very minimal maintenance.

Second, the $250 million figure does not represent $50 million in Government guaranteed trustees' certificates which mature in January of 1976. We have no present ability to pay those trustees' certificates when they become due. We are not very attractive on Wall Street for refinancing. If we don't meet those payments they become a direct obligation of the United States. So, that price tag is there, whether any of us like it or not.

In addition, as this committee is aware from yesterday's testimony, the Interstate Commerce Commission suspended a proposed 7 percent rate increase which our projections had said would start being realized in April. For every month beginning in April under our figures, for every month that rate increase remains in suspense, we will have an additional cash shortfall of $9 to $10 million a month.

Adding these things together as best I could, and assuming that the suspension of the 7-percent increase lasts for 5 months, our figures, when reconciled with the Department of Transportation figures, show a shortfall over this period of time of $530 million.

The CHAIRMAN. Over what period of time now?

Mr. BLANCHETTE. Between now and the end of the first quarter of 1976. I want to emphasize one sentence in my testimony when I give that figure. All long-range cash forecasts are subject to the possibility that future events may make them unrealistic in either direction. The U.S. Railway Association, the Department of Transportation, have sent auditors to verify these figures and they have told us we are optimistic. When you are going to lose $350 million over a period of time, you can afford to be modestly optimistic. That kind of a crystal ball that far away can never be considered an ironclad guarantee.

The last point contained in our testimony deals with the terms and conditions which would be imposed under H.R. 2051. In summary, those terms and conditions which apply not only to improvement moneys under section 215, but also as well could apply to grants under section 213, result in a heads I win, tails you lose proposition.

Digitized by Google

The conditions in H.R. 2051 boil down to this: if money is spent to do the ordinary repair and maintenance of the railroad under those conditions, the estate can never be compensated for more than the value of those properties at that time taking into account their physical condition. And any increase in value, not because of the improvement but because of inflation, because of scrap prices being higher, or for any reason completely unrelated to the investment the Government has made, can never be recouped by the estate. Conversely, any decrease in value because of a recession or a depression or a drop in scrap prices, or a drop in land values, any decrease is taken off the estate. The estate only gets valued at the time of the conveyance for any decrease in value. But it can never get anything upside, even though the upside increase in values is unrelated in any way, shape, or form to the improvement that was made by the section 213 or the 215 investment.

Now, we are not anxious or desirous or in any way suggesting that the Penn Central be paid twice or any estate be paid twice for an investment which is made by somebody else. Section 215 already purports to serve that goal with a don't pay twice provision. We have no objections to provisions which would further insure against that possibility.

There are two ways of doing it. The first way is to take subsection (B)2 of section 215 and make that the same clause as obtains in subsection (B)1. That merely says you will never be paid that portion of any sale to ConRail or to anyone else which reflects value attributable to the maintenance and improvement provided pursuant to the agreement. In other words, there is a link to the increase in value, and where the increase in value is attributable to the increase made, nobody is going to claim it.

Now, there is another way of doing it. That was done in the Senate version of this same bill. That says that the corporation will never have to pay any portion of the value which is attributable to the maintenance or improvement performed pursuant to the agreement. It then goes on to say the association, meaning the U.S. Railway Association, and the Special Court, shall in determining value pursuant to section 303 of the act, take into account the physical condition as of the effective date of the agreement to improve the properties.

Let me go on to say, sir, we don't know whether the section 215 amendments, even as modified or amended, will work. We don't know how they will be implemented. They have one basic fault: they destroy the symmetry of the original reorganization act. That symmetry contained section 213 which is what I call "keep it alive money", payroll, diesel fuel, ordinary repair and maintenance.

Aside from that was section 215 which the Congress said should be used to do things over and above the ordinary repair and maintenance of the railroad. These amendments destroy that and purport to use section 215 not to improve or rehabilitate or do things over and above the normal level of maintenance, but to do the ordinary programed maintenance of the railroad. As a result, they treat ordinary repair as a form of investment.

Whether this will work, Mr. Chairman, I cannot tell you. I can only tell you we will do the best we can to engage in responsible and sensible agreements with the Department of Transportation. We will submit

Digitized by Google

them to the courts, and if everybody acts reasonably in the premises, this use of section 215 may work. If it does not, we are still confronting the same $350 million gap.

I think that concludes my summary, sir, thank you.

[Mr. Blanchette's prepared statement follows:]

STATEMENT ROBERT W. BLANCHETTEE, TRUSTEE, IN BEHALF OF THE TRUSTEE OF THE PROPERTY OF PENN CENTRAL TRANSPORTATION COMPANY, DEBTOR

Mr. Chairman and members of the committee, we are most grateful that the Committee has scheduled its first hearings of this Congress on this measure. The railroad's cash situation must be resolved quickly or it will be unable to continue operating.

This presentation consists of two parts. First, we shall spell out both the present and prospective cash situations of the railroad. We shall then turn to the proposed DOT Amendments to the Regional Rail Reorganization Act of 1973.

The railroad's cash position is the first point. At the time the Act was passed, there was great concern whether Section 213 would be adequate to fund the transitional period before Conrail was formed. The coal strike last fall and the continuing fall-off in the economy, particularly the slump in automobile production, made it inevitable that the railroad would be in a cash crisis beginning in December 1974. As soon as we had quantified the dimensions of the problem, we brought the facts to the attention of the Department of Transportation. On November 20, we told the Department that the only self-help measures we could institute would be an immediate large scale lay-off of employees and a drastic cut in purchases of materials. Even then, the railroad would not be able to pay any increase in wages resulting from industry-wide bargaining negotiations: when these negotiations are concluded, the wage increases will become effective as of the first of this year. Because the employee furloughs and the cut in purchases would have seriously undermined maintenance programs, the Secretary requested that we defer these programs, and we did so.

Since then a cash crisis has been postponed only through the full cooperation of the Department of Transportation in making available substantially all of the money presently authorized and appropriated under Section 213. Of course, we have taken every possible step available to us to stretch our cash resources as far as they can go—from obtaining advance payments from Amtrak to deferring the payment of current bills. In January, we suffered a cash drain of about $2 million a day. Because DOT grants were used to make up the difference, we have exhausted the funds under Section 213. And, because we agreed to defer our self-help measures, we have passed the point where they could be implemented in time to be of help. At the end of February, the railroad will face a payroll of more than $14 million. Without outside cash assistance it will be unable to make those payments. We shall not ask our employees to go on working for nothing because realistically and morally, we do not see why they should.

If no assistance is available, this is what we will have to do: in mid-February, we will anounce that on a specific date in the future, probably February 18, the railroad will begin to decline accepting shipments for future delivery. Then, on or about February 25, the railroad will cease operations altogether.

The announcement is necessary so that shippers can prepare to make other arrangements wherever possible after the cessation date and so that undelivered goods will not be stranded at various points on the railroad. An unannounced, sudden shut-down would cause even greater disruptions.

This is a very unpleasant prospect for everyone. Of course, the railroad could always lift the embargo if cash later became available. However, the cash drain will be greatly magnified as a result of diversion of traffic that will necessarily take place once the announcement is made. We believe that publication of the announcement should be avoided if Congress can make that at all possible.

We now turn to the longer term cash outlook. The Secretary of Transportation has projected that the railroad will suffer a deficiency in cash through the first quarter of 1976 of some $222 million. There are several qualifications to that figure, one very recent. First, this sum reflects a railroad operation with maintenance and repair at basically the 1974 level. It contains no improvement or

Digitized by Google

rehabilitation programs. Secondly, it does not assume any additional cash losses as a result of embargoes or even a temporary shut-down. In addition, it excludes $50 million in Government-guaranteed Trustees' Certificates which become due and payable in January 1976. These Certificates will become obligations of the United States if they cannot be re-financed. Finally, last week, the Interstate Commerce Commission suspended a 7 per cent rate increase proposed by most of the nation's railroads. Our projections had anticipated this increase going into effect beginning in April. This means a further reduction in cash of between $8 and $10 million per month during the time that the suspension is in effect. Due to these factors, the amount specified by the Department would not appear to be sufficient—by an amount in the order of $100 million—to maintain Penn Central operations through the first quarter of 1976 when Conrail is anticipated to become operational. We must add, finally, that all long-range cash forecasts are subject to the possibility that future events may make them unrealistic in either direction.

We now turn to the proposal of the Department of Transportation. That proposal contains terms and conditions that would preclude the railroad from taking full benefit of the assistance program, and would thus simply fail to resolve the cash crisis.

The difficulty with the legislation lies in the new conditions which it imposes upon the use of money authorized under Section 215, and under certain circumstances, under Section 213 as well. As Section 215(b)(1) would be amended, any agreement to use funds—to perform program maintenance, to improve rail properties, and the like—is subject to this condition: when the property involved is transferred to Conrail, Conrail is not obliged to compensate Penn Central for any portion of the value of the properties "in excess of the value of such properties determined on the basis of their physical condition as of the effective date of the Agreement."

This would mean that any increase in the value of property which might occur, not by reason of the Section 215 expenditures, but, for example, by reason of normal appreciation in values, would be forfeited if the railroad were to agree to use Section 215 funds.

On the other hand, if the property were to decrease in value after the Section 215 expenditure was made, for reasons equally unrelated to that investment, the estate would get only the lower value.

This is a heads I win, tails you lose proposition. As Trustees we would be unable to recommend to the Reorganization Court that the estate risk such a forfeiture. Further, we believe that the Reorganization Court could not approve any such Agreement. In short, if the Department's Bill were passed as written, the funds which would seem to become available to Penn Central under Section 215 would in fact not be available.

This problem is aggravated by reason of the fact that under the proposed Amendment, the same conditions may be imposed on grant monies. It is true, of course, that in Section 213 this limitation must be agreed to by the Trustees, but we can anticipate that an effort will be made by the Department of Transportation to structure as many Section 213 grants as is possible in this way. In that event, this legislation would not help Penn Central at all and the cash crisis would persist.

We believe the Amendment has invited these difficulties by failing to recognize that there are two very separate cash problems. The first is the lack of working cash to keep the railroad in operation. The second is the lack of cash to make capital-type of improvements necessary to rehabilitate the railroad.

The present Act makes that distinction. Section 213 addresses itself to the lack of working cash through the vehicle of grants. The only condition imposed is an assurance that the level of service be maintained. Section 215, on the other hand, provides funds for what are, in essence, investments in the future of the railroad. The condition imposed there is the very legitimate one assuring that the bankrupt estate not be paid the value of an investment made by others. We believe that this separate treament of the two different problems is sound and should be preserved.

The fault of the proposed Amendment is its attempt to convert an operating subsidy into a form of capital investment. The railroad's working cash shortages stem from a variety of sources: wages, fuel costs, transportation expenses, and ordinary repair and maintenance. All are necessary to keep the railroad operational during the transition to Conrail; they benefit the public convenience and necessity, not the estate or its owners. Some of these expenses leave nothing

Digitized by Google

behind of a tangible nature after they are made; fuel is consumed, wages are paid out. Other expenses do; a broken rail is replaced, a defective engine is repaired. But they are all ordinary operating costs, not investments. To pick and choose among them and then determine which should qualify for Government assistance is a counterproductive effort.

It is also an effort which could lead to fatal delays. The railroad's programmed maintenance is current and on-going. It would simply not be possible, as the amendments contemplate, to settle upon the value of rail properties to be maintained "on the basis of their physical condition" at the time agreements for the next few months are reached. On this score alone, there would be prolonged litigation while the job waits to be done.

We have, therefore, great difficulty with the new condition imposed in Section 215(b)(1), especially if that condition is expanded to cover operating costs. This does not mean that we oppose the legitimate claim of the Government that when it has invested in capital expenditures, it will not pay a second time. We have no objection to provisions which would insure against that possibility. Indeed, there is a very simple method by which this can be done—adopt in Subsection (b)(1) of Section 215 the language of Subsection (b)(2). In the latter Section, the bill proposes that in the event of a transfer—not to Conrail but to a profitable railroad—of property on which money has been spent under Section 215 then that portion of the proceeds of such a sale "which reflects value attributable to the maintenance and improvement provided pursuant to the Agreement" shall be returned to the Secretary.

That seems entirely appropriate. It does not suggest that the Government may take credit for any appreciation in value unrelated to its investment. It merely requires an appropriate allocation of whatever value has been added so that the Government does not in effect pay twice.

This problem was resolved in the Senate by a change in the language of Subsection (b)(1) which we believe eliminates the problem. As passed by the Senate, that Subsection reads: "(1) the Corporation shall not be required under Title III of this Act to compensate a railroad in reorganization for any portion of the value of the properties subject to the Agreement and designated under the final system plan for transfer to the Corporation which is attributable to the maintenance or improvement performed pursuant to the Agreement. The Association and the special court shall, in determining value pursuant to Section 303 of the Act, take into account the physical condition as of the effective date of the agreement . . . ."

If Section 215 retains its present objective—the funding of capital improvements—it would not alleviate the railroad's working cash problem. The $222.1 million cash deficiency to which the Secretary has referred is only the shortfall in the railroad's ability to meet operating expenses. That figure does not cover the problem of rehabilitating the railroad or performing maintenance over the levels of 1974. Again, we believe that Section 213, without new conditions, should be the vehicle for dealing with working cash problems.

The CHAIRMAN. We will have to go, and we will have to come back later after lunch for the questioning.

Mr. ROONEY. I wonder if all of the members of the committee could get a copy of this testimony prior to coming back here, so they can peruse through it?

The CHAIRMAN. I believe it could be delivered to their offices, could it not? The ones that are here, of course, have a copy.

The committee will adjourn until 1:30.

[Whereupon, at 12:05 p.m., the committee recessed, to reconvene at 1:30 p.m., the same day.]

AFTER RECESS

[The subcommittee reconvened at 1:30 p.m., Hon. Harley O. Staggers, chairman, presiding.]

The CHAIRMAN. The gentleman from Nebraska.

Mr. MCCOLLISTER. Is it the intention of the Chair we hold a markup session tomorrow?

Digitized by Google

The CHAIRMAN. If possible.

Mr. MCCOLLISTER. Would it not be possible, since the House will have only a pro forma session, to begin this afternoon to try to establish a quorum for tomorrow?

The CHAIRMAN. If we could, yes. I think it is a good suggestion.

When we adjourned at noontime Mr. Blanchette was before the committee and had given his testimony and was open for questions. I have perhaps one or two things.

How much money would you need to go through June 30, 1975?

Mr. BLANCHETTE. Before the liability for increased wages as a result of an industrywide settlement that will become retroactive to January 1, 1975, we will need $58 million. Now, at some point there will be a wage increase for our employees. And after that agreement is entered into, then it must be processed and the timecards and payroll cards processed, so that our estimate is that at least by June 30, 1975, that wage increase will be implemented. Therefore, to cover the wage increase, the figure is $106 million.

The CHAIRMAN. $106 million.

Mr. BLANCHETTE. Will keep the railroad operational through June 30, 1975, on its 1974 level of maintenance and repair, as best we can estimate.

The CHAIRMAN. $106 million to keep it operating until July 1 of this year?

Mr. BLANCHETTE. Yes.

The CHAIRMAN. On the same level as 1974 service. All right. I read your testimony and, of course, heard you when you were here, and understand that you had induced the Senate to change some of their language on 213(b), I believe.

Mr. BLANCHETTE. Yes.

The CHAIRMAN. I don't know what this committee will do. We will take it under consideration, of course, when we get into markup. We hope to have that marked up tomorrow morning if it is possible.

Now, I have no further questions at this time because we have heard the testimony of the Department of Transportation and also the ICC. But I just wanted to know what your opinion was of how much you would have to have until July 1 of this year, which would be $106 million.

Now, until the 31st of December, what was that?

Mr. BLANCHETTE. To December 31 of this year?

The CHAIRMAN. Yes, sir, through December 31.

Mr. BLANCHETTE. As near as we can estimate, $180 million would——

The CHAIRMAN. Would take you through——

Mr. BLANCHETTE. December 31, 1975. In that we assume, sir, that the ICC will give us a 12-percent rate increase on September 1, 1975. That was part of our original forecast for the year. In other words, our forecast for the year, I realize this is painfully difficult and not very interesting, but our forecast for the year assumed a 7-percent rate increase which we would begin to benefit from in April. We then had an additional 5-percent rate increase beginning September 1, 1975.

The Interstate Commerce Commission has suspended the 7 percent, and we are assuming as a matter of just crystal balling, that at some point we will get additional rate increases. And if we do, and if they are effective September of 1975 on a basis of a 12-percent increase—

Digitized by Google

namely the 7 that was canceled and the 5 we had originally forecast, and that we get assistance from that vehicle—then the cost of maintaining operations through 1975 is approximately $180 million.

The CHAIRMAN. You talk as if you are fairly certain you would get this in September. Is this some kind of an agreement or understanding?

Mr. BLANCHETTE. No, sir, it is not. Mr. Varalli here, our budget forecaster and resident expert on numbers, just put that into his forecast. A 1-percent increase is $19 million a year. So I cannot make that mental calculation of what happens if we don't get the 12 percent, but 1 percent is $19 million a year.

The CHAIRMAN. What if it is only 7 percent now? Do you have that calculated at 7 percent?

Mr. BLANCHETTE. We calculated a 7-percent rate increase beginning in April, and a 5-percent rate increase on top of that beginning in September. That was the basis of our original figures. We had to make some revisions, as I stated in my testimony earlier this morning, to reflect the fact that since we made our figures and forecast, the ICC suspended that increase.

The CHAIRMAN. You know, yesterday I didn't hear the ICC or anybody else mention anything about a 12 percent, only 7 percent.

Mr. BLANCHETTE. We have not applied for the 5 percent. They have no official knowledge of it. The application has not been filed. We may be optimistic. That is one of the reasons that the auditors said we were optimistic. To get a rate increase, the first thing that has to be done is that the industry must join in it. Then when the industry joins in it, the application must be made. So that if we don't get a rate increase, then the figures are off by that much.

The CHAIRMAN. May I interrupt you there and ask you, because this morning you were talking about $350 million seeing you through the first quarter of next year. Is that predicated on the assumption that you do not get an increase in rates?

Mr. BLANCHETTE. No, that assumes we get the 12 percent effective September 1, 1975.

The CHAIRMAN. That is quite a jump from $180 million to $350 million there for one quarter.

Mr. BLANCHETTE. Well, we have two factors in the first quarter of the year. First is the $50 million Government guarantee obligation to which I referred this morning. And secondly, as you know, Mr. Chairman, from history, the first quarter on the railroad, the winter months, are the most severe cash draining months. They are disproportionate to the calendar year. We have two bad seasons that we can always count on. First is the first quarter of the year, when you have adverse weather conditions and a general slackening, and secondly, in the summer when many industries have their vacation schedules and close their plants. Every year since 1971 we have had problems in those two periods.

The CHAIRMAN. All right. I just am trying to get what your prediction was here, because as I say, when we have to take into consideration what the ICC predictions were and also the DOT, it looks to me like you are asking for $120 million for one quarter of next year, the first quarter.

Mr. BLANCHETTE. The difference between $180 and $350 million.

The CHAIRMAN. And it is $106 million to run through June 30, and $180 million through December 31?

Digitized by Google

Mr. BLANCHETTE. Yes.

The CHAIRMAN. Mr. Macdonald?

Mr. MACDONALD. No questions.

The CHAIRMAN. Mr. Devine.

Mr. DEVINE. I would like to direct a question to Mr. Langdon if he would care to respond, and would like to predicate the question on a statement. You were here yesterday when I questioned the Chairman of the Interstate Commerce Commission about the causes of some railroads being successful and others unsuccessful. Were you here at that time?

Mr. LANGDON. Yes.

Mr. DEVINE. Let me make a statement. I would like to quote from Dunn's Review a couple of months ago, where it made reference to Southern Railroad. I am not an advocate of Southern, they don't touch my district, but they are an example of a successful railroad?

"In the first 9 months of 1974 the net income was $71.8 million or $4.76 a share on operating revenues of $678 million. That profit was not only 35 percent higher than the first 9 months of 1973, it was 29 cents a share higher than all of last year. The most important element of the strength of the railroad is the satisfactory and farsighted top management."

They go on to say that the difference between Southern and the old-line companies is that the old-line companies start with operations. They have the line and let the customers come to them. But the Southern starts with marketing and it has been very clever about soliciting the best business.

It says that there are a lot of misconceptions about the railroad business and most of them grew out of the fact that the whole railroad industry is being judged by the difficulties of just one part of the country. But in fact 9 out of 10 largest U.S. railroads are making a profit.

Railroads carry more freight than all the airplanes, trucks, and barges combined, and do it with the most efficient use of fuel. A train is 4 times more efficient than a truck, and 60 times more than an airplane.

In addition, if railroads keep their present share of business, which seems more than likely, it will mean a 100-percent increase in traffic levels by 1990, hardly the stereotype image of the railroad business.

When you look at the Southern Railroad you feel you go as far away from the stereotype as you can get. This is a quote from a Dunn's Review.

My question suggested perhaps it was poor management on the part of Penn Central that gets them into these difficulties. I believe you indicated to me before the hearing you would like to be able to respond to this.

Mr. LANGDON. Let me join with the magazine in commending the management of the Southern Railway. I think it is absolutely tops. I agree with that.

Over on the Penn Central the problem though is one that goes far beyond management. In the first place, we are dealing with a plant and trying to conduct transportation on a plant which has tremendous obsolescence. It is a very old plant, particularly in the eastern part of the operation, with terminal facilities that are probably as inefficient and as difficult to operate as are found anywhere in the country.

Digitized by Google

In addition to that, for 20 years maintenance has been deferred, to the point where today on the Penn Central in order to just make up the deferred maintenance in the roadway properties, according to the findings of these independent engineers whom Mr. Barnum referred to yesterday, over $2 billion has to be spent in order to make up deferred maintenance in the road accounts alone.

Now, in addition to that, we serve a territory, and this is where this is a very sharp difference between our operation and those in the South—we serve a territory where the economic growth has been much slower than in the Southeast. And the growth in the East has been in a direction where truck transportation has been benefited more than railroad transportation. And the South has grown, all the economic industries, by percentages of 40 and 50 and 60 percent, whereas our growth has been relatively small and modest.

As I say, the eastern growth has been concentrated in the areas of production where the truck is the more efficient method of transportation, particularly when it can operate over publicly provided highways.

Mr. DEVINE. What time frame are you putting this growth in? Twenty years, ten years, or what?

Mr. LANGDON. Since World War II. And we on the Penn Central Railroad are confronted with a competitive situation on the highways which is almost beyond belief. We have an Interstate Highway System paralleling the entire railroad. All main lines are paralleled with the Interstate Highway System, which has been built in a large part since World War II. The truck traffic over those systems has been growing at a rate of 20 and 30 percent a year. We have trucks operating on the Jersey Turnpike every 5 seconds right around the clock, 7 days a week. On Interstate 80 and other east-west highways, the truck traffic is so dense it is equivalent of 60, 70 piggyback trains every 24 hours.

The result is that the railroad is slowly and very gradually being confined to the type of traffic which is not competitive with the highway; namely bulk traffic for the most part, although there are still other types of traffic where the competitive situation allows the railroad to participate.

But the reason why in our territory, and I think this bears directly on your question of yesterday, the C. & O. and the N. & W. are able to make out better than the Penn Central, is that they have such very substantial portions, much more substantial than ours, of bituminous coal, which is not competitive with highway transportation. And 50 and 55 percent of their tonnage is coal, whereas it is only 23 and 24 percent in our case. This cannot move over the highways.

Moreover, those two carriers don't serve the territory where most of our operating problems occur, on the eastern seaboard and New England.

So that this Penn Central problem, while management had a part to play, of course, is far beyond management control. The only way that the property is ever going to be made to have earning power is to have the kind of restructuring which hopefully is in contemplation in development of the final system plan by the USRA. I think USRA may be able to come up with a system so designed and financed that there can ultimately be viability in this railroad operation. But short of that, there is really very little hope.

Mr. DEVINE. Mr. Langdon, we have used up our time, but you should be identified as formerly a trustee, and now president of——

Digitized by Google

Mr. LANGDON. I was one of the four trustees originally in the Penn Central, and then earlier last year, in April I think it was, I was demoted to president.

Mr. DEVINE. Thank you, Mr. Chairman.

The CHAIRMAN. The gentleman from California, Mr. Moss.

Mr. Moss. At the moment, Mr. Chairman, I would like to reserve my time.

The CHAIRMAN. The gentleman from Kansas, Mr. Skubitz.

Mr. SKUBITZ. I have only a few questions. I am trying to get these figures in mind. If I understand Mr. Blanchette correctly, originally the DOT recommended $200 million?

Mr. BLANCHETTE. Yes.

Mr. SKUBITZ. This was before the rate increase was denied by the ICC?

Mr. BLANCHETTE. Yes.

Mr. SKUBITZ. Then the DOT revised its figure upward to $252 million, is that correct?

Mr. BLANCHETTE. I believe that to be the case.

Mr. SKUBITZ. What you are saying in your testimony, if I read it correctly, is that the $252 million that DOT has recommended does not include $25 million that Penn Central must shell out for Amtrak improvements, is this correct?

Mr. BLANCHETTE. That is correct.

Mr. SKUBITZ. And it doesn't include $50 million to pay off guaranteed certificates that will be due in 1976, is this correct?

Mr. BLANCHETTE. Yes.

Mr. SKUBITZ. And an additional $25 million to make up for the losses because of the failure to provide the rate increase?

Mr. BLANCHETTE. Yes; that latter amount, sir, reflects the judgment on our part that the rate suspension would last 5 months, rather than the 3 months which the Department assumed. I don't think there is any way of knowing which of those assumpions is correct.

Mr. SKUBITZ. So what you are telling this committee is that the figure submitted by DOT, $252 million, is actually $100 million short insofar as Penn Central is concerned?

Mr. BLANCHETTE. Yes, sir.

Mr. SKUBITZ. Now, did you discuss this with the DOT? Did you present your figures to them?

Mr. BLANCHETTE. We believe that——

Mr. SKUBITZ. Before you came—I am not asking what your belief is—did you do it? Did you tell them: "Now look, you are not taking into consideration the $25 million that is necessary for maintenance because of Amtrak, and you are not taking into consideration the $50 million on certificates that are going to be due in 1976"?

Mr. BLANCHETTE. We did, sir.

Mr. SKUBITZ. You did. And they said, "Phooey, nothing doing"?

Mr. BLANCHETTE. Or words to that effect.

Mr. SKUBITZ. Now then, take the $50 million in certificates that are due in 1976. Can those be refinanced?

Mr. BLANCHETTE. I don't know what the situation will be later this year. Right now we have probably as poor a credit rating as any entity in America.

Mr. SKUBITZ. Yes; but you have a Government guarantee in back of them. That is the only reason you got rid of them in the first place.

Digitized by Google

Mr. BLANCHETTE. If you will assume that the Government will guarantee the refinancing of that $50 million, then we can go to our financial advisers with one postulate.

Mr. SKUBITZ. If we do that, it means we don't have to raise $50 million at this moment, doesn't it?

Mr. BLANCHETTE. That is correct.

Mr. SKUBITZ. Would this require legislative action?

Mr. BLANCHETTE. I believe it would, sir.

Mr. SKUBITZ. You believe it would.

Mr. BLANCHETTE. Counsel advises that it would.

Mr. SKUBITZ. That is all, Mr. Chairman.

The CHAIRMAN. The gentleman from Michigan, Mr. Dingell.

Mr. DINGELL. I would like to defer my questions briefly.

The CHAIRMAN. The gentleman from New York, Mr. Hastings.

Mr. HASTINGS. I thank you, Mr. Chairman.

Mr. Blanchette, on page 3 of your statement, you outline what will happen if you don't get the financial assistance that you are requesting here from this committee. You will announce on a specific date in the future, probably February 18—now, at one time I understood the date was going to be the 14th of February; now it is probably the 18th. Could you tell me what that means?

Mr. BLANCHETTE. It is an unfortunate part of drafting which I take responsibility for. We will announce about February 14 that on a date in the future, February 18, the railroad will not accept deliveries for future traffic. You have to make the announcement some time in advance before you can begin declining the traffic. We have to notify our shippers and the various agencies involved that beginning on February 18 we won't take any shipments. So that way, they can start from the time of the announcement, namely February 14, or whatever that date happens to be, to not start cars in our direction.

Mr. HASTINGS. All right. Now, after you make that announcement, presuming you are going to, is there any approval required from the ICC?

Mr. BLANCHETTE. No, sir.

Mr. HASTINGS. Is there approval required from the organizational court?

Mr. BLANCHETTE. No, sir.

Mr. HASTINGS. Under the Reorganization Act, there is a question, and I asked this question advisedly because it has been suggested and in fact there is a period of time available in which you must make some application for approval. As far as the ICC is concerned, and the court is concerned, the answer is negative?

Mr. BLANCHETTE. That is correct.

Mr. HASTINGS. Now, under the Reorganization Act, section 304(f), after the date of enactment of this act no railroad in service may abandon service unless authorized to do so by the association.

Now, is there any requirement you read, and your counsel read, subsequent to that——

Mr. BLANCHETTE. Section 304(f) is an amendment in essence to section 1(18) of the Interstate Commerce Act. The difference is, in the Interstate Commerce Act, the approval of the ICC was required before an abandonment or discontinuance of operations. This substitutes the USRA. It has always been the case in the event of an emergency,

Digitized by Google

such as a flood, that embargoes issue to prevent chaos or destruction or just because there is an inability to perform the service. There has never been an interpretation that either section 1(18) of the ICC Act or any other law prevents a railroad or common carrier from taking the normal precaution that it takes once it is confronted with an emergency.

Mr. HASTINGS. Then the situation as you present it seems to be clear once you make the decision to issue the letters of embargo, there is no holding action as far as requirements of any Federal statute or Agency you are aware of?

Mr. BLANCHETTE. No, sir.

Mr. HASTINGS. If this committee and this Congress does not finalize action on some form of this legislation by the 14th, will that procedure take place?

Mr. BLANCHETTE. It will.

Mr. HASTINGS. Whether or not it is in the process of formulation, it will take place?

Mr. BLANCHETTE. It will take place.

Mr. HASTINGS. You are saying that, categorically?

Mr. BLANCHETTE. Yes, sir.

Mr. HASTINGS. I have had many people from this committee indicate otherwise and there is a wire story out now that suggests in fact this will not take place; I want some assurance. I have no reason to disbelieve you, I might say that. Your position seems to be backed up by DOT, ICC, and USRA. There are some, in fact, who feel your letters of embargo will not be sent out. I would like your assurance here on the record.

Mr. BLANCHETTE. Mr. Hastings, I can give you my assurance and the assurance of my cotrustees. As I said this morning, we learned we are judged by hindsight. And if on the 25th of February our employees do not report to work, and they ought not if we can't pay them, and we have not taken the precaution to protect the fruits and vegetables and the commodities that we carry, and we are not able to protect our property against vandalism and theft, we are guilty of an irresponsible act. And we are not going to present ourselves in that situation.

Mr. HASTINGS. I understand the date of the 25th. But I want to make clear in my mind, this Congress is scheduled to go out of business as of tonight as a matter of fact, and not come back until the 17th. There does not appear to be time for complete action on this measure. You are saying, lacking that action, that Penn Central will go through with its embargo?

Mr. BLANCHETTE. Yes, we will.

Mr. HASTINGS. Thank you, very much.

The CHAIRMAN. I would like to make one statement, Mr. Blanchette. I believe that that is a sort of irresponsible statement of yours, what you intend to do in the face of what Congress intends to do, and I think you know what we intend to do. We are trying to pursue this the best we can.

Now the fact that you are going to do certain things regardless. I thought that on the 18th was when you could do this. And we would hope that maybe we would have some action by the 18th.

Digitized by Google

Now, to me, I just don't believe it is a responsible answer that you have given to the gentleman from New York. Because you know it is impossible under the circumstances to get this done before we leave. I have done everything in my power to hurry it up, and I think every member of the committee. We will get it done.

The gentleman from California.

Mr. Moss. Mr. Blanchette, we seem to have some very interesting escalation of figures that have been submitted to this committee, and at this moment I defy anyone to tell me what you people really want. Have you an audit that sets forth definitively the projections which you have summarized for the members of this committee here this afternoon?

Mr. BLANCHETTE. We do not audit our own forecasts, but the U.S. Railway Association has sent auditors to look at these figures, and the Department of Transportation as well.

Mr. Moss. What did you rely upon for the statements you have made here as to the needs of the trustees to continue to operate for varying periods? They were, I think, $180 million to July 1 and/or a little less, and then something under $200 million by December 31, and $350 million by the end of the first quarter of 1976, as I recall? What did you rely upon for those projections?

Mr. BLANCHETTE. The cash and revenue forecast prepared by the management.

Mr. Moss. All right. Have you those prepared forecasts available for this committee?

Mr. BLANCHETTE. Yes, sir.

Mr. Moss. Mr. Chairman, I would ask that those be received by the committee and be made a part of this record so that we may undertake an analysis of them.

[The following information was received for the record:]

CASH NEEDS

Cash numbers used at House Hearings held in Washington on February 4 and 5, 1975, were based on the Source and Application of Funds Statement that showed the end of 1975 cash as a deficit of $209.7 million and Mr. Brinegar's letter of January 17, 1975, to Mr. Albert in which it states Penn Central's cash needs through the first quarter of 1976 are $222.1 million.

1. The House committee was told we need $106 million to get through until the end of June. (May, 1975 cash was used since May's ending cash was worse than June's).

	Millions
Ending cash may	$(142.0)
Less grant money received in January	32.0
Total	(112.0)
April 1, 7% tariff canceled (cash through the end of June)	(22.5)
Total	(134.5)
Cash management (Amtrak, payables, etc.)	28.5
Total	(106.0)

Digitized by Google

2. The House committee was told we needed $180 million to see us through the year 1975.

Ending cash December	(209.7)
Less grant received in January	32.0
Total	(177.7)
D.O.T. testified we would lose about $30.0 million because of 7% tariff canceled	30.0
Total	207.7
Cash management	27.7
Total	180.0

3. The House committee was told we needed $350 million through the first quarter of 1976.

D.O.T. letter of Jan. 17, 1975	[1] 222.1
7% tariff canceled until Sept. 1975	50.0
Extra corridor money	25.0
Trustee certificates	50.0
Total	347.1

[1] Includes cash management.

E. R. VARALLI.

Mr. DINGELL. Would the gentleman yield?

Mr. MOSS. Yes.

Mr. DINGELL. Any audits made by the trustees on which those figures are based, and any other records, books, and documents, shall be made available.

Mr. BLANCHETTE. You may have any document in our possession.

Mr. MOSS. We recognize that. We are trying to isolate those that will be most helpful to us.

You have just stated that on the 14th you are going to give a notice of an intent to embargo. Do you have to have concurrence of the Interstate Commerce Commission in that?

Mr. BLANCHETTE. No, sir.

Mr. MOSS. You do not regard that as a de facto discontinuance of service?

Mr. BLANCHETTE. No, sir.

Mr. MOSS. What do you regard it as?

Mr. BLANCHETTE. We regard it as a response to an emergency. There is a difference between a——

Mr. MOSS. You come here at a fairly late hour in this crisis that confronts you with what you, as trustees, should have certainly been intimately familiar with quite a while ago?

Mr. BLANCHETTE. We started November 20, 1974, sir.

Mr. MOSS. What?

Mr. BLANCHETTE. We started to alert the Department of Transportation and meet with Secretary Brinegar and his staff.

Mr. MOSS. When did you alert this committee?

Mr. BLANCHETTE. I believe we alerted this committee in—I don't have my book, but it was in December of 1974, and it was in early December.

Digitized by Google

Mr. Moss. Well, this committee, of course, has not really completed its formal organization. You have come here, and you tell us that you are going to try what I would regard as almost a blackmailing of the committee with a threat of the imposing of a summarily ordered embargo. I believe it to be an unreasonably ordered embargo.

I want you to know that I for one very deeply resent this kind of highhanded dealing with the Congress of the United States. I think it is reflective of a lack of appreciation of your obligations to the Congress.

This is not an option here that is just ready for you to pick at will, but we are supposed to act responsibly after making certain determinations that you did not call to our attention until very, very recently.

I yield to the gentleman from Michigan, and then, of course, to the chairman of the committee.

Mr. DINGELL. Mr. Blanchette, your communications to this committee were to our counsel, Mr. Gamble, were they not?

Mr. BLANCHETTE. Yes, sir.

Mr. DINGELL. You went to him and told him in December that you had a cash crisis that you were working out with the Department of Transportation. That is what you told him, wasn't it?

Mr. BLANCHETTE. Not quite in those words.

Mr. DINGELL. What did you tell him, exactly?

Mr. BLANCHETTE. My recollection is that we told Mr. Gamble, and I think a telephone call was also placed to the chairman, but I don't—there was no—that conversation did not occur.

Mr. DINGELL. What did you tell him exactly, and how, and where, and when?

Mr. BLANCHETTE. We told him we foresaw a completely unmanageable situation on the railroad in the first quarter of 1975 which would continue; that all sources of assistance under the Regional Railway Act would have been exhausted prior to the expiration of the first quarter of 1975; that we had developed a means of avoiding that through a three-point program which was in our opinion the only self-help measure left to us, and that was to furlough 4,500 employees who did not enjoy labor protection as a result of the Penn Central merger; second, to immediately cut our purchases of materials and supplies by $92 million a year; and third, to announce that when the wage increase went into effect beginning January 1, 1975, that we would be unable to meet that increase.

We further advised counsel that we had apprised Secretary Brinegar of this program, and that he requested us not to put it into effect, and that he was going to make the remaining moneys available to us to abide the event. That we had told the Secretary that the remaining sums of money available under that bill would not be adequate to survive the crisis, but it would buy him 30 to 40 days' time.

We exchanged a comment about the difficulty of obtaining any kind of legislation in the last part of the previous Congress, and we made ourselves available for any further information or corroboration of that figure, and a set of facts.

Mr. Moss. I yield to the gentleman from West Virginia.

The CHAIRMAN. I would like to set this whole thing in perspective here, because as you know, this Congress didn't convene until the middle of last month. After that we received from the Secretary of Transportation a communication to the Speaker which was trans-

Digitized by Google

mitted to me probably the next day, that they had a bill proposed entitled "The Regional Rail Reorganization Act Amendments of 1975."

After these were turned over to the counsel to go over and correct and put in the proper forms to introduce; after they were perfected, I—the counsel or I, had my staff to ask Mr. Devine to cosponsor it with me, and he agreed, and we introduced it on January 23.

I might say to the gentleman that we have been in the process of trying to organize this committee as every other committee in Congress has been. We still are not fully organized. We are proceeding under the House of Representatives rules at the present time in order to expedite this.

I don't know that Congress could have done anything more than they are doing now. I don't see how they can—I think you come late to tell us that unless we get this done by the 14th, that we are in difficulty.

The gentleman from California, I believe his time has run out.

Mr. Moss. I merely want to make this observation. It is my opinion that this action by the trustees, this statement as to their intention to proceed now with the notification of the embargo, constitutes one of the most arrogant actions that I have ever encountered during my 22 years of service in this Congress.

I think that you people are open to the widest possible public censure for your handling of this and for the manner in which you have dealt with the Congress of the United States.

I have the minimum of patience with you, and the kind of problems that you bring in always at the very last possible moment.

The CHAIRMAN. The gentleman's time has expired.

The gentleman from Texas, Mr. Collins.

Mr. COLLINS. I yield to the gentleman from Florida right now.

Mr. FREY. I would like to pursue the line of questioning opened by the gentleman from California. From looking over section 118 of the ICC followed by section 304(f) under which we are now operating regarding interim abandonment, I am trying to find where you get your authority for your action.

Section 306(f), as you know, in essence talks about no railroad discontinuing service or abandoning any line other than in accordance with the provisions of this act. I am really having difficulty in following your explanation on how the Penn Central is doing it. I wish you could explain it more.

Mr. BLANCHETTE. Let me give you an analogy, sir, that was one of our previous annual pilgrimages here. That was in response to Hurricane Agnes. Hurricane Agnes destroyed good parts of the railroad, especially in Pennsylvania. We embargoed vast segments of line because it was impossible to render service over those lines.

Mr. FREY. That was before the act under which we are now operating, right?

Mr. BLANCHETTE. No, sir. Well, I(18) of the Interstate Commerce Act was in effect. This act makes no difference except to substitute the agency which gives the approval.

Now, embargoes are intended for that kind of thing. There is no intent to discontinue service, and in fact we are not intending to abandon a line. Those lines will remain there and service will resume as soon as we are able to pay our employees.

Digitized by Google

Mr. FREY. Now, concerning the Agnes matter, whom did you go to? Did you go to anyone?

Mr. BLANCHETTE. We sent out notices routinely, and when service was put back because of the Congress passing the Agnes Relief Act, we had the money to repair the lines. We repaired them and resumed the service.

Mr. FREY. How long was that delayed?

Mr. BLANCHETTE. In some cases it was several months. And some places are still down, I am advised by Mr. Langdon. There is one branch in particular that still is out of service.

Mr. FREY. Let me go on to another point. There seems to be some question of interpretation about section 213 as to what should be included in it. For instance, whether operating expenses or machinery are included. I get the impression that DOT seems to think section 213 is to be interpreted in the broadest sense. What is your feeling about it?

Mr. BLANCHETTE. The present 213, or 213 as it would be proposed to be amended?

Mr. FREY. The proposed.

Mr. BLANCHETTE. Well, the proposed amendment to 213 puts a potential lid on it, in that once any 213 grant is made with the terms and conditions of section 215(b)(1) then the estate cannot recover any normal appreciation in value after that improvement or infusion is made, whether that is attributable to that improvement or not.

Mr. FREY. One last thing, and I think that although directly unlike the gentleman from California, I particularly feel and I believe many of us feel we are tired of having these things come up at the last minute, facing a situation which is a tough one to face because of the obvious economic impact.

I am not sure what the answer to our dilemma is. I am not even sure, personally, if sometimes we are just pouring money down a drain. I wish the Penn Central knew what to do and which way to go. But I hope we are not going to be sitting here 6 months from now faced with the same problem.

I yield to the gentleman from New York.

Mr. HASTINGS. I can understand the concern of the gentleman from California. It is our right and responsibility to sit and try to judge with the proper amount of time as to the merit of arguments presented by the Penn Central and other railroads. But I don't think that this Congress is in fact going to respond when we have asked for a lot of information, both yourself and the gentleman from Michigan, and we are not going to have the opportunity to even take a look at that until after an 11-day recess.

Now, my part of this country is going to be very seriously impacted by any embargo that is to be put into effect by the Penn Central Railroad. Industry after industry in the northeast said they must close down their plants. My concern is not what is good for Penn Central, it is what is good for the economy for my part of the country, and the rest of the country.

Unemployment today is a critical as ever in history. Yet for us to walk away for 11 days on a recess honoring Abraham Lincoln, who took 1 day to be born, this Member fails to understand, at least the questions raised by this impending action.

Digitized by Google

The CHAIRMAN. The time of the gentleman has expired.

The gentleman from Colorado, Mr. Wirth.

Mr. WIRTH. I yield to Mr. Moss of California.

Mr. MOSS. We tried yesterday, I understand, to get the ICC to express an opinion as to whether or not the trustees do in fact have the power that Mr. Blanchette says they have with regard to their right of suspension. I ask, therefore, that the committee direct the General Counsel for the Interstate Commerce Commission to prepare a formal opinion directly on this point and to do so with dispatch and get it to the members of this committee as quickly as it is consistent with a thorough job.

Mr. DINGELL. If the gentleman would yield——

Mr. MOSS. The gentleman from Colorado has the time.

Mr. DINGELL. Would the mandate to the ICC also require comments not only under the ICC statute but I believe also under section—well, also under 304(f)?

Mr. MOSS. We can work with Counsel for the precise outlining of the opinion we seek from the ICC. I would ask unanimous consent to hold the record at this point to receive that opinion.

I thank the gentleman from Colorado for yielding.

The CHAIRMAN. Without objection, the record will be held open for it. and it will be requested of the ICC.

[The following letter was received for the record:]

Interstate Commerce Commission
Washington, D.C. 20423

OFFICE OF THE GENERAL COUNSEL

February 6, 1975

Honorable Harley O. Staggers
Chairman
Committee on Interstate and
Foreign Commerce
House of Representatives
Washington, D.C. 20515

Dear Chairman Staggers:

In response to the telephone call yesterday afternoon from Mr. John L. Gamble of the staff of the House Committee on Interstate and Foreign Commerce, I am pleased to submit the following brief synopsis on the law pertaining to embargoes invoked by carriers subject to the jurisdiction of the Interstate Commerce Commission.

The law imposes a duty upon a common carrier railroad to render service. Section 1(4) of the Interstate Commerce Act, 49 U.S.C. 1(4), expressly provides "it shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor."

As broad as that declaration appears to be, the railroads long have been recognized to have an inherent right to refuse to handle shipments in an emergency situation. As the Commission noted, in Coal from Arkansas and Other States, 49 I.C.C. 727, 731, "Where physical disabilities prevent the carriers from handling certain kinds of traffic for destinations, or where the consignees are unable promptly to accept delivery, the embargo is properly invoked."

An embargo is an emergency measure imposed normally because of a physical inability by the carrier to perform the transportation. Powell-Meyers Lumber Co. v. St. Louis, I. M. & S. Ry. Co., 45 I.C.C. 594; Murray v. Director General, 69 I.C.C. 477; Missouri & Illinois Coal Co. v. Illinois Central R. Co., 22 I.C.C. 39.

Digitized by Google

The right of carriers to limit their duty to provide transportation by the issuance of embargoes in the time of emergency is not disputed. The question in this case is whether the fact that a railroad is losing money on the operation of a particular service justifies the issuance of an embargo suspending that service. In almost all cases in which the laying of an embargo has been approved, the embargoes were issued because whether conditions, traffic congestion or other physical or operation conditions made it impossible for the carrier to provide transportation to a particular area. Holt Motor Co. v. Nicholson Universal S. S. Co., 56 F. Supp. 585, D. Minn. 1944; Baltimore Chamber of Commerce v. Baltimore & Ohio R. R. Co., 45 I.C.C. 40 (1917); Krauss Brothers Lumber Co. v. Director General, 66 I.C.C. 637 (1922); Murray v. Director General, 69 I.C.C. 477 (1922); American Mfg. Co. v. Director General, 77 I.C.C. 52 (1922). The Railroad cites only one case in which an embargo issued because of financial conditions was upheld and in that case, Gross v. Director General, 58 I.C.C. 604 (1920), the carrier, with the approval of the Commission, was terminating its entire operation. New Orleans Traffic & Transp. Bureau v. Mississippi Valley Barge Line Co., 280 I.C.C. 105 (1951), specifically held that financial losses on a carrier's less-than-bargeload operation did not justify the imposition of an embargo on that operation. We agree with the decision in New Orleans Traffic that the unauthorized imposition of an embargo on a particular service because the continuation of that service would result in a financial loss is an unlawful practice and that the Commission can annul such an embargo. Cf. Meyers v. Jay Street Connecting Railroad, 2 Cir., 1958, 259 F. 2d 532.

Digitized by Google

An embargo may not be employed as a device for effecting a discriminatory practice. Prudential Oil Corp. v. Merchants & Miners Transp. Co., 43 I.C.C. 696; E. L. Rogers & Co. v. Philadelphia & R. Ry. Co., 12 I.C.C. 308. Neither may an embargo be imposed to accomplish results which the law requires shall be effected only by means of published tariffs. Powell-Meyers Lumber Co., supra.

The carrier must give notice of an embargo. Eastern Ry. Co. v. Littlefield, 237 U.S. 140, 145. The law does not require that the embargo notice be published as schedules are published, American Wholesale Lumber Assn. v. Director General, 66 I.C.C. 393, although it has been the practice for such notices to be published through the Association of American Railroads as if they were tariffs.

Since 1973, the Commission has had in effect regulations governing the giving of notice of an embargo. 49 C.F.R. 1006. In essence, they require that written notification, specifying the extent of the embargo, the date on which it is to become effective and the reasons therefor, shall be posted at each of the affected offices of the carrier and served upon connecting railroads, as well as being mailed to the main and regional offices of the ICC.

The leading and most recent case is New York Central Railroad Co. v. United States, 201 F. Supp. 958 (S.D. N.Y. 1962), remanded for mootness, 301 U.S. 805 (1962). That case arose from the efforts of the New York Central Railroad to terminate less-than-carload service. Frustrated by its unsuccessful efforts to obtain Commission authorization therefor, the railroad by an embargo notice announced that it would no longer accept less-than-carload shipments. The Commission, without hearing, entered an order, Service Order No. 638, of its Safety and Service Board No. 1, setting aside the embargo for the reason that the embargo was not valid and that there was presently a need for the service. The railroad brought suit to challenge the Commission's action, alleging, among other things, that the Commission did not have the statutory authority to annul the embargo and that the Commission's order constituted unlawful interference with the carrier's managerial discretion. The court rejected these contentions, saying,

Digitized by Google

Hon. Harley O. Staggers
February 6, 1975
Page 4

On the basis of the foregoing, I am of the opinion that a railroad may not employ an embargo to effect abandonments that would require the advance authorization of the Commission or other public body. The Commission has the power to look into the lawfulness of an embargo and, even in the absence of a hearing, to order its revocation if determined to have been improperly imposed. On the other hand, I am of the view that, if a railroad foresees an imminent inability to perform transportation for reasons beyond its control, it has not only the right, but, as I perceive it, the duty to give notice of the impending shutdown to the shippers it serves and the railroads with which it connects.

I trust the foregoing will be of some aid to you and the Committee, but please let me know if I might be of further assistance.

Respectfully yours,

Fritz R. Kahn
General Counsel

Mr. WIRTH. Mr. Blanchette, I would like to review the bidding, if we could. Before doing that I would like to say I believe it is the concern of everybody on this committee for the economy of this country and to keep the Penn Central going. We are not going to let it go down the tube.

I think, however, we have a right to know what kind of numbers we are looking at. To review very briefly, yesterday, as I remember, the bidding started at $250 million and immediately went to $285 million, after which we talked about the President's energy proposal and what a variable that might be, after which we went to the rate increase, after which we went to a discussion of the losses of the Penn Central which changed in a matter of minutes from $340 million to $350 million.

That was yesterday's confusion. Today, as I understand, we started at $275 million. Is that correct?

Mr. BLANCHETTE. No; I started at $350 million.

Mr. WIRTH. It was my understanding coming in we started at $275 million, then added $25 million for the New England Corridor, and $50 million for the trustees' certificates?

Mr. BLANCHETTE. Yes.

Mr. WIRTH. Which were new variables as far as the testimony to this committee is concerned.

Mr. BLANCHETTE. Yes.

Mr. WIRTH. We are up to $350 million, adding today $75 million to yesterday's request.

Further, today we have discussed $23 million for the rest of the Northeast Corridor, coming in from the Department of Transportation estimate, is that correct?

Digitized by Google

Mr. BLANCHETTE. Well, the $25 million for the Northeast Corridor is part of the $350 million figure. I don't recall a $23 million figure.

Mr. WIRTH. The other railroads then. Adding a further $23 million. And $25 million further for the Erie Lackawanna, if that were to be included in the package, bring us up to $398 million.

Anyway, the purpose of this is to ask you if it would be possible for you to get to the committee tomorrow morning a simple outline of the basic amount of your request? If we start at, say, $275 million. What is included in that $275 million? You know, nothing that has to be many, many pages. A summary statement that can be simply understood.

Then if you could add to that the other variables we have talked about, the Northeast Corridor, the trustees' certificates, the other DOT requirements, then what other variables you may be thinking about in terms of what would happen if the President's energy proposals went through, what would that add to the cost? What are the variables related to the rate increases? Maybe there are one, or two, or three variables.

Could you get that to us as to what you think a firm low number is, and what a potential high number might be, explained in a form that could be seen in ledger form? It seems to me that is a reasonable request, and I have not seen anything like that.

Mr. BLANCHETTE. You will have that tomorrow morning, sir.

Mr. WIRTH. Could we have with that some kind of assurance that also conforms with the numbers presented to us by the DOT yesterday?

Mr. BLANCHETTE. I cannot do that. We disagree. The Department and the trustees disagree as to some of the variables. I cannot make the DOT agree with me, or Mr. Varalli here who prepares these figures, that the rate increase will begin in September. They may have a different figure. We can reconcile.

Mr. WIRTH. Can you let us know where the areas of disagreement may be?

Mr. BLANCHETTE. Yes, sir.

[The following information was received for the record:]

PENN CENTRAL TRANSPORTATION CO.,
Philadelphia, Pa., February 5, 1975.

JOHN GAMBLE, Esq.,
Committee on Commerce, House of Representatives, Rayburn House Office Building, Washington, D.C.

DEAR MR. GAMBLE: As requested by Congressman Wirth at the conclusion of the hearings this afternoon by the Penn Central trustees, I am enclosing the estimate of financial requirements discussed there, with appropriate explanatory notes detailing the reasons for the difference between the figures used at the hearing and those in the Department's original estimate transmitted with the proposed bill on January 17. I am also sending a copy directly to Congressman Wirth.

Since there may be further questions concerning Penn Central's requirements and the basis for the estimates, Mr. Varalli, who was present at the hearings today, will return to Washington tomorrow and be available to the committee at 10 o'clock in the morning for any questions you may wish to have him answer.

Sincerely,

CHARLES A. HORSKY.

Digitized by Google

Estimate of potential requirement for financial assistance—Penn Central

	Millions
1. Estimate by DOT of Jan. 17, 1975	$222.1
2. Suspension of the tariff increase	[1] 50.
3. Trustees' certificates due Jan. 15, 1976	[2] 50.
4. Expenditure on Northeast corridor	[3] 25.
Total	347.1

[1] DOT's original projection assumed a 7-percent rate increase effective in February and a 5-percent rate increase in September. Penn Central's cash forecast assumed that the 7-percent increase would not become effective until April 1975. At the hearing before the committee, Mr. Barnum adjusted his figure of needs by adding $30,000,000 to the requirements, apparently on the assumption that the 7-percent increase would be deferred for only 3 months. However, if the full suspension period is permitted to run until September, Penn Central will not receive the revenues for the 5 months April through August. Seven percent is estimated to produce approximately $9,000,000 to $10,000,000 a month, and hence the $50,000,000. The 12 percent referred to at the hearings is the total of 7 percent and 5 percent.

[2] Neither the original DOT projection of Penn Central's cash needs nor its testimony before this committee has ever included any allowance for the repayment of the $50,000,000 of Trustees' Certificates, presently due Jan. 15, 1976.

[3] In DOT's letter to Speaker Albert dated Jan. 17, 1975, it was indicated that of the $100,000,000 increase proposed by sec. 213, $25,000,000 was planned for upgrading work in the Northeast corridor. The Penn Central cash projections did not and do not include any cash expenditures for upgrading the corridor. Consequently, to the extent that such upgrading is to be directed, an additional $25,000,000 would have to be provided.

The CHAIRMAN. The gentleman from New Jersey, Mr. Rinaldo.

Mr. RINALDO. Thank you, Mr. Chairman.

Mr. Blanchette, first of all—I should say I concur completely both in the remarks of the gentleman from California as to the conduct of the Penn Central trustees, and the remarks of my colleague from New York as regards the Congress and the possibility of us staying in session.

I want to get back once again to the tax situation that I discussed yesterday. I would hope before I vote on this measure and before any Member of this Congress votes on this measure, it would be cleared up. The tax question doesn't only affect the city of Elizabeth, it affects many cities in every congressional district in which there is a railroad.

To reiterate: the Central Jersey's tax delinquency to the city of Elizabeth, which dates back to the year 1967, exceeds $1.5 million. Penn Central has been deliquent since 1970, and owes more than $200,000 in back taxes. The interest owed by both railroads in this one city alone amounts to over $445,000.

Now, the city has tried, and I have tried over and over again, in my capacity as a State senator, and since I came to Congress 3 years ago, and we have been unsuccessful in collecting the back taxes because the railroads have been protected from foreclosure of property assets.

As I said yesterday, so that you are completely up to date, because State law requires taxes from railroad property to be carried as anticipated revenue, the city is forced to make up for the unpaid taxes by increasing the local property rate for all property owners. This certainly is a horrible situation.

Let me explain as simply as I can what is unconscionable on the part of the railroads, and in particular Penn Central. In your leases with many tenants you have what is known as a tax escalator clause. Very simply what it means is that in effect, and I am putting this in as sim-

Digitized by Google

ple language as I can, the tenant not only pays his rent, but he also pays an additional sum, sometimes I understand by separate check, to cover the taxes due and owing to that municipality, or other unit of government.

What has happened since 1970 in the case of the Penn Central, at least—and I assume this is policy—but at least in the case of the city of Elizabeth—is that every time the tax check is mailed, the Penn Central trustees in effect confiscate, convert, physically take that check and absorb the funds.

This to me is unconscionable. Because what happens is the taxpayer then gets hit twice. The taxpayer in my district, in the city of Elizabeth, are going to pay for their fair share of this bill, but also additional money will be paid in increased local property taxes.

This has to be corrected immediately. It is an emergency situation and cannot continue. These funds are not calculated anywhere in any reports that I have read of the Penn Central, and I have gone over them as carefully as one individual could. They are not calculated as revenue. It doesn't belong to you.

It in effect is given to the trustees as custodians, you might say, for money which legally is owing to the various municipalities, county governments, and State governments. Over and over again, in talks I have had with people from Penn Central and the Central Jersey, I have been told this should not be allowed to continue, and it is going to stop. It has not stopped.

Tomorrow I am going to introduce an amendment to the effect that henceforth any such tax moneys must pass through and be given to the governmental body to which they are legally owed. And I would hope that you would support this kind of an amendment.

Mr. BLANCHETTE. I would like to respond.

The CHAIRMAN. If the gentleman wishes to respond, he might. The gentleman's time has run out.

Mr. BLANCHETTE. I am in perfect, 100 percent accord with the proposition that where a separate check is made by a tenant, specifically attributable and traceable and allocable to taxes, that those taxes should be paid. And it is not right to withhold those payments. At least in the case of Penn Central.

I cannot talk about the other railroads in reorganization. We have done that where we can find situations. We have 19,000 real estate leases, and 80,000 crossing agreements of one kind or another. There are going to be mistakes. I suggest a mistake has been made in your case. When you advised me of this, we will correct that situation.

Mr. RINALDO. I don't believe the escalator, if you will examine it carefully, are included in crossing agreements. Where the agreement is included in a lease, for example for an office building, I respectfully have to disagree with you, when you say when there is a separate check. If there is $50,000 worth of rent due, and maybe $5,000 for taxes due and owing to the municipality, if you were given a check for $55,000 by the tenant, even if it is one check, the $5,000 should be remitted to the proper governmental entity. Even if it is combined.

The CHAIRMAN. The time of the gentleman has expired.

The gentleman from Michigan, Mr. Dingell.

Digitized by Google

Mr. DINGELL. Mr. Chairman, I wonder how quickly we can resolve ourselves into executive session to vote Penn Central the money? It occurs to me a $100 million a day increase, we are not going to be able to afford this if we don't hurry up.

I don't think that is at all funny, gentlemen. I happen to be an attorney and a member of the bar. I have served as a trustee and am aware of the responsibilities of the trustees to the creditors, but also am aware of the fact you have a responsibility to the public interest.

I would like to very sadly observe your appearance today gives me the unfortunate opportunity to conclude that you are either probably the most arrogant witness I have seen before this committee in my time here, or perhaps you are the least competent. I must observe regretfully that I have seen so many incompetent witnesses here I have to come to the conclusion you are probably the most arrogant.

I talked to Mr. Gamble here about your communications to the committee, and he advised you at the time you communicated with him you should communicate with Mr. Adams or me, or the chairman. As a member of the Transportation Subcommittee I will tell you I have checked with my office and heard nothing from any of you with regard to the cash crisis that impended.

I can only say to you that this seems to be an almost precise replay of the Penn Central crisis of a few years ago where people came in and said, "You give us $250 million or we will close the thing down."

It strikes me maybe we ought to get ourselves a new set of trustees. You are first of all supposed to report to the ICC. Second of all, you report to the USRA. Third, you keep internal audits to advise the Congress.

I assume none of you are neophytes, and you are aware of the fact that Congress does adjourn, does go home, does meet with the people, come back, and reconstitutes committees. You are aware, I think, or chargeable with an awareness, that Congress does have to reorganize itself, and yet you present yourself before this committee and say "$250 million or we are going to close the railroad down."

It strikes me this is even still more curious, in view of the fact that that figure has grown in a period of less than 24 hours by $100 million. Frankly, gentlemen, I can only come to the conclusion your attitude, I intended to have some questions, but I don't think any questions will respond to the matter, your attitude is like the public be damned attitude, where you come in and say, "Give us the money or we will close the thing down."

It may well be you will get the money, but it may be that the court will be instructed to have some new trustees appointed. I am not satisfied that men who behave like you have are entitled to maintain an estate that so broadly can affect the country that it can cause a havoc in the northeastern United States.

The CHAIRMAN. The gentleman from Indiana.

Mr. SHARP. No questions.

The CHAIRMAN. The gentleman from Connecticut?

Mr. RINALDO. Would the gentleman yield?

Mr. MOFFETT. Certainly.

Mr. RINALDO. I didn't get an answer to that final question, where I

Digitized by Google

mentioned the example of the funds being combined in one check, there being an escalator clause, and the funds being combined, the rental and the taxes? Do you or do you not agree the Penn Central trustees should then remit the check with the portion of the funds due in taxes to that municipality?

Mr. BLANCHETTE. Yes, sir.

Mr. RINALDO. Thank you.

I asked that question specifically because in the one case I mentioned, the total tax liability since 1967 now is over $3 million. I don't want to see it continue further. Thank you.

Mr. MOFFETT. Sir, has the Penn Central had any communications regarding this crisis with the shippers in, say, Connecticut?

Mr. BLANCHETTE. In Connecticut? Yes, indeed.

Mr. MOFFETT. What has been the nature of that communication?

Mr. BLANCHETTE. The general course is for our traffic department to advise shippers interested of the problem, and usually that intercourse is accomplished between the traffic officer of the railroad and——

Mr. MOFFETT. Of the problem——

Mr. BLANCHETTE. Of any kind of crisis coming up.

Mr. MOFFETT. Has the Penn Central suggested that the shippers contact Members of Congress?

Mr. BLANCHETTE. I don't know what we have suggested. People have called our traffic officials and said, "Do you have a problem?" And we have said, "Yes".

Mr. MOFFETT. They have called your people?

Mr. BLANCHETTE. They have called us, and we have called them.

Mr. MOFFETT. Have you organized any lobbying effort?

Mr. BLANCHETTE. No.

Mr. MOFFETT. In any way?

Mr. BLANCHETTE. No; we have not organized a lobbying effort, except we have brought some of our local people here, Penn Central people here, to express to the Members of the Congress the problem, make themselves available for questions and answers.

Mr. MOFFETT. How would you describe as best you can the attitude of most of the shippers at this point?

Mr. BLANCHETTE. Concerned.

Mr. MOFFETT. Would you say it is panic?

Mr. BLANCHETTE. No; I don't know if it is panic. No.

Mr. MOFFETT. And would you say the Penn Central has contributed to that concern?

Mr. BLANCHETTE. We have caused it.

Mr. MOFFETT. Have you contributed to it in the sense of your contact with them? Do you feel you have educated them to the problem?

Mr. BLANCHETTE. We have given them in essence the first part of my testimony.

Mr. MOFFETT. Is there any indication that the shippers have begun making plans on a large scale? Other plans?

Mr. BLANCHETTE. I would like Mr. Langdon to answer that question.

Mr. LANGDON. Yes; I think that is right, sir. I think they are making plans as to if the embargo is actually issued, how they will divert the freight.

Mr. MOFFETT. Is there any indication that some of them have already switched to trucks?

Digitized by Google

Mr. LANGDON. Yes, sir.

Mr. MOFFETT. How widespread would you say that is?

Mr. LANGDON. I think it is on a small scale, but I think they are ready to make it on a broad scale in the event, depending on what happens here today, largely.

Mr. MOFFETT. Depending on what happens today?

Mr. LANGDON. Yes; in this sense, how this thing is left.

Mr. MOFFETT. What can be resolved today that would change the situation as far as what the shippers are doing in either contemplating or actually shipping?

Mr. BLANCHETTE. I don't think anything can be accomplished today to my knowledge.

Mr. MOFFETT. Now, you and I had a phone conversation and I was appreciative of that, Mr. Blanchette. Have you today testified that if the legislation isn't in fact passed and signed by the President by the middle of the month, the 14th, that you will take steps to close down?

Mr. BLANCHETTE. We will issue the notice of possible future embargo. Immediately we are able to do so, we will lift that embargo, if it has already gone into effect. The vice—I don't disagree, Mr. Moffett, that the Congress will act. The vice of it is, once the embargo goes into effect, damage is done. We will lift that embargo as soon as people can permit us to pay our employees.

Mr. MOFFETT. Damage is already being done——

Mr. BLANCHETTE. In small amounts.

Mr. MOFFETT. In small amounts?

Mr. BLANCHETTE. But we are not going to ask our people to work for nothing. They are already earning the pay that falls due on a payroll on the 25th of February. They are staking us right now.

Mr. MOFFETT. I understand that.

Just one more question. It is my understanding, Mr. Chairman, even if we acted as quickly as we possibly could, under the rules there is no possibility of this coming to the floor before the 14th. Suppose there were no recess?

The CHAIRMAN. We do not come back until the 17th——

Mr. MOFFETT. Suppose we were here. There would be no possibility as I understand it until at least the 14th, isn't that correct?

The CHAIRMAN. It could be possible.

Mr. MOFFETT. I just wanted to say that for the record, because the gentleman from New York seemed to indicate that if we did not take the recess it would somehow expedite this. I am on record as not favoring the recess, but it should be said refusal to take the recess would not in fact expedite this, to my knowledge.

The CHAIRMAN. Under the regular procedure it would be after the 14th before we could do it. But in an emergency we might be able to get some of the rules waived. But under the regular rules—I doubt it.

I would say this to the gentleman from Connecticut, whether we are going to be able to get a quorum tomorrow? I would like to ask those members of the committee who are here today if they will be here tomorrow at 10 o'clock.

All right. That gives us a little something to start off.

Mr. DEVINE. Let the record show there are less than 10 members here.

The CHAIRMAN. That is right. But we are going to poll every member of the committee, because I understood there would be no business

Digitized by Google

on the floor. I think we would try to, if we have—I am taking time to explain a little bit, not out of your time, Mr. Moffett, that if we had the time, we would try to get this bill out tomorrow, and get it so we could act as sooon as we came back.

The Speaker called me and said, if we could do it, get everything ready. They would probably have a rules meeting on the 17th and try to act on the 18th. I am giving you that for your benefit. But I doubt it very much under the conditions as they are, and I cannot control those and don't know that any one member can, or two members, or the Speaker.

Mr. BLANCHETTE. We will be delighted at the first opportunity that presents itself for us to discard that embargo.

The CHAIRMAN. A lot of damage is going to be done before that.

Mr. BLANCHETTE. We regret that.

The CHAIRMAN. To the Penn Central and it is already in bad shape.

The gentleman from Connecticut.

Mr. MOFFETT. No further questions.

The CHAIRMAN. The gentleman from Pennsylvania, Mr. Rooney.

Mr. ROONEY. I have read your statement earlier, Mr. Blanchette; and I regret very much that other meetings prevented me from being here during the questioning this morning. If you do impose this embargo on the 14th of February, have you estimated the cost to the Penn Central of shippers shifting the transportation of their goods from railroads to trucks, and remaining with the transportation of their products by truck after the embargo ends?

Mr. BLANCHETTE. It is a very difficult judgment call, but as near as I can answer that is in this way. Between the 14th and the 24th, we would normally earn approximately $90 million. Let us assume now the embargo is put into effect but because of what the Chairman described we are able to lift it on the 24th, and we don't actually shutdown. Some fraction of that $90 million is gone and may be gone forever. It depends on whether shipments that are held back are later rerouted on the Penn Central, and a number of variables. All I can say is that between the 14th and the 24th, we will lose in revenue some portion, some significant portion, of $90 million.

Mr. ROONEY. So you have made a modest estimate for your needs I think. When I left this morning it was $350 million through the first quarter of 1976.

Mr. BLANCHETTE. Yes, sir.

Mr. ROONEY. And now, you indicate you may need more money because you did not take into account the possible additional loss of revenue due to the embargo?

Mr. BLANCHETTE. We did not take into consideration on that $350 million any adverse cash impact resulting from the implementation or the announcement of an embargo.

Mr. ROONEY. I have no further questions.

The CHAIRMAN. Does the gentleman from Texas have any questions? If not, we will proceed to the next witness.

All I must say is I think that before you leave, you gentlemen must take into very, very serious consideration any action that you do, and I think you better consult with the Department of Transportation and the ICC and the Congress before any action is taken.

Mr. BLANCHETTE. Thank you, Mr. Chairman.

The CHAIRMAN. The next witness is the Erie Lackawanna trustee, Mr. Ralph S. Tyler, Jr.

Mr. Tyler.

Digitized by Google

STATEMENT OF RALPH S. TYLER, JR., TRUSTEE, ERIE LACKAWANNA RAILWAY CO., AND HARRY G. SILLECK, JR., COUNSEL, ACCOMPANIED BY THOMAS F. PATTON, TRUSTEE; GREGORY W. MAXWELL, PRESIDENT; JOHN L. ALTIERI, JR., COUNSEL; AND RICHARD HAHN, VICE PRESIDENT—FINANCE AND ADMINISTRATION

Mr. TYLER. Mr. Chairman, may I first identify my colleagues. On my immediate right, Mr. Harry G. Silleck, Jr., special counsel to the Trustees. Next to him, Mr. Thomas F. Patton, Trustee, Erie Lackawanna Railway Co. Next to Mr. Patton, Mr. John J. Terry, Jr., also special counsel. On my left, Mr. Gregory Maxwell, president of Erie Lackawanna Railway Co., and next to him Mr. Richard H. Hahn, vice president—finance and administration.

Mr. Chairman——

The CHAIRMAN. Do you have a prepared statement? If you would put that in the record and summarize, we would appreciate it.

Mr. TYLER. Very well, sir. [See p. 207.]

Mr. TYLER. First, may I say we are grateful to you and the members of your committee for the opportunity of meeting with this committee today.

Could I go through a condensation of material previously filed, sir?

The CHAIRMAN. Yes.

Mr. TYLER. Thank you.

Mr. Patton and I as trustees urgently request legislation to provide grants to Erie Lackawanna without which we will be forced to cease operations by the end of February, because cash to meet our payrolls will run out.

We likewise urge the adoption of section 7 of Senate 281 providing for Erie Lackawanna's inclusion as a railroad in reorganization under the 1973 act which is necessary if there is to be any assurance of the preservation of the service now performed by Erie Lackawanna.

The material previously filed sets forth in detail the lengths of our line, the number of employees, 10,000, and the States we serve, as well as our patrons and customers.

If we are forced to close down it would be a tragic addition to the country's economic crisis. This can be averted by an enactment of Senate 281 which would permit Erie Lackawanna to share in the benefits of the Regional Rail Reorganization Act of 1973.

Congress enacted that law to provide a comprehensive plan for the reorganization of all the bankrupt railroads in the Northeast, because Congress believed that the separate reorganization of all those railroads under section 77 of the Bankruptcy Act was impossible.

Erie Lackawanna was then a railroad in reorganization along with the other lines. The Congress provided, however, that if the Reorganization Court supervising the section 77 proceedings found among other things that any such railroad could be successfully reorganized on an income basis within a reasonable time, such reorganization should continue for that railroad instead of reorganization under the 1973 act.

Last April the Federal District Court supervising our section 77 reorganization, based upon evidence submitted by the trustees, con-

Digitized by Google

cluded that Erie Lackawanna could reorganize successfully on its own.

I want to point out, Mr. Chairman, contrary to the intimation of some of the statements made yesterday, this was not an optional matter under the statute. We did not make an election.

It involved a judicial determination of a question of fact as the statute required.

Mr. Chairman, the trustees and employees of Erie Lackawanna have worked very hard to accomplish the section 77 reorganization and we are reluctant to seek financial assistance from the Government.

In fact, except for a small Agnes loan of $3.5 billion, this is the first time we have come to the Government for help. However, developments subsequent to the Court's finding have led us to the unhappy conclusion that Erie Lackawanna cannot reorganize on its own and, indeed, is in a desperate cash situation which will force cessation of operations by the end of February unless Government assistance is provided.

These developments include rising costs for labor and materials and a severe downturn in traffic due to the recession.

Even applying all cash management techniques available, we will run out of cash by the end of February. We have already reduced our employment by some 1,600 employees since November 1, so we have exhausted that possibility.

Recognizing the great public interest in keeping the railroad running, we seek immediate financial assistance for the short run and inclusion in the group of railroads to be reorganized under the 1973 act for the longer period.

Senate 281 meets both of these goals.

I want to emphasize that interim financial assistance alone will not solve the problem. Unless we are permitted to become a "railroad in reorganization" under the 1973 act, there is no assurance that any of our properties will continue to be operated after the final system plan becomes effective, nor will there be any assurance that the cost of labor protection benefits of Erie Lackawanna's 10,000 employees will be covered, nor any assurance of assistance to States or local communities which desire to continue rail service by the use of rail subsidies and loans from the Federal Government under the 1973 act.

Yesterday, Mr. Chairman, Mr. Barnum on behalf of the Department of Transportation proposed some amendments to H.R. 2051 in lieu of Senate 281.

His amendments simply do not meet the needs of Erie Lackawanna, or the public interest in assuring continuance of service now performed by Erie Lackawanna.

Let me be specific. In the first place, Mr. Barnum would leave Erie Lackawanna in the anomalous status of a so-called profitable railroad even though it cannot be reorganized.

Yesterday, in response to a question from Congressman Brown, Mr. Barnum said that all that would have to be done would be for the Erie Lackawanna trustees to negotiate with some other railroad for disposition of its properties, and that would be that.

Then Erie Lackawanna properties would be in the final system of roads and the Erie Lackawanna creditors would have gotten fair value. He ignores the fact that it takes two to negotiate a deal, and there is no assurance whatever that the parties could arrive at a deal, and if they don't, the Erie Lackawanna properties will not be in the resulting system of roads under the 1973 act.

Digitized by Google

Moreover, the problem is complicated by the necessity under the act, a point stressed by modifications proposed yesterday by Mr. Barnum, that the deal must be arrived at and concluded within 60 days after the effective date of the final system plan.

It is certainly doubtful that this can be done as to all properties as to which Erie Lackawanna might be expected to negotiate.

Without a provision like section 7 of Senate 281, there is just no way that Erie Lackawanna properties can be sure of being in the resulting northeastern system.

Secondly, his proposal on section 213 grants is not workable even to meet the short-term needs of Erie Lackawanna for cash.

As he would rewrite section 213, no money would be available for Erie Lackawanna unless "a substantial portion" of its rail properties is "likely" to be transferred to ConRail or other roads.

How can anyone tell whether that is likely, particularly this month with not even the preliminary system plan released.

Mr. Barnum also purports by another proposal to assure Erie Lackawanna's employees of labor protection. Again, however, this is dependent under his language on a substantial portion of Erie Lackawanna's properties being transferred to ConRail or other roads.

This is no assurance of protection because, as I have said, it depends on one or more voluntary deals being worked out on both sides before 60 days after the final system plan becomes effective.

Now, another important subject, an omission. Mr. Barnum's proposed amendments do not even attempt to deal with the matter of subsidies and loans from the Federal Government to local agencies to carry on any portions of Erie Lackawanna's operations not designated in the final system plan for continued operations.

Yet, unless Erie Lackawanna and either ConRail or other roads agree to and actually conclude the deals or transfers for substantially all of Erie Lackawanna's properties that are designated in the final system plans, there will be no subsidies to local communities to help them take over the rest of Erie Lackawanna's operations.

Mr. Barnum's proposal does not make Erie Lackawanna eligible for section 215 assistance. Yet, if there is a need to start now on buying ties and rails and equipment for Penn Central and other roads in anticipation of the final system plan, there is equal reason to do so in the case of Erie Lackawanna to the extent its properties need modernization.

Why is the Department of Transportation proposing these clearly inadequate amendments? Because, Mr. Barnum says, there is a possibility that the making of Erie Lackawanna a railroad in reorganization under the 1973 Act could reopen the question litigated last year as to the constitutionality and the fairness and equity of the process.

He, frankly, admits such litigation would fail, but fears, he said, the issuance of the injunctions which might delay consummation of the final system plan pending that litigation.

Gentlemen, we think that is entirely specious. I will ask our special counsel, Mr. Silleck, to tell you why.

Mr. SILLECK. Mr. Chairman, as Mr. Tyler said, Mr. Barnum's expressed worry is injunctive relief and the possible delay that might be involved. At this point I see no reason why any creditors would

Digitized by Google

even begin to initiate litigation. But assuming that somebody did, it is well-established law that it is not possible to obtain a preliminary injunction unless the plaintiff can show probably success on the merits. Mr. Barnum flatly stated yesterday that any such litigation in his opinion would fail. We gather the ICC and the USRA think it would fail.

The Senate, by passing S. 281 has indicated it thinks it would fail. In view of the Supreme Court's decision, only a couple of months ago, upholding the constitutionality of the 1973 act, it is perfectly clear that such litigation would fail. If that is the case, how can there be any legitimate worry that an injunction would be granted?

Furthermore, where the public interest would be adversely affected by the granting of a preliminary injunction, as it certainly would be in the event of any litigation attacking the legislation which the trustees are here proposing, that would be another reason under decided case law for denying injunctive relief.

Nor would it take very long to decide the question on the merits. Mr. Barnum made reference yesterday to the 11 months which it took to resolve the reorganization case last year. That case took 11 months only because no greater expedition was necessary, as the planning process was still in the early stages and the case raised very serious questions of constitutionality.

The implication that the Federal courts would be so irresponsible as to hold up the implementation of vital legislation and thus hold up the effectiveness of the final system plan hereunder is simply ridiculous.

Certainly in the light of the national crisis presented by the problem of the bankrupt railroads in the East, if any injunction were by mischance granted in lower courts, prompt resolution of the whole subject would be available in the Supreme Court.

We all know that the Supreme Court can act fast when it needs to, as it has in the past.

Mr. Tyler has also referred to the difficulty of working out terms on a negotiated basis within the timeframe of the DOT's proposal. In connection with the matter of delay, I would like to expand on that point.

As the Chairman of USRA, Mr. Lewis, stated yesterday, it is likely that some of EL's properties will be designated for transfer to a truly profitable road. Under section 206 of the 1973 Act, this must be done in the preliminary system plan and within 90 days thereafter the ICC must find that such transactions will be——

The CHAIRMAN. Could I interrupt you one moment?

I wanted to ask one question.

The Chair must leave for an emergency and will be back and I wanted to ask Mr. Tyler this: If we granted an emergency loan or grant under the 1970 Emergency Rail Act, and not under the 1973, could you continue to reorganize under section 77? And if so, what amount would you need to take you through the first quarter of 1976?

Mr. TYLER. May I break that down? Your question related to the 1970 act.

The CHAIRMAN. That is right.

Mr. TYLER. My understanding is that we would not be eligible for a loan under that act because we do not meet one of the terms of the act, namely, viability or survivorship.

Digitized by Google

Second, there would also be a problem about the rank and priority of that loan, as a claim against the bankruptcy state.

Going on, our opinion is that our situation has deteriorated so much that a loan almost without regard to size would not make us reorganizable within a reasonable period of time.

The CHAIRMAN. I said loan or grant. Do you know of any other act that we might apply an amendment to this bill under that you could get your money? Any other act that you could still reorganize under?

Mr. TYLER. No.

The CHAIRMAN. Well, I just wonder if there is any way you could work out something? We want to help you. I do, but in light of what Mr. Barnum has said and others said about jeopardizing, and I have been listening to you about not being subject to suit and not being responsible in court, and I know when you get a bunch of lawyers together you can do most anything. So I just kind of discount this a little bit, not saying you are not perfectly honest about what you are telling us. But I know that circumstances change with time. I am just wondering if there is some other way to help you without coming under this act. Put an amendment in this some way.

Mr. TYLER. I believe there is not, Mr. Chairman, we urge upon you the views of Mr. Lewis and the ICC, who are in favor of our going under the 1973 act.

The CHAIRMAN. OK. That is the question.

You may proceed.

Mr. SILLECK. I was referring to the question of delay and trying to work out the inclusion of Erie Lackawanna in the final system plan, if it were to remain as a so-called profitable railroad.

Under section 206, if Erie Lackawanna's properties are to be designated in whole or in part for transfer to a truly profitable railroad, it must be done in the preliminary system plan. And within 90 days thereafter the ICC must find such transactions will be in full accord and comply with the provisions and standards of section 5 of the Interstate Commerce Act.

Under that act the ICC determines whether the terms of any transaction are just and reasonable. If EL is a "railroad in reorganization," there would be a measure of value, to wit, the constitutional minimum language, which the ICC can pass on in determining whether the standard of "just and reasonable" has been met. But without that measure, and there would be no measure in the case of EL, if it is treated as a profitable railroad, you will be forcing the parties immediately to agree on the price so that the ICC can perform its duties under section 206 within 90 days.

This is just not feasible. But even supposing the ICC ignored the whole question of just and reasonable price, there is still the great difficulty in agreeing upon terms within 210 days after the preliminary plan is released, and then having courts determine whether the price is right within 60 days more. You will note that in the case of railroads in reorganization under this act, there is no time limit whatever on determining the very complex issues of valuation that are involved.

Yet, under the DOT's proposal, Mr. Barnum would require that that be determined, approved, agreed upon, and that the transactions be concluded within 270 days.

Digitized by Google

Because of that difficulty the Congress cannot reasonably expect that agreements will be reached and concluded within the time required by this act.

Now, what that means is very clear. When the Congress gets down to the point this fall of considering the final system plan, it will have no assurance that EL's rail operations will be continued after the plan becomes effective. We do not believe that Congress would or should approve a final system plan that does not at least provide such assurance.

The chief architect of the planning process, Mr. Lewis, has testified that in order for the final system plan to fulfill the goal of the act, it is essential that EL be subjected to mandatory conveyances. If the plan submitted does not fulfill the goals of the act, there will be real delay inevitably at that point.

The real fears of delay at that point ought to be given far more weight than any theoretical delays caused by some hypothetical litigation.

Mr. TYLER. Mr. Chairman, in conclusion, we can see no basis in fairness or principle for treating Erie Lackawanna any differently from the other railroads which cannot be reorganized.

By this legislation Congress would not do something special for Erie Lackawanna. It would merely be treating Erie Lackawanna in the same manner as the other railroads in reorganization in accordance with Congress' initial intent.

A year ago the economic evidence indicated that Erie could go it alone through a section 77 reorganization. It is because that conclusion is no longer being supportable, that it is now essential to provide for the return of Erie Lackawanna to the status of a railroad in reorganization and for an increase in the authorized amount of section 213 grants in order to continue Erie Lackawanna's operations.

Now, a question that you are thinking about, and I want to answer right now and we will discuss it further later in the question period, is what are our financial requirements, what are we seeking in the way of section 213 grants.

For the first half we estimate that we will require grants of $10 million before giving effect to the loss of revenue from the suspension of the 7 percent rate increase due to go into effect February 5.

To meet that deficiency in revenue we will need in the first half another $6 million. So that makes a total of $16 million during the first half of 1975, the period ending June 30.

For the second half we estimate that our requirements will be $9 million in grants.

Now, I want to recite the three key assumptions we have made in giving those estimates.

As to rate increases, we have assumed that the 7 percent rate increase, suspended on February 5, would become effective on July 1. We further assumed that a 3 percent rate increase, not on the ICC's records, but geared into our forecast, to become effective September 1, would not become effective at all in 1975.

We have made one further principal assumption, and that is that any increases in the cost of oil due to the import fee or other elements, would be compensated for by specific and particular rate increases authorized by the ICC as was the pattern last year.

Digitized by Google

So, on those assumptions, it is $25 million that we believe we need through December 31, 1975 [see later dated February 6, 1975, p. —, this hearing].

Mr. Chairman, might I ask that the testimony with the three appendixes we filed on this committee last Friday be incorporated into the record?

Mr. Moss [presiding]. Is there objection to the request?

Hearing none, the material will be incorporated in the record at this point.

[Testimony resumes on p. 216.]

[Mr. Tyler's prepared statement and appendixes follow:]

STATEMENT OF RALPH S. TYLER, JR., CO-TRUSTEE OF ERIE LACKAWANNA RAILWAY COMPANY, DEBTOR

Thomas F. Patton and I are the Trustees of Erie Lackawanna Railway Company ("EL"). We urgently request adoption of S. 281. Without this legislation EL will be forced to cease operations by the end of February, because cash to meet our payrolls will run out.

This means not only that the 10,000 employees of EL may be added to the unemployment rolls but within a few days many shippers on our line may be forced to curtail operations and lay off employees. This impact will be felt not only along the 2,800 miles of EL lines in the States of Illinois, Indiana, Ohio, New York, Pennsylvania and New Jersey but in other sections of the country since EL is an integral part of the national rail network. A more complete description of the services provided by EL is submitted herewith as Appendix A.

The list of 20,000 EL customers who would be adversely affected covers the entire geographic, production and service spectrum of the U.S. economy. Such a disaster, which would be even more tragic in the current economic crisis, can be averted by the enactment of S. 281 which will permit EL to share in the benefits of the Regional Rail Reorganization Act of 1973.

Congress enacted the 1973 Act to provide a comprehensive plan for the reorganization of all the bankrupt railroads in the Northeast because the Congress believed that the separate reorganization of all those railroads under Section 77 of the Bankruptcy Act was impossible. The Congress provided, however, that if the reorganization court supervising the Section 77 proceedings found, among other things, that any such railroad could be successfully reorganized on an income basis within a reasonable time, such reorganization should continue for that railroad instead of a reorganization under the 1973 Act. Such a railroad is not eligible for the financial assistance under the 1973 Act to continue necessary operations which is available to Penn Central and other bankrupt roads reorganizing under the 1973 Act.

Last April, the federal district court supervising EL's Section 77 reorganization proceedings, based on evidence submitted by the Trustees, concluded that EL could reorganize successfully on its own. The Trustees and employees of EL have been working hard to accomplish such a reorganization and EL has been very reluctant to seek financial assistance from the Government. However, developments subsequent to the court's finding have led us to the unhappy conclusion that EL cannot reorganize on its own and indeed is in a desperate cash situation which will force cessation of operations by the end of February unless Government assistance is provided.

These developments include rising costs for labor and materials and a severe downturn in traffic due to the recession. In 1974 EL experienced a loss in net income of about $17.5 million on top of losses of $18.2 million in 1972 and $18.6 million in 1973. The effects of the recession fell heavily on the railroad in November and December and the recession is continuing to plague the railroad.

Our current 1975 forecast projects a loss of $22.6 million for the year. Even that forecast may be unduly optimistic. It assumes a slight upturn in the economy in the second half of the year, but whether this is realistic is becoming more doubtful. The gloomy outlook is further aggravated by the ICC suspension of the 7% rate increase which had been counted on by the nation's railroads to take effect on February 5. The impact on EL will be a drop in revenue from the level forecast of $500,000 in February, $1.3 million in March and, if the suspension lasts the full statutory period of seven months, a total of $8.5 million through September. To the extent these reductions occur there will result a corresponding additional deficit in cash.

Digitized by Google

As a result of the 1974 losses and the consequent drain on cash already experienced, maintenance of roadway is being held to the minimum necessary to meet Government safety standards. A year ago only 3% of our main lines were under "slow orders"; now the figure is over 20%. Moreover, the disappointing results for 1974 and the even more disappointing forecast for 1975 have made it impossible for EL to proceed with necessary capital improvements in plant and rolling stock.

A more complete description of the events which have brought us to this point is contained in a memorandum which is submitted herewith as Appendix B.

Even applying all the cash management techniques at its disposal, EL will run out of cash by the end of February. Our employment force has already been reduced by 1,600 employees since November 1. Without assurance of Government financial assistance we will have to begin to embargo traffic before the end of February. Recognizing the great public interest in keeping the railroad running, we seek immediate financial assistance for the short run and inclusion in the group of railroads to be reorganized under the 1973 Act for the longer period. S. 281 meets both of these goals.

It is important to note that interim financial assistance alone will not solve the problem. Unless EL is permitted to become a "railroad in reorganization" under the 1973 Act, there is no assurance that any of EL's properties will continue to be operated after the final system plan becomes effective. Nor will there be any provision to cover the cost of labor protection benefits for EL's 10,000 employees, nor any provision for assistance to states or local communities which desire to continue rail services by the use of rail subsidies and loans from the Federal Government as the 1973 Act provides. Moreover, the Senate Commerce Committee has found that restoration of EL to the status of a "railroad in reorganization" will "alleviate . . . planning problems and streamline the process" under the Act. Appendix C submitted herewith is an analysis in some detail of the legal and public interest considerations involved.

By this legislation, Congress does not do something special for EL. It is merely treating EL in the same manner as the other railroads in reorganization in accord with Congress' initial intention. A year ago the economic evidence indicated that EL could "go it alone" through a Section 77 reorganization. It is because that conclusion is no longer supportable that it is now essential to provide, as does S. 281, for the return of EL to the status of a "railroad in reorganization," and for an increase in the authorized amount of Section 213 grants in order to continue EL's operations.

Appendix A

Description of Erie Lackawanna Railway Company, Its Business and Service

Erie Lackawanna Railway Company has been—and continues to be—an integral part of the transportation system serving the highly industrialized northeastern United States.

Erie Lackawanna operates over 2,800 miles of road in the states of Illinois, Indiana, Ohio, New York, Pennsylvania and New Jersey. Its main line runs between Chicago and New York City, serving Marion, Akron and Youngstown, Ohio; Jamestown, Buffalo, Corning, Elmira and Binghamton, N.Y.; Scranton, Pa.; and Paterson, Newark and Jersey City, N.J. Erie Lackawanna has important branch lines connecting such cities as Cincinnati, Dayton and Cleveland, Ohio, to its main line operations. Branch lines in New York connect Rochester, Syracuse, Utica and Niagara Falls to the main line.

In addition to serving as a direct link for many of the major metropolitan areas in the states served, Erie Lackawanna connects with other railroads which allows its customers to ship to or receive from almost any point in the United States. These important gateways include Chicago with its multiroad connections with most western and southwestern railroads, Cincinnati with its important connections with railroads serving the South, Buffalo with its many connections with other eastern railroads as well as Canadian rails, and several important eastern interchanges providing connections to New England and other eastern destinations.

During the year 1974 Erie Lackawanna handled over 746,000 carloads of freight on its lines and almost 182,000 trailer loads of freight. The trailers of freight are handled on rail cars, usually two per car. For freight service, Erie Lackawanna

Digitized by Google

received gross revenues of approximately $282 million last year. In addition, Erie Lackawanna has an extensive commuter train operation in Northern New Jersey and adjacent New York State, handling approximately 40,000 commuters per day. Last year for this service the railroad received over $14 million in revenues and over $13 million under contract with the states involved to bring the operation to a non-profit, break-even level.

Erie Lackawanna required the services of approximately 11,000 employees to produce its total 1974 revenues of $323 million, including the freight and passenger revenues noted above.

Freight cars in Erie Lackawanna ownership totaled almost 20,000 at the end of 1974 and it also owned or leased over 3,400 freight carrying trailers. In addition there were over 500 locomotives owned by railroad at the end of 1974.

Erie Lackawanna's major customer list—those companies which depend on the railroad for a large portion of their total distribution needs—reads like a who's who in United States industry. Republic Steel, United Parcel Service, General Motors, Youngstown Sheet & Tube, Allied Chemical, U.S. Steel and Ford Motor as a group provided almost 28% of Erie Lackawanna's freight business. Other major companies which depend on Erie Lackawanna for rail transportation include Metropolitan Edison of Pennsylvania, Chrysler Corp., International Paper, National Steel, Bethlehem Steel, General Electric, General Foods, Owens-Illinois, General Mills. The list of 20,000 Erie Lackawanna customers covers the entire geographic, production and service spectrum of the U.S. economy. These 20,000 customers ship from or receive at 140,000 locations.

The types of goods carried by Erie Lackawanna are likewise extensive. In 1974 the railroad carried over 50,000 carloads of each of the following commodities: paper and paper products, iron and steel products, automobiles and automobile parts, coal, iron ore and chemicals. This traffic constituted 40% of the total handled in 1974. Much of the traffic moves in rather heavy volume between relatively few points. For example, iron ore mostly moves between the U.S. ports on Lake Erie to the Youngstown and Warren, Ohio, areas as well as Sharon and (via connecting railroads) Pittsburgh, Pennsylvania. Lumber, flour, machinery and beverages added another 10% to the volume of traffic moved over Erie Lackawanna tracks. The other 50% of the traffic was made up of a broad array of commodities from food products to sand and gravel, from ordnance shipments to glass products. Additionally, the railroad handled over 158,000 trailer loads of general merchandise where no commodity identification is available.

Erie Lackawanna's large handling of highway trailers on rail cars makes it a major carrier of this type of freight. With almost 20% of its freight business in trailers, the railroad has developed two large efficient terminals which handle about 80% of its trailers onto and off rail cars. One is located at Chicago and the other in northern New Jersey where not only local New Jersey industry can be served but also customers located at points in New York City, lower Connecticut and Long Island. The volume of this traffic alone indicates shippers' dependence on this type of extremely competitive service.

Over 750,000 cars and trailers, or more than 80% of the total, handled by Erie Lackawanna either originate and/or terminate from customers located on its own lines. Many of these customers do not have alternate rail service available to them.

Some of the larger customers served exclusively by Erie Lackawanna (so far as rail service is concerned) include a General Motors stamping plant at Mansfield, Ohio, a Ford Motor automobile assembly plant at Mahwah, N.J., the Metropolitan Edison generating plant at Portland, Pa., a National Biscuit bakery at Fairlawn, N.J., an FMC chemical plant at Meadville, Pa., and a Packard Electric auto parts plant at Warren, Ohio.

Erie Lackawanna provides the exclusive rail service for 50 firms which move over 500 carloads of freight per year. The need for the essential rail service provided by Erie Lackawanna was evidenced in the hearing held in 1974 pursuant to the Regional Rail Reorganization Act of 1973 before the United States District Court at Cleveland overseeing Erie Lackawanna's reorganization proceedings in which a total of 156 shippers offered exhibits demonstrating the importance of Erie Lackawanna's service to them. The preservation of rail service is also required by industries locating or planning to locate new facilities on Erie Lackawanna's lines. Most notable among these is the new Schlitz plant near Syracuse, N.Y., which will be one of the largest breweries in the United States upon its completion in 1977.

Digitized by Google

While Erie Lackawana is greatly dependent on the economy of the northeastern United States, the economy of the northeastern United States is also greatly dependent on Erie Lackawanna. As indicated above, industry in that region relies on Erie Lackawanna to provide an important part of its transportation needs, and many companies have no alternative rail transportation available to them. The economy of the area served by Erie Lackawanna benefits from the existence and preservation of present industry shipping patterns and also because rail service attracts new industry to the area. Moreover, the expenditure last year by Erie Lackawanna of $157 million in wages and salaries and $50 million for the purchase of materials and supplies indicates what a significant contributor the railroad is to the economy of the area in which it operates.

By reason of the substantial volume of traffic it handles in conjunction with other railroads to and from points throughout the United States, Erie Lackawanna's service is an important factor in the national economy.

Appendix B

Memorandum of the Trustees of Erie Lackawanna Railway Company as to (1) Its Inability To Reorganize Under Section 77 of the Bankruptcy Act and (2) Its Urgent Need for Cash To Carry On Its Operations

Erie Lackawanna Railway Company ("EL") has been in reorganization proceedings under Section 77 of the Bankruptcy Act since June 1972.

Early in 1974, pursuant to proceedings required by the Regional Rail Reorganization Act of 1973 (the "1973 Act"), EL was found by the Bankruptcy Court overseeing its reorganization to be reorganizable under Section 77 on an income basis within a reasonable time. However, because heavy operating losses have persisted into the third year of the reorganization proceedings—preliminarily estimated (on a fully accrued basis) to be $17.5 million in 1974—and because the losses are expected to increase substantially in 1975 as a result of present economic conditions, the Trustees of EL concluded early in January, 1975, that such a Section 77 reorganization is not possible.

Furthermore, based on their forecast for 1975 results, EL will need assistance from the Federal Government in an amount of $10 million in order to carry on EL's operations during the first half of 1975, much if not all of which will be required before the end of February. Additional funds may be necessary if the economic downturn is sharper than has been anticipated, or if, as discussed below, expected rate increases to meet increased costs are delayed.

The Court's finding last year that EL, could be reorganized under Section 77 was predicated upon a recommendation by the EL Trustees, whose judgment was based on projections of future operating results ("the 1974 Forecast") arrived at in close consultation with highly competent and experienced railroad consultants and financial advisors. The 1974 Forecast indicated that EL could successfully be reorganized under Section 77 by January 1, 1981.

The 1974 Forecast anticipated a relatively stable economy. At the time, it was concluded by EL's financial consultants that if EL's earnings improved as projected for 1974 and 1975, EL could then anticipate adequate liquidity to meet working capital requirements and sufficient confidence of the private sector in its ability to reorganize which would enable EL to obtain necessary financing for capital improvements. Thus EL was expected to achieve adequate earning power in later years on which to base a fair and equitable capital structure.

Even assuming some way could be found to meet EL's present working capital needs, the reorganization of EL on an income basis within a reasonable time can no longer be regarded as possible, and the financial consultants have so advised the EL Trustees. The considerations involved in arriving at that conclusion include (1) the heavy loss actually experienced in 1974 on top of the losses in 1973 and 1972, and the even greater loss which the Trustees are now compelled to anticipate for 1975, (2) the necessity for a greater improvement in EL's business in subsequent years than can now be realistically expected, and (3) the inability to catch up soon enough on essential maintenance of plant, as well as to make capital improvements which would be necessary to the accomplishment of a Section 77 reorganization but which must now be indefinitely deferred.

Digitized by Google

THE LOSSES

Losses from operations during the reorganization years, the results for 1974 and 1975 as anticipated in the 1974 Forecast, and the losses now anticipated for 1975 ("the 1975 Forecast" are set forth below. The letter "D" denotes deficit.

[In millions]

			1974		1975	
	1972	1973	1974 Forecast	Actual[1]	1974 Forecast	1975 Forecast
Income before fixed charges[2]	$6.7D	$6.3D	$0.6	$3.9D	$2.0	$9.0D
Net income (before extraordinary item in 1972 due to "Agnes" storm)	18.2D	18.6D	12.4D	17.5D	10.6D	22.6D

[1] Preliminary; subject to audit and year end adjustments.
[2] Fixed charges include about $4 million of interest, principally on equipment debt, and other items required to be paid during the course of the Section 77 reorganization proceeding. The remaining fixed charges approximate $8 million which is the accrual of interest on funded debt which is not required to be paid during the reorganization proceeding.

As the foregoing shows, the Trustees' 1974 Forecast anticipated an improvement in operating results for 1974 of more than $6 million as compared with the earlier years, whereas the actual improvement in 1974 amounted to only about $1.1 million. Moreover, while a year ago 1975 was anticipated to produce a further improvement, EL must now expect that 1975 will show a loss $4 to $5 million greater than even the losses experienced yearly hertofore in the reorganization period.

The 1974 results are the more disappointing because EL, with the rate increases authorized by the Interstate Commerce Commission, produced about $282 million of freight revenues, up nearly $25 million over 1973, and yet the loss was reduced by only $1.1 million.

Now, because of the accelerating downturn in the general economy in the last months of 1974 which is continuing into 1975, the number of ton miles of freight traffic anticipated to be handled in 1975 is forecast to drop 17% below the volume anticipated for 1975 a year ago.

The 1975 Forecast may in fact be on the optimistic side. For the first six months of 1975 the 1975 Forecast is, as it must be, closely related to the decline in traffic experienced at the end of 1974. The 1975 Forecast then assumes a moderate upturn in the general economy in the last half of the year producing some increase in EL's business. Whether recovery from the recession will be experienced that early now appears to be viewed as more doubtful by many respected economists.

Of great concern now also is the recent suspension by the Interstate Commerce Commission of the 7% rate increase anticipated to become effective on February 5. This will result in estimated reductions of $494,000 and $1.3 million in the February and March revenue projections respectively. If the suspension is effective for seven months as permitted under the law, the aggregate revenue drop compared with EL's projected level is $8.5 million. The 1975 Forecast also assumes a 3% increase in rates in September 1975, which accounts for $3.1 million of the freight revenues projected in the last four months of the year. Whether this will be forthcoming, at least as early as anticipated, now appears doubtful in view of the ICC's suspension of the 7% rate increase.

It should further be kept in mind that experience shows that authorized rate increases intended to offset wage and price increases fall short of doing so because of competitive factors and the time lag between the experiencing of the cost increase giving rise to the rate increases and the implementation of the rate increases.

THE URGENT CASH NEED

Based on the 1975 Forecast of EL's revenues and expenses, EL's cash is expected to slide into a negative figure early in February and the cash deficit will increase to over $8 million by the end of February. During the balance of the year, cash is forecast to have some fluctuation, but to remain throughout the year in a substantial deficit position, exceeding $9 million at the end of September 1975.

Digitized by Google

EL is, of course, employing cash management techniques in order to conserve cash required to continue its operations. It is anticipated, however, that even with full implementation of all available cash management techniques EL will not have sufficient cash to meet its operating requirements through February. Clearly, any further downturn in business or severe weather conditions this winter or the failure to obtain the anticipated rate increases, discussed above, would have a disastrous impact on cash.

It is also to be observed that the taking of extraordinary measures to conserve cash will have only a short-term effect.

By reason of EL's critical cash position, maintenance of its physical plant is now being carried on at the absolute minimum required to continue operations in accordance with Government safety standards. Only a year ago the percentage of EL's main line under "slow orders" was as little as 3%; it is now more than 20%. While the 1975 Forecast assumes a significant reduction in the amount of derailment expense ($7 million in 1974), this reduction may not occur in view of the current state of maintenance. If it does not occur, it will be another factor which will increase the anticipated 1975 loss and cash needs beyond those hereinabove described.

EL has also closed its principal car repair facility at Meadville, Pa. Only necessary running car repairs are now being made at line points. Locomotive maintenance has been reduced as much as possible.

Since November 1, 1974, to cut expenses EL has reduced the number of its employees, including seasonal employees, by over 1,600, with the result that there is no further slack to be taken up in this area of expense if EL is to maintain its present level of service. Many of these employees must be rehired in the near future to prevent further deterioration of roadbed and equipment.

As a result of the continuing heavy losses as well as the cash shortage, the EL Trustees have discontinued yard modernization and equipment acquisition programs and are not now making any significant capital improvements beyond those required in connection with environmental protection or other governmental orders.

Appendix C

Legal and Public Interest Considerations Involved in Proposed Amendments of Regional Rail Reorganization Act of 1973 by S. 281

On the date of enactment of the Regional Rail Reorganization Act of 1973 (the "1973 Act"), Erie Lackawanna Railway Company ("EL") was a "railroad in reorganization" within the definition of that term in Section 102(12) of the 1973 Act. Pursuant to Section 207(b) of the 1973 Act, on April 30, 1974, the United States District Court (the "Bankruptcy Court") overseeing the proceedings for EL's reorganization found that EL is reorganizable on an income basis within a reasonable time under Section 77 of the Bankruptcy Act ("Section 77"), and that the public interest would be better served by such a reorganization than by a reorganization under the 1973 Act. That finding having been made within 120 days after the enactment of the 1973 Act, EL thereupon ceased to be a "railroad in reorganization" as defined in Section 102(12).

It is now concluded by the Trustees on the basis of subsequent developments that a reorganization of EL on an income basis within a reasonable time under Section 77 is not possible, and that a substantial infusion of cash is necessary to continue EL's operations.

Section 207(b) of the 1973 Act contains an express finding by the Congress that there is a "strong public interest" in effectuating a reorganization under the Act of all railroads in the region (as defined) undergoing reorganization which are not reorganizable on an income basis within a reasonable time under Section 77. In addition, Section 213 of the 1973 Act authorizes Federal grants of money to "railroads in reorganization" where necessary for the continued provision of essential transportation services. On the other hand, there is no other existing legislation authorizing similar assistance to a railroad in Section 77 proceedings which cannot reasonably be expected to become self-sustaining.

Accordingly, both to assure a reorganization of EL properties which accords with the public interest as thus determined and to make EL eligible for assistance under Section 213 of the 1973 Act, it is necessary that EL be restored to the status of a "railroad in reorganization." Section 7 of S. 281 provides mechanics to achieve this result.

Digitized by Google

There are major considerations from the standpoint of the public interest why EL should be reorganized as a "railroad in reorganization" under the 1973 Act rather than continue in the status of a "profitable railroad" under Section 102(9) of that Act.[1]

With EL as a "profitable railroad," while its properties might be designated for transfer under that Act to Conrail, and/or to one or more truly profitable railroads, the making of any such transfer would be optional with EL and could not be compelled under that Act. Likewise, the acceptance of such a transfer would be optional with Conrail and such other profitable railroads. Absent the making of such transfers, there is no assurance under the Act that any EL properties would continue to be operated if EL were to be treated as a "profitable railroad."

Further, the costs of protecting EL employees adversely affected by any such transfer would not be included in the $250 million of Federal Government payments for labor protection provided by Section 509 of the 1973 Act. It is, therefore, doubtful that any transfer of EL properties under the 1973 Act would ever be agreed to if EL is to be treated as a "profitable railroad."

Even in the absence of labor production payments by Federal authorities for EL's employees did not prove an insuperable obstacle to the accomplishment of the transfer of EL's properties if EL were continued within the definition of a "profitable railroad," it certainly cannot be assured that EL and the other profitable railroads or Conrail to which EL's properties might be designated for transfer, or among which it might be proposed in the planning process that they be divided, will in all cases arrive at agreements which can be "concluded" within 60 days after the effective date of the final system plan as required by Section 206(d)(4).

Thus the provisions for local rail service subsidies and loans might well have no application to any of EL's properties. Unless EL, if treated as a "profitable railroad," were to transfer "all or substantially all" of its properties designated in the final system plan for transfer to Conrail or to a "profitable railroad," EL's remaining properties (which might otherwise be abandoned) would not be subject to the provisions of Section 304(c)(2) of the 1973 Act, and the provisions for Federal assistance through rail service continuation subsidies and acquisition and modernization loans referred to in Sections 304, 402 and 403 of the 1973 Act would not be applicable in respect of any of EL's properties.

Since EL cannot be reorganized separately, it is possible that there will be designations of several portions of its properties for transfer to one or more possible recipients and that several other portions will not be designated for transfer to any one. To the extent that state or local authorities or others may be anticipating that they could acquire and operate portions of the EL properties not transferred to a profitable railroad or to Conrail in order to provide service which they regard as essential for local purposes, their expectations of substantial Federal assistance through subsidies and loans to effectuate that result could well be denied fulfillment if EL is not made a "railroad in reorganization" by amendment of the 1973 Act.

In addition to providing appropriate and necessary mechanics to assure the restoration of EL to the status of a "railroad in reorganization," S. 281 would increase the amounts of grants that may be authorized under Section 213 of the 1973 Act to "railroads in reorganization," and thus it provides a means for avoiding the shutdown of operations which otherwise would be necessitated by EL's cash shortage.

In this connection it should be noted that, contrary to the contention of the Department of Transportation before the Senate Commerce Committee, the proposed amendment to Section 211 of the 1973 Act providing for loans to railroads would not take care of EL's cash needs. The language in Section 211(a) now providing for loans under that section to be made "for purposes of assisting in the implementation of the final system plan" would be amended by S. 281 to read "for purposes of achieving the goals of this Act." However, this broadening of the purposes of Section 211, while perhaps desirable for other reasons, is not an adequate substitute for Section 213 grants to a bankrupt railroad which is not reorganizable under Section 77 of the Bankruptcy Act.

---

[1] Under the 1973 Act, any railroad which is not a "railroad in reorganization" is by definition a "profitable railroad," even if it is a bankrupt which is not reorganizable under Section 77.

Digitized by Google

Section 211(a) of the 1973 Act provides that no loan may be made thereunder unless "where applicable" it is treated as an expense of administration. This provision remains the same in Section 211 as proposed to be amended, and would therefore require that any loan in EL's case be treated as an administration expense with priority over all pre-bankruptcy debt, secured as well as unsecured.

In the event the EL Trustees would seek to make a Section 211 loan for working caiptal needs, it seems certain that a claim of unconstitutional erosion would be advanced by EL pre-bankruptcy creditors. Accordingly, there is substantial doubt whether the Bankruptcy Court overseeing EL's reorganization would authorize the making of such a loan to EL.

As stated by the Special Court in its decision on the "180 day order" in *In re Penn Central Transportation Co., et al.*, — F. Supp. — (Sept. 30, 1974) (slip op. p. 51), "there is no disagreement that . . . accumulation of administration expenses which are entitled to priority over secured creditors" and "the issuance of trustees' certificates with liens superior to those of mortgage bonds" are items which may "constitute unconstitutional 'erosion'." Furthermore, in assaying the fairness and equity of the process of the 1973 Act on Penn Central (and on the other "railroads in reorganization," slip op. p. 26) the Special Court (slip op. p. 51) relied on the provisions of Section 213 (as well as Section 215 relating to assistance for capital improvements), among other factors as indicating that in the case of such railroads there was no convincing evidence that any such erosion items would be likely to develop prior to the effective date of the final system plan on the schedule established in the 1973 Act.

Certainly, loans under Section 211 to a bankrupt road which cannot achieve an income-based Section 77 reorganization could constitute "erosion" which may be claimed to be constitutionally impermissible. This would be fortified, if such a road were treated as a "profitable railroad" for definitional purposes, by the fact that no reorganization of its properties would be assured by the 1973 Act. Rather, as previously indicated, the transfer of any properties of a "profitable railroad" would be optional not only with such railroad but with the designated transferee.

Assuming any such constitutional question were resolved in the courts favorably to the making of such a loan, it is likely that before the loan could in fact be made the EL Trustees would already have been required to commence the shutdown of EL's operations. On the basis of EL's forecast, cash will be required before the end of February to avoid a shutdown of operations. However, so far as EL is aware, the United States Railway Association which administers Section 211 has no regulations on the form and content of applications for loans to implement the final system plan which would be adaptable to a loan necessary to continue essential operations. In addition, Section 211(b) requires publication of any loan application under Section 211, with time required to be given for public comment. Further, the various terms of any loan would require negotiation which would take time before a loan agreement could even be presented to the Bankruptcy Court. Any decision of the Bankruptcy Court would be subject to appeals. These obstacles to obtaining timely assistance would not exist in the case of grants under Section 213 of the 1973 Act.

There also appears to be no basis in fairness or equity for distinguishing as to eligibility for the various types of Government assistance provided in the 1973 Act between bankrupt railroads which cannot be reorganized independently on an income basis under Section 77. Penn Central and other "railroads in reorganization" as defined in the 1973 Act would be eligible not only for loans under Section 211 as proposed to be amended, but also for grants under Section 213 and financial assistance under Section 215. EL should be similarly treated, and this would result from the adoption of Section 7 of S. 281 providing a mechanism for its restoration to the status of a "railroad in reorganization."

February 6, 1975

Honorable Harley O. Staggers, Chairman
House Committee on Interstate and
Foreign Commerce
2366 Rayburn House Office Building
Washington, D. C.

Dear Mr. Chairman:

This letter is to correct an inadvertent error in my testimony as Trustee of Erie Lackawanna Railway Company before your Committee yesterday afternoon.

I stated that we forcast Erie Lackawanna's requirements for Government cash grants during 1975 total $25 million, including $9 million during the second half of the year, based upon a number of assumptions. These assumptions included the assumption that two freight rate increases would be permitted by the Interstate Commerce Commission to become effective, one of seven percent (suspended by the Commission on January 30, 1975) on July 1, 1975 and another for three percent (for which no application is pending before the Commission) on September 1, 1975. My testimony was in error as to the assumption regarding the latter freight rate increase; Erie Lackawanna's requirements during 1975 for Government cash grants total $25 million, including $9 million during the second half of the year, based upon the assumption that such three percent freight rate increase will not become effective on any date in 1975. The three percent freight rate increase was anticipated in our 1975 forecast made prior to January 30. In view of the Commission's suspension of the seven percent freight rate increase due to become effective on February 5, 1975, it now appears unlikely that the three percent freight rate increase will become effective in 1975.

When the draft of the transcript of my testimony is submitted to me for review and corrections, I shall correct therein the foregoing error.

Very truly yours,

Ralph S. Tyler, Jr.

Digitized by Google

Mr. TYLER. Mr. Chairman, we will try to answer your questions.

Mr. Moss. Mr. Devine.

Mr. DEVINE. Thank you, Mr. Chairman.

Mr. Tyler, yesterday when Assistant Secretary Barnum testified before the committee I think, speaking for the Department of Transportation, generally agreed that Erie Lackawanna needed assistance and I think he came up with the answer of $25 million rather than the original figure which Mr. Bill Minshall, who talked to me at great length about this, offered.

And the only question seems to be on whether or not you should come under the same umbrella, and he objected to that on the basis it might stir up litigation and cause further delays and so forth.

He suggested that an amendment be offered that would bring you in and give you $25 million to resolve your problems, and that apparently is not satisfactory to your group.

Would the adoption of this amendment he suggested solve your problems or compound your problems?

Mr. TYLER. No, Mr. Devine, it would not. The $25 million on the assumptions I outlined would keep us alive through 1975. There would be problems not only to us but to USRA in formulating the northeastern railway system if we are not a railroad in reorganization.

There is even a cloud on our ability to get the $25 million by reason of that qualification under section 213 that a railroad such as Erie Lackawanna would be eligible for grants only if it was likely, as I recall, that a substantial portion of the properties would be included in the final system plan.

Mr. DEVINE. You simply then would like to be treated as Penn Central, and you don't hold the same fears he does as to possible litigation?

Mr. TYLER. No.

Mr. DEVINE. That summarizes the differences, does it not?

Mr. TYLER. In short, we don't think we should be penalized for making a good try at reorganizing under section 77, and then find we have been bludgeoned by this unparalleled recession and inflation that kept mounting during the year and then came to a crescendo at the end of the year.

Mr. DEVINE. Thank you.

Mr. Moss. Mr. Dingell.

Mr. DINGELL. No questions, thank you, Mr. Chairman.

Mr. Moss. Mr. Brown.

Mr. BROWN. Thank you, Mr. Chairman.

As I understand, Mr. Tyler, some time back when you took over as trustee of the Erie Lackawanna you thought that the Erie Lackawanna would be able to survive and be a competitor for ConRail?

Mr. TYLER. That is right.

Mr. BROWN. Then as a Nation we got into the recession in which we find ourselves today and it was apparent that the Erie wouldn't be able to compete with ConRail.

Is there any chance that it can in the future be a competitive influence to ConRail?

Mr. TYLER. Speaking of properties, I think that is conceivable as part of the planning. But not reorganizing Erie Lackawanna as such under section 77.

Digitized by Google

One of the possibilities which I believe has been discussed a number of places, including, I believe, the recent annual report of USRA, was a second ConRail, of which Erie Lackawanna could be a part.

Mr. BROWN. So you think there is no prospect that the present Erie Lackawanna, given the requirements of bankruptcy sections, can put it back on its feet?

Mr. TYLER. No.

Mr. BROWN. So the question is not as I asked the Secretary of the Department of Transportation the other day, not a question of whether, but when, and if eventually, why not now?

Mr. TYLER. Yes.

Mr. BROWN. Now, would you address yourself to that same question, if eventually, why not now. What are the advantages in doing it now over doing it at some later date after the ConRail plan has been formulated without Erie in the operating plan and then folding Erie into that plan at a later date?

The Secretary seemed to feel that there was advantage in deferring inclusion of the Erie until after the plan had been proposed without the Erie—with the Erie's bankruptcy taken into consideration.

I gather this has to do with the disposition of the properties and the rights of the creditors. Can you address those points?

Mr. TYLER. It seems to me, Mr. Brown, that the advantage of doing it now is that USRA will have some known quantities to deal with and can handle them with some certainty.

Our problem came upon us rather suddenly. It was toward the end of December that we saw how our situation deteriorated in 1974. It struck us that we were not going to be able to reorganize.

We formulated a business plan and forecast on January 3 which clearly showed that. That resulted in the trustees reaching the conclusions announced on January 9, (a) that we could not reorganize under section 77 within a reasonable time, and, (b), without Government assistance, we would have to cease operations.

On that date we had a number of meetings in Washington, including a meeting with officers of USRA, Mr. Lewis and Mr. Jordan, also with the Chairman of the Interstate Commerce Commission and also Mr. Tuggle and some of their associates, and then with Mr. Barnum, the Acting Secretary of DOT, and members of his staff as well.

The view was expressed by the USRA that while they were sorry to see us there and regretted the difficulty that brought us there, if we had to come, they were glad we came that day and not later.

That by our problem surfacing, as it were, that early, they would have time to develop a preliminary system plan for issuance on February 26, which would encompass the Erie Lackawanna.

USRA already had given Erie Lackawanna a substantial amount of study, knew a great deal about it. They did not have appraisals, they would not by that date, but those could come later.

So, if it had to be, that was the good time for it. Whereas, if it had come somewhat later, it would have to be handled, and what I am referring to as a jerry built kind of way. So that is what, in my opinion, the Barnum proposals are. They are compromises. Attempts to do something halfway, inspired by what we regard as an unfounded fear of litigation.

Digitized by Google

Mr. BROWN. The figure seems to be $25 million that the Government would loan you to keep——

Mr. TYLER. Grant.

Mr. BROWN [continuing]. Grant you, I am sorry, until such time as they are ready to take you into the system, given the testimony of Secretary Barnum.

So what I am really probing for is why is it worth in effect $25 million to the Government to defer taking you in? Is the feeling that the lawsuits that might lie against the Government, if you were taken in now, in excess of this $25 million? I guess maybe that points up the issue?

Mr. TYLER. We have to divide our problem into two parts, I think, Mr. Brown. The $25 million is to keep us operating through December 31, so that we will be available and an operating enterprise to be folded into some kind of a Northeastern plan.

We then get to the situation that we are in, we are to be reorganized by ourselves under section 77, we are going to have to be taken over by ConRail or by profitable railroads, and the most efficient and effective way of doing it, is to make us a full-fledged railroad in reorganization under the act and have the same status as the others.

The CHAIRMAN. The time of the gentleman has expired.

The gentleman from California.

Mr. MOSS. When did this matter which you first told us come to the attention of the trustees? In December, when was it called to the attention of this committee?

Mr. TYLER. Mr. Moss, our first announcement of our two-prong problem, lack of capacity to reorganize and need for Government funds or we would have to cease operations, was first announced here in Washington on January 9 when Mr. Patton and Mr. Maxwell and myself met with the regulatory agencies and advised them that that was the case.

At that time we also issued a press release. So that information became generally available.

I believe it was the following week—we have been in Washington since then for 2 or more days every week, and I think it was the following week we first had conversations with members of the staff of your committee and with one or two members of your committee.

Mr. MOSS. Some time then after mid-January?

Mr. TYLER. Yes. It would be shortly past the middle of January.

Mr. MOSS. That is sufficient for my purpose.

Mr. TYLER. Yes.

Mr. MOSS. Are you going to give a notice of intent to embargo?

Mr. TYLER. Yes. Our situation is this, sir: We, unlike Penn Central, believe that—prefer and even believe—that we need some authority to take this rather drastic action.

Mr. MOSS. You have anticipated my question. That is precisely what I was going to ask you.

Do you concur in the view expressed by the Penn Central trustees as to their ability to act unilaterally without any concurrence by the Interstate Commerce Commission?

Mr. TYLER. I have got enough problems without trying to judge Penn Central. Their status is somewhat different from ours.

Digitized by Google

Mr. Moss. In your view then, your powers are not the same as theirs?

Mr. TYLER. Our status is different. You see, we are in this curious situation——

Mr. Moss. Did you feel that the powers are different in the case of your trustees and the trustees of Penn Central?

Mr. TYLER. Our status is different in one respect, sir, certainly, in that we were found by our court to be reorganizable by an order entered April 30. We find that now to be unsupportable, but the order still stands.

Mr. Moss. Is it your opinion, if you were to issue an order of embargo, you would have to have concurrence of the ICC?

Mr. TYLER. No, sir, our intention is to file a petition with our reorganization court. We will seek authority from that source.

Mr. Moss. Only from the court, not the ICC?

Mr. TYLER. That is right.

Mr. Moss. You do not feel it is necessary to seek it from the ICC?

Mr. TYLER. That is right.

The CHAIRMAN. The gentleman from New York, Mr. Hastings.

Mr. HASTINGS. I thank you, Mr. Chairman.

If I understand this situation relating to Erie Lackawanna, DOT is against your inclusion as far as a railroad in reorganization but are sympathetic to your financial needs to keep it in operation.

The one question that, although I think I know the answer, I would like to have on the record, what happens to your labor force in the event you are not included at all?

Mr. TYLER. I might start out by saying that H.R. 2051 is completely silent on the subject. We only get to some of the more serious questions when we get to the amendments proposed by Mr. Barnum in his testimony yesterday.

Mr. HASTINGS. To clarify there, as far as this bill is concerned, the labor force would not be under the labor protective provisions of the Labor Reorganization Act; is that correct?

Mr. TYLER. Under H.R. 2051. Mr. Barnum has amendments which gives a qualified possibility but no assurance of our labor force being protected.

Mr. HASTINGS. And two major issues seem to be—and I think you have outlined them rather well, so I won't dwell on them, the question of litigation raised by Mr. Barnum has been sufficiently answered by yourself and by USRA in my judgment.

The prime question, the right of mandatory conveyance on the part of USRA, becomes critical in importance to Erie Lackawanna. I would frankly say, understanding the problems of both the Penn Central and the Erie Lackawanna, I don't see the difference, why we should treat one one way and the other the other way.

I am beginning to believe unless we do something fairly quickly for all of the railroads, we might just as well consider the next alternative, and that is, nationalize the system of railroads in the Northeast, which I do not endorse. I am very sympathetic to your problem.

Mr. BROWN. Would you yield?

Mr. HASTINGS. Yes.

Mr. BROWN. It seems to me if they are going to be taken in eventually it might be better to take you in now. If they are going to loan you the $25 million one way or another, then the system could see that that $25

Digitized by Google

million was directed during that operating period in ways that would conform to what they have and what ConRail has in mind for the Erie system after they are absorbed into the system.

Mr. TYLER. I think that is right. If the Government is going to make grants of $25 million to Erie Lackawanna, it should be in more of a controlled position then—which it would be in if it came under the act. The Government does not have the same controlling position.

Mr. BROWN. I have great respect for you and the circumstances under which you find yourselves and the stewardship of your responsibility, but it seems to me it is good business if it is the Government's $25 million one way or the other, that we give it to you after you are part of the ConRail operation, and we take you in now.

Mr. TYLER. Yes.

Mr. BROWN. Thank you, Mr. Chairman.

Mr. HASTINGS. If I may ask one final question. Has the labor that is now working for Erie, have they taken a position on your inclusion?

Mr. TYLER. Yes. Our—one of the first things we did after our meetings in Washington January 9, Mr. Maxwell had a meeting with the representatives of our employees, advised them with complete candor of what our situation was and what we were trying to do.

One of the purposes of our attempt to get under the act would be to provide them with the protection of title V of the act, just as that available to other railroads.

Mr. MAXWELL. And they have been kept informed since that time also as to the progress of the various hearings and we have been in constant touch with them about that.

So their general feeling is that it coincides with ours, that the company should be included under the status of a railroad in reorganization.

Mr. HASTINGS. Have they taken a solid position?

Mr. MAXWELL. I cannot say they have taken that in writing, no. If I might make one further comment that I think might be helpful, if the company is not taken in as a railroad in reorganization now, we think that it will propose some very serious problems as to branch-line operations and the immediate funding by the States and the Federal Government of those lines that are not included in the final system plan and are released for subsidies by States and municipalities.

And I am sure you are aware of the fact that this is an extremely sensitive subject, particularly when the final system plan comes to the Congress for its approval this fall.

Mr. HASTINGS. I can assure you that is probably the most politically sensitive question that a lot of us with branch-line problems will have.

The CHAIRMAN. The gentleman from Pennsylvania.

Mr. ROONEY. Getting back to your original question as to whether you could go this route alone, and I believe you, Mr. Tyler, said you would not be eligible under the 1970 Rail Services Act, could we not amend that act to include you?

Mr. TYLER. We are not a railroad under reorganization as far as the 1973 act is concerned. You are talking about the Emergency Rail Services Act?

Mr. ROONEY. Right.

Digitized by Google

Mr. TYLER. The 1970 act. The problem there, I believe, is that as a condition to obtaining such a loan there must be a finding of viability.

Mr. ROONEY. It seems to me, I think in your statement you said that you lost $18.2 million in 1972, in 1973, $18.6 million, and in the lean year, 1974, you only lost $17.5 million. So you are making some progress.

I would not want to make that kind of progress if I were running a railroad.

Mr. TYLER. Very small progress, sir. The only reason we did as well as $17.4 million, and that is a tentative figure, we may do a shade better than that, is because we had the benefit midyear of a 10-percent rate increase which had not been included in our forecast. Then we are facing in 1975, as our statement sets forth, a loss of some $22.5 million.

Mr. ROONEY. You have asked for a grant of $25 million to carry you through December 31, 1975; is that correct?

Mr. TYLER. Yes.

Mr. ROONEY. ConRail doesn't go into effect until the first quarter of 1976. How much more funds would you need?

Mr. TYLER. You are speaking of the additional money we would need in the first quarter of 1976?

Mr. ROONEY. Yes.

Mr. TYLER. We have not made any real forecast of that. Perhaps Mr. Hahn could speak generally on the subject.

Mr. HAHN. We have not made a forecast into the first quarter, but as indicated this morning by Mr. Blanchette, that is a tight period, the first quarter. It may be we would need several additional millions of dollars.

Mr. ROONEY. How much is several additional millions of dollars?

Mr. HAHN. I can't give a good estimate. Possibly five.

Mr. MAXWELL. Mr. Rooney, I think we should take it through this year and see what we can do to not have to come back for further funds at the end of the year for the first quarter. We would prefer to try it. I realize you don't like to—very properly—having us come back time and again, but I think in this case that because of the very peculiar state of the economy, we would prefer to sit tight on this recommendation to you.

Mr. ROONEY. I have no further questions.

The CHAIRMAN. The gentleman from California, Mr. Moorhead.

Mr. MOORHEAD. Thank you, Mr. Chairman.

I wonder whether there are any other railroads that would be competitive to the new ConRail which are interested in your track or portions of it?

Mr. TYLER. Perhaps you would like to speak to that, Mr. Maxwell.

Mr. MAXWELL. In the area east of Buffalo, we are the only competitor to Penn Central down into the New Jersey area, through Pennsylvania and the lower tier of New York State. West of Buffalo there are other lines that run roughly parallel to one another through to the Chicago area. But each of them has heavy areas of industrial activity. I would say the principal problem is east of Buffalo in the maintenance of competition in that area.

Digitized by Google

Mr. MOORHEAD. You think some of the track you have might be sold to other railroads if you were not brought into this plan?

Mr. MAXWELL. I don't know. You will no doubt recall that the USRA in their annual report had five different operations as to what they were considering for their preliminary plan, and it is just not possible at this time to tell what kind of a framework those operations will be.

Mr. MOORHEAD. You have got about 2,000 miles, I understand, altogether of track.

Mr. MAXWELL. 2,800.

Mr. MOORHEAD. How much of that would be useful to the new Con-Rail system and be able to be used in the building of a profitable railroad?

Mr. MAXWELL. I would think a minimum of about 2,500.

Mr. MOORHEAD. You think most of it?

Mr. MAXWELL. Yes; I do.

Mr. MOORHEAD. Why can't you make money on it then with 2,800 miles of track if someone else can make money on 2,500?

Mr. MAXWELL. It depends on the time of framework. If you use one of the operations that are due under ConRail's proposals and set up a second ConRail and provide additional revenue-gathering capacity in the form of additional trackage to the Erie Lackawanna and perhaps some other lines, then I think you can get the earning power that it can stand on its own feet.

Mr. MOORHEAD. What kind of shape is your equipment in, your track, right now?

Mr. MAXWELL. We have had an increase in our slow orders on track. We had been running 2 to 3 percent of our mileage which rose during the middle of the year because of a shortage of materials, ties and rails. At the present time that is running, the total amount under slow order, is running about 30 percent. We have made some progress in reducing that slightly, but it will have to come after the moderation of the weather during the month of April when we can go back to work on it.

The equipment, our bad order situation is too high. We have had some cars that are carried on our bad order that are obsolete in nature. I would say it is on the order of about 10 percent. This is about double what we think it should be.

Mr. MOORHEAD. I would like to assign the rest of my time to Mr. Brown.

Mr. BROWN. Just a couple of questions.

I have some of that Erie track in my district. Thirty percent has to be an optimistic estimate.

Mr. MAXWELL. That is one of the pieces that has to have the additional work done on it.

Mr. BROWN. That is 100 percent in my area. What could you do if you didn't have the problem of maintenance? Would the Erie survive as an independent railroad?

Mr. MAXWELL. As far as I am concerned, I would not say that is the answer. It turns on the rebuilding of terminals and on the greatly increased acquisition of equipment and the ability to service the debt.

Mr. BROWN. It seems to me we are strongheaded in our approach to this problem. I wish instead of having ConRail and the operating responsibility, we had tried to rationalize the system of transporta-

Digitized by Google

tion in this country by having the Federal Government, and I would like to have your comment, by having the Federal Government take over and maintain the way on the railroads, the rights-of-way on the railroads, the same as we do on the airlines, for the bargelines, for the trucklines, and the highways.

And if we had that kind of a rationalized system and knew what we were putting into it from the standpoint of Federal dollars, then the Erie might be a successful operating railroad with modern equipment, perhaps some innovative equipment that we don't now have. You could have developed a system that would operate the railroads without the burden of maintaining the rights-of-way.

Would you comment?

Mr. MAXWELL. I think our principal concern with that particular idea is that we look on it as the first step in outright nationalization.

Mr. BROWN. What do call ConRail?

Mr. MAXWELL. Well, it is a compromise.

Mr. BROWN. A compromise of nationalization? That is not the first step?

Mr. MAXWELL. It could be the first step, if ConRail is not successful, yes. On the other hand, I think in this country we deserve every possible effort which the Congress has very rightfully recognized to develop a means of taking an intermediate step and seeing if it can go by itself.

Mr. BROWN. I just observe that the trucklines are not that nationalized, the bargelines are not, we have no ConRail in that area. The only area we are talking about doing this is the rail lines. And it seems to me there is something in that approach that might recommend consideration of it.

The CHAIRMAN. The gentleman from Texas, Mr. Krueger.

Mr. KRUEGER. Thank you, Mr. Chairman.

As I have looked through the testimony for today, I have not seen any genuine forecasts for success for the future. I am wondering, if this infusion of tax money should come to the railroads, what genuine forecasts are there that the railway can be made to operate successfully in the future?

Mr. TYLER. One of the reasons we are here is because we don't see how we can make this railroad operate successfully in the future, which is the conclusion reached by a number of the bankrupt railroads in the Northeast some time ago, and the 1973 act was enacted in order to meet that situation.

We at this point find ourselves in the same or comparable situation with the Penn Central, so we seek to return under the act with the hope and anticipation that USRA, with the help of other Government agencies, will be able to recreate a viable railroad transportation system for the northeastern part of the United States.

Mr. KRUEGER. Is it your judgment you will be able in the areas you serve to compete with other forms of transportation such as trucking and airfreight and so forth? I have not seen those issues addressed either.

Mr. TYLER. I personally can't see that far into the future. It is going to depend on what type of a plan comes out of USRA, what is done in the way of rationalizing rail lines; what is done in the way of increasing productivity of labor; what is done in the way of provid-

Digitized by Google

ing Government assistance to build up the equipment needs of railroads; what is done in the way of building up terminals.

Mr. KRUEGER. Would you have any comment on the question earlier, to the possibility of nationalizing the railway itself, as to whether you could consider this a plus or minus for the railroads?

Mr. TYLER. I think it would be a very unfortunate step.

Mr. KRUEGER. Even though it would mean you wouldn't have to pay those taxes?

Mr. TYLER. This attempt of USRA and ConRail is our last chance of avoiding it.

Mr. KRUEGER. And in what way would it be unfortunate? That is what I am not certain about. Suppose we just nationalize the—not the equipment, but just the bed itself, just the line of land?

Mr. TYLER. That is a program that Mr. Brown has been interested in for some time. Mr. Maxwell has expressed the view that could be the first step toward nationalization. There are some differences between a nationalized railroad bed on the one hand and public highways which are used extensively by trucks and other vehicles on the other, and airways that are used by airlines and general aviation, barge lines in rivers that are used by commercial barge lines and others.

There are some differences there. They are not completely the same.

Mr. MAXWELL. In effect you have the individual use of the railroad right-of-way by just the company. The waterways, airways, and highways are used by other parties than transportation of freight. It is a little bit different situation.

Mr. SKUBITZ. Would the gentleman yield?

He has touched on a point I have been interested in for some time, but not from the standpoint of nationalization.

I have thought in terms of lease-back propositions on the railroads, where the Government would take over the maintenance of the roadbeds, charge the costs back in some sort of proportionate share between the use made of the roadbed by the railroads and the use made by passenger service.

In that way we solve two problems. One, the Government would be interested in roadbed repair during slack times. Right now when we are looking for jobs, this would be a place to use people. In turn, the only time the railroads are really interested in maintaining the roadbeds is when they have got some money. And the only time they have got money is when they are operating at full capacity, and then they don't have time for it.

What I am trying to say is it is just in reverse. The Government could take care of it, when we really need to put men to work, and lease back to you or charge back to you what the actual costs are on the basis of what it costs to repair it. That can fluctuate on the amount of traffic that you are carrying over that road.

It would be much easier for us to help a railroad in that way than having you trot back here every 1, 2, or 6 months wanting some more money.

Would you mind commenting on that proposal?

Mr. TYLER. My partner, Mr. Patton, might comment on that.

Mr. PATTON. I would simply say this, sir. That may be something to consider, and it may have merit at a different time. Right now the Congress has set in motion a program which is well on its way to fruition.

Digitized by Google

I think it is only fair that the program which is being undertaken by the USRA be completed and be given an opportunity to demonstrate whether or not it can be a successful, profitable road. If it isn't, then I should say that that is one of the alternatives, the one you suggested. That should be fully explored in the handling of the railroad situation in this country.

Mr. SKUBITZ. Will the gentleman yield?

The CHAIRMAN. The gentleman's time has expired.

You may be recognized.

Mr. SKUBITZ. I don't expect to do this overnight, but I think it is time to start thinking in those terms. Corporations, chain organizations and what-have-you, are far more interested in somebody else building the building, and they in turn lease the building and even pay it back in 10 or 15 years in order that they might write it off as a business expense.

This would give the railroads the same opportunity. It would give us an opportunity to get some decent roadbeds. When you read about all the wrecks we are having on the railroad, and about the movement of poisonous gases and very shortly atomic material, I sometimes shudder to think these things are going over the kind of roadbeds we have today. And I think it is about time whether we ought to move in.

Mr. PATTON. I hope there is some group in the U.S. Government making a study of this situation as an alternative, in the event what we are doing now proves not to be successful.

Mr. SKUBITZ. Thank you.

I now yield to the gentleman if he wants some of my time.

Mr. KRUEGER. Thank you very much.

My questions are complete.

The CHAIRMAN. The gentleman from Colorado.

Mr. WIRTH. As I am sure you heard, I will try to boil those down to some kind of simple notion we can get our heads around.

Is there in the railroad industry general rules of thumb that say if you were operating in the optimum conditions and had a pie of 100, and expenses of running your railroad, what percentage of that would go to equipment? What percentage would go to salaries and manpower, and what percentage would go to maintaining a roadbed, of those would be your major expense categories?

Mr. MAXWELL. Well, the percentages vary, and you realize, between various parts of the country.

Mr. WIRTH. Sure.

Mr. MAXWELL. But, in the eastern part of the country the transportation ratio, varies between 45 and 50 percent; 45 to 50 percent of each revenue dollar taken in. The track maintenance runs between 10 and 12 percent. The equipment ratio for both locomotives and freight cars, and if passenger cars are maintained, usually runs on the order of 16 to 18 percent. And the remainder is in general expenses and miscellaneous.

Mr. WIRTH. In other words, if a proposal such as this were followed, we could assume 10 to 12 percent of your dollars might be taken over if the rights-of-way and railbeds were taken over by the Government at some time in some kind of an arrangement?

Mr. MAXWELL. Yes. You have an offset, of course, in the lease costs which the Government, which is perfectly proper, would assess to that roadbed. And you have a partial offset against that 10- to 12-percent figure I mentioned on track maintenance.

Digitized by Google

Mr. WIRTH. Sure, I understand that.

Mr. MAXWELL. Yes.

Mr. WIRTH. Thank you.

The CHAIRMAN. Would the gentleman mind repeating those percentages there for me? I didn't get them.

Mr. MAXWELL. The transportation ratio for the eastern lines usually varies between 45 and 50 percent.

The CHAIRMAN. You mean transportation? What do you mean?

Mr. MAXWELL. The expense of running trains, the operation of terminals, the manning of trains, and the various employees engaged in the actual operation of trains.

The CHAIRMAN. OK.

Mr. MAXWELL. The track maintenance and roadway maintenance, the ratio is on the order of 10 to 12 percent, and the equipment ratio for maintenance of cars and locomotives is in the area of 16 to 18 percent. The remaining is in the area of miscellaneous expenses.

Mr. WIRTH. Following up on that briefly, we are talking about 10 to 12 percent for the roadbed, right?

Mr. MAXWELL. Yes.

Mr. WIRTH. Are there savings that would be accrued into the railroads in terms of State and local taxes that you would then pay?

Mr. MAXWELL. Yes, I would expect there would be.

Mr. WIRTH. And what would those be?

Mr. MAXWELL. Those are not included in the figures that I mentioned to you. They are what you would call below the line. And those would be additional savings if the Government owned the right-of-way.

Mr. WIRTH. You would expect that is like 5 percent of the total revenue dollar? Would it be that high or higher than that?

Mr. MAXWELL. No. I would think it would be a much lower figure, probably on the order of about 1 to 2 percent. I am speaking in terms of all the revenues.

Mr. WIRTH. Sure. That would have to be something that if a proposal like this were followed, it would have to be fed back——

Mr. MAXWELL. It might very well offset the leasing costs, as an example, the leasing payments.

Mr. WIRTH. Thank you.

The CHAIRMAN. I want to thank you. Mr. Tyler, and the rest of you that have come and given us the benefit of your views. They will be given careful consideration in the markup of the bill at 10 o'clock in the morning. The committee will stand adjourned.

[The following statements and letters were received for the record.]

STATEMENT OF J. R. SNYDER, NATIONAL LEGISLATIVE DIRECTOR, UNITED TRANSPORTATION UNION

My name is J. R. Snyder. I am appearing today as the National Legislative Director of the United Transportation Union, a union representing some 250,000 railroad workers engaged in operating the nation's trains as Conductors, Engineers, Brakemen, Firemen and Switchmen. I appreciate this opportunity to present our views on the legislation before this Committee, which is designed to prevent a complete or partial shutdown of the Penn Central Railroad System and the Erie-Lackawanna Railroad on or before the end of this month of February.

As the members of this Committee know, the United Transportation Union and its' affiliated organizations in the Congress of Railway Unions strongly and successfully supported the Regional Rail Reorganization Act of 1973, which is

Digitized by Google

designed to make possible the successful reorganization of a number of bankrupt railroad systems in the Northeast and Mid-Western sections of the United States. We feel that legislation to prevent a complete financial collapse of Penn Central and Erie-Lackawanna is absolutely necessary to, in turn, prevent further recession of the industry of the entire United States and to avoid endangering the continued functining of the American rail systems.

We are wholeheartedly in support of the bill, S. 281, as passed by the Senate January 29 with one reservation, which would be in the nature of the addition of an amendment changing the language of Section 7, Part 2, to amend the last sentence to read as follows: "The Association shall take any steps it finds necessary, consistent with limitations and other provisions of this Act, to effectuate the consequences of such a revised order, and shall issue, not later than 45 days after the decision of the Reorganization Court, an appropriate supplement to the preliminary system plan." The reason that we request that S. 281 be so amended is simply to make certain that USRA shall include the Erie-Lackawanna Railroad into the final plan. This is made absolutely necessary by the announcement by the Trustees of Erie-Lackawanna that they are unable, because of the present recession, to bring about a reorganization of that railroad under the provisions of Section 77 of the Bankruptcy Act, and, further, that they are without sufficient cash flow, also due to the recession, to continue operations beyond the end of February.

While we suppose that S. 281 may be the bill which will be finally adopted to preserve the Northeast and Mid-West bankrupt railroads and make possible the formation of a successful ConRail when the plans have been finalized, we, of course, support any similar legislation which might be substituted for this bill as a result of hearings, but, in any case, we think that, as a minimum, the language now included in S. 281, with the amendment above suggested, should be incorporated in any legislation which finally deals with this emergency.

It appears from the testimony of various interested parties before the Senate Hearing on S. 281 that there is immediate need for an infusion of funds which will prevent the close down of Penn Central and Erie-Lackawanna with the consequent disastrous effect such closure would have on the employment in the region affected, which stretches from Chicago and St. Louis to Virginia and Maine, and the financial impact of the loss of connecting business on all other railroads in the remainder of the lower 48 States of the United States. Something in excess of 35% of all American rail freight either originates or terminates on the Northeastern rail lines involved in this reorganization. And of the rail lines, the Penn Central and Erie-Lackawanna constitute the overwhelming bulk of the mileage. It is impossible for us to estimate the economic effects of the unemployment, financial failures and transportation chaos which would result if shippers dependent on these railroads are deprived of the service which moves their coal, their raw products used in manufacture, their manufactured products moving to all parts of the country, the foodstuffs, both perishable and staple, which are received by rail in this region, and, in fact, the total impact upon the entire region and its' workers, its' producers, its' financial establishment, its' travelers, its' farmers, laborers and children and aged.

It is also necessary to look at the effect of the cessation of operation of Penn Central upon the movement of passengers by way of Amtrak which would fall a helpless victim as a consequence of the closing down of Penn Central. It would not appear possible that Amtrak could operate over Penn Central under the circumstances, and there is a grave possibility that likewise the commuter operations operated by Penn Central and Erie-Lackawanna could not be operated when these lines are closed down for lack of funds. We are supporting the appropriation of $250 million for Penn Central and $25 million for Erie-Lackawanna, with the requirement that Erie-Lackawanna be included in the Regional Rail Reorganization Act Plan to be drawn up by USRA. We have looked at the situation in every possible light, and while we are aware that there are some who believe that this is another case of "crying wolf" we cannot find, in talking to our members, who are the people who run the trains on these carriers, that there is any other way that they can continue operations unless they should be seized and operated as nationalized railroads by the United States Government.

Obviously we are concerned about the future of our members, who make up a large proportion of the total employees of Penn Central and Erie-Lackawanna. All of them would be thrown into the ranks of the unemployed and immediately begin to constitute a larger drain upon the welfare rolls of the United States. There are some 80,213 employees on the Penn Central Railroad and 11,872 em-

Digitized by Google

ployees on the Erie-Lackawanna, which is not an inconsiderable number of people to be affected when it is realized that there are an average of five persons in each family of an employee. There is absolutely no reason that these people should join the ranks of the unemployed because there is a very real need for their services in rail transportation and they will not become unemployed, nor will those people who depend on the railroads that operate for their transportation needs also become members of the unemployed, if this Committee reports out and the House of Representatives adopts and passes this bill.

I have mentioned the form of the shipments which are carried in large quantities by these railroads, and I believe that every member of this Committee has a fair idea of the type and amount of goods which travels over these lines. In this time of winter and fuel shortages, it is perhaps well to mention that coal and fuel oil, and propane gas are all carried in large quantities to supply the heat and energy requirements of this section of the country, and that with spring approaching great amounts of fertilizer are being received over all this area, especially in those parts of the Middle West which have a large and prosperous agricultural production. Both the transportation of food products ready to eat and of feed necessary to raise the broilers and the milk cows of the region are most essential to the health of everyone living in the Northeast—Mid-West Region. We know that efforts could be made to move some of this material by truck, which would result in highway chaos and the use of energy in the form of gasoline and diesel oil in a manner which is the least efficient for transportation purposes of any method known. We think that such a reaction by this Committee and Congress as to allow the shutdown of these carriers to take place and thereby ensure that the entire region would be thrown into a chaotic situation as regards transportation, heating, lighting, food and employment is unthinkable. We feel certain that you will report this bill, or one like it, with the necessary amendments favorable to the Full House and that it will be speedily passed.

In closing, I would like to mention that S. 281 has an amendment to put a ceiling of $90,000 on the salary of the President of Amtrak. Some persons have regarded this as a mistake, but this organization believes, and we believe that the majority of business minded Americans believe, that in a sense "you get what you pay for" and that if Amtrak is to be headed by a knowledgeable and successful chief executive there must be available a salary which is commensurate with first-class ability, because Amtrak must compete with other sections of the railroad industry to obtain a qualified president. We believe that it is time to quit picking a chief executive who has no knowledge of the railroad business and cannot grasp the situation so that Amtrak can be successful. We think there is no substitute for brains *AND* experience for a capable Amtrak executive officer.

I wish to thank you for the opportunity of presenting the viewpoint of the United Transportation Union on this emergency situation, which is now before you.

STATEMENT OF CHARLS E. WALKER, PRESIDENT; CHARLS E. WALKER ASSOCIATES, INC., ON BEHALF OF CERTAIN MAJOR SHIPPERS OF RAIL FREIGHT

Mr. Chairman and distinguished members of the Committee: We appreciate the opportunity to speak on behalf of ten major users of rail freight service on the Northeast railroads. These firms include Aluminum Company of America, Allied Chemical Corporation, Bethlehem Steel Corporation, Ford Motor Company, General Electric Company, General Motors Corporation, National Steel Corporation, Union Carbide Corporation, U.S. Steel Corporation, and Weyerhaeuser Company. These users have manufacturing plants and suppliers located throughout the continental United States as well as in the Northeastern region. They are uniquely acquainted with the operations and interdependence of transportation services in this country. These ten companies alone account for approximately one-half of the total freight moved on Penn Central. Many of the operations of these companies would shut down in five days or less if the Penn Central stops running. Adequate alternatives are not available. The recent coal strike offers a minor but real example of such a result.

We submit this statement on behalf of these companies in support of timely legislative approval of interim financial assistance for the bankrupt railroads in the Northeast in a continuing effort to focus shipper and public attention on the problems of rail freight service in the Northeast. The consequences

Digitized by Google

of a shutdown or disruption of freight service on these railroads would hit every person in this country to some degree. These companies alone operate hundreds of plants and employ hundreds of thousands of men and women in the 17-state region served by these railroads. Many plants located outside the region are totally dependent on parts, goods and supplies shipped over the bankrupt railroads in the Northeast region. Many of those operations would have to be sharply curtailed—and some would of necessity shut down completely—within days after interruption of railroad freight service by the Penn Central and Erie Lackawanna railroads. Thus, not only would Penn Central workers become unemployed, but entire plants of other industries would, of necessity, close down with massive unemployment resulting.

It is difficult to conceive of a more inappropriate time for a major railroad stoppage than today. As you know, the nation's gross national product declined at an annual rate of over 9 percent in the final quarter of 1974 and may decline by more in the current quarter—indeed, a major railroad stoppage, even if temporary, would almost guarantee that result. The unemployment figures to be released on Friday will probably show the highest percentage of people out of work since before World War II—a rate that is certain to rise much higher in the event of major rail shutdowns.

A rail stoppage will inevitably erode further the real income of American working men and women, partly because of the drop in employment and income that such a stoppage would cause, and partly because of the impact on the prices of manufactured goods resulting from attempts by producers to ship goods to market by less economical modes of transportation.

To be sure, the revenues of the companies on whose behalf we appear, all of whom are major shippers, will be significantly reduced. But this impact pales in comparison to the impact on workers and their families. The worst recession since World War II will be deepened and perhaps prolonged and prices and the cost of living would rise at the same time. An already bad situation will be made worse.

The railroads of this country are all interdependent. We have a national market place in this country and transportation is the key. One of the most significant market places is the Northeast region. Each Representative is surely aware of the goods moving to the state he or she represents from the Northeast as well as the goods moving from that State to the Northeast. Jobs are directly dependent on those uninterrupted movements. The railroads in the Northeast are a vital part of an integrated transportation system. Other railroads and modes of transportation simply cannot provide the same service without these railroads.

A simple example can illustrate the need for this railroad. Auto parts produced in Ohio are shipped to an assembly plant in Georgia. If those parts do not arrive on time, the whole assembly line shuts down. Coal is shipped from West Virginia to Pennsylvania to produce tin plate to be shipped to a canning plant in California which ships canned goods to New York and Connecticut. In 1974, the Penn Central moved 270 million tons of freight. Of this total, coal, coke, and ore accounted for 46 million tons; iron and steel products were 26 million tons and total movements by the steel industry were approximately 72 million tons.

Inventories of many materials are low. It would take a very short time for the ripple effect to appear in the form of layoffs. It takes more time to get goods moving again through the pipeline.

The present emergency cannot accurately be termed a "new crisis" in a whole series. We are sympathetic with the frustrations of the Congress and the Administration in dealing with these problems, seemingly, over and over again. The timing of this particular cash shortage is a result of the coal strike, huge declines in sales of autos and the general downturn of the economy. But this so-called crisis is really part and parcel of the problem which has developed over the course of twenty years. Mismanagement, poor regulation, labor problems and rising costs all interact.

Why does Penn Central lose so much money? It's not just operation of unprofitable lines. That accounts for only a small portion of the loss. In our judgment, the whole system presently operates at a loss due primarily to the deteriorated condition of plant and equipment. Due to deferred maintenance and failure to modernize, the productivity of the system not only has not kept pace with rising costs but has actually deteriorated while costs were doubling and doubling again. The reasons for deferring maintenance and modernization are useful now only to prevent such a process from repeating itself. The Regional Rail Reorganization Act directly addresses the problems of rebuilding and rationalizing this system. It won't solve all the problems of rail service in this

Digitized by Google

country, but the problems cannot be solved without the RRRA and Federal assistance. It is cheaper in the long run to the taxpayer to maintain railroad operation until the planning process is completed and the rebuilding process begun than to permanently subsidize or nationalize an inefficient operation.

The planning process is in mid-stream and must be completed without a shutdown of these railroads if the hope and promise of this massive effort is to ever be realized.

The only feasible solution to the immediate cash problems of the bankrupt railroads is for additional monies to be made available to them. The Department of Transportation has recognized the urgency of the situation and has recommended to the Congress emergency legislation to provide cash resources to enable railroads reorganizing under the Regional Rail Reorganization Act of 1973 to continue essential transportation services during the planning process, and to perform maintenance and improvements which are necessary for safe and efficient operations. The Senate has passed S. 281, with amendments, to provide the necessary funds. The aid contemplated by S. 281 and H.R. 2051 would be designed in such a way as to insure that value added by improvements made therewith would go to Consolidated Rail Corporation after that Corporation is brought into existence at the end of the current planning process.

We cannot overemphasize the critical nature of the increase in Section 215 loans. This money would be used for maintenance, most of the value of which would accrue to ConRail. These loans, under RRRA, would be repaid at little or no cost to the taxpayers. This program would release cash to Penn Central for operations thus reducing the total amount of Section 213 grants necessary.

Finally, the authority of the ICC to order profitable railroads to operate over lines of the bankrupts is not a feasible solution on a system as vast as Penn Central. The problems of compensation to the profitable roads are insoluble. For example, these railroads could operate over Penn Central lines only with the use of the Penn Central crews. These crews would have to be paid, presumably out of the assets of the profitable railroads. This would be an intolerable burden. Furthermore, since such roads would not be compensated until after expiration of the order, it would amount to a forced loan from profitable to bankrupt lines, possibly jeopardizing the operations of the former.

We urge prompt passage of this legislation. Thank you.

STATEMENT OF DAVID L. FOSTER, SALEM, VA.

My name is David L. Foster and I reside at Route 5, Box 472, Salem, Virginia I have a BA degree in economics from Bates College, and hold an MBA in transportation from Wharton School of Finance and Commerce, University of Pennsylvania. I am employed by the Norfolk and Western Railway in Roanoke, Virginia, where I do economic research. This statement is my own and represents my personal views, not those of my employer.

I am opposed to the Senate-passed bill granting $275,000,000 in aid to the bankrupt Penn Central Railroad, and for the following reasons I urge the House Commerce Committee not to report out such a bill to the House of Representatives:

(1) *The Penn Central is not a necessary company.* Attached as Exhibit 1 to this statement is a document compiled by the United States Railway Association (USRA).[1] This document contains a listing of those portions of the present Penn Central, and in some cases other Eastern bankrupt carriers as well, that are desired by connecting or parallel rail carriers in the East and Midwest. If your staffers were to sit down with a system map of Penn Central and mark on it the lines wanted by other railroads as shown in the USRA planning document, virtually every line of any significance would be spoken for; and many would be desired by two or three carriers. Surprising to me were the number of lines listed in this document that are often thought of as branch lines. So service continuance over most of the present Penn Central System would be continued if these tentatively-proposed acquisitions were to be consummated.

(2) *Liquidation much cheaper to taxpayers.* Since even Penn Central ceases to exist as one company, service would be continued by other railroads over virtually all of its lines of any importance, a much more economical and practical government approach to the situation would be to grant much more

---

[1] EDITOR'S NOTE.—Document may be found in committee files.

Digitized by Google

limited aid over a period of months during which time the Penn Central would be divided up ("auctioned off", as some have phrased it) among other solvent carriers. This approach offers the twin advantages of securing for Penn Central's creditors the maximum value for their properties and at the same time limiting government financing and other involvement in the railroad's operation to a minimum.

(3) *Government funds for special interests.* I oppose granting government money to special interests of any kind. Special interests are continually turning to the Federal Treasury for their protection, whether they be Lockheed Aircraft, food stamp recipients, maritime unions, or moribund railroads. This cannot be allowed to continue. The taxpayers of the nation are called upon to pay the bills of such *special interests*, while no one looks out for the *general interest* of the public or its ability to pay higher and higher sums necessary to sustain the heavier and heavier burdens of special interest financing. Aid in the amount of $275,000,000 to Penn Central, apart from being unnecessary, would not be nearly sufficient to restore the health of that dying giant. It would buy nothing beyond the perpetuation of the status quo for a year or so, but then the problem would arise anew and the taxpayer would again be asked to shoulder more massive special interest financing. The $275 million is just a start. *Billions* of dollars would be required to save the Penn Central, and the Congress *must* consider where its policies will lead in a year or two as it contemplates its current response.

(4) *Disaster for other solvent railroads.* A series of cash infusions of hundreds of millions of dollars to the Penn Central, if continued to the point where they did foster and sustain renewed viability for that company, would be detrimental to the privately-financed competing railroads in the East and Midwest, for no private company can compete against the power of the Federal Treasury. Herein lies the potential for an even larger problem for Congress in the years ahead. If one railroad after another is pushed into bankruptcy and is judged to be vital to the National Economy and thus becomes eligible for Federal backing, the spectre of owning and operating a Nationalized Railroad System becomes very real.

That preservation of Penn Central as a company is vital to the National Economy, or even to the Northeastern regional economy, is false. Senator Hartke, in pushing for the passage of the $275 million aid bill in the Senate said that compared to a Penn Central closedown, last year's Arab oil embargo would "seem like a summer picnic in which we have rainbows dancing around our hearts." Such emotional pleas are without reason, although many more will likely be made before your Committee and before the House of Representatives. Appending PC's various lines to healthy trunk-line railroads, supplemented by shipper- and municipally-owned short lines that would surely arise, would ensure continuance of service at a level adequate to sustain the shipping needs of the National and regional economies. Such a plan would require only limited government financing during the period necessary to accomplish orderly transition of lines to alternative ownership and operation, rather than an ever-growing commitment *beginning* with hundreds of millions of dollars annually.

GORDON P. MACDOUGALL,
WASHINGTON, D.C.,
February 6, 1975.

Hon. HARLEY O. STAGGERS,
Chairman, Committee on Interstate and Foreign Commerce, U.S. House of Representatives, Washington, D.C.

Re H.R. 2051 and S. 281.

DEAR MR. STAGGERS: Attached hereto is the presentation of Governor Milton J. Shapp, made during the course of the consideration of this legislation by the Senate Committee on Commerce.

If you deem it appropriate, it is requested that this statement be considered by your committee and included in the record.

Thank you.

Very truly yours,

GORDON P. MACDOUGALL,
Special Assistant Attorney General,
Commonwealth of Pennsylvania.

Digitized by Google

STATEMENT OF GOVERNOR MILTON J. SHAPP, COMMONWEALTH OF PENNSYLVANIA

S. 281, Regional Rail Reorganization Act Amendments of 1975 was introduced on January 21, 1975, by Senator Vance Hartke for himself and Senator James B. Pearson, by request, and was scheduled for hearing the following day by the Subcommittee on Surface Transportation of the U.S. Senate Committee on Commerce.

S. 281 would amend certain provisions of Regional Rail Reorganization Act of 1973, enacted January 2, 1974. (P.L. 93-246). The need advanced by the Ford Administration for emergency consideration is the threat advanced by the trustees of Penn Central Transportation Company to embargo shipments beginning in mid-February, and to shutdown railroad operations at the end of that month. Penn Central testified that it faces wage payments of over $14 million on February 25-27-28, 1975, and that it will not have the money to pay its employees on those dates.

Section 213 of the Act presently authorizes $85 million to be appropriated for emergency grants to railroads, pending implementation of the final system plan under the Act, for the continued provision of essential transportation services. It is proposed to increase this sum by $100 million, to the level of $185 million.

Section 215 of the Act authorizes the issuance of $150 million in obligations for the acquisition, maintenance, or impovement of railroad facilities and equipment necessary to improve property that will be in the final system plan. It is proposed to increase this sum by $150 million, to the level of $300 million.

There remains about $4.4 million in funds uncommitted under section 213, and some $146.6 million under section 215. However, the balance of the section 215 obligations have recently been earmarked by the United States Railway Association (U.S.R.A.) for specific projects.

The preliminary system plan is to be released by U.S.R.A. on February 26, 1975, and the final system plan on July 26, 1975.

Penn Central is vital to the economy of the Northeast and to the nation. Suspension of operation, particularly at this time, would be catastrophic and in all probability would plunge the nation deeper into economic recession while cutting off vital supplies of fuel, food and manufactured goods to the nation's most densely populated area.

Nevertheless, the Congress and the American public should not be pressured in to approving such huge sums as Penn Central now seeks without careful scrutiny. The $250 million sought by the Administration is presented as needed to keep the Penn Central and other Northeast railroads in operation through the current calendar year. During this period, the needs of the railroads may change. More money may be requested.

Meanwhile, U.S.R.A. must meet its February 26 and June 26 deadlines. It is still too early to determine whether the U.S.R.A. plan will be accepted, rejected, returned for modification, or whether entirely new legislation will be needed. Present indication is that the the latter course will be required.

Penn Central states that it requires $14 million to meet its payroll through February. It is my suggestion, therefore, that these funds and subsequent funds for the current fiscal year be made by the Congress as needs are discerned. Everyone, in the meantime, should have sufficient time to review railroad needs during the period for which the $250 million is now requested.

I opposed enactment of Regional Rail Reorganization Act of 1973. See: Hearings on S. 1031, S. 2188 and H.R. 9142, *Northeastern and Midwestern Railroad Transportation Crisis*, before Surface Transportation Subcommittee of the Committee on Commerce, U.S. Senate, 93rd Cong., 1st Sess., Ser. No. 93-8, at pp. 161-204 and 832-44 (1973). At the same time I stated, and I again urge that—

> "Interim funds should be made available to the distressed railroads to guarantee the operations during the period of time necessary to complete the study."

I would only emphasize that present services must be continued during the planning process and beyond.

The Administration's request follows the 7-2 decision of the U.S. Supreme Court, rendered on December 16, 1974, which opens the U.S. Treasury to deficiency judgments as high as $10-$12 billion, for "taking" of railroad properties under the Act. A group of U.S. Congressmen, headed by Mr. Brock Adams, filed an amicus curiae brief to the Court, opposing such a construction of the Act. The Commonwealth of Pennsylvania, in its separate amicus curiae brief, had urged that the Act be invalidated and returned to the Congress.

Digitized by Google

S. 281 goes far beyond the provision of funds until completion of the preliminary plan on February 26, or the final system plan on July 26. The purpose of the legislation is to enable funding through the first quarter of 1976.

It may very well be that the entire concept of the Regional Rail Reorganization Act will require revision after release of the preliminary system plan next month, or the final system plan in June. It would seem unwise to legislate certain funds at this time when the preliminary system plan is forthcoming in the very near future.

Moreover, evaluation of needs is being hampered by U.S.R.A. itself. Personnel from the Commonwealth of Pennsylvania, and from other States, are being denied access to important studies and reports which have been compiled by U.S.R.A. at public expense, and which are critical to an evaluation of the railroad reorganization process and to the necessity for funding. In response to our written request from our Department of Justice, we were advised by press release on January 21 that these important sources of information would be available only *after* release of the preliminary system plan on February 26. A copy of the U.S.R.A. press statement, which is wholly unsatisfactory to us, is attached.

Accordingly, I urge that funds be provided, but only such funds as to continue essential operations at this time during the planning process. Any funds for maintenance or acquisition should clearly make certain that payment is not made twice for the same facilities.

ERIE-LACKAWANNA

The trustees of the Erie-Lackawanna Railway Company (E-L) request that they be given federal financial assistance in the amount of apx. $10 million to guarantee operations through the first half of 1975, and that this assistance be given in the form of permitting E-L's reorganization court to reverse its previous determination to reorganize outside of the Act.

We do not oppose such assistance to E-L as may be required. We vigorously oppose, at least until the plans required from U.S.R.A. can be evaluated, any inclusion of E-L as a "railroad in reorganization" so as to qualify E-L for compulsory conveyance of its properties to Consolidated Rail Corporation or to other railroads. In short, E-L should not be legislated into the Act at this time, other than for the purposes of financial assistance.

Commonwealth of Pennsylvania supported the decisions of the Erie-Lackawanna and Boston & Maine reorganization courts, rendered on or about May 2, 1974, that the respective roads be reorganized outside of the Act.[1] Inclusion of E–L and B&M in Conrail would diminish competitive rail service in Pennsylvania and would also be harmful to a major railroad, Delaware & Hudson, which is not in reorganization. For these and other reasons, Pennsylvania participated in the E-L and B&M "120-day" court cases. These court decisions, in my opinion, should not be upset by Congress at this time. Particularly would it be inappropriate so soon before the preliminary system plan is made known.

However, it is my suggestion that the Congress consider amendments to the Act at this time which would permit assistance to E-L without changing its present court-determined status of May 2, 1974. This would seem possible by amendments to sections 211, 213 or 215, and without disturbance with section 207.

I do not believe that the U.S. Supreme Court's construction of the Act in December, 1974, or the present downturn in the economy, should provide justification for any additional raid on the Treasury.

[Press release, United States Railway Association, Jan. 21, 1975]

USRA To Make Reports Available

Copies of studies done for the United States Railway Association will soon be available for public inspection in a reading room being set up for that purpose at the Association's headquarters.

These consultant reports are those which the Association commissioned for its use in the formulation of the preliminary system plan for restructuring bankrupt railroads in the Northeast and Midwest. They will be made available following publication of the prelimary system plan late in February.

---

[1] *In re Boston & Maine Corporation*, 378 F. Supp. 68 (D. Mass. 1974). The Erie-Lackawanna's court decision is not yet reported.

Digitized by Google

Arthur D. Lewis, Chairman of the Board, United States Railway Association, announced that the public will be able to read or to copy the reports in a special reading room to be established by the Association.

Copying facilities will be provided as a part of the public service, with the actual cost of copying to be paid by the user. Copies of the reports also will be furnished on request, with a fee arrangement to cover the cost of reproduction and mailing on each order.

The United States Railway Association is the government corporation established under the Regional Rail Reorganization Act of 1973 to reorganize the bankrupt railroads in the 17-states comprising the Northeast and Midwest region of the United States. The six railroads now involved in that reorganization are the Penn Central, Reading, Lehigh Valley, Lehigh and Hudson River, Ann Arbor and the Central of New Jersey. A seventh carrier, the Erie-Lackawanna, has recently requested to be included in the reorganization.

Plans call for the reading room to be established on February 26 in the library, Room 2605, at the Association's headquarters in the Transport Building, 2100 Second Street S.W., Washington, D.C. 20595.

NATIONAL COUNCIL OF FARMER COOPERATIVES,
WASHINGTON, D.C.,
January 29, 1975.

Hon. HARLEY O. STAGGERS,
Chairman, House Committee on Interstate and Foreign Commerce
Rayburn House Office Building
Washington, D.C.

DEAR CONGRESSMAN STAGGERS: The National Council of Farmer Cooperatives is concerned over recent reports of an imminent shutdown of the Penn Central system due to lack of operating capital. Such a shutdown would seriously harm farmer cooperatives and their patrons who depend upon Penn Central not only for through service, but also for pick-up and delivery service at thousands of origin and destination points located throughout the Midwest and Northeast regions.

The Senate Commerce Committee earlier this week favorably reported S. 281, a bill to amend the Regional Rail Reorganization Act of 1973 to increase emergency financial assistance to railroads in reorganization. A similar bill H.R. 2051 was introduced in the House and referred to the Committee on Interstate and Foreign Commerce for consideration.

On behalf of the members of the National Council of Farmer Cooperatives, I respectfully request your Committee to give this matter the utmost priority. While we urge a careful and complete review of the request for supplemental appropriations, we believe the review should be conducted as expeditiously as possible, so as to be concluded in advance of the threatened embargo date of February 14. Expedited action by your Committee will avoid unnecessary disruption of rail service that might result if this legislation is not considered prior to the 10-day Congressional recess scheduled to commence February 7.

Yours truly,

KENNETH D. NADEN,
President.

DOW CHEMICAL U.S.A.,
WASHINGTON, D.C.,
February 4, 1974.

Re H.R. 2051 and S. 281—Increased Funding For Northeast Railroads.

Hon. HARLEY O. STAGGERS,
Chairman Committee on Interstate and Foreign Commerce
U.S. Congress, Washington, D.C.

DEAR MR. STAGGERS: While The Dow Chemical Company abhors government subsidies for transportation, it is imperative that appropriations for the aid of the bankrupt Northeast Railroads be forthcoming until the reorganization plan specified under the Regional Railroad Reorganization Act of 1973 can be accomplished. The country cannot tolerate the complete shutdown of the Penn

Digitized by Google

Central Railroad; and the Penn Central cannot continue to operate under its present circumstances without financial assistance until it is restructured. Therefore, the necessity for interim funding (as called for under the two bills above and possibly other future appropriations requests) is obvious.

We urge that your committee recommend that these funds be made available and that the loans be guaranteed. We ask that you include this statement in the Record on your hearings regarding H.R. 2051 and S. 281.

Sincerely yours,

RICHARD M. PATTERSON,
Government Relations Manager.

[Whereupon, at 4 p.m., the committee was adjourned.]

FEDERAL COMMUNICATIONS COMMISSION OVERVIEW

TUESDAY, MARCH 11, 1975

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE ON COMMUNICATIONS,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D.C.

The subcommittee met at 10 a.m., pursuant to notice, in room 2325, Rayburn House Office Building, Hon. Torbert H. Macdonald [chairman] presiding.

Mr. MACDONALD. The subcommittee will come to order, please.

This morning, the Subcommittee on Communications meets for the purpose of overview hearings involving the Federal Communications Commission. I would like to welcome the members of the Commission and their staff.

At the outset, let me explain the intent of this subcommittee in proceeding with its oversight responsibilities in the area of communications. It is my desire to effect some major changes in the way in which we discharge our oversight function. In the past, this subcommittee had the additional responsibility of dealing with complicated matters of energy policy. If you recall, this subcommittee was the Subcommittee on Communications and Power. However, now we may focus our attention on a broad range of communications matters.

As the members of this subcommittee know, I envision a very active and productive year during this first session of the 94th Congress.

The purpose of these overview hearings are to provide the members of this subcommittee, many of whom are new to the communications area, with an opportunity to discuss with the Commission their concerns and to learn how the Commission functions and what its primary responsibilities are. In addition, these hearings will enable members of the Commission and their staff to familiarize themselves with matters that concern the members of this Subcommittee.

These overview hearings will be followed later in the year by full and extensive oversight hearings. It is my hope that these oversight hearings will provide a model for effective legislative oversight of the regulatory agencies. These oversight hearings will involve extensive preparation by the staff of the subcommittee, and by the members of this subcommittee, working closely with the staff and the members of the Commission, and will enable this subcommittee to take much a more exhaustive look at the FCC and how it operates than has ever been possible before. I might add that we are enlarging our staff with an eye toward assisting us in pursuing this very important objective.

I realize that Chairman Wiley is completing his first year as Chairman of the FCC, and I welcome him and the other Commissioners here this morning. I would like to say that there are many areas in which I

Digitized by Google

feel the Commission is doing a good job and, quite candidly, other areas where I feel the Commission's record is far less commendable. I suspect that this subcommittee will continue to have its differences with the Commission in terms of both procedure and policy, but I can assure the Commissioners and their staff that at least there will be increased dialog between the Congress and the FCC; that is, if the FCC answers its phone.

Chairman Wiley, I appreciate your condensing your opening remarks. We will receive your entire statement into the record as if read, without objection, and you may proceed, now. Actually, we have your rather lengthy statement, and the compression of it, which still seems to me to be a little lengthy—maybe you can even verbally condense that, because it offers matters that are familiar to many of us, and actually, this morning, I would like to get on with the questioning as quickly as possible because I have some things in mind, and I know other members of the committee do as well, that have been sort of fermenting if that is a good choice of words, in my mind, dealing with the FCC. I can't think of a better time to get some answers than this morning, when, as I see, you have got the whole Commission here.

STATEMENT OF HON. RICHARD E. WILEY, CHAIRMAN, FEDERAL COMMUNICATIONS COMMISSION, ACCOMPANIED BY COMMISSIONERS ROBERT E. LEE, CHARLOTTE T. REID, BENJAMIN L. HOOKS, JAMES H. QUELLO, ABBOTT WASHBURN, AND GLEN O. ROBINSON; WALTER R. HINCHMAN, CHIEF, COMMON CARRIER BUREAU; AND DAVID D. KINLEY, CHIEF, CABLE TELEVISION BUREAU

Mr. WILEY. Yes; we do.

Mr. MACDONALD. For which we thank you. You may proceed.

Mr. WILEY. Thank you very much, Mr. Chairman and members of the subcommittee. I appreciate this opportunity to review with you significant activities of the FCC during the past year. As you suggest, I have with me my colleagues, Mr. Robert E. Lee, our veteran on the Commission; Charlotte T. Reid; and Benjamin L. Hooks. Additionally, we have our trio of newcomers, Commissioners James Quello, Abbott Washburn, and Glen O. Robinson. Additionally, we also have our top personnel on hand.

As you suggest, I have submitted a lengthy statement covering a wide variety of major matters, and I also have a shorter statement from which I am going to read, and I will try to abide by your request to cut it down some.

While broadcasting and its associated problems are often considered the glamorous portion of the Commission's broad regulatory scope, increasing attention has been focused in recent years on the Commission's activities dealing with communications common carriers. I would like to begin our review by discussing telephone rate regulation, especially our February 27 decision to permit the Bell System to file tariffs which would increase interstate revenues by $365 million annually.

Accordingly, I would like to proceed by going to our A.T. & T. rate case. A.T. & T., through its Bell System, handles some 80 percent of all telephone service in the United States. For many years, the regu-

Digitized by Google

latory approach of the Commission was to set interstate and foreign telephone rates through a combination of rulemaking and a process of continuous surveillance. In 1971, despite the vast effort required, the FCC embarked upon an in-depth examination of the telephone ratemaking process.

In phase 1 of this investigation, the Commission sought to determine the just and proper rate of return for the Bell System. The investigation went into the Bell System's embedded cost of debt, cost of new debt, debt/equity ratio, and cost of equity. The investigation required many days of hearings and hundreds of exhibits. In November 1972, the investigation was completed, and we prescribed the allowable rate of return for the Bell System as 8.5 percent. We held, however, that A.T. & T. could increase its earnings up to 9 percent, through more efficient operations and increased productivity under the tariffs then in effect, without seeking authority from the Commission. It was felt that such an incentive for the Bell System would be desirable and in the public interest.

Hearings are now being conducted on phase II of the rate case, involving an examination of the costs and expenses of the Bell System, including the reasonableness of Western Electric's prices for equipment to the Bell operating companies, the amounts claimed by Bell for investment and operating expenses, and the lawfulness of the overall internal rate structure of the message toll service. The hearings are expected to be completed by midyear, and we should have a final decision some time in 1976.

We now go to the A.T. & T. rate filing of January 1975. On January 3, 1975, A.T. & T. submitted to the Commission a proposed new tariff seeking increased revenues for the Bell System's interstate services in the amount of $717 million per year, effective March 4, 1975. The proposed rate adjustments were designed to produce an interstate rate of return of 10½ percent to 11 percent on investment. A.T. & T. contended that this rate of return was required to sustain the financial integrity of the Bell System and to attract necessary debt and equity capital under prevailing conditions in the money markets.

Upon the filing of the new tariff, the Commission basically had three alternatives under present law: (1) To allow the entire $717 million tariff to go into effect after a 90-day suspension period; (2) to reject the tariff in its entirety; or (3) to modify our prescription to take into consideration economic changes which were uncontested. We had to act before March 4, which was the effective date of the tariff.

On February 27, the Commission rejected Bell's request for an annual increase in revenues of $717 million. Recognizing, however, that it was uncontested that Bell's capital structure had changed and that the embedded cost of debt had risen almost a full percentage point, the Commission, in accordance with the recommendations of our Common Carrier Bureau, modified Bell's prescribed rate of return to cover these known changes. This action increased Bell's allowable rate of return from 8.5 percent established in the phase 1 case, to 8.74 percent, and allowed Bell an annual increase in revenues of $365 million. Without a hearing, however, the Commission was unable to determine Bell's cost of equity. Thus, this matter was set

Digitized by Google

for an expedited hearing to be concluded within 9 months. At the end of this proceeding, Bell's rate of return will be modified appropriately.

Our actions in response to any tariff filing, as indicated previously, are severely limited by the existing statute. At the same time, our tariff submissions continuously grow more complex due to new monopoly and competitive services now being considered. It is for this reason that we will shortly propose new legislation to provide the Commission more latitude and flexibility in dealing with these complex matters. Specifically, we are seeking authority, among other things, to suspend for up to 9 months, which with expedited hearing procedures we recently have initiated, should be sufficient to complete hearings on even more complex filings. Additionally, we want to be able to grant partial or temporary increases where indisputable evidence exists to support such grants. In our recent decision, we were able to accomplish this result only because of the previous prescription of a rate of return.

Let me turn now to the *Private Line Rate* case, docket No. 18128. There, we hope to establish guidelines for the assignment of Bell System revenue requirements among its principal competitive and monopoly interstate and foreign services. Proposed findings and conclusions have been filed, and in a few weeks there will be a recommended decision.

In January 1974, the "Hi-Lo" private line service tariff revisions were filed by the Bell System. These tariffs would, for the first time, significantly depart from the concept of nationwide rate averaging by seeking to price private line telephone service according to whether high or low density facilities are involved, with reduced rates applying over allegedly lower cost high density routes. They raise a number of substantial questions, including the proper allocation of direct and common costs, and thus were suspended and designated for a hearing.

Another important proceeding before the Commission involves appropriate regulatory policies concerning resale and shared use of common carrier services and facilities. There is growing interest in the communications industry in establishing middlemen or "brokers" to obtain transmission capability from established carriers and then to provide new or more economical communications service to the public. At present, the tariffs of the established carriers restrict these operations. We are now engaged in a full hearing to determine if such restrictions serve a valid public policy.

Moving now to interconnection, we also are involved in a number of proceedings dealing with the interconnection of separate systems or facilities with the nationwide communications network of the established common carriers. Recently, our staff recommended a new FCC certification program for interconnection equipment to a Federal/State joint board. We believe that effective coordination between Federal and State regulators is very important in these areas. However, we have also ruled that a State may not take action which would thwart Federal policy on customer interconnection, a decision which has been appealed to the U.S. Court of Appeals for the Fourth Circuit.

During the past year, we also implemented the interconnection policies adopted in our specialized carrier and domestic satellite proceedings. These decisions held that new terrestrial specialized carriers and new domestic satellite carriers should have nondiscriminatory

Digitized by Google

access to the monopoly facilities of the telephone companies. In September of last year, our ruling was upheld by the Court of Appeals for the Third Circuit.

Going to specialized carriers, requests for authority to extend the geographic coverage of the newly authorized specialized carriers continue to be processed by the Commission. Approximately 200 cities will be covered by presently filed applications. Two carriers are on the way to promote coast to coast service in the near future. The U.S. Court of Appeals for the Ninth Circuit affirmed our basic Specialized Common Carrier decision. You will notice my statement sets forth information on these particular systems.

Proceeding now to domestic satellites, in the newly developing realm of domestic satellites, the Commission completed its policymaking proceedings in December 1972. Since then, we have authorized five of the seven satellite proposals initially received, together with several experimental earth stations. The advent of domestic satellite communications provides an opportunity to integrate service between the 48 contiguous States and Alaska, Hawaii, and Puerto Rico. We are currently evaluating carrier proposals in this regard.

I should also mention that, very recently, the Commission rejected a specific joint proposed arrangement between IBM and Comsat but indicated other options for independent or coordinated service which we would approve.

We turn now very quickly to international telecommunications. This area continues to be the fastest growing segment in the entire telecommunications field. During 1973, we authorized a new cable system in the Pacific Region—Transpac II—and it was partially completed in 1974. Rate reductions have resulted from this system. In the Atlantic region, Earth stations were authorized to expand to handle increased traffic and to provide for diversity of their satellite traffic capability. Furthermore, Comsat was authorized to participate with its partners in Intelsat to construct three new satellites, the so-called Intelsat IV–A satellite series. A number of international matters, however, still remain to be resolved. For example, we are reexamining the relationship between the international record carriers and Western Union in the pickup and delivery of international telegram traffic in the Continental United States. We have also set for hearing the question of whether Western Union is entitled to an increase in the per word charge for the carriage, within the mainland, of inbound and outbound international public message telegram traffic. And a U.S.-European-Canadian meeting in Munich in October 1974, established a continuing consultative process among these countries in planning future transmission facilities in the North Atlantic.

I should also like to add that the Commission is currently engaged in a proceeding to determine whether Comsat's tariffs are in the public interest. The hearing record was closed on December 1, 1974, and a decision by the Commission is anticipated by June 1, 1975.

Finally, let me call your attention to another important proceeding which we initiated last year: A major study of the economic factors and interrelationships of the common carrier industry in docket 20003. A major objective of this effort is to determine the economic effects of our policies relating to competition, interconnection, various

Digitized by Google

ratemaking practices and the allocation of common plant expenses and revenues to interstate rather than intrastate operations.

I turn now quickly to our activity in the broadcast area. One of our major concerns at the commission during the past year has been TV programing for children. I am proud of the considerable progress we have made in this sector of our broadcast regulatory activity.

On October 24, 1974, the Commission concluded a study of children's television by issuing its Children's Television Report and Policy statement. This report established a series of guidelines for programing and advertising designed for the child audience. In concluding this 4-year-old proceeding, the Commission was aware of the tension between its duty to regulate the medium in the public interest and its corresponding obligation, under the first amendment and section 326 of the Communications Act, to avoid regulations which might constitute censorship. Traditionally, the Commission has resolved this dilemma by establishing general guidelines and avoiding excessive governmental interference in specific program decisions. This traditional approach was followed in the Children's Television Report.

The report reached a number of conclusions. In general these can be summarized by stating two guidelines. First, TV stations should provide a reasonable amount of programing for children, including educational material and material designed particularly for younger children, and the scheduling of such programing should be made more diversified. Second, the level of advertising during these programs should be reduced and a clear separation between program material and commercials should be established.

To implement this policy, the Commission amended its TV license renewal form to obtain information on programs for children, and on past and proposed commercial practices during these programs. The Commission, however, declined to adopt rules to enforce its policy since the broadcast industry, after extensive discussions with me, adopted commercial time standards comparable to those the FCC would have considered. The amended license renewal form, however, will enable us to determine whether TV licensees are complying with the industry standards, and to evaluate whether self-regulation is effective.

On February 19, 1975, the Commission issued another report regarding children and television entitled, "Report on the Broadcast of Violent, Indecent and Obscene Material." The report was in response to requests from the Congress, studies on the harmful effects of televised violence on children, and a growing number of complaints concerning this type of programing.

The report focused on two questions, namely, what steps might be taken to prohibit the broadcasting of obscene and indecent material, and what could be done to protect children from other sexually oriented or violent material which might be inappropriate for them. With regard to the first question, direct Government action is required. The Commission has responded by issuing a recent declaratory order which clarifies the use of the term "indecent" in 18 U.S.C. 1464—A statute which forbids the broadcast of profane, indecent or obscene language. Specifically, we held that certain words describing sexual or excretory organs or activities—broadcast in midafternoon by a New York City radio station—were covered by the statute.

Digitized by Google

The Commission, moreover, intends to recommend to the Congress, an amendment to 18 U.S.C. 1464, which would eliminate the uncertainty regarding whether visual depiction of prohibited matter is included within the law. Accordingly, it covers cable television, as well as radio.

With respect to the broader question of what is appropriate for TV viewing by children, the Commission believes that industry self-regulation is preferable to Government standards. Our preference is based on a concern that the Commission could become too deeply involved in programing judgments which would raise serious legal and constitutional questions. Therefore, I initiated a series of meetings with executives of the three major television networks and of the National Association of Broadcasters to explore the possibility of meaningful solutions in the private sector. As a result of these meetings, the networks and the NAB's code review board adopted the following guidelines to be presumably effective this September.

(1) The first hour of network programing in prime time and the preceding hour is to be designated as a family viewing period. This means, generally, 7 to 9 p.m. eastern time.

(2) Viewer advisories will be broadcast in audio and video form to warn parents if programs during the family viewing period occasionally have material unsuitable for children. Viewer advisories will also be used later in the evening if programs have material that might be disturbing to significant portions of the audience.

(3) Broadcasters will attempt to notify publishers of TV program listings which programs will contain advisories.

The Commission believes that these guidelines are commendable, and will provide considerable aid to parents for the protection of children from violent and obscene material. A meaningful evaluation of these guidelines, however, must wait until it is possible to observe how they are interpreted and applied by broadcasters. Ultimately, their success will depend on the reasonableness and good faith of the broadcast industry.

Turning to another major decision of the Commission, this year we adopted newspaper broadcast cross-ownership rules on January 28. These rules prohibit the multiple ownership of AM, FM, and television broadcast stations. Divestiture is required by January 1, 1980.

Moving on to license renewals, I think this committee is very well informed on this subject. The Commission is working on developing its own package in this area. I think, in the near future, we will finalize our ascertainment. We are also working on a new comparative renewal policy statement and an improved system of staff delegations to improve the speed of our processing capability and to allow us to spend more time on those applications that require remedial action.

Going to the fairness doctrine, we reaffirmed the need for the fairness doctrine, which requires that broadcasters devote a reasonable percentage of time to coverage of public issues and that such coverage provide an opportunity for the presentation of contrasting viewpoints.

The Supreme Court in the landmark *Red Lion* decision upheld the constitutionality of the fairness doctrine, which is mandated in section 315 of the act.

On July 12, 1974, we released our fairness report which was the end result of a 3-year relook at the doctrine in light of developing contro-

Digitized by Google

versies in areas such as counter commercials and applicability of the doctrine to political broadcasts. Our report basically reaffirmed the need for the fairness doctrine, as I indicated.

Let me turn now to the prime time access rule. The prime time access rule, as the committee knows, basically limits the networks to 3 hours of prime time programing during the evening.

In October 1972, we initiated an inquiry to examine the effectiveness of the rule and decided to modify it. However, our modification was stayed by the Court of Appeals for the Second Circuit, and they suggested additional inquiry. We made that inquiry, and this year we reaffirmed our original decision to lessen network control over the selection of prime time programing, and we made modifications primarily to exempt documentary, public affairs, and children's programing. Once again it was appealed to the courts and was reargued last Friday. We expect the rule to be implemented this September, but this will depend on the ultimate decision of the court.

The Commission has been active in other broadcast matters, which, for the sake of brevity, I shall only touch upon. We have notified broadcasters of athletic events that they must disclose during broadcasts any arrangements whereby sports announcers have been selected by someone other than the broadcaster. To the extent consistent with international agreements, we have allowed daytime-only licensees an additional hour of operation during the presunrise period in order to mitigate problems caused by the earlier effective date of daylight saving time.

The Commission is also examining several issues such as the use of reruns during prime time on TV, and the feasibility of making additional VHF television channel assignments through drop-ins at shorter mileage separations from other stations. We are still involved in reregulation and, during 1974, 261 rules were modified to meet current needs. Finally, an interesting and worthwhile innovation has been a series of regional meetings where various Commissioners, key staff members and myself met face-to-face with broadcasters and the general public.

Let me turn now to the emerging area of cable television. Our new cable regulatory program is entering its fourth year, and we are undertaking a comprehensive review of some key elements of that program.

This review is being conducted by two task forces, and through the process of several major rulemakings. The cable reregulation task force, similar to the work we have done in broadcasting—is reviewing all of our cable rules, forms, and procedures to modify and simplify them, particularly for the smaller cable operator. The Commission will be reviewing the work and recommendations of this task force later this month. I anticipate changes in the future.

A second task force, known as the 1977 task force, is studying the problems faced by the Commission and the industry as the March 31, 1977, deadline approaches for full compliance with our 1972 rules. As a result of this staff effort, the Commission has recently proposed for public comment a postponement of the deadline for certain of our channel capacity requirements. These requirements would apply to many older systems which would have to be completely rebuilt to comply. We hope to initiate another proceeding this month to inquire substantively into these requirements.

Digitized by Google

In addition, the Commission has almost completed major revisions to our antisiphoning rules for movies, sports, and series programing on pay cable. We would hope to finalize these rules this week or next. Likewise, in the area of our network program exclusivity or nonduplication rules, the Commission has decided on major revisions. The staff is now in the process of drafting the final documents, which should be issued in the next several weeks.

We are also examining our policy regarding divestiture when there is cross-ownership of cable TV systems and co-located TV stations, a proposed sports blackout rule for cable systems (a proceeding which, I might add, has been pending since February of 1972), our standards for cable franchises, and proposed legislation for cable television drafted by the Office of Telecommunications Policy.

During the past year, through staff growth and efficiencies, we have made a 40-percent reduction in cable applications backlog and a sizable decrease in average case processing time. We are determined to modify our regulatory framework to accommodate the public interest in developing this emerging communications service to the American people.

We have covered, now, common carrier, broadcast, and cable TV. Let me mention several other areas. One of the most important decisions concerning land mobile spectrum relief in the last 25 years was taken last year in Docket 18262, the so-called 900 MHz proceeding. Our action provides for expanded private systems of communication in the public safety, industrial, and land transportation radio services and also makes possible the eventual establishment of a nationwide, compatible, mobile radiotelephone and limited dispatch service. We will complete our final reconsideration of this matter this month, paving the way for the development of the new services contemplated. In another docket, we have extended to three additional cities the opportunity for land mobile sharing of TV channels 14–20. Additionally, the needs of emergency medical services were afforded relief by our June action in Docket 19880, creating a new communications category in the special emergency radio service. We have also adopted interim rules (Docket 18302) to provide for automatic vehicle location and monitoring systems, important to police, fire, transit, and other public services.

I will skip over some of the material on page 22, but I commend it to your attention. I might say that in the amateur and citizens radio service, we are considering four interrelated proceedings: A creation of a new class E citizens service, an expansion of class D stations, a restructuring of amateur radio operator licenses (to permit a no-code license) and an initiation of automatic identification requirements for the citizens band.

Let me conclude my verbal statement to you by briefly mentioning the final two topics in the complete statement, namely, fees and our backlog reduction and management improvement program. In March 1974, the Supreme Court, in *National Cable Television Association* v. *United States*, held that the Commission's annual fee for cable TV systems had not been formulated in accordance with existing law. We are now in the court of appeals regarding our new fee schedule, and we suggested, in our statement, the Congress may wish to consider clarifying legislation in this entire area.

Digitized by Google

Mr. Chairman, as should be evident from my full statement, it has been a busy year with many accomplishments. While we are pleased with some of our progress, we recognize much remains to be done. As more of the pressing major policy matters are resolved, we hope soon to be able to focus increased attention on ways to reduce the backlog of applications and other matters being processed.

Mr. Chairman, that concludes my statement. We will be pleased to respond to your questions.

[Chairman Wiley's prepared statement follows:]

STATEMENT OF RICHARD E. WILEY, CHAIRMAN, FEDERAL COMMUNICATIONS COMMISSION

Mr. Chairman and Members of the Subcommittee: Thank you for the opportunity to review with you significant activities of the Federal Communications Commission during the past year. I have with me my colleagues, Commissioners Robert E. Lee, Charlotte T. Reid, Benjamin L. Hooks, James H. Quello, Abbott Washburn and Glen O. Robinson.

While broadcasting and its associated problems are often considered the glamorous portion of the Commission's broad regulatory scope, increasing attention has been focused in recent years on the Commission's activities dealing with communications common carriers. I would like to begin our review by discussing telephone rate regulation, especially our February 27 decision to permit the Bell System to file tariffs which would increase interstate revenues by $365 million annually.

COMMON CARRIER

AT&T Rate Case

For the benefit of some of the new members of the Subcommittee, a little background may offer some perspective. AT&T, through its Bell System, handles approximately 80% of all telephone service in the United States. For many years, the regulatory approach of the Commission was to set interstate and foreign telephone rates through a process of rulemakings and continuous surveillance. In 1971, despite the vast effort required, the Commission undertook an in-depth examination of the telephone ratemaking process in Docket 19129—the AT&T Rate case.

In Phase I of this investigation, the Commission sought to determine the just and proper rate of return for the Bell System. The investigation went into the Bell System's embedded cost of debt, cost of new debt, debt/equity ratio, and cost of equity. The investigation required many days of hearings and hundreds of exhibits. In November, 1972, the investigation was completed and we prescribed the allowable rate of return for the Bell System as 8.5%. We held, however, that AT&T could increase its earnings up to 9% through more efficient operation and increased productivity under the tariffs then in effect, without seeking authority from the Commission. It was felt that such an incentive for the Bell System would be desirable and in the public interest.

The remaining issues in Phase II of the rate case call for an examination of costs and expenses of the Bell System, including the reasonableness of Western Electric's prices on equipment sold to Bell operating companies, the amounts claimed by Bell for investment and operating expenses, and the lawfulness of the overall internal rate structure of the Message Toll Service. As we reported last year, Phase II unfortunately had a slow start because of difficulties in recruiting qualified personnel to conduct a meaningful examination of the issues, and because of procedural problems with AT&T, particularly involving staff access to needed information from Western Electric. These problems, however, were resolved in 1973 and the evidentiary hearings began on May 13, 1974. The examination of AT&T's direct case, which was submitted in November, 1973, was completed in November, 1974. The Trial Staff has now offered its testimony, and it is now being tested by the other parties. The hearings are expected to be completed by mid-year but, due to the complexities of the issues involved, a final decision is not anticipated until sometime in 1976.

AT&T Rate Filing of January 1975

On January 3, 1975, AT&T submitted to the Commission a proposed new tariff seeking increased revenues for the Bell System's interstate services in the amount of $717 million per year, effective March 4, 1975. The proposed rate adjustments were designed to produce an interstate rate of return of 10½ to 11% on investment.

AT&T contended that this rate of return was required to sustain the financial integrity of the Bell System and to attract necessary debt and equity capital under prevailing conditions in the money markets.

Upon the filing of the new tariff, the Commission basically had three alternatives under present law: (1) to allow the entire $717 million tariff to go into effect after a ninety-day suspension period; (2) to reject the tariff in its entirety; or (3) to modify our prescription to take into consideration economic changes which were uncontested. To prevent the tariff from going into effect, it was necessary for us to take appropriate action prior to March 4 (the effective date of the tariff).

On February 27, in accordance with the recommendations of the Common Carrier Bureau, the Commission rejected Bell's request for an annual increase in revenues of $717 million. Recognizing, however, that it was uncontested that Bell's capital structure had changed and that the embedded cost of debt had risen almost a full percentage point, the Commission modified Bell's prescribed rate of return to cover these known changes. This action increased Bell's allowable rate of return from 8.5%, established in the Phase I case, to 8.74%, and allowed Bell an annual increase in revenues of $365 million. Without a hearing, however, the Commission was unable to determine Bell's cost of equity. Thus, this matter was set for an expedited hearing to be concluded within nine months. At the end of this proceeding, Bell's rate of return will be modified appropriately.

The instant case highlights the need for the Commission to have greater flexibility and authority in dealing with tariff filings, and illustrates how such flexibility and authority could be employed in the public interest. As you are aware, Mr. Chairman, the law presently allows a carrier to file a tariff seeking increases in rates on 60 days' notice. In most instances, the Commission can only prevent the tariff from going into effect after the notice period by suspending it for a period up to ninety days. Thus, the staff has only the notice period of 60 days to determine the facts and make recommendations to the full Commission on the proposed disposition of the tariff. Due to the ever increasing complexities of our present day tariffs, it is often difficult to make a thorough evaluation in this time period. For that reason, we are proposing a legislative change to extend these periods. In addition, it traditionally has taken from one to two years, or more, to complete a hearing on the lawfulness of the tariff. This has resulted in tariffs being in effect for a minimum of 9 months before their lawfulness could be determined. We recently have instituted an expedited hearing procedure, relying heavily on written rather than oral examination, by which we expect to reduce the hearing time to 9 months in most cases. However, under the present statute, tariffs still will go into effect months before the question of their lawfulness has been resolved.

We are proposing legislation which would extend the 60-day notice period to 90 days and make it applicable to all tariff filings, including those involving no rate increase. We are also proposing that we be authorized to suspend for up to 9 months, by which time we would expect to complete a hearing on even the most complex filings. Finally, we are asking authority to suspend in part and grant in part. Another problem with the present statute is that any suspension must apply to the entire tariff. Thus, even where the Commission is convinced by the uncontroverted evidence that the carrier is entitled to at least a portion of the increase sought (as in the present case), we lack authority to approve such a partial increase.

In the recent decision, we were able to accomplish many of the objectives of our legislative recommendation only because the Commission had previously prescribed a rate of return and, thus, could reject the tariff filing as a violation of that prescription. However, because of the uncontested evidence of Bell's increased debt cost and changes in the capital structure, the Commission could justifiably modify its previous prescription and allow Bell a new rate of return to cover the increased costs. In addition, we were able to defer the effective date of the full increase sought pending a full adjudication of its lawfulness. However, I must emphasize that this is the exception rather than the rule with respect to our ability to handle such cases.

Private Line Rate Cases

Proposed findings and conclusions have been filed in the *Private Line Rate Case* (Docket 18128), and there will be a Recommended Decision in a few weeks from the Chief of our Common Carrier Bureau. Following further comment and exceptions by all parties on that recommendation, the Commission expects to reach a final decision before the end of the year. In this proceeding, we hope to establish guidelines for the assignment of Bell System revenue requirements among its principal interstate and foreign services. This includes not only the monopoly

Message Toll Service and WATS services but also the private line services of the Bell System where they compete now in this rapidly expanding market with the newly specialized communications carriers.

In January, 1974, we suspended for the statutory limit of 90 days the "Hi-Lo" private line service tariff revisions filed by the Bell System and ordered a hearing on the lawfulness of the tariffs (Docket 19919). In its filings, AT&T departed from nationwide costs and rate averaging, which it had previously applied to interstate services, and instead priced private line service according to whether high or low density facilities were involved. Reduced rates would apply over alledgedly lower-cost high density routes and increased rates would apply over allegedly higher-cost low density routes. These "Hi-Lo" tariffs raise a number of substantial questions including the proper allocation of direct and common costs for specific services. We entered an accounting order to provide for possible refunds and set forth procedures requiring a paper hearing which will allow for an expedited resolution. The record was closed in July, 1974, and oral argument was held before the Commission on November 5. We anticipate a decision in June of this year.

Another important area of private line service involves the resale and shared use of common carrier services and facilities (Docket 20097). There is growing interest in the communications industry in establishing middle men or "brokers" to obtain bulk transmission capability from established carriers so that they, in turn, can provide new or more economical communications services to the public. We have previously authorized three firms—Telenet, Graphics, and Packet Switch—to engage in selected types of brokerage. The tariffs of established carriers have historically limited such operations. For that reason, we are undertaking an inquiry to determine the potential need for such services; the extent to which these new entities should be able to obtain communications services from the established carriers; and what regulation of these operations would be in the public interest. A Notice of Inquiry and Proposed Rulemaking was issued in July, 1974, inviting comments by interested persons on the many interrelated issues to be considered by the Commission in developing policy in this area. Comments of the parties have been received and are now under study by the staff.

Interconnection

We also are involved in a number of proceedings dealing with the interconnection of separate systems or facilities with the nationwide communications network of the established common carriers. Interconnection involves two basic areas: customer/carrier interconnection, namely, connection of customer-provided private systems and facilities to the facilities of common carriers; and carrier/carrier interconnection involving the connection of the facilities of one carrier to the facilities of another carrier.

Interconnection of customer-provided equipment through the use of a special interface or coupling arrangement is now permitted under telephone company tariffs, pursuant to the Commission's *Carterfone* decision. Following *Carterfone*, the Commission undertook to determine whether it would be feasible and in the public interest to require that some customer-provided equipment be allowed direct interconnection with the network, thus eliminating both a cost and operational deterrent contained in the present tariffs. After extensive staff work, independent studies, and comments by interested parties, our staff recently recommended a certification program for such equipment to be administered jointly by our Common Carrier Bureau and Office of Chief Engineer. This proposal was considered by a Federal-State Joint Board on March 3, and we have scheduled a further meeting on the subject for April 24. Meanwhile, our staff is undertaking discussions with the staff of the National Association of Regulatory Utility Commissioners (NARUC) on this and related subjects.

I believe that effective coordination and cooperation between Federal and State regulators is very important in areas such as this, and I have pledged the Commission's best efforts to meet our share of that responsibility.

In January, 1974, we issued an important ruling on customer interconnection in Docket 19808. Noting that interstate and foreign communication services depend vitally on plant facilities and operations which are inextricably interwoven with intrastate services, we ruled that this fact does not permit conflicting state and Federal policies to exist with respect to interconnection of customer-provided equipment and that, consistent with judicial precedent, Federal policy must prevail. Accordingly, we ruled that a state may not take any action that would thwart Federal policy on customer interconnection. This decision was recently appealed by the North Carolina Regulatory Commission to the U.S. Court of Appeals for the 4th Circuit.

Digitized by Google

With regard to carrier/carrier interconnection, our main regulatory activities in the past year have been to implement the interconnection policies that we adopted in our *Specialized Carrier* and *Domestic Satellite* proceedings. Those decisions held that new terrestrial specialized carriers and new domestic satellite carriers should have non-discriminatory access to the monopoly facilities of telephone companies in order to provide authorized services to their customers. To implement this holding, we ruled that the leasing of facilities or services by one carrier to another for interstate or foreign communications must be governed by tariffs filed with the FCC rather than by private contract. Bell appealed both these principles. In September, 1974, the U.S. Court of Appeals for the Third Circuit affirmed the Commission's rulings.

Separations

You may recall that, last year, I discussed the continuing problem of jurisdictional separations. Jurisdictional separations involve the allocation, for ratemaking purposes, of investment and costs of telephone plant and operations between interstate service and local exchange and intrastate toll service. This allocation is becoming quite controversial in light of generally increasing costs and rates, particularly for local exchange service, and the state regulatory bodies are focusing their attention more and more on this problem. The Commission adopted rules after a Federal-State Joint Board proceeding to provide guidelines in making these allocations. A petition filed by the National Association of Regulatory Utility Commissioners (NARUC) is now pending before the Commission urging changes in the current separations formula. If these changes are adopted, interstate operations would have to bear an additional $575 million of revenue requirements, shifted from intrastate operations.

We are aware of the problems faced by the states regarding further intrastate rate increases. Accordingly, we have suggested to NARUC that joint studies be undertaken to determine whether the judicious use of usage-sensitive pricing for local telephone service, instead of traditional flat-rate pricing, would lead to more efficient use of the communications network. If this occurred, the investment required by telephone companies for local exchange service, and the need for rate increases, would be reduced. Experiments in usage-sensitive pricing are being conducted in a few local areas, and we are closely following the results of these experiments.

Specialized Common Carriers

In 1973, AT&T filed a petition requesting that we reverse our 1971 decision allowing specialized common carriers to enter the common carrier communications field. AT&T requested that we discontinue all further grants to competitors pending the outcome of an evidentiary hearing on its petition.

In December, 1973, we denied this petition (FCC 73–1298) on the ground that a re-examination of the policies formulated by our decision would be unwarranted and premature. We held that AT&T had not advanced any significant arguments that were not carefully considered by the Commission at the time of its decision, and that there had been no changes in circumstances or unanticipated developments since our decision which might require reexamination. The U.S. Court of Appeals for the 9th Circuit on January 20, 1975 affirmed our *Specialized Common Carrier* Decision.

Since the 1971 decision, we have issued a large number of construction authorizations and operating licenses for various types of specialized carrier systems. Two carriers have now been authorized coast-to-coast systems and are in the final stages of construction. Several carriers have large partial systems in operation. The total applications filed cover services to more than 200 cities in the United States.

Domestic Satellites

The Commission completed its domestic satellite policy-making proceeding in December, 1972. Since then, we have authorized five of the seven domestic satellite proposals initially received, together with several experimental earth stations.

Western Union Telegraph Company launched two of its three satellites last year and has been providing service since July. The Communications Satellite Corporation (COMSAT) has formed a subsidiary, Comsat General, to own and operate four satellites authorized to provide satellite services for the seven authorized AT&T earth stations.

Digitized by Google

General Telephone and Electronics (GT&E) was authorized to establish a separate system to provide message telephone and other services, through a lease arrangement with National Satellite Services, Inc. (a Hughes Aircraft subsidiary). This authorization was appealed to the Court of Appeals by AT&T. Subsequently, GTE and AT&T determined through negotiations to merge their efforts. Accordingly, GTE has requested authorization to drop its plans for a separate system in favor of owning 3 of the 7 earth stations proposed for a joint AT&T/GTE system. This request has been set for hearing.

In addition to these three systems, interim operations have been authorized to American Satellite Corporation and RCA Global Communications, Inc./RCA Alaska Communications, Inc. The RCA system is now providing service to Alaska and the lower 48 states, temporarily using the Canadian or the Western Union Satellite System until they launch their own "bird" in 1975. American Satellite presently leases satellite transponders on the Western Union system to provide service via its own earth stations. In addition to the carrier-owned earth stations associated with these systems, the Commission has authorized several experimental earth stations to General Electric, TelePrompTer, Scientific Atlanta, and American Satellite.

COMSAT/IBM

In 1972, the Commission approved in principle the establishment of a joint venture in domestic satellite services by Comsat, MCI, and Lockheed. Each partner was to have a 33% interest in the resultant CML Corporation. Due to changed economic circumstances, MCI and Lockheed decided not to proceed with an operational program, Comsat and IBM recently proposed a new arrangement in which they would purchase the MCI and Lockheed interests, with IBM retaining a 55% ownership and Comsat a 45% ownership in CML. Numerous objections were raised in comments filed concerning this proposed merger, and a full-day oral argument was held on Novemer 25, 1974.

After carefully scrutinizing the issues raised, the Commission determined that there should be no absolute bar to Comsat and IBM entering the domestic satellite business, either separately or together, but that their specific joint proposal arrangement should be rejected. Accordingly, the Commission gave them the option of proceeding independently of one another, of proceeding under a lessor/lessee arrangement, or of finding a third partner having at least a 10% ownership share in order to prevent total dominance by any of the partners involved.

Another significant domestic satellite decision was our approval of an arrangement whereby an entire transponder in an Intelsat satellite over the Pacific basin was leased to the voice and record carriers by Comsat. Since an entire transponder was leased, the rate per circuit was substantially reduced. In approving the transponder lease, the Commission required most of the savings to be passed on to the public. The term of the lease was restricted to allow future potential competitors for mainland/Hawaii satellite service an opportunity to bid against Comsat for the provision of such service in 1975.

The advent of domestic satellite communications service between the 48 continguous states and Alaska, Hawaii and Puerto Rico provides an opportunity for the integration of these areas into the uniform domestic rate pattern. For that reason, we have required certain carriers to submit proposals for integrating these rates. Responses and further information have been submitted and are presently under evaluation.

International Telecommunications

In the international sphere, revenues have continued to grow at a rate well in excess of 15% annually during the past several years, making this the fastest growing segment in the entire common carrier field. This growth pattern has brought with it many urgent problems which have been further complicated by the pace of technological advances in international telecommunications, and by the competing demands made upon the Commission by satellite interests, terrestrial interests, AT&T and the international record carriers for rulings and policy statements more clearly defining their respective areas of service.

As a consequence of increasing demand, the Commission has authorized several high capacity cable and satellite facilities. During 1973, the Commission granted a cable landing license and issued authorizations to AT&T, Hawaiian Telephone Company, ITT World Communications, Inc., RCA Global Communications, Inc. and Western Union International, Inc., for a new cable system in the Pacific region. This cable system, referred to as Transpac II, will have three segments,

Digitized by Google

with a capacity of 845 circuits. The first segment between the Mainland and Hawaii is presently operational, and the remaining two segments (between Hawaii and Guam and between Guam and Okinawa) should be completed this year.

The international satellite field has also grown rapidly. Comsat was authorized last year to participate with its partners in INTELSAT in the construction of three new satellites, the so-called INTELSAT IV–A satellite series. These satellites would have a capacity of between 5,500 and 6,500 circuits plus television, depending upon the operational requirements and frequency configuration. The first INTELSAT IV–A satellite is scheduled for operation in mid-1975, and will be used initially in the Atlantic region.

There have also been changes in international rates, mostly in the form of reductions. AT&T is continuing to work with our staff in devising new rate structures for international message telephone calls to take account of economies made available by improvements in technology, lower labor costs, and increased reliance on direct dialing and the availability of high capacity communication facilities to all parts of the world.

Maritime and Aeronautical Satellites

Communication via satellite is broadening to encompass services not previously provided by commercial satellite facilities. The Commission has approved a joint venture of Comsat General Corporation, RCA Global Communications, Inc., Western Union International, Inc. and ITT World Communications, Inc. to participate in the joint ownership of a maritime satellite system, and to individually market maritime communications satellite services. This is a developmental program which materialized from a communications requirement of the U.S. Navy Department with the majority of the communications capacity required to serve such needs. The additional capacity not required to satisfy the Navy's requirements will provide a means for initial commercial maritime satellite requirements to be met.

In addition to the maritime satellite system just described, the Commission is involved in developing U.S. views and establishing an international maritime satellite system. An international conference is now scheduled for April, 1975 to consider the establishment of an organization for international maritime satellite service.

An aeronautical satellite system (AEROSAT) is being planned with ownership of several European countries, Canada and the United States. The Commission will have the responsibility of approving and licensing the U.S. carrier participation and the regulatory aspects of the operation and services to be provided. The initial system will be experimental in nature and is intended to bridge the gap between experimental effort and an operational satellite capability. The purposes of the AEROSAT system are to provide experience in technical, operational, economic and managerial areas required in advance of a fully operational capability. It appears now that the first operational capability of the system will be in late 1978.

Comsat Rate Case

For some time, we have been engaged in a comprehensive proceeding to determine whether the charges, classifications, regulations and practices in the tariffs of the Communications Satellite Corporation are just and reasonable. These tariffs authorize Comsat to provide satellite channels to international carriers for voice and record services to the public. The hearing record in this proceeding was closed in December and proposed findings were filed on February 18, 1975. A decision by the Commission is anticipated by this summer.

International Policy Matters

There have been a number of developments in the area of international communications policy during the past year. Perhaps foremost among these is the effort we have launched with respect to the planning of future satellite and cable facilities for international communications. As you may know, determination of the appropriate mix of these facilities has been and continues to be a subject of intense interest and concern among the U.S. carriers, their foreign counterparts, and foreign administrations. It is also, of course, of great concern to the Commission since the investments in these facilities are ultimately borne by the rate-payer.

In recognition of these concerns, and of the growing complexity of international communications networks, we met with representatives of some 16 European telecommunications administrations in Munich last October, for the purpose of establishing a continuing consultative process on trans-Atlantic facility needs

Digitized by Google

and options. The first meeting on substantive matters, following up on the understanding reached in Munich, should be held later this Spring. The Commission will serve as the focal point for U.S. participation in this effort, which will involve other government agencies, all the U.S. carriers, user interests, and other interested parties. We expect to coordinate fully and frequently with the Office of Telecommunications Policy and the Department of State to ensure that the U.S. presents a well thought out, unified approach to this vital planning effort.

In furtherance of these broad objectives, the Commission in February released a Notice of Inquiry to help determine a policy for future licensing of facilities for overseas communications. We anticipate this proceeding will be an evolving process working toward the continuing refinement of the Commission's guidelines for the future planning of facilities. With the increasing complexity of communications systems, and the continuing growth in communication requirements, the Commission must constantly review relevant information to establish and refine guidelines so that the planning and implementation of needed communications facilities may proceed on a timely basis during the next decade. The Commission's basic policy is one of concern for adequate diversity, redundancy and flexibility, and the availability of sufficient capacity to meet all reasonable requirements for this nation's international communications services.

Also in the area of international communications policy, we are reexamining the relationship between international record carriers and Western Union created by Section 222 of the Act. Major issues here include various proposals by the international record carriers to establish new gateway cities for international record traffic, bypassing Western Union's domestic network; Western Union's desire to participate in the furnishing of new and different services among all States of the Union including Hawaii and Alaska; the proper division of unrouted international telegraph traffic picked up by WU, among the several international record carriers; and the proper landline haul charge which WU should receive for handling such international traffic.

In early, 1974, the Commission also initiated a proceeding to determine whether the basis for regulating rates for international leased channel service should be changed. At present, these rates are established and justified on a route-by-route basis. The Commission is considering whether those rates should be on an area-by-area basis, or perhaps removed altogether from cost-of-service/rate of return regulation so that they may be determined by the competitive environment.

As is evident, the Commission is now being required to reallocate significant resources to the international area. In recognition of this fact, we have recommended that a new position of Assistant Chief/International be created in the Common Carrier Bureau to help coordinate international matters. Specifically, he and his staff will be responsible for coordinating efforts of the staff, industry, and other agencies in developing and presenting the Commission's views and policies on such matters as transatlantic facility planning, World Administrative Radio Conferences, maritime and aeronautical satellite programs, and related items.

Economic Inquiry

Finally, I should like to call your attention to another important common carrier study which is underway. In recognition of the growing complexity of the telecommunications industry's structure, technological operations, service offerings, rate structures, interstate/intrastate jurisdictional separations, and related issues, the Commission decided, in April 1974, to undertake a major study of the economic factors and interrelationships of the common carrier industry. A major objective of this study is to determine the economic effects of policies relating to competition, interconnection of customer-provided equipment and multiple communications networks, various rate-making practices (including usage-sensitive vis-a-vis flat rate pricing), and the allocation of common plant expenses and revenues to interstate instead of intrastate operations.

This proceeding (Docket 20003) is designed as a fact-finding inquiry rather than a vehicle to adopt specific rules or policies. The economic factors being examined are so interrelated that we consider it essential that a fact-finding inquiry occur before reaching a decision on several outstanding petitions for review on economic grounds of Commission policies and industry practices.

BROADCAST

Children's Television Programming and Advertising

On October 24, 1974, the Commission concluded an extensive study of children's television by issuing its *Children's Television Report and Policy Statement.*

Digitized by Google

The *Report* established a series of guidelines for programming and advertising designed for the child audience.

In setting up guidelines concerning children's programming practices, the Commission was mindful of the fact that there is a tension between its duty to regulate the medium in the "public interest" and its corresponding obligation, under the First Amendment and Section 326 of the Communications Act, to avoid regulations which might constitute "censorship". In all cases where the Commission is involved in the regulation of program content, it must walk a tightrope between saying too much and saying too little. Traditionally, the Commission has resolved this dilemma by establishing general guidelines and avoiding excessive governmental interference in specific program decisions. This traditional approach was followed in the *Children's Television Report.*

The *Report* recognizes that programs designed for general audiences are not adequate to serve the special needs of children. Because of their immaturity, children require programs which are specifically designed for them. The *Report,* therefore, requires television stations to provide diversified programming designed to meet the particular needs of the child audience. It is also made clear that a reasonable amount of this programming should be designed to contribute to the child's cultural and intellectual development—and not simply to entertain. The Commission stated that this educational programming need not take the form of dull "classroom" instruction. Rather, it was pointed out that there are many exciting ways in which the medium can be used to further a child's understanding of history, music, the arts, and the world around him.

The Commission's *Report* noted that pre-school children differ markedly from older children in their level of intellectual development and that some programming should be particularly designed for the younger children in the audience. In addition, the Commission found that the practice of many broadcasters in relegating all children's programs to just one or two days of the week is unreasonable. The *Report* stated that considerable improvement is expected in scheduling practices in the future.

With regard to the related problem of advertising on children's programs, the *Report* clarified the division of responsibility between the FCC and the Federal Trade Commission (FTC). The FCC has a responsibility to see that the amount of advertising is not excessive and that broadcasters maintain a clear separation between program material and advertising. Other areas of concern about advertising for children, including deceptive or misleading advertising practices, are within the Jurisdiction of the FTC.

The FCC considered and rejected suggestions that advertising be banned completely from children's television. It was recognized that advertising is the sole economic foundation of the American commercial broadcasting system. It would be unrealistic, on the one hand, to expect licensees to improve significantly their program services to children and, on the other hand, to withdraw the principal source of funding for this effort.

The Commission's studies indicated, however, that existing levels of advertising to children were in excess of the amount needed to support good program service. Following extensive discussions with me, the National Association of Broadcasters responded to these findings by amending its code to limit non-program material on children's programs to nine minutes and thirty seconds per hour on weekends and twelve minutes during the week by 1976. The Association of Independent Television Stations (INTV) agreed to reduce advertising to the same levels.

The advertising levels adopted by these industry associations are comparable to levels which the Commission would have considered adopting by rule in the absence of effective self-regulation by broadcasters. Accordingly, the Commission has endorsed the industry's action and will carefully examine the renewal applications of stations which exceed the agreed levels. Such licensees will be expected to make a substantial and well-documented showing to justify their advertising policies. The Commission has recently acted to amend the television renewal form to provide detailed information on the children's advertising practices of each station.

The *Children's Television Report* also recognizes the fact that young children have considerable difficulty in distinguishing advertising and programming material. The *Report* requires stations to take special precautions to insure that there is a clear separation between the two. In addition, the *Report* prohibits the use of a program host, or other program personality, to sell to children. The Commission found that one effect of "host selling" is to interweave program and commercial material, exacerbating the difficulty children have in distinguishing the two. In

Digitized by Google

addition, it was found that the host, as a result of his special relationship with the audience, was in a position to take unfair commercial advantage of the trust which children place in program personalities.

Violent, Indecent and Obscene Material

In response to Congressional directives, the Commission has considered the problem of sex and violence on television with special emphasis on the goal of protecting children. A *Report on the Broadcast of Violent, Indecent and Obscene Material* was forwarded to the Congress on February 19, 1975.

This *Report* focused on two areas of inquiry: (1) what steps might be taken to prohibit the broadcasting of obscene and indecent material; and (2) what steps might be taken to protect children from other sexually oriented or violent material which might be inappropriate for them.

With regard to the first question, the Commission believes that existing statutory authority embodied in Section 1464 of the Criminal Code is adequate as a safeguard against obscene and indecent language. On February 12, 1975, the Commission issued a declaratory order designed to clarify the term "indecent" as used in the statute and to make it known that certain words describing sexual or excretory organs or activities are covered by the statute. The related problem of video or pictorial presentation of such material is not specifically covered by the statute and the Commission will propose legislation to clarify any uncertainty in this area.

The Commission also considered the broader question of material which—although not legally obscene or indecent—may nevertheless be inappropriate for viewing by children. The Commission believed that this problem should most appropriately be handled through self-regulation rather than through the establishment of government standards. The reason for this preference is that decisions concerning what is appropriate are highly subjective. Thus, attempts to regulate in such an area could lead the Commission too deeply into programming judgments, raising serious constitutional questions.

With these considerations in mind, I initated a series of meetings with the executives of the three major television networks to explore the possibility of industry self-regulation. In suggesting these meetings, I sought to serve as a catalyst for the achievement of meaningful reform within the industry. As a result of these meetings, the networks and the National Association of Broadcasters' Code Review Board adopted the following guidelines:

(1) Two hours in the early evening (generally 7:00 to 9:00 PM Eastern Time) will be set aside as a "Family Viewing" period. Programs presented during this period will be appropriate for viewing by the entire family including younger children.

(2) "Viewer advisories" will be broadcast in audio and video form to warn parents when there is an occasional exception to this Family Viewing principle. Viewer advisories will also be used later in the evening if programs have material which might be disturbing to significant portions of the audience.

(3) Broadcasters will attempt to notify publishers of *TV Guide* and other program listings so that the viewer advisories will be printed with these listings.

It is obvious, of course, that these guidelines will not guarantee that every child will be protected from objectionable material. Children watch television in varying numbers during all hours of the broadcast day and not just during the 7:00 to 9:00 PM period. Some, who are not properly supervised, will undoubtedly be exposed to programs which responsible adults would consider to be inappropriate. Nevertheless, we believe that the industry reforms strike an appropriate balance between two conflicting objectives. On the one hand, it is necessary that the industry aid concerned parents in protecting their childred from objectionable material; on the other hand, it is important that the medium have an opportunity to develop artistically and to present themes which are appropriate and of interest to an adult audience. In essence, the balance decided on by the industry is to divide prime time in half.

In the final analysis, the success of these new guidelines will depend on the reasonableness and good faith of the broadcast industry. The new standards will only be accepted by the American people if broadcasters are responsible in their day-to-day administration of the program.

Cross Ownership

On January 28, 1975, the Commission adopted the final order in Docket 18110 bringing to an end and the proceeding begun in 1968 relating to the multiple ownership of AM, FM and Television Broadcast Stations. In some areas of media

Digitized by Google

cross ownership, the existing rules continue in effect and, in other areas, new rules have been adopted.

In the area of TV-radio combinations, no divestiture of existing combinations is required, and the present rules adopted in an earlier phase of this proceeding remain in effect. This means that a licensee of a VHF television station may not build or acquire a radio station (AM, FM, or AM-FM) in the same market, and that the licensee of an AM station, an FM station, or an AM-FM combination may not build or acquire a VHF station in the same market. Although existing combinations are not required to divest, if the owner of a VHF-radio combination sells, he must sell the TV station to one party and the radio station to a different party. Applications involving UHF-TV and radio station combinations are handled on a case-by-case basis.

AM-FM combinations also are not required to divest, and existing rules continue in effect. This means that the licensee of an AM station may build or acquire an FM station in the same market and vice versa. Moreover, AM-FM combinations may be sold to a single party. The present rules governing duplication of programming by AM-FM combinations will be considered in pending Docket 20016.

New rules were adopted, however, concerning cross-ownership of a newspaper and either a television station or radio station in the same market. Prospectively, the formation of new newspaper-broadcast station combinations in the same market is barred. Divestiture is required by January 1, 1980, by television stations in seven communities where the only general circulation newspaper in the community and the only television station placing a city-grade signal over the entire community are under common ownership. Similar divestiture is required in the case of nine radio-newspaper combinations where there is common ownership of the only general circulation daily newspaper in the community and the only radio station placing a city-grade signal over the entire community in daytime hours. Waivers may be available upon a proper showing.

License Renewals

The subject of broadcast license renewal continues to generate interest and controversy. During calendar 1974, 2,571 AM, FM and TV stations (out of approximately 8,500 total stations) applied for renewal of their authorizations to broadcast. In that same time span, 2,531 renewals were granted, some of these having been applied for prior to 1974. A total of 112 petitions to deny license renewals were filed in that year, as well as a substantial number of informal objections and complaints.

The Commission has made a number of internal adjustments and improvements to meet the renewal workload. A task force of attorneys has been placed on temporary assignment to the Renewal Branch, chiefly to deal with contested applications. Reorganization of certain record-keeping functions, and closer internal coordination are beginning to speed the flow of paper. And conversion of certain broadcast data from manual to computer format has added greatly to the efficiency of research on renewal policies.

A number of broadcast policies have been opened for inquiry. Perhaps closest to resolution is Docket 19715, Ascertainment of Community Problems. As you may recall, the Commission's four-year-old *Primer* on ascertainment was prepared for use by new applicants and was made applicable to license renewals only as an interim measure until other guidelines could be developed to recognize the importance of the renewal applicant's actual performance during the preceding license term.

The Commission also sought comment concerning "continuous" versus fixed-period ascertainment, and whether survey requirements should differ according to the kind of broadcast service (radio, television), station size, market size, and other factors.

Many of the comments the Commission received in this matter stated that the present application of the *Primer* requirements to renewal applicants was burdensome, restrictive, arbitrary, and method-centered. A significant number of these same comments, however, acknowledged that the *Primer* introduced a degree of certainty into the ascertainment process, and conceded the value of the contacts between the broadcaster and the community made obligatory by the *Primer*.

The Commission now is considering a series of staff recommendations and alternatives for resolution of the ascertainment inquiry. Although it would be premature to speculate upon the outcome, I think it is fair to state that the Commission approaches its task highly conscious of at least these three concerns: (1)

Digitized by Google

the burden upon the small broadcaster of a highly formalized process which inordinately consumes his time and his comparatively meager resources; (2) the desirability of a means to insure "continuity" of community ascertainment by the broadcast licensee throughout his license term; and (3) the value of systematic contacts between the broadcaster and the community in the development of a continuing "dialogue."

Another outstanding inquiry, now scheduled for early resolution by the Commission, is Docket 19154. This proceeding concerns the standards for evaluating and comparing in the context of a comparative hearing a renewal application and one or more competing applications for the same frequency. Specifically, we have sought comment on whether to establish quantitative standards for local and informational programming which would give a *prima facie* indication of substantial service warranting a "plus of major significance"—to use the Court of Appeals' phrase—in a comparative renewal hearing.

Besides ascertainment and comparative renewal policy, several other important renewal topics are on the Commission's schedule for the January-March quarter. These include the development of a "short form" for certain radio license renewals and a re-examination of the "delegations" policy which guides the staff in determining whether a renewal application should be approved by the Commission or may be approved at the Bureau level.

The Commission places great importance on the efforts by broadcasters and their listeners and viewers to resolve differences and problems through discussion on the local level. In this connection, the Commission is considering a policy statement to clarify the appropriate role of broadcaster-citizen agreements.

Fairness Doctrine

In 1949 the Commission adopted a policy which has become known as the fairness doctrine and which subsequently received statutory recognition. The fairness doctrine requires that broadcasters devote a reasonable percentage of time to coverage of public issues and that such coverage provide an opportunity for the presentation of contrasting viewpoints.

The Supreme Court in the landmark *Red Lion* decision upheld the constitutionality of the fairness doctrine. The Court declared that because the number of licenses available is necessarily limited, a licensee must act as a public trustee to present those views and voices which are representatives of his community.

Because of the passage of time since adoption of the policy and the emergence of many new problems regarding its application, the Commission in 1971 began an inquiry directed toward reassessment and clarification of the policy. The product of this proceeding, in which the public, the broadcasting industry and the Commission played active roles, was the Commission's Fairness Report, released on July 12, 1974. Four areas of inquiry were examined: the fairness doctrine generally; access to the broadcast media as a result of the presentation of commercial announcements; access, generally, for discussion of public issues, and application of the doctrine to political broadcasts. In each of these areas the Report clarified the Commission's application of the fairness doctrine. It also explained more fully our procedures for processing fairness complaints and the requirements placed upon both complainants and licensees with respect to filing and answering such complaints. In conclusion, the Commission reaffirmed the need for the fairness doctrine and said that strict adherence to the doctrine was perhaps the single most important requirement of operation in the public interest.

Political Broadcasting

The Commission also clarified its position concerning political broadcasting. In a Public Notice of June 5, 1974 (47 FCC 2d 516) the Commission stated that a right of access to *prime time* by Federal candidates is inherent within the meaning of "reasonable access" required by section 312(a)(7) of the Communications Act. A broadcast licensee, therefore, may not deny candidates access to time periods of greatest audience potential, such as "prime time" on television or "drive time" on radio. The Commission further stated that if a broadcast licensee sells spot announcements to legally qualified candidates for public office, it would be contrary to the congressional objective of putting candidates in the same position as the most favored commercial advertisers to deny them the opportunity to purchase spot announcements of the same length and type available to commercial advertisers.

Combination Rates and Joint Sales Practices

On January 29, 1975, the Commission issued its First Report and Further Notice of Proposed Rule Making in response to a 1973 Notice of Inquiry and

Digitized by Google

Notice of Proposed Rule Making regarding policies on combination advertising rates—the rates offered advertisers by two or more separately owned stations serving substantially the same area—and other joint sales practices involving broadcasters and cable television systems. The Commission emphasized in its 1973 action that it was seeking to maintain a healthy, competitive economic environment for broadcasting consistent with the public interest and the policies underlying the antitrust laws. The basic policy is that of promoting "arms length" competition among broadcast stations.

The Commission's First Report (1) re-affirms existing policy which prohibits separately owned stations serving the same market from using combination rates or joint sales practices; (2) makes more inclusive a previously-enunciated policy prohibiting a sales representative organization owned by a licensee from representing a competing station in the same area; (3) reverses a policy which permitted certain FM stations serving the same area to use combination rates; (4) permits an independent sales representative organization (i.e., one not owned by a licensee in the community) to represent more than one station in a community provided that the stations are not sold in combination. For example, a representative of two stations in a community will be required to enter into separate contracts with advertisers for each station and to leave all decisions as to contracting for the sale of time, including rates, to the individual licensees.

The Commission in its recent action also proposed a new rule that would codify the policy prohibiting combination sales by separately owned stations and specify the signal contours of stations to which the prohibition would apply. The proposed rule also would prohibit combination sales by separately owned stations and TV cable systems if the specified contour of the station overlapped the area served by the cable system. Finally, the proposed rule would prohibit combination sales by *commonly* owned television and aural stations if there were an overlap of contours.

Practice of Licensees and Networks in Connection With Broadcasts of Sports Events

On July 31, 1974, the Commission notified broadcasters of athletic events that they must disclose "clearly, publicly, and prominently" during broadcasts any arrangements in which sports announcers have been directly or indirectly selected, paid, approved or removed by parties other than the licensee or network broadcasting the event. This action resulted from proceedings initiated by a Notice of Inquiry released June 26, 1973, in which the Commission sought comment on a variety of alleged practices by networks and individual licensees in the broadcast of sports events. Comments showed that non-broadcast organizations such as sports leagues and individual teams exercised a high degree of control over the selection and retention of sportscasters. The Commission found that allowing sports organizations a voice in the selection of personnel to announce their events did not, in itself, necessarily result in the abdication of a licensee's responsibilities. The licensee, if it insists, can still retain effective control over programming.

The Commission found, however, that the public interest would best be served by requiring licensees to disclose the existence of such arrangements during broadcasts. Disclosure would prevent deception as to possible lack of objectivity because of the private interest of the sports announcer. Although we did not inhibit the role which third parties played in the selection of sports announcers, we stressed that it was the licensee's responsibility to "refrain from engaging in or permitting others to engage in, deliberate falsification, distortion or suppression of facts." In this regard, the Commission noted that many of the allegations of distortion or suppression outlined in the Notice of Inquiry went far beyond general home-team bias on the part of the announcer.

Special Subcarrier Service for the Blind

On November 6, 1974, the Commission issued a declaratory ruling which for the first time enabled a licensee of an educational station to use its FM Subsidiary Communications Authorization (SCA) for special programming to serve the blind. The licensee had requested a declaratory ruling as to the applicability of the fairness doctrine and sections 315 (equal opportunities for political candidates) and 317 (prohibition of editorializing and endorsement of political candidate) of the Communications Act to its FM SCA programming to serve the blind by reading articles, feature stories, editorials and advertisements from newspapers. Special subcarrier radio receivers for reception of the SCA broadcasts were to be furnished to the blind.

Prime Time Access Rule

The prime time access rule, which first became effective in October of 1971, provided that broadcast stations in the top-50 markets could present no more than three hours of network programming during prime time each evening. (Prime Time is defined as the four-hour period between 7 and 1 p.m., E.T. and P.T., 6–10 p.m., C.T. and M.T.) The one hour of time "cleared" of network programming by the rule could not be filled with either off-network material (programs previously shown by any of the three major networks) or feature-length films exhibited within a top-50 market during the past two years.

In October of 1972, the Commission initiated an inquiry to examine the overall effectiveness of the rule; to resolve manifold problems in administering the rule; and to consider modification or repeal if warranted. After extensive comment and oral argument on the subject, the Commission issued a decision sometimes referred to as PTAR II. Without ruling on the merits of that decision, the U.S. Court of Appeals for the Second Circuit nevertheless enjoined the Commission from putting its rule changes into effect before September of 1975, and suggested that additional inquiry be made with respect to particular parties and groups.

Pursuant to the court's instructions, the Commission obtained and evaluated further comment and, in January of this year, issued a decision which had a three-fold objective: (1) re-affirm our original decision to lessen network control over the selection of prime time programming and encourage local licensees to make such judgments as well as to continue to encourage alternate, independent sources of programming; (2) avoid a growing number of complex difficulties in administering the rule; and (3) create a special exemption so that the rule would no longer work to inhibit the presentation of certain network programming of unique public interest value, specifically documentary, public affairs and children's programming. In the last connection, it is believed important to encourage children's programming at an early evening hour which the rule has tended to inhibit in practice. The Commission believes that it would be inconsistent to take strong and affirmative action in our *Children's Television Report and Policy Statement* (Docket No. 19142) encouraging the presentation of more children's programming, and then to ignore the apparent effects of the prime time access rule to lessen the likelihood of such programming. In the Commission's judgment, creating a special exemption to the prime time access rule would greatly serve one public interest objective without significantly undercutting another.

As you may already know, Mr. Chairman, this matter was again taken on appeal and argued before the court just last week. The Commission is confident, however, that our recently adopted decision serves the needs of the public and we look forward to its implementation in September of this year.

"Re-runs" in Prime Time Television Programming

During the last decade, there has been a substantial increase each year in "re-runs". For example, a TV station might repeat (usually during the spring and summer months) episodes of programs previously shown. This practice resulted in a substantial amount of public complaint, and in 1972 a petition was filed asking the Commission to adopt rules limiting prime time re-runs to 25% of a broadcast year (the equivalent of the "39-13" ratio of new and "re-run" material which prevailed years ago). This type of rule has been opposed by the networks on the ground that the already high and increasing costs of program production require cost saving measures such as the use of re-runs. The networks further argue that if the number of re-runs were restricted, they would, of necessity, turn to less expensive programming. On the other hand, Hollywood guilds and union groups have vigorously supported regulation to limit the use of re-runs.

On October 3, 1974, the Commission issued a Notice of Inquiry concerning the use of re-runs in regular network program series. The Commission is seeking to answer certain questions regarding current programming trends and to determine whether they serve the public interest. For example, to what extent does the welfare of the U.S. program production industry, and employment in that industry, afford a basis for Commission regulation; is government regulation appropriate or necessary; and what would be the economic and programming consequences of restricting the use of re-runs. Comments, have been received and are now under study by the staff.

VHF Television Channel Drop-Ins

In October, 1973, the Office of Telecommunications Policy (OTP) prepared a Technical Analysis of VHF Television Broadcasting Frequency Assignment Criteria. Based on their own analysis, approximately 62 new VHF Television

Digitized by Google

channel assignments could be made in the United States provided the Commission hereafter assigned channels geographically closer than under present rules. In March 1974, the Commission received a petition from the United Church of Christ, asking that we add as many new VHF television broadcasting channels as are technically feasible and that we consider the 62 new channels mentioned in the OTP analysis. That petition also seeks preferences under certain conditions for non-commercial educational operations and minority ownership. The New Jersey Coalition for Fair Broadcasting also filed a petition requesting that the Commission "drop in" a VHF television channel in the state of New Jersey. Although the OTP analysis did not specifically suggest a New Jersey drop-in, the New Jersey Coalition based its proposal on the OTP criteria; namely, the assignment of channels geographically closer than permitted under present FCC rules.

The Commission responded to the petition from the New Jersey Coalition by adopting a Notice of Inquiry and Proposed Rule Making to examine the feasibility of reducing the spacing between co-channel and adjacent TV channel assignments, reallocating TV channels from adjoining states to New Jersey, or authorizing hyphenated or dual community assignments with the main studio installed in New Jersey.

In March of last year, OTP re-evaluated its 1973 analysis and prepared a further study. This study suggested 83 VHF drop-in assignments among the top 100 markets.

OTP also suggested what criteria might be used to assign new VHF television channels. These criteria include reducing the mileage spacing between existing co-channel and adjacent channel stations from present rule requirements, and abandoning the concept that a television station's maximum service area should remain protected until it can achieve full operating power and facilities.

The "drop-in" proposals raise difficult technical as well as policy questions. Nevertheless, we believe that the issue of VHF television drop-in assignments should be re-examined and we anticipate issuing inquiry and rule-making proceedings in the very near future.

Daylight Saving Time Impact

As previously reported, the enactment in late 1973 of year-round daylight saving time (P.L. 93-182) resulted in serious dislocations throughout the AM broadcast industry, particularly among the more than 2,000 stations licensed for daytime-only operation. In winter, most stations were still in pre-dawn hours after much of their listening audiences had left for work or school. During the 1973–74 winter season, the Commission attempted to deal with this problem by adopting a series of emergency orders to allow a minimum of an additional hour of operation during the pre-sunrise period with a power of a least 50 watts, except where precluded by international agreement.

This situation improved when year-round daylight saving time was abandoned in the fall of 1974 (P.L. 93-434). During 1975, however, the onset of advanced time occurred on February 23 rather than on the traditional last Sunday in April. We are, therefore, left with a two-month period during which daytime stations will suffer varying degrees of loss of early morning "drive time" broadcast service. This was particularly noticeable during the last week in February when advanced time went into effect.

In recognize of this problem, the Commission issued an Order reinstating last year's temporary pre-sunrise operating benefits flowing from international agreements reached with Canada and the Commonwealth of the Bahamas during the past four months.

Re-Regulation of Radio and Television Broadcasting

The Commission announced the formation of the Re-regulation Task Force on April 6, 1972. The purpose of the Task Force is to undertake a continuing study of the broadcast rules concerning AM, FM and TV service. It is composed of three staff members—an engineer, an attorney and a broadcast specialist.

By the end of 1974, the work of the Task Force resulted in modifications to 261 rules. It also completed special studies (e.g., "Energy Usage by the Broadcasting Industry"), and special projects (e.g., Regional Meetings in Atlanta, Chicago, and Washington).

Numerous other projects are in progress. They include modifying additional rules; developing new policies regarding the ascertainment by broadcast licensees of community problems, needs and interests; Notice of Rulemaking modifying and amending program logging rules; and analyzing the feasibility of relying on automatic, unattended transmission systems for broadcast stations; proposing new

Digitized by Google

short-form radio license renewal procedures; and planning more regional meetings with licensees and members of the public.

Regional Meetings

An interesting and worthwhile innovation to which I just referred was undertaken this year by the Commission. A series of Regional Meetings were held where the Chairman, various Commissioners and key staff members met face-to-face with broadcasters and the general public. Each meeting was divided into two parts, one for broadcasters and another for the public, although each group was encouraged to attend both meetings to gain insight into each other's problems, needs and interests.

The first meeting was in Atlanta on May 23 and 24, 1974. Broadcasters and the public from Alabama, Florida, Georgia, South Carolina and Tennessee met with members of the Commission on the Georgia Tech campus. The second regional meeting convened in Chicago on October 30 and 31 for the five states of Illinois, Indiana, Ohio, Michigan and Wisconsin. On January 8 and 9, 1975, a third meeting was held in Washington, D.C. covering Delaware, Maryland, Virginia, West Virginia, Kentucky, North Carolina, and the District of Columbia. These meetings, we believe, lead to better understanding, better regulation, and better and more responsive broadcasting and we plan to continue this series of meetings throughout the country in the next few years.

CABLE TELEVISION

Regulatory Program

In the cable television area, the Commission's "new" cable regulatory program is entering its fourth year, and we are undertaking a comprehensive review of some key elements of that program. This review is based on three years of operational experience, and on suggestions for changes made by advisory committees, Commission task forces, and industry and public spokesmen.

Advisory Committees

Last year I briefly described the work of the Federal-State/Local Advisory Committee and the Cable Technical Advisory Committee. In response to this group's final report, the Commission, during 1974, issued a clarification of the cable rules and eight rulemaking proposals. Perhaps the most critical of these is one which looks into the problem of multiple levels of regulation over cable television systems. The Commission's concern in this proceeding is to avoid unnecessary duplication of regulatory efforts.

The Technical Advisory Committee's work continues, and the final report of its Steering Committee and most of its panels should be ready shortly. We are hopeful that the work produced by this panel of experts will significantly aid us in understanding and regulating the technical aspects of system operation. The Committee's report should prove useful in identifying those areas in which further technical standards are necessary and in developing performance test procedures useful not only to us but to the industry itself.

Rule Makings

Several other rulemaking matters deserve brief mention. As you know, the Commission prohibits cross-ownership of cable television systems with co-located television stations. Prohibited existing interests are required to be divested by August 10, 1975. An analysis, however, of the numerous requests for waiver of the divestiture requirement, and a desire to put cable cross-ownership limitations on a similar policy footing with the newly adopted rules limiting broadcast and newspaper cross-ownership, have caused us to re-examine the present cable rule. Accordingly, we are initiating a further rulemaking proceeding and during this period will suspend the August, 1975 divestiture date. As to newspaper and cable cross-ownership, available information has not revealed the need for remedial action at this time. We will, however, continue to study this matter.

A Commission proposal, under consideration since February 1972, to impose sports black-out rules comparable in scope to those permitted professional sports leagues by P.L. 87-331, is being restudied in light of the 1973 amendment to the Communications Act, which prohibits league home game blackouts of professional football, baseball, hockey and basketball games if the games are sold out 72 hours in advance. New data and rulemaking comments are being received concerning the cable blackout question.

Over the course of the year we have concluded a rulemaking proceeding designed to increase the diversity of programming cable systems may deliver by permitting the carriage of distant late night television programming. By amending our franchise standards relating to line extensions and complaint procedures, we

Digitized by Google

have also attempted to insure that cable service is uniformly available in communities where it operates and that cable subscriber complaints are properly dealt with. We have acted to pre-empt local and state technical standards inconsistent with our own. Our mandatory program origination rules, stayed since the Supreme Court considered our jurisdiction to impose them, were re-evaluated and altered in significant respects. Continuing consideration is being given to the difficult problem of what role the Commission should play in regulating the utility pole attachment practices of telephone and electric utility companies whose poles must be used by cable television operators.

We have recently given staff instructions for the resolution of two of the more controversial rulemaking matters left pending. The first of these relates to pay cable and over-the-air subscription television operations. This proceeding was opened for further written comment last fall, followed by two days of oral arguments and panel discussion concerning the nature of the rules that should govern these services. We have had a very real concern, as you know, that these new pay operations if not properly regulated could cause a loss of programming from conventional "free" over-the-air television stations—the program siphoning effect. We have been particularly concerned with the possibility that this would happen to sports programming and feature films which are mainstays of the conventional broadcast service. We have given the staff instructions for writing final rules in the pending proceeding which we think provide solid assurance that program siphoning will not occur. At the same time, we have no desire to stifle this new service to the public. I believe we have found an appropriate balance of these concerns. We do, however, intend to keep this proceeding open so that we will be in a position to act without delay if experience under revised rules shows that to be necessary.

The second of these major proceedings which is nearing completion has also generated much interest from the public, the cable and broadcast industries, and the Congress. It concerns the network program exclusivity or non-duplication rules that presently apply to cable television. The present proceeding seeks to re-examine the existing rules and gather statistical data concerning their operation. Here again, we have recently given the staff instructions for revising the rules. We think these rules are an important part of our cable program. However, we are considering possible rule change, to make non-duplication more equitable, less inconvenient to cable subscribers and not unduly burdensome to smaller cable systems.

Task Forces

In April 1974, I announced the creation of two special task forces within our Cable Television Bureau—the "1977 Task Force" and the "Cable Re-regulation Task Force." The 1977 Task Force is studying the problems faced by the Commission, franchising authorities, and the cable television industry as cable systems prepare to meet the March 31, 1977, deadline for uniform compliance with our cable rules on franchise, access, and technical standards. The Task Force is also considering, in light of Commission experience and present economic conditions, whether some of the uniform compliance requirements should be dropped or at least postponed beyond March 31, 1977. With the recommendations of this Task Force in hand, the Commission recently issued a Notice of Proposed Rule Making looking toward a suspension of a number of the requirements of the rules that would have required substantial rebuilding of existing cable television systems by March 31, 1977. A further Notice looking toward a substantive re-evaluation of some of the rules should be released shortly.

The Re-regulation Task Force is reviewing our experience with cable television rules and forms with a view toward eliminating unnecessary regulations, procedures, and paperwork and simplifying the rules. Each rule is being analyzed to determine its continuing validity and whether it should be retained, modified or deleted. Particular attention is being directed toward relief for the small cable television system operator. Task Force recommendations may result in either clarification orders or formal rulemaking proceedings.

Service to the Public

During 1974, the Commission received about 1,300 applications for new or increased cable television service, and a total of 1,950 pending applications were processed. The resulting 40% reduction in the cable applications backlog and a sizeable decrease in average case processing time are largely attributable to a substantial increase in the staff of our Cable Television Bureau during 1974, and to completion and implementation of the Bureau's organization framework.

Digitized by Google

Finally, in a further effort to serve the public, a Cable Complaint Service was established in the Cable Bureau in 1974. The Service has three main functions: it attempts to clear up misunderstandings between subscribers and systems regarding the Commission's Rules; it deals with complaints about a system's quality of service by resolving disputes informally, and, when merited, by instituting formal action; and it helps the cable industry and local or state governments to develop procedures for the expeditious resolution of complaints at the local level.

Proposed Legislation

Finally, the Commission over the course of the last year has submitted formal comments to the Office of Management and Budget on two drafts of cable television legislation prepared by the Office of Telecommunications Policy. While our comments have reflected some fundamental philosophical differences with the Office of Telecommunications Policy, particularly as to the degree of administrative flexibility which the Commission should have in regulating the cable television industry, we fully concur with their view that some additional legislation, at least in certain specific areas, would be desirable. In this connection, we are developing our own draft legislation which should be completed within the next several months. While this more comprehensive look at statutory changes relating to the industry is under consideration, I would like to reaffirm my support for a more narrow action which we have proposed in the past—that is, to give the Commission forfeiture authority with respect to cable television systems similar to our existing authority with respect to broadcasters and other radio licensees. Without such authority, we have no effective enforcement tool for minor infractions of our rules which do not warrant an order directing total cessation of operations.

SPECIAL RADIO SERVICES

Land Mobile Radio Services

The next area I will review for you involves special radio services. A major part of this area is concerned with land mobile radio.

Land mobile spectrum relief has been a matter of top priority in 1974. In what may well be the most important Commission decision concerning land mobile spectrum relief over the past 25 years, major long term relief was provided through our action in Docket No. 18262 in which frequencies in the 900 MHz band were made available for land mobile use. Our action makes possible the eventual establishment of a nationwide, compatible, mobile radiotelephone and limited dispatch service. This is, according to our plan, to be made available to the public through common carrier enterprises.

Further, our action in this Docket provides for much expanded private systems of communication at 900 MHz in the Public Safety, Industrial, and Land Transportation Radio Services. The new spectrum allocated to these services can accommodate from 30,000 to 60,000 mobile units in each major area or region of the Nation, and reuse of the frequencies will be possible at distances ranging from 60 to 100 miles.

In taking this action in Docket No. 18262, we also made provision for new licensing procedures and for innovative systems designs. These will enable us to increase the efficiency and effectiveness of land mobile use of the radio spectrum. The new techniques mentioned include licensing of specialized mobile radio systems and "cellular," "trunked," and "multiple access" methods of operations. We believe that these measures, as an ancillary benefit, will lead to large scale opportunities for employment in the development and establishment of these new land mobile modes of communication and open up opportunities for growth and expanded availability of competitive systems of communication and competitive land mobile radio equipment. Our decision in this Docket is being reviewed in the light of petitions for reconsideration filed in the proceeding and we expect to reach a final determination in the matter within a month's time.

In Docket 18261, which provides for sharing of television channels 14–20 by the land mobile radio services, added land mobile relief was achieved by extending the sharing plan to Dallas-Fort Worth and Houston, Texas; and Miami, Florida. Thirteen major urban areas now have some use of channels in the 470–512 MHz band for land mobile purposes. Actual assignments, however, in Detroit and Cleveland are still pending the completion of agreements with Canada. In the eleven cities where authorizations are being issued, the growth has been from 450 system assignments and 128 applications pending in 1973 to 978 system authorizations and 151 pending applications in 1974.

The Emergency Medical Services communications needs, which we reported last year, have been afforded relief by our June action in Docket 19880 creating a new medical service communications category in the Special Emergency Radio

Digitized by Google

Service. This action made certain frequencies available exclusively for ambulance-to-hospital and ambulance-to-doctor medical telemetry and medical voice uses. More than forty EMS communication system plans have been filed.

Rulemaking to improve the regulatory framework for private microwave systems was also issued in 1974. In the near future, we expect to issue new microwave rules which will affect the entire range of our licensees.

In 1974, we also adopted interim rules (Docket 18302) to provide for automatic vehicle location and monitoring systems. Police and fire departments, transit systems, trucking companies and others are expected to implement these systems to automatically keep track of the location of their vehicles.

Amateur and Citizens Radio Services

Regulatory activity has also been occurring in the amateur and citizens radio services. A Notice of Proposed Rulemaking and Inquiry adopted on June 6, 1973, concerned the possibility of reallocating the 224–225 MHz band to Citizens Radio for the creation of a new Class E Citizens radio service.

Rulemaking notice for revision of the operating rules for Class D stations in Citizens Radio was adopted on July 23, 1974, and remained open for comments until January 30, 1975, and for replies until March 14. Significant aspects of the proposal include the doubling of frequency space available to Class D stations, changing equipment technical standards to require use of single sideband equipment, simplification of station identification requirements, and changes in the permissible communications rules for clearer understanding. It is hoped that these proposals, if adopted, will promote a higher degree of voluntary rule compliance by licensees.

The Commission further adopted a Notice of Proposed Rulemaking on December 4, 1974, to restructure the various classes of amateur radio operator licenses. This proceeding proposes to create a new communicator class of license with operating privileges in the 220–225 MHz band. A code examination would not be required for this license.

These three rulemaking proceedings involve related issues. Principal among these is the amount and location of spectrum space that should be allocated to meet the personal and business radio communication needs of the general public. Moreover, further discussions are needed with Canada concerning Class E frequencies along our border. Accordingly, we are deferring action regarding the creation of a new Class E Citizens radio service until later in 1975 to permit us to fully develop the requirements and alternative solutions we feel are needed. It is our firm intention, however, to reach a conclusion in this matter as quickly as possible.

In the Citizens Band area, we amended our rules, effective January 23, 1975, to prohibit the marketing of single band external radio frequency power amplifiers (commonly known as linears) capable of operation with Class D radio equipment, and, as further clarification of what was already illegal, specifically to proscribe their use at a Class D Citizens radio station. A power amplifier's only function at a Class D station is to boost the power of the station beyond permissible levels. These devices could significantly interfere with other radio and TV reception. Strict enforcement of the new rules is expected.

Aviation and Marine Radio Services

The aviation and marine radio services also have been active during the past year. The Commission is continuing its efforts to improve Public Coast Radiotelegraphy in the Maritime Service. Several applications to close some radiotelegraph stations have resulted in interim denials unless service by the remaining stations to the maritime industry is improved. The Commission's inquiry into this subject continues in Docket 19544.

The Maritime Satellite Panel of Experts completed its work in 1974 in preparation for the Meeting of Governments in April, 1975. The purpose of this meeting is to agree on institutional arrangements and technical specifications for a Maritime Satellite System. The FCC will be represented at the Meeting of Governments.

The Commission has released a Notice of Inquiry soliciting the public's views in preparation for the 1977 meeting of the Aeronautical World Administrative Radio Conference. The purpose of this meeting will be to establish technical requirements and a frequency allotment plan for the Aeronautical Mobile (R) Band for aeronautical communications.

The exchange of instruments of ratification for the "Agreement Between the United States of America and Canada for Promotion of Safety on the Great Lakes by Means of Radio, 1973", took place on May 6, 1974. The Agreement will enter

Digitized by Google

into force on May 6, 1975, and will affect shipping on the Great Lakes. The Agreement will terminate the 1952 Agreement, and requires all vessels covered by the Agreement to have VHF radiotelephone equipment operating in the band 156–162 MHz, and designates the frequency 156.8 MHz as the distress, safety and calling frequency. Medium frequency radio operations will be improved by the introduction of single sideband equipment. The technical regulations of the new Agreement are more specific and conform more with modern practices than the 1952 Agreement. The Commission is currently updating its regulations to implement the agreement.

General International Radio Matters: Preparation for the 1979 World Administrative Radio Conference (WARC 79)

The Commission is preparing for the International Telecommunications Union (ITU) 1979 World Administrative Radio Conference. The importance of this conference cannot be over emphasized. The outcome may determine various allocation matters involving almost all of the radio services administered by the Commission for the remainder of the century. The necessary internal organization that will spearhead the Commission's preparations for this WARC 79 has been established. This group will coordinate with industry and the public to establish non-government radio frequency requirements. It will also coordinate its efforts with similar on-going efforts of the Office of Telecommunications Policy which is handling federal government radio requirements. The FCC industry effort was announced in a Public Notice released January 31, 1975, calling for a public meeting to be held on February 21, 1975. At that meeting, the role of public participation was outlined and active participation was invited. During the meeting, the FCC preparatory structure was described in detail. The first of a series of inquiries into WARC 79 has been relased in Docket 20271. This inquiry seeks comments and views of interested parties.

FIELD OPERATIONS

Citizens Radio Enforcement

In the area of field operations, during 1974, our Citizens Radio Service enforcement effort in the southeast United States was expanded by the activation of our fourth Special Enforcement Facility at Powder Springs, Georgia. In Iowa we carried out two major enforcement efforts to curb violations of the Commission's rules. The field staff also carried out a nationwide educational campaign to notify truckers of the rules governing the use of citizens radio. As a result of our efforts in Iowa, 29 illegal users of citizens radio equipment were found in violation—27 of whom entered guilty pleas and 2 were found guilty after trial in a U.S. District Court.

In enforcing the Commission's rules, however, we have experienced difficulty regarding sanctions. Monetary forfeitures for violation of our rules may be readily imposed on licensed radio stations but are not available against unlicensed stations. This results in large numbers who simply do not obtain licenses and presents us with a major enforcement problem. We are seeking to remedy this situation through proposed legislation which will enable the Commission to impose forfeitures on such unlicensed operations.

Operator Examinations

A new examination for operators at broadcast stations is being placed into use nationwide. The number of questions has been increased from 20 to 40 so that the applicant will have a better chance of passing without restricting the scope of the exam. Questions are designed to determine the applicant's practical knowledge of the Commission's Rules and operating requirements as they pertain to his duties.

The Commission also has contracted with the Civil Service Commission for their examiners to conduct FCC operator examinations in five pilot areas of the country. The experimental program ends in September, 1975, Evaluations are being made to determine cost effectiveness and whether the increased number of examination locations in the pilot areas is beneficial to the public. If the results of the program are satisfactory it would be expanded nationwide.

ENGINEERING MATTERS

National Spectrum Management Program

In the Office of the Chief Engineer, the Spectrum Management Task Force continues to evaluate and improve a regional program for spectrum management that was established in 1971. The purpose of the Force is to make more efficient

Digitized by Google

use of a limited resource, namely the radio spectrum. The Chicago Regional Office is now processing applications by computer and issuing frequency recommendations based on computerized engineering models that reference the most extensive data base ever available to the Commission in the land mobile services.

The Spectrum Management Task Force is now within reach of its objective of improving spectrum utilization throughout the mobile radio services by limited relaxation of the traditional block allocation scheme. In the coming months, the Task Force intends to validate the monitoring data base that it has been constructing over the last three years, and to establish the new criteria necessary for the sharing of under-utilized frequencies.

The Office of the Chief Engineer is, moreover, considering the possibility of reducing the spectrum required for UHF–TV service by examining the spacing between co-channels. A Notice of Inquiry regarding this is being prepared. Other steps to save spectrum include the preparation of a work statement for a contract to develop an improved TV receiver, and the completion of a computer program to increase the efficiency of UHF–TV assignments on a compressed spectrum.

FEES

The original goal of the Commission's fee collection program was to recover from licensees as close to 100% of the Commission's annual appropriation as possible. A fee schedule was established in 1970, and for three years between 60 and 80% of the budget was recovered. During 1974, however, the fee schedule has been a continuing source of Commission concern. On March 4, 1974, the Supreme Court, in *National Cable Television Association* v. *United States*, held that the Commission's annual fee for cable television systems had not been formulated in a manner consistent with Title V of the Independent Offices Appropriation Act of 1952. The Court interpreted Title V as allowing the Commission to collect from the recipients of its benefits some of the Commission's costs based on the "value to the recipient" standard in Title V rather than on the basis of total recovery of the Commission's annual budget.

Immediately following the Supreme Court's decision, the Commission suspended the collection of the broadcast and cable television annual fees. In August, 1974, we issued a Further Notice of Proposed Rulemaking for a new schedule of fees consistent with the Court's holding, and on January 15, 1975, adopted a Report and Order establishing new fees effective March 1. This schedule is designed to recover the Commission's costs in processing applications and granting authorizations. It will recover approximately $16.5 million, or 35.3%, of the Commission's fiscal year 1975 budget.

In December, 1974, we concluded that all fees should be refunded to cable television systems that had paid fees under the 1970 schedule. Although the Commission believed it could recalculate the proper fee for the period following 1970, it decided against this because of the substantial administrative burden, and the small amount of fees that could be retained. On January 20, 1975, refund requests of other parties were denied because they had not exhausted their judicial remedies by filing a petition with the Supreme Court for a writ of certiorari, and the period for Commission reconsideration or judicial review of their fees had passed. Petitions to review the Commission's orders denying refunds and establishing the new fee schedule have been filed in the United States Court of appeals for the District of Columbia Circuit.

BACKLOG REDUCTION AND MANAGEMENT IMPROVEMENT PROGRAM

Backlog Reduction

As should be evident from my statement, it has been a busy year with many accomplishments. Any observer of the Commission is aware of the accelerated pace of our activities. I believe we are making real progress in many major areas. However, much remains to be done. We hope soon to be able to focus increased attention on the backlog of items awaiting action.

In October, 1973, the Commission initiated a comprehensive program to eliminate application processing delays and backlogs caused by obsolete rules, out-of-date forms and inefficient procedures. The program is developing simple, clear, user-oriented rules and forms to aid the public in preparing more complete and accurate applications and other filings, thus expediting action by our staff.

The cable television rules, for example, were amended in November, 1973, to allow cable systems to furnish the FCC and local television stations a simple notice when they plan to add certain signals to an existing system instead of filing a formal

Digitized by Google

application for a certificate of compliance. In December, 1974, a proceeding was initiated to revise and clarify rules for the common carrier mobile and microwave services to minimize petitions. A notice of proposed rulemaking also has been issued regarding a single license to cover all the remote pick-ups of a broadcast station instead of individual licenses. By the end of 1974, the Commission had completed 14 rules and forms revision projects. Twenty-six additional projects are planned for completion during FY 1975 or FY 1976.

Management Improvement

An executive team made up of the Chairman and the Bureau and Office Chiefs has been formed and meets weekly to plan the Commission's agenda and to establish priorities in connection with its work load. The Commission, during the last seven months, has worked under a publicly released meeting schedule which has assisted the staff and the Commission in discharging its responsibilities.

As part of the program to eliminate backlogs, the Commission is seeking to end internal procedural bottlenecks, improve manpower utilization, and increase productivity. Comprehensive management surveys of two backlog areas (common carrier radio and industrial and public safety radio), and an analysis of the Commission's agenda process were completed in July, 1974. As a result of these surveys, internal improvements have been implemented.

Two new management studies were initiated in September, 1974. An analysis of broadcast complaints and compliance activities seek to expedite processing of complaints and investigations of rule violations. A study of administrative services operations seeks to improve the support provided to program managers.

In conjunction with these studies, the Commission' management staff has been examining the interrelated problems of training, job satisfaction, leadership style and other factors affecting productivity. A pilot project was started in 1974 to evaluate the effectiveness of "job enrichment" or designing jobs to make them more challenging and to improve individual development and performance.

To provide a top level forum to monitor these activities, the Commission established a Backlog Control Committee chaired by a Commissioner. The Committee met nine times during 1974 to review backlog reduction plans and goals, and to provide an interchange of ideas in the Commission.

Current Backlog Status

These management improvement efforts together with additional manpower authorized by Congress last year have enabled the Commission to increase output to reduce a number of critical backlogs, in some cases despite substantial increases in workload. For example, Safety and Special Radio receipts increased 45% during 1974, but they were processed more quickly than in 1973. The average time required to handle these applications in 1973 ranged from 21 to 74 days, and in 1974 it was reduced to 14 to 40 days.

Progress in the Cable Television Bureau has also been excellent. Disposals increased substantially in all categories—69% for Community Antenna Relay Applications, 67% for Certificates of Compliance, and more than double for Special Relief Petitions.

The number of pending Common Carrier microwave applications for new service and transfers or assignments has been reduced from 3,513 to 2,195—a 38% improvement. Normal applications are now processed in about four months which is considered reasonable for licenses of this complexity. The Domestic Public Land Mobile backlog has been stable during the past year (around 1,800), but we anticipate improvement during 1975 as a relatively new staff gains experience.

The Broadcast situation is mixed. The Bureau achieved a dramatic improvement in the processing of assignment and transfer application. In the area of new AM service and major changes, processing increased 37%, but receipts were up 42%, and consequently the backlog increased. There were reductions, however, in the number of pending TV and FM applications for new service or major changes. The renewal backlog increased slightly during 1974 because of more petitions to deny from public interest groups. A number of administrative steps have been initiated to reverse this trend, and reductions are expected in the coming months.

Mr. Chairman, that concludes my statement. We are all prepared to answer questions, and to provide further information.

Mr. MACDONALD. Thank you very much, Mr. Wiley.

I must say that the report sounds a little more self-satisfying on the work of the Commission than perhaps everybody else in the country feels about it, including this committee, and including this

Digitized by Google

Member of Congress, but as one who runs for office myself, and one who has heard many, many others run, it doesn't set me off. That is all a bit self-congratulatory.

In your report, I think that is only human, and I think the Commission, and especially yourself, is to be commended for many things that it has done, or attempted to do, and maybe the rest of the Commission won't like this, but I think one of the best things you have done is to get everyone to stay in Washington for at least 3 days a week, and get them all together so you can get on with the public's and your business.

I am a little surprised, Mr. Wiley, that you would raise the A.T. & T. rate filing as a matter that you feel the Commission did a terrific job on. I would like to ask some questions about that and then come up with a suggestion that goes beyond A.T. & T., and I think you will be very interested in my questioning.

You know that I had been pressing you a little bit concerning the A.T. & T., and their request for $717 million, and I heard nothing much about many hearings or decisions concerning it until suddenly my phone rang one day. I think it was shortly after the decision had been reached by the Commission on the A.T. & T., informing me of what you had done, even though you were very well aware as to how interested the Congress was in this entire matter, and especially what we could do to be of assistance to the FCC. It is obvious A.T. & T. is a large company, and it would take all of our coordinated efforts to try to keep what they say, and what is the fact, exactly in line. Even with our coordinated efforts, we could do that, so I was very surprised, indeed, not to hear it from the FCC, but to hear it from somebody who knew somebody who worked for A.T. & T., and who, in turn, knew somebody at the FCC. All of which brings me directly to the point I have in mind.

Inasmuch as the FCC meetings are sort of like a sieve, nothing ever gets kept quiet very long, although the A.T. & T. decision set a new world record, as far as I am concerned, as far as speed is concerned, and it set a personal record for surprise, and, at first, indignation. I figured it was not the day to call you directly because I was afraid I might blow off at you and then regret doing that, but I do not regret calling it to your attention. I think that something the FCC could do very easily, that we have done here in the Congress, and it seems to me to be the best way of doing the publics' business and to set an example for many of the other agencies here in Washington—would be to hold these executive sessions in public. This committee holds its executive sessions in public unless a majority votes to close the executive session to the public. We are always presented with something from the FCC saying, this is what we have done, and we have to get a crystal ball out to figure out why it was done. Sometimes, there are those that agree with what was done, and sometimes, obviously, there are those that disagree on any given subject, but, at least, if the executive sessions were open, and the public's business was done in public, I think it would put to rest a lot of rumors concerning the agencies—I am not just now talking about yours—although I am talking specifically about yours in this case, but I think it is also true of other agencies here in town, and to stop the criticism about the agencies being run by the people that they are supposed to regulate.

Digitized by Google

Now, I am not suggesting A.T. & T. runs the FCC. What I am more than suggesting is that I think that it would be a very good move on your part to see to it that the Congress and the public become as well informed on the workings of the Commission as are some of the segments of the industry over which you have jurisdiction and over which you impose regulation. We here have done the same thing. We have opened up our meetings to the public. If it was a very sensitive matter or adjudicatory matter, either one or both, that affected national security or our relationships with other countries—in the field of international satellites, for example—I think that no one would particularly raise any objections to those executive sessions being closed, but I think it would be a very good thing for the Commission to make all of your deliberations open to the public. You have made a good deal in your statement to us of taking the Commission to the various places in the country to hear from the public. I think that in your markups and the decisionmaking, the people, especially the Congress, have the right to know who is voting how and why, and what are the reasons that the decision was reached, so I would urge—I don't like to make a formal request as of yet, because I know, perhaps it is a new thought to you—but I would like to urge, at this point, Commissioner Wiley, that you take a good look at this and take steps to open up your executive sessions to the public, and have a public vote, on which members should be recorded, so that we, in the Congress, and those who have appointed the various members, know who is doing their job well, and who is just going through the motions—if, indeed, there are any such people, which I sometimes hear about. If you have any response to that suggestion, Mr. Wiley, at this point, I would like to hear it.

Mr. WILEY. I would like to make several comments, if I might, concerning the remarks you made. Number one, I don't think there is anything in my statement which indicates that we felt—to use your phrase—that our decision in the case was terrific. I don't think there was anything in the decision to be either commended or condemned, we were simply doing our job and sometimes it is difficult. I do apologize, as I have told you personally, for not advising the chairman of this committee in advance of the Commission's decision.

I would like to say, as far as the speed of the decision goes, we made it prior to March 4, because it had to be made prior to March 4. We released the public announcement that day and I resist any suggestion that there was anything clandestine about the Commission's decision.

Mr. MACDONALD. I said a closed session; now, we can play semantics all morning, if you want to. Anything that is closed is not clandestine in the sense that nobody knows it is going on. The public may know that a meeting is taking place, but they don't know what is happening in the meeting, unless they are well acquainted with somebody in the FCC who leaks to them immediately when the meeting is over. I swear to you that I had knowledge of what you had done within several hours after it was done. Even though you finally decided, apparently, to put out a press release, and you put out a very short release saying what you had done later in the afternoon; then I was notified by someone at the FCC. I was not there at the time, but my office tells me I was notified at 5:30 on the same day, while the people who have an in at the FCC, private individuals working

Digitized by Google

for private companies, were telling a friend of mine, who was telling me, about what was happening. Now, that is not right.

Mr. WILEY. If I may respond. As I say, we did release our decision on the very day it was made. I have had a group of staff looking into the whole question of opening meetings for some time. There are considerations with a regulatory commission which takes in proprietary information, which makes decisions affecting stock of various companies we regulate, which must be considered in the overall decision. I am only saying to you, Mr. Chairman, this is not a question that I find should not be considered, and we are considering it. I would like to say, the question of leaks from the Commission concerns me very much. I think it is not appropriate for members of our Commission or staff members to tell regulated industries or other friends of theirs of the private negotiations of the Commission, as has been going on. I think the basic answer to what you are saying is the integrity of its members. I think the decision——

Mr. MACDONALD. I have to interrupt you at this point, Mr. Chairman, because I in no way am questioning the integrity of anyone. The Congress, this subcommittee, opened up its hearings, not because anybody on the subcommittee or full committee challenged the integrity of any member, but just to insure the freedom of information, the right of the public to know what is going on in their Government and you, yourself, have indicated how important the decisions that you make are, so integrity has got nothing much to do with it.

Mr. WILEY. It has this to do with it. As you suggest, and others have suggested, sometimes regulatory agencies seem to have a closer association with those they regulate than is appropriate. I think that does bear on the basic integrity of the Commission, its members and decisions, and I must say I respectfully resist that.

Mr. MACDONALD. You can resist all you want. It doesn't change the point of the fact that somebody that works for A.T. & T. told somebody who told me about your decision several hours before you did.

Mr. WILEY. There may be Commission leaks——

Mr. MACDONALD. As far as the stock market goes, as long as the insiders know, and so long as you keep it from the public, it would seem to me to have much more tendency for some insider to take a flyer on the stock market on information they have that the rest of the public does not have, so I think your argument on that point is self-defeating.

Mr. WILEY. Let me say again, we don't keep things from the public. We try to release our decisions as quickly as possible. In the meantime, if someone within the Commission releases information, I think that is inappropriate. As for the question of open meetings, I think that is a serious and complex matter, and something I am having looked into because I am for as open a government as possible. We will have to consider whether such openness will assist the delicate considerations we have and lead to the kind of exchanges we have in a collegial body, that make good policy. If it would prohibit that kind of free and open exchange among the Commissioners, I would have to question it. I think the Congress is looking into this same question, because I have read a variety of testimony on the Government in the Sunshine legislation—I have seen a variety of viewpoints suggested on testimony

Digitized by Google

on that subject. I think it is an important issue that must be looked into and I agree with you to that extent.

Mr. MACDONALD. Do you agree with me to the extent you are thinking seriously of opening your executive sessions to the public?

Mr. WILEY. I am having a staff look into it to make recommendations on it. I don't think this is the place to comment on that. My personal opinion is that there are some aspects of our meetings that could be made public. There are others that, perhaps, opening them to the public would not be in the public interest.

Mr. MACDONALD. When it was first suggested 2 years ago that we open up our markup sessions, I resisted, myself, thinking that there would be people playing demagogue, who would be appealing to the masses, rather than getting the business of the committee done. But I assure you that has not happened on this committee, so I have become a believer that once you get involved in something complex, you know, you forget anybody else is there.

Mr. WILEY. We have mentioned several times the fact that if everyone is going to know what we are doing in any case, it may be appropriate to simply have the meetings in the open. I would have no problem with that, personally. I think some considerations have to be given to the kind of proprietary information we deal with, the effect it may have on the stock market and what have you.

Mr. MACDONALD. I think it is more deleterious to free trading to have just a few insiders have quick access to what the Commission has done.

Mr. WILEY. I have often found inside information is not always as accurate as it might be.

Mr. MACDONALD. I haven't been privy to much of it because, for some reason, the people I know privy to the information don't give it to me except that on this A.T. & T. thing, I heard about it more quickly than I know for sure what is going to come up on the Floor of the House this afternoon, and it would seem to me—I don't want to go over the same arguments—your argument of the stock market is fallacious.

Another matter, you are talking about what you are going to do with the CATV and the rules you are thinking about. If you want to be an insider, all you have got to do is buy Television Digest, which I agree doesn't always have all proper information, or Broadcasting Magazine, about which I would have to say the same thing. They have about 2½ or 2 pages just full of changes that the FCC made in a closed meeting last week.

Mr. WILEY. It is for that very reason I asked the staff to look into this very question several months ago but——

Mr. MACDONALD. Wouldn't it all be alleviated if you had the meetings in public?

Mr. WILEY. The other side of it is—would you have the same kind of frank and open discussion? Would Commissioners suggest a number of things which, in the full light of day might not appear too good, but are necessary for the Commission to get the full range of options? I don't know.

Mr. MACDONALD. Now, you are questioning the integrity of your Commission. It isn't me, it is you.

Digitized by Google

Mr. WILEY. I don't think that is integrity. I think that is courage. I believe Commissioner Lee wants to add something.

Mr. MACDONALD. Before you say that, discretion is the better part of valor, but as far as I know, the members, unless they do something outrageous, only have to please one man, and that is the President, and get approved by the Senate, and there you are. You don't have to be a profile in courage on every issue. Mrs. Reid has been both places, and I am not going to put her on the spot but I am sure—well, if it isn't out of line, I think, after we finish this—you say you think it is a good idea from your point of view, but you are not sure about the others.

Mr. WILEY. I say it is a good idea, there are some concerns.

Mr. MACDONALD. I want to go down the line and ask them what they think.

Mr. WILEY. I do commend to your attention some of the debate that has gone on with respect to the Government in the Sunshine bill. The American Bar Committee has been studying that and I am on the council——

Mr. MACDONALD. Studies—every subject you have has been studied to death. A number of the things you are talking about originated back in 1971, and they are still unresolved and you are complimenting the Commission for coming to grips and coming out with some ruling. I don't know what they have been doing since 1971. You have only been Chairman for a year, so you are not supposed to be responsible for everything but I think it is a good suggestion. But, of course, we are just at the talking stage now. I think the FCC is an arm of the Congress—if the Congress tells you to do it and takes further action, you are going to have to do it. I always believe in doing things the easiest way possible just as long as they are done properly, and I would think that perhaps a trial period even—if you found out that all of your Commissioners, or the majority of them lack courage, which I find hard to believe—they have to run the gauntlet, in the first place, over in the Senate, to come here, which takes a good deal of courage for some people, I would think. I wholeheartedly subscribe to it. I hope that you get moving on it.

Mr. LEE. I have one small observation on that point, as an observer on the scene for a long time. It is difficult to say that everything shouldn't be public. I think, for the most part, that is in the public interest. There are some areas, however, that I would question, and this is one. The reason I say that is, that you would not have what we sometimes refer to as the full, robust, open debate among Commissioners to achieve a point. I think it is somewhat analogous to the appropriation process up here, perhaps it has changed recently—I worked up here years ago and we used to sit in on these markups involving money. I worked for an old gentleman—you probably refer to him by the name of John Tabor, and sitting in these little conferences—he would throw out a figure—somebody else threw out a figure, and sometimes he would lean over and say, "that is only the asking price."

I think there are places where you need that exchange, and some reporter isn't going to pick up a remark you made and go out and print it before he gets a chance to understand why you made it. Per-

Digitized by Google

haps you are testing—you want a reaction. I think this particular area—I am not saying we shouldn't do it, but I want to move very carefully.

Mr. MACDONALD. I think the Commission has been in existence for an awful lot of years. It has never been tested, and I, for one, think it is time to have it tested. Mrs. Reid, you wanted to say something?

Mrs. REID. I had the same thought, having served on the Appropriations Committee, and even though I think some of our meetings could be open, many of the meetings do remind me of the meetings we had in Appropriations, particularly in markup. There are exchanges that would probably be inhibited if this kind of meeting were open, and I think we would have to look at that very carefully.

Mr. MACDONALD. I agree, but if you have a lack of courage to face displeasure, you are in the wrong job, just as I would be if I was scared of the press. What can they do? They can twist facts sometimes, but they don't twist them all of the time, and a good reporter doesn't even try to twist facts to make a pretty good story out of not much of a story. Cutting A.T. & T's. request in half looked to me like a trade off. They asked for $717 million, you gave them $365 million. Well, I see the Chairman shaking his head, no, but I only think that because I am not privy to what happened at that markup session to which I would have access if it were public.

Mr. WILEY. My full report clarifies completely where we picked $385 million. I don't think that is a fair statement.

Mr. MACDONALD. I have used up my time for the first round, and we will go on. Mr. Carney would be next, but we have adopted some new rules.

Mr. CARNEY. Mr. Chairman, I will humbly await my turn.

Mr. MACDONALD. Mr. Byron.

Mr. BYRON. Yes, Mr. Chairman, I have one or two small questions here. I concur with our Chairman. I don't think openness is half as bad as it seems. The water is a little cold when you put your foot in but in the long run it is probably better.

I had a couple of questions on your remarks on that cable television. I just want to address myself to that, if I could.

You say you are holding hearings now on the question of cable TV and the sports blackout question. Have these hearings progressed or is that just beginning?

Mr. WILEY. Well, this question——

Mr. BYRON. I think that is on page 19.

Mr. WILEY. This question of distant signal sports has been pending in the Commission since February of 1972. The Commission put out a rulemaking in this entire area and said it would decide this matter expeditiously. However, 3 years later, we have not decided it and I put it on my publicly announced schedule for a meeting with the Commissioners to reach a decision on the issue. Many of our Commissioners are new and have not been introduced to this problem before. We also put it out for further comments to update the record. The Commission has not yet had this discussed with them, but it is going to be coming up in the near future when the date for filling comments has expired. We extended time at the request of the cable industry to sometime in April, and therafter the Commission will consider it. What the rulemaking is looking to is whether or not the

Digitized by Google

Commission should give some credence to the apparent intent of Congress, Public Law 87–33, relative to this area. This is an area of great controversy to the cable industry and sports interest as well, and the Commission has got to decide where its regulatory responsibilities lie in this area and simply has not done so at this point.

Mr. BYRON. You don't plan to treat CATV any differently than in the past, until you have arrived at some decision on this issue?

Mr. WILEY. On this issue, what will happen is that after the comments have been completed, the staff will come forward and discuss it with the Commission, and we will make a determination as to whether or not there should be any kind of oral proceeding in the area. We have had one oral argument back in 1972. That is quite old, and we must decide whether or not some action may be appropriate in this area.

The Commission has had no discussion of it. We haven't made a decision whether we are going to do what is proposed in the rules, something less than that, or nothing.

I know Members of Congress have received input on this, and I can only say, at this time, it is somewhat premature.

Mr. BYRON. We have millions of subscribers around the country, and that is a tremendous hornet's nest, it seems to me. You remember how quickly the bill went through here several years ago. I think it was 3 days, Mr. Chairman, and there is a great deal of public interest in sports television.

Mr. WILEY. I agree with you.

Mr. MACDONALD. Will the gentleman yield?

Mr. BYRON. Yes.

Mr. MACDONALD. Mr. Wiley, don't you think it would be well to distinguish, for the benefit of the newer members, of which Mr. Byron is not one, the difference between importation of distant signals and the antiblackout law itself?

Mr. WILEY. What we are talking about is distant signal importation of sports events. The Commission put out a proposed rule which would seem to track Public Law 87–331. Say we have a professional game in the four major sports—then when they are playing at home, no cable system located within the grade B contour could carry, without the consent of that team, a television broadcast of a professional game of the same sport, without consent of the local television station. That is one thing we are talking about on cable. There is also a sports blackout bill which much was involved in relative to home games on TV, sporting events. We are not referring to that.

Mr. BYRON. How about the question of pay television. I notice you are having hearings on that?

Mr. WILEY. That is a separate question, somewhat related, but the Commission has just about finished a revision, major revision of our antisiphoning rules. Those are not out, so I will only speak for myself. I think it very likely the Commission will continue to believe that some antisiphoning regulations are necessary, the concern being there is a public interest associated with conventional over-the-air television system, and major sporting events and feature films should not be siphoned off to a pay form. I think we are going to give more opportunity to pay television to develop. It is highly controversial and I expect, within a week or two, we will have a set of revised rules you

Digitized by Google

can review and determine whether or not you feel they do meet the public interest.

Mr. BYRON. You are not going to make any major change?

Mr. WILEY. I think there will be major changes but I think the basic concept of antisiphoning will continue in terms of allowing pay television to feature sporting events to give this choice to the American people who want to pay for it while maintaining the basic system for the mass of the people.

Mr. MACDONALD. I can point out, whatever action they take along those lines, that will be thoroughly explored by this subcommittee just as soon as they do it.

Mr. WILEY. We welcome that.

Mr. BYRON. The problem of cross-ownership there is sort of a growing area of newspaper—CATV ownership. Does that concern the Commission at all?

Mr. WILEY. We have taken action in the newspaper-television, and in the newspaper-radio areas recently. We have taken revised action in the CATV-television cross-ownership area. On the question of newspaper-cable ownership, the Commission tentatively has decided it will continue to watch that matter but does not feel a rule prohibiting future co-located situations is necessary at this time. We don't know how cable will develop and we don't know if there would be concern that would require regulation.

Mr. BYRON. You do compile information on it, though?

Mr. WILEY. We are watching it carefully and revising our reporting to keep up on what are the patterns in this area.

Mr. MACDONALD. Mr. Frey.

Mr. FREY. First, let me say I am delighted to be back on the subcommittee and look forward to working with the chairman, who has worked for years in this area and done so much for it. The ability of this committee to focus completely on this issue, on a continuing basis, is going to be a benefit to the committee, and we hope, to the country.

I might say, we don't have any problem of leaks up here. The decisions are out before we even know they are being made. We understand the problem. I am delighted you are meeting 3 days a week. I hope the Congress catches up to you.

I do have some things in my mind. I would like to echo what the gentleman from Maryland said about this whole area of pay TV, and especially the sports area. I am concerned with it and I am delighted the chairman has indicated we are studying it very closely.

I have a couple of general questions on my mind. I think you said, or someone from the Commission said, you had questions about competition always being in the best interest. I think you said in front of the committee—competition not always being in the public interest, and I think I am not sure whether I share your views or don't or whether you said it or not. What I am trying to say is I do have a basic question about competition in some of these areas.

Let's take, for instance, the area generally of A.T. & T. and the problems of the skimming off of some of the businesses that have been claimed. We get many people in my State who are angry about the phone bills and power bills, and everything like that. I would like your thoughts generally on this subject.

Digitized by Google

Mr. WILEY. What I did say was that I felt competition, after all, is the basic economic concept in our society. I generally agree it is in the public interest in terms of providing more diversified service, offering to the public lower cost innovation, what have you. What I am saying is the Commission's statutory mandate is to regulate in the public interest. The courts have told us competition is in the public interest. Generally speaking, we have introduced the thrust of competition, over the last several years, into the common carrier area. We have done this in specialized common carrier decisions, in the interconnection area, and also we have introduced sort of open-skies competition theory in domestic satellites. I generally think these decisions are going to prove to be in the public interest. We are looking at the question of whether or not it will have an adverse public effect on the telephone system in the country or any deleterious effect. Those questions are being carefully studied in 2 dockets I mentioned in my statement. We are working with the Federal-State joint board docket, which is looking to the——

Mr. FREY. When are you going to get the answers?

Mr. WILEY. To date, I have not seen the evidence that would convince me, the decisions we made to date are not in the public interest. I think, frankly, we have not seen the evidence of technological harm to the basic system. We have not seen the evidence of harm, to turn away from our basically procompetitive system.

Mr. FREY. Let me give you a hypothetical. If the phone bill of people in my State doubles, should I tell them it is in their best interest?

Mr. WILEY. One of the things, perhaps, one would look at is whether we are pricing our telephone services in the right way. You pay for most utilities by reason of usage, whereas, for telephone service, we have had flat rates. The Commission has suggested the usage should be considered. I agree the economic impact on the American public is something that has to be looked at to determine if competition is in the public interest.

Mr. FREY. You mentioned something about satellites. You rejected a proposed arrangement, other options you are considering. What are those other options?

Mr. WILEY. You mean in the Comsat–IBM matter?

Mr. FREY. Yes.

Mr. WILEY. Comsat–IBM brought to us a proposal for a joint communications domestic satellite service. We rejected the precise plan they gave us but we provided them with 3 options—either to enter the market independently of each other—to enter jointly with a third party that would have to own at least 10 percent of the stock, or Comsat to provide leased space service to IBM much as it does to A.T. & T.

Mr. FREY. Speaking generally, are you going to propose certain options, that others, who were interested, could take in the future?

Mr. WILEY. We already have. We came out with a major domestic satellite decision which is spelled out in my statement. We currently have the Western Union, which is broad——

Mr. FREY. Any new options—because, as I read your statement, you are talking about new options or new ways to do it. I was interested in what they might be.

Digitized by Google

Mr. WILEY. I think the innovation, now, in new services and technologies will have to come from the public sector. I think the entry of IBM must be watched in terms of——

Mr. FREY. Are you satisfied with the cooperation of the commissioner of football, in that report you put out last October?

Mr. WILEY. I think, in our first report to Congress, we did not receive, initially, the kind of cooperation we had hoped for. Subsequently, through correspondence I had with Mr. Rozelle, I think we worked out our problems. It is a question of initiating the kind of information we needed, having them understand what we required, and I think, this year, we will be able to give you, the Congress, a more meaningful report.

Mr. FREY. I hope so because that first one wasn't really a record setter.

I know you have some statistics about what you are doing to update the Commission, but just for the record, how many dockets are pending in the licensing area? How many applications?

Mr. WILEY. In broadcast licensing, 8,000 commercial radio and television licenses have to be renewed each year—that is about 2,700 a year. It is complicated by petitions to deny and comparative filings authorized by the statute. We have several hundred of those applications, of those challenges, backlogged at the Commission. That is why we have put a new task force into the renewal branch and put more people in there to try to adopt some new procedures to get from underneath this backlog.

Mr. FREY. What has been the average time?

Mr. WILEY. It is difficult to give you an average. If it is an uncontested filing, it will go through very quickly. If it has EEOC problems, promise versus performance problems, if there is a station challenging it, it can be held up for a long time. This is a concern both to the industry and the Commission, and I think it was to the Congress, because, of course, you considered license renewal legislation last year.

Mr. FREY. Maybe we will get back to that. I am delighted to see you are working on a way to separate the smaller broadcasters from the others—we are getting killed with the paperwork.

One last comment. I read your report on, the just recent one, on obscenity, and that is a most interesting legal area. Your definition, I guess, of obscenity relates—and you have made it as specific as possible, in terms of the thrust of that case. I have also been interested, over a period of years, in the problem of the children's programing broadcasting, and at times I find myself in a quandary, as I suppose you do, in the need to preserve, in essence, the first amendment, and what I think at times is the overuse, for instance, in the advertising area. I have five children—whether I like it or not I get to see some of it. Your method seems to be to throw out a suggestion, and then negotiate with the industry. Is that a fair statement?

Mr. WILEY. Not completely, Mr. Frey. On the question of children's television, this has been a proceeding which had been at the Commission for a long time. I made a speech indicating I specifically felt the time had come for Government action—commercials should be reduced. The industry came to see me and suggested they were going to take action in this area to limit commercials. I said I would see what they had in mind, but it had to cover not only code stations

Digitized by Google

but all stations. Subsequently, the NAB did take action. The independent television stations took action to reduce commercials along the lines I had in mind. We then put a statement on the renewal form and we will be able to monitor it to see whether self-regulation will be workable. I would like to facilitate and encourage that wherever I can. If it is not meaningful, we will have to take action. I think we have shown that in the past.

Mr. MACDONALD. Mr. Carney, a new, welcome addition.

Mr. CARNEY. Mr. Wiley, in your testimony, you say that the Commission believes industry self-regulation is preferable to Government standards, and so on. That might be a nice theory, but I understand your Commission was set up because of the fact when institutions do not practice restraint, then the people expect the Government to step in and make regulations. Isn't that right?

Mr. WILEY. You take this particular statement out of context, if I may say so. That is an area where we are touching very delicate first amendment problems. In dealing with the question of violence and sexual material on television, we are in a sensitive area. I felt, if the industry could take action in this area, that would be preferable to a rigid set of Government standards. If that doesn't turn out to protect the public, we will have to take a look at what our regulations will be. It will be a very complex area which may require additional legislation.

Mr. CARNEY. I appreciate that, but my mail, and every Congressman's mail, is consistent. Over the years, my mail has been consistent from housewives and people complaining about violence and, also, they contend, immoral or frank discussion.

I think anybody that observes TV can see, in the last 2 or 3 or 4 years, every week, some network will do something more explicit. The next week another network does it. I think people should have the right to choose what they want to read or go to see. This is something going over the airwaves, and the airwaves are owned by the people of this country. I think the people have some right to reasonable regulation.

Mr. WILEY. Let me say this—I strongly agree with your basic view that broadcasting is different than other entertainment forms. It goes directly into the home. We can expect different standards than that of motion pictures. That is why I took the initiative of meeting with the network officials to explore whether or not some meaningful self-regulation could be achieved. The steps that the networks and the NAB Committee Review Boards have taken to date give some promise of this occurring and, at the same time, allow television to continue to cover sensitive subjects for mature audiences at times when adult audiences may be interested. Of course, even those should be done with taste and decency. We have assurances from the networks, and we will wait and see if these people mean what they say.

Mr. CARNEY. The product doesn't show it. They may be giving you assurances. I will tell my friends in the broadcasting industry, unless they show they mean what they are saying, they are going to get regulations they might not like. I am saying this publicly because I agree with you in theory—self-regulation is the best. One of the things about this country, if you don't do self-regulation, and the people control the Government, they go too far, people have a way of kicking back and that always isn't good. Somethimes they kick too hard.

Digitized by Google

I commend you and your committee for trying to do something about this, but I want to say publicly to the members of the industry, they better start showing discretion, if my mail means anything.

About cable TV, one of the complaints I am getting in my district, and one of the reasons I wanted to be on this subcommittee, was frankly, I want to say it bluntly—you are allowing too narrow licenses for too narrow districts. In my district—and I have pretty good grounds on this—these fly-by-night operators, who aren't financially sound, are going out and inducing city councils and government bodies, township trustees, to grant them a license. They are not producing on this. They want to sell the paper to somebody that is a bigger operator. They have got a few thousand dollars invested, and they sell these cable TV licenses for, in some instances, 50 and 100 times what they have put into it, without doing anything of a constructive nature to build the industry. Have you any rules or regulations to control that?

Mr. WILEY. When we embarked on our cable regulatory program, because cable has different characteristics in the sense of making use of the local streets and properties, we embarked on a joint regulatory program with State and local communities. The selection of the franchisee is primarily a matter not for Federal but local franchising authorities. At the same time, the Commission does have concern about some of the points you have mentioned, and we are currently looking at a possible new proceeding on transfers of cable operations, but I would have to say that some of the concerns you express lie at the door of local governmental bodies.

Mr. CARNEY. Have you put any thought to maybe some Government control to make it a broader licensing basis? Local bodies don't give TV and radio stations out; you do it. Why shouldn't the same apply to cable TV?

Mr. WILEY. The reason we have a national plan in broadcasting is because it is over the air. Cable is a wire situation that has to use the local streets and has incidents of local ownership and concern. We have attempted to have a sharing of the regulatory concern. If we were not going to do that, we would have to have a much larger FCC. I am not certain Congress would support that because, frankly, we don't have the manpower to franchise all of these various merging cable systems, and I am not really sure it ultimately would be in the public interest. At the same time, it seems to me those franchising authorities must go through certain requirements that we establish. For example, a public proceeding. People can come in and make their views known. They must meet certain Federal standards we have set up. I am not saying it is a perfect system, but I do feel it has some advantages because of cable's peculiar characteristics.

Mr. CARNEY. Do you think we should leave this, the license or franchising, to local authorities, or do you think there should be some reasonably broad governmental regulations everyone that wants a license should comply with—financial liabilities, how long they should keep the license after they get it, the terms they can transfer or sell that property to someone else? It seems to me there should be some regulation on this. Have you put any thought to this?

Mr. WILEY. Yes. We have had a Federal, State, and Local Advisory Committee working for several years. We are studying part II of the FSLAC report. We have limited the time a local franchise authority

Digitized by Google

can grant a franchise to 15 years. We have preempted technical standards. We are going to make decisions in the near future as to how much the Federal Government should do and how much the State and local authorities can do. It is not an easy area, but I am satisfied careful study is being made of this entire problem.

Mr. CARNEY. I hope you will make a study and make sound regulations in the public interest.

I have one more question. You point out here in the fee schedule that you will recover $16½ million or 35 percent of the Commission's fiscal year budget. That $16½ million, what licenses do you cover there?

Mr. WILEY. We cover practically all of our services in which there is some value to the recipient. That is the standard the Supreme Court requires. Before, under congressional directive, we tried to take our entire budget and divide it among the various things we regulate. The Court said that is not proper. We have gone back and made a complicated breakdown. We are now only going to recover 35 percent of our budget, where previously we were trying to recover as close to 100 percent as we could.

Mr. CARNEY. Is that all forms of licensees or cable TV?

Mr. WILEY. Oh, no. Down to citizen band radio.

Mr. CARNEY. I was in Ohio State Legislature many years and we expected the Public Utilities Commission of Ohio to make sure the public utilities were assessed enough to pay for that service. Why should the Government pay 65 percent, which would be over $35 million, when these commercial people are making money on it?

Mr. WILEY. I can only repeat what the Supreme Court told us in March of last year, the whole concept of regulation is in part service to the public, and that service to the public is supposed to be paid out of the tax revenues, so we had to go back and compute a new fee schedule based on value to the recipient. At the time of our last fee decision I put out a separate statement, in which all of the Commissioners joined, suggesting this whole area cries out for additional congressional guidance. We are now in court on almost every aspect of this fee schedule. If the Commission is to continue to be a Federal Communications Commission and not a Fee Commission I suggest respectfully the Congress might wish to reevaluate this entire area.

Mr. MACDONALD. If the gentleman from Ohio would yield for a brief moment. I would also like to point out that next to filling out an IRS form, the rules and regulations governing CATV, as of now, are just about as confusing to me, and I would guess to the average cable operator, certainly to the average investor, thinking about going into CATV, as the Internal Revenue forms. Some day, when we have more time, I am going to discuss with you all of the rules, because some of them seem terribly unnecessary and others seem unnecessarily complex.

Mr. WILEY. I couldn't agree with you more. I have said publicly I think the set of cable rules is perhaps one of the most complicated ever devised. We have had almost a year, already, a task force working to simplify those rules.

Mr. CARNEY. No more questions.

Mr. MACDONALD. Mr. Madigan.

Mr. MADIGAN. I have some questions which your former law partner wanted me to ask you but since they relate more to your

Digitized by Google

efficiency as a Little League coach than they do to the Commission, I think I will not ask you those right now.

I am interested in the area Mr. Frey opened up, and I wonder were you a member of the Commission when the decisions were made about telephone company competition, the point to point communications and the interchange of equipment for those kinds——

Mr. WILEY. I was probably General Counsel when some of those decisions were made. It has been evolving over the last few years since 1968, and I joined the Commission in 1970 as General Counsel, so I don't think I participated as a Commissioner in the Common Carrier decision, but I have more recently in the extensions of those basic decisions.

Mr. MADIGAN. I want to see if my understanding of the background for the charges made by a company like Bell, is the same understanding you have. What I have read about this, both in court decisions and in decisions through the years made by State regulatory agencies, it seems to me the intent has always been to weigh the cost of the telephone company doing business to the commercial or industrial use for the purpose of providing telephone service to the residential user at the cheapest possible price. Is that the general impression you have?

Mr. WILEY. There has probably been some of that aspect in Bell's general costing of its services. Whether or not that is an appropriate action or whether or not some small businessmen should subsidize, for example, more wealthy residential users, to take the worst situation—we normally think about the small man subsidizing a large commercial businessman. You can think of the reverse situation also—whether or not any subsidies in this area are appropriate, is something I think should be looked at.

Mr. MADIGAN. Have there not been decisions made by State agencies that had, as their basis, that understanding or that thrust—they were trying to provide telephone service to residential users cheaply by having the telephone company weight the charge for equipment rental?

Mr. WILEY. I assume so.

Mr. MADIGAN. It seems to me, with that history, that the recent decisions by your Commission then enable these new competitors to effectively undercut companies like Bell because Bell has these inflated charges on the basis of these prior corrections given them. We allow people to come in and compete with them, charging a lesser amount of money, but those new people coming in are not under any obligation to provide residential or rural or long-line service, any of the more costly things. I wonder how you justify that?

Mr. WILEY. In the economic inquiry I mentioned, docket 20003, we are looking into the question of economic effects of our policies. However, it is difficult to draw the extreme conclusion in this area that the mere fact we have introduced competition into some aspects of Bell's overall services, will cause, for example, the residential user, the rural homeowner, the urban homeowner to pay more money, and if so, are there other ways to solve that? I think it is a very complex area. I have not seen evidence myself sufficient to suggest the Commission's policies, which introduce some competition into this entire monopoly area, are not in the public interest today.

Digitized by Google

Mr. MADIGAN. While this subcommittee doesn't get into it, this full committee gets into other types of business endeavors and the use and regulations that relate to them, and the problems other business entities have.

I would like to draw an analogy for you between railroads and telephone companies. Railroads, for the most part, in the United States, are bankrupt, are in a bankrupt situation, except for some of the Western and Southwestern routes. Through the years, railroads have been regulated. They do not have the flexibility to charge their customers on the basis of what the service should actually cost. They were regulated and told what they could transport, where, and what they could charge for it. There has always been a weighting in the railroad industry for providing cheap transportation for agricultural products, and making up the money by charging more for industrial goods. The truck companies and other carriers have come in and taken away from the railroads the industrial transportation business and left them only with the things they were doing cheaply. It seems inconsistent to me that the Interstate Commerce Commission could cause that kind of problem in the American transportation industry, and then your Commission would come along and move in the direction you are moving, which, ultimately could create the same kind of problem for the telephone company.

Mr. WILEY. I am not sure the analogy is proper. I say our regulation of the Bell System has been an indication of effective, successful regulation because here we have a viable service to the American people, a company which has been successful. One of the reasons it has been successful is the Commission and the State regulatory commissions have had the courage to provide unpopular rate increases, as we did in this last one, where the public interest would require it, and the company would need it. I am not convinced the introduction of competition, in some aspects of this very, very large empire of services, is necessarily going to lead to the kind of disastrous effect you suggest. However, because it is a possibility, and there are concerns about the economic industry by not only the Bell System, but hundreds of independent telephone companies, the Commission has instituted this very, very complex and far-reaching inquiry, which will examine all aspects of this area, and I must say we are working closely with State regulatory commissions which have a legitimate concern in this same area. I assure you this is something the Commission is going to continue to monitor carefully because we don't want another Penn Central in the telephone service. We have the finest telephone service in the world, and I think the companies are to be commended. The only question is whether or not, in the light of the national interest in providing competition, certain aspects of that service should be completely inhibited because of our success to date with a monopolistic service. I don't think the evidence suggests it should, at this point.

Mr. MADIGAN. Before we move away from that, I want to leave you with this one observation. At the same time your Commission has been moving in the direction it has, people with as diversified backgrounds and ideologies as Attorney General Saxbe and the former chairman of President Johnson's Council of Economic Advisers, have been recommending American railroads should be set up by the

Digitized by Google

Government on a basis like Bell telephone. That is their recommendation. At the same time, you are moving in the opposite direction, so I am delighted you are undertaking this study, and I hope it will be done in a timely fashion, and will be a comprehensive thing.

Mr. WILEY. One thing you must understand—the competition we have introduced has been in the private line and not the message toll service, which is the basic service we have been talking about to the resident. However, I think your point is that it might have an effect on the economic viability of this other service and that is what we are examining.

Mr. MADIGAN. We can talk about the business customers subsidizing wealthy residential users. There are a lot of residential users we can put in a cate_ory other than wealthy.

Mr. WILEY. Absoutely.

Mr. MADIGAN. Increase in cost for residential telephone service would be absolutely terrible—people would have to do without.

I want to make this final observation about obscenity. I served as the vice president of the obscenity commission, and we did draft legislation, quickly undone by the courts. You and I might not agree on a definition of obscenity, but I think the fact you have attempted to do something is laudatory and I praise you for that, whether or not we are in agreement. I think it is an area something has to be done by people like yourself. I want to commend you.

Mr. WILEY. Thank you. I also share your concern about the rates which the residential telephone user pays and might pay, and we are looking into all aspects of that, I assure you.

Mr. MACDONALD. I would like to get back to what I think, perhaps, is my underlying discontent with the report which you filed on television violence and that mainly I would think, deals with your optimism concerning the industry's willingness for self-regulation. I, perhaps, don't go quite as far as Mr. Carney did in his questioning, but I must say that the industry, as far as I am concerned, in my experience with them, and I have many good friends in the industry, and secretly—I don't know if they will admit it to me, but secretly I know they must admit it to themselves—they have one motivation and that is the bottom line. They don't care what they put on that screen as long as the ratings show that it is attracting a vast majority of Americans to watch it. I know you have been with the Commission since 1970, so you can't be naive about what motivates the broadcasting industry as a whole, and therefore, when you say that this whole thing is going to depend on their reasonableness and their good faith, that is, in my judgment, like writing a letter to Santa Claus. They have made so little progress, but for the amount of progress they have made, I would like to congratulate you. I think you and this subcommittee have been hammering along about children's programing and there have been some active groups, including one called ACT, which has done very well in this field. But as far as sex and violence are concerned, and as far as your hoping that the good faith and reasonableness of the networks is going to take care of violence and sex on TV programing, I think you are whistling Dixie.

Mr. WILEY. If I may respond to that——

Mr. MACDONALD. If you will pardon me——

Mr. WILEY. Your concern is an honest one, I am sure, and one shared by many people. At the same time, one has to remember, we

Digitized by Google

do have a first amendment, and a no-censorship provision in the Communications Act.

Now, we have the networks having made public, policy statements about what they plan to do in this area.

Mr. MACDONALD. If I could interrupt. They made the same promises to me when the license renewal bill was being considered, and I was trying to drive topless radio off the air. We were successful but that was just a series of happenstances among which was the happenstance that their license renewal bill was pending. And as far as their good faith is concerned ,the license renewal bill is an example. I felt a 3-year license was enough but I agreed to 4 years just to get a bill out and through, because there were inequities going on and still are, in this field and Mr. Frey has mentioned some of them. Then the broadcasters broke their word and went for 5 years on the floor, and of course got it, and that killed the entire bill.

How long have we been after the networks about sex and violence? They get worse and worse. They don't get better and better. When did you have this great conversation with them where they promised to do this and that to clean up television? They were going to cut back on violence?

Mr. WILEY. I just had these meetings in November and January.

Mr. MACDONALD. The programing gets worse all the time. You turn on the TV, any given night, and that is all you can see, after about 8 p.m., is a new way to kill somebody. It is done under the guise of cops and robbers and sure, the bad guy always gets caught, but in the meantime, there is blood all over the streets, blood every place. Guys are getting beaten up. The violence, I think, is much worse on our children than any of the obscenities. Some of the obscenity isn't as bad as they hear at their own school, but some of that violence is incredible.

Mr. WILEY. I have spoken out vigorously on this same subject. I agree with your views.

Mr. MACDONALD. Why say, "Now it is up to their good faith and reasonableness," when they have demonstrated their lack of good faith and reasonableness in this field?

Mr. WILEY. If the Congress has any ideas they would like to suggest for further action or further legislation, I would be glad to consider them, but I think this program goes as far as the Commission can go under the current law and is a good step in the public interest.

Mr. MACDONALD. I agree, the Commission is in a tough position in light of the first amendment. But exposing everybody in the family to burning someone alive—they caught five kids in the city of Boston sometime ago, who set fire to a woman—threw gasoline over her, lit her with a match. They got them down to the police station and no one could believe kids their age would do it. "Where did you get that idea?" they asked. "We saw it on a TV program." The TV programs haven't ceased one iota in violence. It seems to me they keep pushing and pushing to see how far they can go before somebody really cracks down on them. I would think, without touching the first amendment, in the license renewal process, this could be a fair part of ascertainment, because, are they serving the public interest of the communities they are licensed to service by showing all of this sex and violence? That, in no way would abridge the first amendment.

Digitized by Google

Mr. WILEY. I think they are getting the message from the comments you have made and other Members of the Congress have made, and the Commission has made, and I have made. Starting in the fall, I think a parent can be assured, prior to 9 p.m., at least, there isn't going to be any programing in prime time that would be offensive to younger children, without specific advisories. I think it is always going to be subjective. We are dealing with a system Congress set up—placed the public interest in private hands.

Mr. MACDONALD. I know you are not suggesting we nationalize?

Mr. WILEY. No, not in the slightest. I am satisfied with the current system. I think the current system can work. It has to have continual oversight. That is what we are going to do, not only in that area, but all areas.

Mr. MACDONALD. I agree. I don't envy you your job. Nobody ever promised you a rose garden when you took the job you are in. I think this violence thing is the worst thing to hit the United States since the plague, since now, on the news, the kids see live war in Southeast Asia with blood and guts all over the streets, and then we go *from* there into blood and guts all over our streets under the heading of action—"SWAT" is a new one. Each of the new programs outdoes the other. You can take a postgraduate course on how to kill somebody in "Hawaii Five O". You don't have to go to school any more to learn tricks of the trade. You can turn on your TV. That is what makes me—not laugh—I am not laughing at you—I sympathize with you a good deal, but when you talk about the family television hour, *it* sounds like something like "Over the Hill to Grandmother's House." I don't know any family that has got an hour's family viewing time, do you?

Mr. WILEY. It is 2 hours, first of all. It is the first half of prime time.

Mr. MACDONALD. There are so many things we can get into, since you refer to prime time access. That period was reserved for local programing. All we got was reruns of "Lucy," "Dragnet," or something like that. The amount of new local programing is still zilch, so I, for one, think that has been a failure except there has been some expanded local news—but outside of that, there is no more local programing than there ever was, in my judgment.

Second, you talk about eastern time and 7 to 9 being set aside. How about central, Rocky Mountain, west coast?

Mr. WILEY. West Coast would be the same. I suggested to the networks they have 9 across the country, much as they do in Europe and France, where you have a one time zone country. They suggested this would be economically not feasible and their programs therefore do vary by the time zone. The proposal I put to them was 9 origination time.

Mr. MACDONALD. It is an effort, I suppose, but I don't have too much hope, because kids watch TV from morning until night, especially if you have got two TV's in the house—you have to run a border patrol to see what they are watching upstairs. You can't watch what you want to yourself—I went through that stage.

We have two new members that have not been heard from, but I would like to sound off through you to the industry, that while you may be relying on their good faith and reasonableness, this subcom-

Digitized by Google

mittee is not, as far as its chairman is concerned. I will believe it when I see the performance, not just on conversations. I have had a million conversations and it turns out it gets worse instead of better.

We have two very new members—no newer than anyone else when they first came here, but new to the subcommittee—Mr. Wirth and Mr. Brodhead. I don't know if you are sitting in seniority.

Mr. Brodhead, do you have any questions?

Mr. BRODHEAD. Yes; I do.

Mr. Wiley, I would like to pursue much the same line of questioning as Mr. Madigan. When the FCC made the original decision to allow these specialized common carriers to compete with the Bell System, wasn't that done on the basis that they were going to be providing new and different services?

Mr. WILEY. I think largely that is true, and I have not been totally satisfied with their performance to date in terms of providing something different, new, to the public that the Bell System hadn't performed. The response I get, when I raise those points, is that they have to get started, have to get developed, and this is going to come when they become viable.

Mr. BRODHEAD. Then, what you are saying is, up to this point there hasn't been any significantly new or different services these companies have provided?

Mr. WILEY. There have been some, but, as I say, more can be done in this area, and I feel, in time, more may well be done. We are learning as we go along in this area. This is a new thrust.

Mr. BRODHEAD. Could you be a little more specific with respect to what services they are providing, that the Bell System or the standard telephone companies cannot or have not been providing?

Mr. WILEY. Let me ask Mr. Hinchman, the Chief of our Common Carrier Bureau, if he would like to elaborate.

Mr. HINCHMAN. If you are talking about new transmission services, they all transmit information by microwave and that is the same kind of system Bell has used, but in terms of tailoring of services to fit particular customers' needs to provide terminal equipment at customer locations, to provide new forms of switch service for private networks, they are providing new services. I think it is a matter of definition what you call a new service. They are offering something which, apparently, those customers are finding attractive, economical, providing, to that extent, new services. They are not providing something which was unheard of in terms of television transmission service that we didn't have before, but in terms of the overall end to end service, they are providing, there are new service offerings. They have tariffs that do not match the type of service the Bell System provides and they are finding customers for their services.

Mr. BRODHEAD. I am deeply concerned about the effect of this policy on the average telephone subscriber. If the Bell System is losing business, if their rates are being undercut, the extent to which they are going to have to compensate for this by raising the cost of the telephone service for the average residential subscriber. Residential telephone service today is a necessity, and we are in a very tight inflationary period. Considering that the costs people have to pay for basic utilities are rising very fast, I am concerned this policy is going to have that kind of impact. I therefore question whether or not it is in the public interest.

Digitized by Google

Mr. WILEY. I would refer back to some of the responses I gave to Congressman Madigan. This is an issue under consideration by the Commission. There are a variety of answers to it other than simply the fact the residential phone bills are going to have to go up. There are possible alternative ratemaking practices, including usage-sensitive pricing. Not only do I think we have to look at possible alternatives in terms of pricing, concerning usage-sensitive pricing, as I said, but we have to look at the size of the market we are talking about and really what portion of it has been open to competition. The private line market is relatively miniscule in terms of the market we are talking about. The Commission recognizes the concerns you express.

Mr. BRODHEAD. Have you addressed the question of needless duplication of services; that is, if there are existing lines or systems that can carry this business and then somebody else, another company makes another system to carry the traffic that could be carried by an existing system. If the problem is that the existing system is inadequate or the rates are unfair, that could be dealt with by the appropriate regulatory agencies. But in case of duplication, eventually, these costs are passed along to the public and the people end up paying for it. If this competition is going to provide lower prices and benefits to the public, I can see it. However, it would appear to me, at least at this early stage, there has been some aspect of needless duplication of service with additional costs to be passed on to the consumer.

Mr. WILEY. I don't agree that has happened to date. I think the Commission has long agreed that two telephone poles in the back yard, to take a classic case, would be needless duplication and wastefulness. I am not so sure that is true in some aspects of the common carrier; for example, private line. There can be different services that members of the public, businessmen, may want to pay for and receive. I think competition can make existing companies more responsive, more innovative. I think that is in the best interest of the American public. We are monitoring this new policy very carefully. The Commission is going to continue to study it. To date, in my view, it has been in the public interest.

Mr. BRODHEAD. Thank you, sir.

Mr. MACDONALD. Mr. Wirth?

Mr. WIRTH. I am sorry I was not here for your discussion of open meetings earlier, but I would like to add my input, and I think that of probably most of the new Members of the Congress, about the whole notion of Government conducting its sessions in secrecy, staff notwithstanding. I think, what you do want to do is have those as open as possible. I don't see any great reason for holding them in closed session, unless national security is at stake.

Mr. WILEY. As I said, shortly after the first of the year, I was thinking of that issue because of some professional association work looked at the Government in the sunshine bill. The staff is studying this matter, and some time in the future we will have this discussed with the Commission and determine whether or not there are portions of our meetings that could be open.

Mr. WIRTH. We have had a sunshine law in the State of Colorado, which has worked very well. In balance, it is in favor of that. I came in this morning, really concerned about cable in our rural areas. I guess some of my enthusiasm for that subject may have been gutted

Digitized by Google

by the discussion of blood and guts on television. Assuming there can be a good product that can be felt out, I would like to focus a few minutes on that. As I understand it, there are literally thousands of households that have no access to television reception.

Mr. WILEY. I think television basically covers 98 percent of the country.

Mr. WIRTH. I think cable is a way of providing additional service to the American people. Have you seen the service commissioned by OTP and done by the Denver Research?

Mr. WILEY. Yes; we are examining that.

Mr. WIRTH. What is the FCC doing to stimulate cable television in our rural areas?

Mr. WILEY. I will ask Mr. David Kinley to comment on that.

Mr. KINLEY. Congressman Wirth, there is nothing in the way of funding that we have undertaken. We have no funds under our appropriation, of course, to foster the development of technology such as cable TV. What we have tried to do is tailor the signal carrying rules in such a fashion that it would make it economically feasible for private operators to undertake cable operations in rural areas. This is particularly true in areas, what we call, outside all markets, cable areas in which no grade B contour television station reaches that area. In those situations, under our rules, the cable system can carry any signal they desire. This is the means by which we have tried to foster the development.

Mr. WIRTH. The DRI study contains two specific recommendations as to what could be done, that do not require the kind of print-in money you are talking about.

That report also talks about the possibility of various proposals for liens that might be provided by the Federal Government to stimulate rural cable growth.

Mr. WILEY. The entire report is being reviewed by the Cable Bureau to see whether or not there is a regulatory aspect to it which we should be involved with.

Mr. WIRTH. I am sure there is and I wanted to continue our discussions. I will be back on that. There are a lot of people in various areas of the country that are concerned about their lack of access to television.

Mr. WILEY. Thank you.

Mr. MACDONALD. We have a vote going on in the House, and we thank you very much for coming here and bringing everyone else with you. We never got a chance to take a crack at a couple of questions that I have. We will have you back as soon as feasible on both sides. We have much more time. You probably have a little less. We will be seeing more of you. It is nice to see you. Thank you.

[The following correspondense was received for the record:]

U.S. HOUSE OF REPRESENTATIVES,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D.C., March 19, 1975.

Hon. RICHARD E. WILEY,
Chairman, Federal Communications Commission,
Washington, D.C.

DEAR MR. CHAIRMAN: I was unable to attend hearings before the Communications Subcommittee of the House Interstate and Foreign Commerce Committee last Tuesday, March 11, due to a meeting of another committee of which I am also a member. As I did not have the opportunity to ask certain questions of you at that time, I am now submitting them to you in writing

Digitized by Google

and the questions and the answers will become a part of the permanent hearing record of that day. I would appreciate it if you would answer the following questions and submit the answers to me as soon as your time permits.

1. I understand that the original subscription television rules were established in an effort to regulate the assignment of the limited over-the-air frequencies. If this is correct, how does the FCC understand its rationale for regulating pay cable where there is an abundance of channel space?

2. Many of my constituents would be interested in seeing movies in the comfort of their own homes. Pay cable endeavors to offer this opportunity, I understand. The FCC rules limit the amount of product available to the pay cable interests but do nothing to assure that network television will continue to provide same. Can you explain this?

3. Further, my understanding of the existing rules tells me that a broadcaster might contract for a new, successful movie soon after its release, and then hold that movie for five to seven years. This "warehousing" of product denies the public the right to see the movies. Why is there no provision in the new rules to prohibit such an occurrence?

Do you believe it is fair for the broadcaster to acquire an exclusive contract on a film and then not show it for many years?

4. I understand that the impact of the proposed sports black out rule would be to force people to attend sporting events in person that they had previously enjoyed on television. I cannot understand why the FCC would be interested in sporting events gate receipts. Could you please explain this?

5. As you are aware, the Congress will be reviewing Public Law 93-107 concerning sports black out this spring, and you are also aware that in 1973 we rejected the black out policy advocated by sports leagues. Why is the FCC looking at the same issue when there is a Public Law on the books?

I look forward to hearing your response to these questions.

With kind regards.

Sincerely,

JOHN M. MURPHY,
Member of Congress.

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D.C., April 7, 1975.

Hon. JOHN M. MURPHY,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN MURPHY: This is in response to your letter of March 19, 1975, in which you listed several questions that you did not have an opportunity to ask when I testified before the Communications Subcommittee of the House Interstate and Foreign Commerce Committee on March 11, 1975. Your questions and my responses thereto are set forth below.

1. "I understand that the original subscription television rules were established in an effort to regulate the assignment of the limited over-the-air frequencies. If this is correct, how does the FCC understand its rationale for regulating pay cable where there is an abundance of channel space?"

When the over-the-air subscription television rules were adopted by the Commission in 1968, at least two primary public interest considerations were deliberated. The threshold question was whether limited broadcast frequencies should be allotted for the delivery of subscription programming. This having been answered in the affirmative, the Commission went on to consider whether program restrictions were required in the public interest to ensure that the type of programming traditionally brought to the public by conventional television would not be "siphoned" away from that source to subscription operations. This second question does not concern only the use of broadcast frequencies by subscription television; it also relates to the nature of conventional television broadcasting and the effect that subscription television, in all of its forms, will have on the conventional service. Having found that subscription program restrictions are in the public interest, and having adopted appropriate rules applicable to over-the-air subscription operations, these same rules were later applied to subscription cable television operations. The rules are applied to both over-the-air and cable subscription operations not because both services utilize broadcast frequencies, which cable need not do, but because both services impact upon the conventional television structure.

Digitized by Google

2. "Many of my constituents would be interested in seeing movies in the comfort of their own homes. Pay cable endeavors to offer this opportunity, I understand. The FCC rules limit the amount of product available to the pay cable interests but do nothing to assure that network television will continue to provide same. Can you explain this?"

I am confident that you would agree that the Commission should not mandate the provision of specific programs by conventional television. Such action would be contrary to our system of privately operated broadcasting. The subscription rules seek to maintain the sources of programming now generally delivered by conventional television so that the American public continues to have an opportunity to view that programming free of direct charges. To the extent that subscription television supplements conventional television by offering an alternative form of television entertainment, its growth and development promises many benefits to the public. By adopting the subscription program rules, we have sought to provide for the development of subscription television without undermining the ability of the public to view popular programs on conventional television. Where it is determined that a program is not desired for conventional telecast the rules allow for the program's subscription exhibition, *e.g.*, older feature films not broadcast in the market for three years may be exhibited on a subscription basis. With regard to relatively recent feature films (those less than three years old) which are not generally televised, the rules do not prohibit their subscription exhibition.

"Further, my understanding of the existing rules tells me that a broadcaster might contract for a new, successful movie soon after its release, and then hold that movie for five to seven years. This 'warehousing' of product denies the public the right to see the movies. Why is there no provision in the new rules to prohibit such an occurrence?"

The record is not clear as to whether "warehousing" actually takes place, or, if it does, as to the nature and extent of the practice. When the new subscription rules were adopted on March 20, 1975, we noted the lack of factual information on this issue, despite our previous specific request for such information, and commenced a new inquiry looking into the warehousing question. Additionally, we stated that the concepts integrated into the new subscription feature film rule suggest the need for an overall assessment of exclusivity practices *vis-a-vis* conventional and subscription television operations, and we questioned whether rules are needed to limit the degree of program exclusivity for which either form of television service may contract. On the basis of our inquiry into the subject, should the evidence demonstrate that measures are required to prevent unreasonable restraints on the program product available to the subscription television industry, we will consider adopting new rules designed to limit or remove such restraints.

3. "Do you believe it is fair for the broadcaster to acquire an exclusive contract on a film and then not show it for many years?"

Clearly, where demands for exclusivity amount to a predatory practice, they are both unfair and a violation of the anti-trust laws. Some exclusivity against subscription television may be reasonable to protect the legitimate business interests of conventional broadcasters. Few would suggest that some program exclusivity among broadcast stations in the same market is not fair, or even necessary. At this time, we do not have enough information to determine what degree of program exclusivity against subscription operations is "reasonable," or whether restraints on the practice of contracting for exclusivity are required. We hope to find answers to these questions as we proceed with our inquiry into the subject of program exclusivity which I mentioned in my answer to the previous question.

4. "I understand that the impact of the proposed sports blackout rule would be to force people to attend sporting events in person that they had previously enjoyed on television. I cannot understand why the FCC would be interested in sporting events gate receipts. Could you please explain this?"

The Commission's pending cable television sports blackout rule making is grounded upon the Congressional policy established in Public Law 87-331. The first section of that statute provides an exemption from the anti-trust laws to permit the professional football, basketball, baseball and hockey leagues to pool the individual television rights of its member clubs and to sell those rights as a package. The second section of that law provides for television blackouts of games in the home territory of a team when it is playing at home. It is argued by sports interests and others that cable television systems, by carrying sports events

Digitized by Google

televised by distant broadcast stations, threaten to undermine the Congressional intent of Public Law 87-331, and that the Commission should follow the established Congressional policy by adopting a rule which would proscribe the carriage of distant signal sports events on cable television systems in a manner consistent with the policy underlying Public Law 87-331.

5. "As you are aware, the Congress will be reviewing Public Law 93-107 concerning sports blackout this spring, and you are also aware that in 1973 we rejected the blackout policy advocated by sports leagues. Why is the FCC looking at the same issue when there is a Public Law on the books?"

Public Law 93-107 requires that the local blackout provided for by Public Law 87-331 be lifted if the game to be played is sold out 72 hours prior to game time. Since the proposed cable television blackout rule would affect only sports programming carried over distant teleivision signals, the rule would have no effect upon the operation of Public Law 93-107. Where the local blackout is lifted pursuant to that statute, and the game is televised locally, cable television subscribers will be able to veiw the game on the local television station which is carried by the cable television system.

I trust that the foregoing is responsive to your questions. If you desire additional information, do not hesitate to contact me.

RICHARD E. WILEY, *Chairman.*

HEALTH MANPOWER PROGRAMS

THURSDAY, FEBRUARY 20, 1975

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE ON HEALTH AND THE ENVIRONMENT,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D.C.

The subcommittee met at 10 a.m., pursuant to notice, in room 2322, Rayburn House Office Building, Hon. Paul G. Rogers (chairman) presiding.

Mr. ROGERS. The subcommittee will come to order, please.

This morning the subcommittee begins 2 days of hearings on important measures which would revise this Nation's Federal initiatives on health manpower and nurse training for 3 years.

We will consider H.R. 2956, the Health Manpower Act of 1975, a bill identical to legislation that passed the House of Representatives last December; and H.R. 2957, the Nurse Training Act of 1975, which passed both bodies last year but was vetoed following adjournment; and all other related bills.

Because health manpower and nurse training legislation was not enacted last year despite considerable congressional activity, serious national issues remain unaddressed. These issues include the financial dependence of most health professions schools on direct Federal assistance, shortages of health professionals, acute specialty maldistribution within the medical profession, a widening geographic maldistribution of health professionals, particularly physicians, and the problems of quality and international equity which have arisen from the rapid influx of foreign medical graduates into this country within the past decade.

The problems that are a product of these issues—widely acknowledged by government, within academic institutions, and by practicing health professionals—will not be resolved without legislative direction. In my view, it is incumbent upon this committee to develop legislation that will address all of these issues.

Without objection, the text of H.R. 2956, H.R. 2957, H.R. 2958, H.R. 3279, and a list of all other identical and similar bills to be considered by the subcommittee will be printed at this point in the record.

[Testimony resumes on p. 308.]

[The bills and listing referred to follow:]

94TH CONGRESS
1ST SESSION

H. R. 2956

IN THE HOUSE OF REPRESENTATIVES

FEBRUARY 6, 1975

Mr. ROGERS (for himself, Mr. PREYER, Mr. SYMINGTON, Mr. CARNEY, Mr. SCHEUER, Mr. WAXMAN, Mr. HEFNER, Mr. FLORIO, Mr. CARTER, Mr. HASTINGS, and Mr. HEINZ) introduced the following bill; which was referred to the Committee on Interstate and Foreign Commerce

A BILL

To amend the Public Health Service Act to revise and extend the programs of assistance under title VII for training in the health and allied health professions, to revise the National Health Service Corps program and the National Health Service Corps scholarship training program, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE; REFERENCE TO ACT

SECTION 1. (a) This Act may be cited as the "Health Manpower Act of 1975".

(b) Whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a sec-

Digitized by Google

tion or other provision, the reference shall be considered to be made to a section or other provision of the Public Health Service Act.

TITLE I—GENERAL PROVISIONS

SEC. 101. (a) Sections 701 through 711 are repealed.

(b) Sections 724, 725, 799, and 799A are transferred to part A of title VII and are redesignated as sections 701, 702, 703, and 704, respectively.

(c) Section 701 (as so redesignated) is amended—

(1) by striking out "As used in this part and parts C, E, and F—" and inserting in lieu thereof "For purposes of this title:";

(2) by inserting "or an equivalent degree" after "degree in public health" in paragraph (4); and

(3) by adding at the end the following new paragraphs:

"(7) The term 'program for the training of physician assistants' means an educational program which has as its objective the education of individuals who will, upon completion of their studies in the program, be qualified to effectively provide primary health care under the supervision of a physician and which meets guidelines prescribed by the Secretary. Such guidelines shall be prescribed on or before March 1, 1975, after consultation with appropriate professional organizations and

Digitized by Google

shall, as a minimum, require that such an educational program (A) have (i) a program of classroom instruction and supervised clinical practice directed toward preparing students to deliver primary health care and (ii) a minimum course of study of one academic year, and (B) have an enrollment in each year of not less than twenty-five students.

"(8) The term 'program for the training of nurse practitioners' means an educational program which has as its objective the education of professional nurses who will, upon completion of their studies in the program, be qualified to effectively provide primary health care and which meets the guidelines prescribed by the Secretary. Such guidelines shall be prescribed on or before March 1, 1975, after consultation with appropriate professional organizations and shall, as a minimum, require that such an educational program (A) have (i) a program of classroom instruction and supervised clinical practice directed toward preparing nurses to deliver primary health care and (ii) a minimum course of study of one academic year, and (B) have an enrollment in each year of not less than twenty-five students.

"(9) The term 'program for the training of expanded function dental auxiliaries' means an educa-

Digitized by Google

tional program which has as its objective the education of individuals who will, upon completion of their studies in the program, be qualified to effectively provide primary dental care under the supervision of a dentist and which meets guidelines prescribed by the Secretary. Such guidelines shall be prescribed on or before March 1, 1975, after consultation with appropriate professional organizations and shall, as a minimum, require that such an educational program (A) have (i) a program of classroom instruction and supervised clinical practice directed toward preparing students to deliver primary dental care and (ii) a minimum course of study of one academic year, and (B) have an enrollment in each year of not less than twenty-five students."

(d) (1) (A) The second sentence of subsection (a) of section 702 (as so redesignated) is amended to read as follows: "Of the appointed members of the Council (1) twelve shall be representatives of the health professions schools assisted under programs authorized by this title, including at least six persons experienced in university administration and at least one representative of schools of medicine, osteopathy, dentistry, veterinary medicine, optometry, pharmacy, podiatry, and public health, and entities which may receive a grant under section 791, (2) two shall be full-

Digitized by Google

time students enrolled in health professions schools, and (3) six shall be members of the general public.".

(B) The amendment made by subparagraph (A) with respect to composition of the National Advisory Council on Health Professions Education shall apply with respect to appointments made to the Council after the date of the enactment of this Act, and the Secretary of Health, Education, and Welfare shall make appointments to the Council after such date in a manner which will bring about, at the earliest feasible time, the Council composition prescribed by the amendment.

(2) Section 702 (as so redesignated) is amended by striking out "E, and F" in subsection (a) and inserting in lieu thereof "E, F, and G".

(3) Section 702 (as so redesignated) is amended by striking out "parts A and G" in subsections (b) and (c) and inserting in lieu thereof "part II".

(c) Section 703 (as so redesignated) is amended to read as follows:

"ADVANCE FUNDING

"SEC. 703. An appropriation under an authorization of appropriations for grants or contracts under this title for any fiscal year may be made at any time before that fiscal year and may be included in an Act making an appropriation

Digitized by Google

under such authorization for another fiscal year; but no funds may be made available from any appropriation under such authorization for obligation for such grants or contracts before the fiscal year for which such appropriation is authorized.".

(f) Part A of title VII is amended by adding after section 704 (as so redesignated) the following new sections:

"RECORDS AND AUDITS

"SEC. 705. (a) Each recipient of a grant or contract under this title shall keep such records as the Secretary may prescribe, including records which fully disclose the amount and disposition by such recipient of the funds paid to it under such grant or contract, the total cost of the project or undertaking for which such grant or contract is made, and the amount of the portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

"(b) Each recipient of a grant or contract under this title shall provide for an annual financial audit of any books, accounts, financial records, files, and other papers or property which relate to the disposition or use of the funds received under such grant or contract. For purposes of assuring accurate, current, and complete disclosure of the disposition or use of the funds received under such a grant or contract, each such audit shall be conducted in accordance with such requirements concerning the individual or agency which con-

Digitized by Google

ducts the audit and the standards applicable to the performance of the audit as the Secretary may by regulation provide. The report of each such audit shall be filed with the Secretary at such time and in such manner as he may by regulation prescribe.

"(c) The recipient of a scholarship or traineeship under this title or a grant under subsection (f) or (g) of section 747 shall not with respect to the scholarship, traineeship, or grant be required to keep the records prescribed under subsection (a) or provide the audit prescribed by subsection (b).

"DELEGATION

"SEC. 706. The Secretary may delegate the authority to administer any program authorized by this title to the administrator of a central or regional office or offices in the Department of Health, Education, and Welfare, except that the authority—

"(1) to review, and prepare comments on the merit of, any application for a grant or contract under any such program for purposes of presenting such application to the National Advisory Council on Health Professions Education, and

"(2) to make such a grant or enter into such a contract,

Digitized by Google

shall not be delegated to any administrator of, or officer in, a regional office or offices.".

(g) (1) The heading for part A of title VII is amended to read as follows:

"PART A—GENERAL PROVISIONS"

(2) The heading for part II of title VII is repealed.

SEC. 102. Section 212 is amended by adding after subsection (d) the following new subsection:

"(e) Active service of commissioned officers of the Service shall be deemed to be active military service in the Armed Forces of the United States for the purposes of all rights, privileges, immunities, and benefits now or hereafter provided under the Soldiers' and Sailors' Civil Relief Act of 1940 (50 App. U.S.C. 501 et seq.).".

TITLE II—ASSISTANCE FOR CONSTRUCTION OF TEACHING FACILITIES

SEC. 201. Section 720 is amended to read as follows:

"GRANT AUTHORITY; AUTHORIZATIONS OF APPROPRIATIONS

"SEC. 720. (a) The Secretary may make grants to assist in the construction of teaching facilities (including teaching hospitals) for the training of physicians, dentists, pharmacists, optometrists, podiatrists, veterinarians, and professional public health personnel.

49-476 O - 75 - 2

Digitized by Google

"(b) There are authorized to be appropriated $25,000,000 for fiscal year 1975, $25,000,000 for fiscal year 1976, and $25,000,000 for fiscal year 1977, for grants under this part.".

SEC. 202. (a) (1) Subsection (a) of section 722 is amended to read as follows:

"(a) The amount of any grant under this part for construction of a project shall be such amount as the Secretary determines to be appropriate after obtaining advice of the Council, except that no grant for any project may exceed 80 per centum of the necessary costs of construction, as determined by the Secretary of such project. In determining the portion of the construction costs to be covered by a grant under this part for a construction project for teaching facilities for the training of physicians located in a State which has no such facilities, the Secretary shall provide that the grant for the project cover 80 per centum of its construction costs unless he determines a grant for such portion of such costs is not needed.".

(2) The amendment made by paragraph (1) shall take effect with respect to grants made under part B of title VII of the Public Health Service Act from appropriations under section 720 of such Act for fiscal years beginning after June 30, 1974.

Digitized by Google

(b) Subsection (d) of section 722 is amended by striking out "(within the meaning of part A of this title)".

(c) Subsection (e) of section 721 is amended by adding at the end the following new sentence: "In considering applications submitted for a grant under this part for the cost of construction of teaching facilities for the training of physicians, the Secretary shall give special consideration to projects in States which have no such facilities.".

SEC. 203. (a) Subsections (a) and (b) of section 729 are each amended by striking out "1974" and inserting in lieu thereof "1977".

(b) The second sentence of section 729 (e) is amended by striking out "and" after "June 30, 1973," and by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "$2,000,000 for fiscal year 1975, $3,000,000 for fiscal year 1976, and $3,000,000 for fiscal year 1977.", and the fourth sentence of such section is amended by inserting a period after "Treasury" the second time it appears in that sentence and by striking the remainder of that sentence.

(c) (1) The third sentence of section 729 (a) is amended to read as follows: "No such loan guarantee may, except under special circumstances and under such conditions as are prescribed by regulations, apply to any amount which, when added to any grant under this part or any other

Digitized by Google

law of the United States, exceeds 90 per centum of the cost of the construction of the project.".

(2) The amendment made by paragraph (1) shall apply with respect to loans guaranteed under section 727 (a) of the Public Health Service Act (as redesignated by section 204 (b) of this Act) after the date of the enactment of this Act.

(d) Subsections (a) and (b) of section 729 are each amended by inserting "or the Federal Financing Bank" after "non-Federal lender".

SEC. 204. (a) Section 721 (c) is amended—

(1) by striking out "section 770 (f) of this Act" in paragraph (2) and inserting in lieu thereof "section 771";

(2) by striking out the sentence at the end of paragraph (2);

(3) by striking out paragraph (5) and redesignating paragraphs (6) and (7) as paragraphs (5) and (6), respectively;

(4) by striking out "and" at the end of paragraph (5) (as so redesignated), by striking out the period at the end of paragraph (6) (as so redesignated) and inserting in lieu thereof "; and", and by inserting after paragraph (6) the following:

Digitized by Google

"(7) the application contains or is supported by adequate assurance that any laborer or mechanic employed by a contractor or subcontractors in the performance of work on the construction of the facility will be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Act of March 3, 1931 (40 U.S.C. 276a–276a–5, known as the Davis-Bacon Act).

The Secretary of Labor shall have with respect to the labor standards specified in paragraph (7) the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 5 U.S.C. Appendix) and section 2 of the Act of June 13, 1934 (40 U.S.C. 276c)."; and

(5) by striking out "725" in the last sentence and inserting in lieu thereof "702".

(b) Sections 726, 727, 728, and 729 are redesignated as sections 724, 725, 726, and 727, respectively.

TITLE III—STUDENT ASSISTANCE; NATIONAL HEALTH SERVICE CORPS

SEC. 301. (a) Subsection (a) of section 740 is amended by striking out "or veterinary medicine" and inserting in lieu thereof "veterinary medicine, or public health".

(b) (1) Subsection (b) of section 740 is amended (A) by striking out "and" at the end of paragraph (4), (B) by

Digitized by Google

redesignating paragraph (5) as paragraph (6), and (C) by inserting after paragraph (4) the following new paragraph:

"(5) provide that the school shall advise, in writing, each applicant for a loan from the student loan fund of the provisions of section 741 under which outstanding loans from the student loan fund may be paid (in whole or in part) by the Secretary; and".

(2) Paragraph (4) of such subsection (b) is amended by striking out "veterinary medicine or an equivalent degree," and inserting in lieu thereof "veterinary medicine or an equivalent degree or to a graduate degree in public health or an equivalent degree,".

(c) Subsection (a) of section 741 is amended to read as follows:

"(a) Loans from a student loan fund established under an agreement under section 740 may not exceed for any student for any academic year (or its equivalent) the sum of—

"(1) the cost of tuition for each year at the school for which such fund was established, and

"(2) $2,500."

(d) Subsection (b) of section 741 is amended by striking out the period at the end and inserting in lieu thereof "or to a graduate degree in public health or an equivalent degree.".

Digitized by Google

(e) Subsection (c) of section 741 is amended by striking out "or veterinary medicine" and inserting in lieu thereof "veterinary medicine, or public health".

(f) (1) Subsection (c) of section 741 is amended by striking out "3 per centum" and inserting in lieu thereof "7 per centum".

(2) The amendment made by paragraph (1) shall apply with respect to loans made after the date of the enactment of this Act from student loan funds established under section 740 of the Public Health Service Act.

(g) Subsection (f) (1) of section 741 is amended—

(1) by inserting before the semicolon at the end of subparagraph (A) the following: "or a graduate degree in public health or an equivalent degree"; and

(2) by striking out "or podiatry" in subparagraph (B) and inserting in lieu thereof "podiatry, or public health".

(h) In the case of any individual who, on or after November 18, 1971, and before the date of the enactment of this Act, met the requirements of subparagraphs (A) and (B) of section 741 (f) (1) of the Public Health Service Act and who practiced his profession in an area described in subparagraph (C) of such section (as in effect before the date of the enactment of this Act) while a member of the National Health Service Corps or as an officer of the Regular or

Digitized by Google

Reserve Corps of the Public Health Service or as a civilian employee of the Public Health Service, the individual shall, for purposes of section 741 (f) of such Act, be deemed to have entered into the agreement required by such subparagraph (C) with respect to that practice.

(i) Effective with respect to appropriations under section 742 of the Public Health Service Act for fiscal years beginning after June 30, 1975, subsection (a) of section 742 is amended to read as follows:

"(a) For the purpose of making Federal capital contributions into the student loan funds of schools which have established such funds under an agreement under section 740, there are authorized to be appropriated $30,000,000 for fiscal year 1976, and $30,000,000 for fiscal year 1977. For the fiscal year ending June 30, 1978, and each of the two succeeding fiscal years there are authorized to be appropriated such sums as may be necessary to enable students who have received a loan under this part for any academic year ending before July 1, 1977, to continue or complete their education."

(j) Section 743 is amended by striking out "1977" each place it occurs and inserting in lieu thereof "1980".

(k) (1) Section 744 is repealed.

(2) The health professions education fund created within the Treasury by section 744 (d) (1) of the Public Health

Digitized by Google

Service Act shall remain available to the Secretary of Health, Education, and Welfare for the purpose of meeting his responsibilities respecting participations in obligations acquired under section 744 of such Act. The Secretary shall continue to deposit in such fund all amounts received by him as interest payments or repayments of principal on loans under such section 744. If at any time the Secretary determines the moneys in the fund exceed the present and any reasonable prospective future requirements of such fund, such excess may be transferred to the general fund of the Treasury.

(3) There are authorized to be appropriated without fiscal yar limitation such sums as may be necessary to enable the Secretary to make payments under agreements entered into under section 744(b) of the Public Health Service Act before the date of the enactment of this Act.

(4) Section 742(b) is amended (1) by striking out ", and for loans pursuant to section 744" in paragraph (1); and (2) by striking out "(whether as Federal capital contributions or as loans to schools under section 744)" in paragraph (3).

(l) (1) Section 746 is repealed.

(2) Section 740 is amended (A) by striking out "of Health, Education, and Welfare" in subsection (a); and

Digitized by Google

(B) by striking out ", except as provided in section 746," in paragraphs (2) and (3) of subsection (b).

(3) Section 745 is redesignated as section 744.

(m) (1) The heading for part C of title VII is amended to read as follows:

"PART C—STUDENT ASSISTANCE".

(2) The heading for subpart I of part C of title VII is amended to read as follows:

"Subpart I—Student Loans".

SEC. 302. (a) Subparts I, II, and III of part F of title VII are repealed.

(b) The Secretary of Health, Education, and Welfare during the period beginning July 1, 1974, and ending September 30, 1977, may (1) make grants to public and nonprofit private schools of medicine, oseopathy, dentistry, veterinary medicine, optometry, podiatry, and pharmacy to enable such schools to continue making payments under scholarship awards to students who initially received such awards out of grants made to the schools under section 780 of the Public Health Service Act for fiscal years ending before July 1, 1974, and (2) makes scholarship grants under section 784 of such Act (as in effect before the date of the enactment of this Act) to individuals who initially received such grants before July 1, 1974.

Digitized by Google

SEC. 303. Part C of title VII is amended by adding at the end of the following new subpart:

"Subpart III—Traineeships for Students in Schools of Public Health

"TRAINEESHIPS

"SEC. 751. (a) The Secretary may make grants to schools of public health for traineeships to train students enrolled in such schools.

"(b) (1) No grant for traineeships may be made under subsection (a) unless an application therefor has been submitted to, and approved by, the Secretary. Such application shall be in such form, be submitted in such manner, and contain such information, as the Secretary by regulation may prescribe. Traineeships under such a grant shall be awarded in accordance with such regulations as the Secretary shall prescribe. The amount of any such grant shall be determined by the Secretary and payments under such a grant may be made in advance or by way of reimbursement and at such intervals and on such conditions as the Secretary finds necessary.

"(2) Traineeships awarded under grants made under subsection (a) shall provide for such stipends and allowances (including travel and subsistence expenses and dependency allowances) for the trainees as the Secretary may deem necessary.

Digitized by Google

"(c) For the purposes of making payments under grants under subsection (a), there are authorized to be appropriated $6,000,000 for fiscal year 1975, $6,000,000 for fiscal year 1976, and $6,000,000 for fiscal year 1977.".

SEC. 304. (a) Section 329 is amended to read as follows:

"NATIONAL HEALTH SERVICE CORPS

"SEC. 329. (a) There is established, within the Service, the National Health Service Corps (hereinafter in this section referred to as the 'Corps') which shall consist of those officers of the Regular and Reserve Corps of the Service and such other personnel as the Secretary may designate and which shall be utilized by the Secretary under this section to improve the delivery of health services to medically underserved populations.

"(b) (1) The Secretary shall designate the medically underserved populations in the States. For purposes of this section, a medically underserved population is the population of an urban or rural area (which does not have to conform to the geographical boundaries of a political subdivision and which should be a rational area for the delivery of health services) which the Secretary determines has a critical health manpower shortage or a population group determined by the Secretary to have such a shortage; and the term 'State' includes Guam, American Samoa, and the Trust Ter-

Digitized by Google

ritory of the Pacific Islands. In designating medically underserved populations, the Secretary shall take into account (A) the recommendations of the entities responsible for the development of the plans referred to in section 314(b) which cover all or any part of the areas in which populations under consideration for designation reside, and (B) in the case of any such area for which no such entity is responsible for developing such a plan, the recommendations of the agency of the State (or States) in which such area is located which administers or supervises the administration of a State plan approved under section 314(a).

"(2) Any person may apply to the Secretary (in such manner as he may prescribe) for the designation of a population as a medically underserved population. In considering an application under this paragraph, the Secretary shall, in addition to criteria utilized by him in making a designation under paragraph (1), take into account the following:

"(A) Ratios of available health manpower to the population for which the application is made.

"(B) Indicators of the population's access to health services.

"(C) Indicators of the health status of the population.

"(D) Indicators of such population's need and demand for health services.

Digitized by Google

"(3) The Secretary shall (A) provide assistance to persons seeking assignment of Corps personnel to provide under this section health services for medically underserved populations, and (B) conduct such information programs in areas in which such populations reside as may be necessary to inform the public and private health entities serving those areas of the assistance available to such populations by virtue of their designation under this section as medically underserved.

"(c) (1) (A) The Secretary may assign personnel of the Corps to provide, under regulations prescribed by the Secretary, health services for a medically underserved population if—

"(i) the State health agency of each State in which such population is located or the local public health agency or any other public or nonprofit private health entity serving such population makes application to the Secretary for such assignment, and

"(ii) the

"(I) local government of the area in which such population resides, and

"(II) any State and district medical, osteopathic, or dental society for such area, or any other appropriate health society (as the case may be) for such area,

Digitized by Google

certify to the Secretary that such assignment of Corps personnel is needed for such population.

"(B) The Secretary may not approve an application under paragraph (1) (A) (i) for an assignment unless the applicant agrees to enter into an arrangement with the Secretary in accordance with subsection (e) (1) and has afforded—

"(i) the entity responsible for the development of the plans referred to in section 314 (b) which covers all or any part of the area in which the population for which the application is submitted resides, and

"(ii) if there is a part of such area for which no such entity is responsible for developing such plans, the agency of the State in which such part is located which administers or supervises the administration of a State plan approved under section 314 (a),

an opportunity to review the application and submit its comments to the Secretary respecting the need for and proposed use of the manpower requested in the application. In considering such an application, the Secretary shall take into consideration the need of the population for which the application was submitted for the health services which may be provided under this section; the willingness of the population and the appropriate governmental agencies or health entities serving it to assist and cooperate with the

Digitized by Google

Corps in providing effective health services to the population; and recommendations from medical, dental, or other health societies or from medical personnel serving the population.

"(C) If with respect to any proposed assignment of Corps personnel for a medically underserved population the requirements of clauses (i) and (ii) of subparagraph (A) are met except for the certification by a State and district medical, osteopathic, or dental society or by any other appropriate health society required by clause (ii) (II) and if the Secretary finds from all the facts presented that such certification has clearly been arbitrarily and capriciously withheld, the Secretary may, after consultation with appropriate medical, osteopathic, dental, or other health societies, waive the application of the certification requirement to such proposed assignment.

"(2) (A) In approving an application submitted under paragraph (1) for the assignment of Corps personnel to provide health services for a medically underserved population, the Secretary may approve the assignment of Corps personnel for such population during a period (referred to in this paragraph as the 'assistance period') which may not exceed four years from the date of the first assignment of Corps personnel for such population after the date of the approval of

Digitized by Google

the application. No assignment of individual Corps personnel may be made for a period ending after the expiration of the applicable approved assistance period.

"(B) Upon expiration of an approved assistance period for a medically underserved population, no new assignment of Corps personnel may be made for such population unless an application is submitted in accordance with paragraph (1) for such assignment. The Secretary may not approve such an application unless—

"(i) the application and certification requirements of paragraph (1) are met;

"(ii) the Secretary has conducted an evaluation of the continued need for health manpower of the population for which the application is submitted, of the utilization of the manpower by such population, of the growth of the health care practice of the Corps personnel assigned for such population, and of community support for the assignment; and

"(iii) the Secretary has determined that such population has made continued efforts to secure its own health manpower, that there has been sound fiscal management of the health care practice of the Corps personnel assigned for such population, including efficient collection of fee-for-service, third-party, and other funds available to such population, and that there has

Digitized by Google

been appropriate and efficient utilization of such Corps personnel.

"(3) Corps personnel shall be assigned to provide health services for a medically underserved population on the basis of the extent of the population's need for health services and without regard to the ability of the members of the population to pay for health services.

"(4) In making an assignment of Corps personnel the Secretary shall seek to match characteristics of the assignee (and his spouse (if any)) and of the population to which such assignee may be assigned in order to increase the likelihood of the assignee remaining to serve the population upon completion of his assignment period. The Secretary shall, before the expiration of the last nine months of the assignment period of a member of the Corps, review such member's assignment and the situation in the area to which he was assigned for the purpose of determining the advisabilty of extending the period of such member's assignment.

"(5) To assist in the recruitment of health manpower, the Secretary shall provide technical assistance to all medically underserved populations to which are not assigned Corps personnel. The Secretary shall also give such populations current information respecting public and private programs which may assist in securing health manpower for them.

Digitized by Google

"(d) (1) In providing health services for a medically underserved population under this section, Corps personnel shall utilize the techniques, facilities, and organizational forms most appropriate for the area in which the population resides and shall, to the maximum extent feasible, provide such services (A) to all members of the population regardless of their ability to pay for the services, and (B) in connection with (i) direct health services programs carried out by the Service; (ii) any direct health services program carried out in whole or in part with Federal financial assistance; or (iii) any other health services activity which is in furtherance of the purposes of this section.

"(2) (A) Notwithstanding any other provision of law, the Secretary (i) may, to the extent feasible, make such arrangements as he determines necessary to enable Corps personnel in providing health services for a medically underserved population to utilize the health facilities of the area in which the population resides and if there are no health facilities in or serving such area, the Secretary may arrange to have Corps personnel provide health services in the nearest health facilities of the Service or the Secretary may lease or otherwise provide facilities in such area for the provision of health services, (ii) may make such arrangements as he determines are necessary for the use of equipment and supplies of the Service and for the lease or acqui-

Digitized by Google

sition of other equipment and supplies, and (iii) may secure the temporary services of nurses and allied health professionals.

"(B) If such area is being served (as determined under regulations of the Secretary) by a hospital or other health care delivery facility of the Service, the Secretary shall, in addition to such other arrangements as the Secretary may make under subparagraph (A), arrange for the utilization of such hospital or facility by Corps personnel in providing health services for the population, but only to the extent that such utilization will not impair the delivery of health services and treatment through such hospital or facility to persons who are entitled to health services and treatment through such hospital or facility.

"(3) The Secretary may make one grant to any applicant with an approved application under subsection (c) to assist it in meeting the costs of establishing medical practice management systems for Corps personnel, acquiring equipment for their use in providing health services, and establishing appropriate continuing education programs and opportunities for them. No grant may be made under this paragraph unless an application therefor is submitted to, and approved by, the Secretary. The amount of any grant shall be determined by the Secretary, except that no grant may be made for more than $25,000.

Digitized by Google

"(4) Upon the expiration of the assignment of Corps personnel to provide health services for a medically underserved population, the Secretary (notwithstanding any other provision of law) may sell to the entity which submitted the last application approved under subsection (c) for the assignment of Corps personnel for such population equipment of the United States utilized by such personnel in providing health services. Sales made under this paragraph shall be made for the fair market value of the equipment sold (as determined by the Secretary).

"(e) (1) The Secretary shall require as a condition to the approval of an application under subsection (c) that the entity which submitted the application enter into an appropriate arrangement with the Secretary under which—

"(A) the entity shall be responsible for charging in accordance with paragraph (2) for health services by the Corps personnel to be assigned;

"(B) the entity shall take such action as may be reasonable for the collection of payments for such health services, including if a Federal agency, an agency of a State or local government, or other third party would be responsible for all or part of the cost of such health services if it had not been provided by Corps personnel under this section, the collection, on a fee-for-service or other basis, from such agency or third party the portion.

Digitized by Google

of such cost for which it would be so responsible (and in determining the amount of such cost which such agency or third party would be responsible, the health services provided by Corps personnel shall be considered as being provided by private practitioners); and

"(C) the entity shall pay to the United States as prescribed by the Secretary for each calendar quarter (or other period as may be specified in the arrangement) during which any Corps personnel are assigned to such entity the sum of—

"(i) the pay (including amounts paid in accordance with subsection (f)) and allowances of such Corps personnel for the portion of such quarter (or other period) during which assigned to the entity;

"(ii) if such entity received a grant under subsection (d)(3) for the assistance period, an amount which bears the same ratio to the amount of such grant as the number of days in such quarter (or other period) during which any Corps personnel were assigned to the entity bears to the number of days in the assistance period after such entity received such grant; and

"(iii) if during such quarter (or other period) any member of the Corps assigned to such entity is

Digitized by Google

providing obligated service pursuant to an agreement under the Public Health and National Health Service Corps Scholarship Training Program, for each such member an amount which bears the same ratio to the amount paid under such Program to or on the behalf of such member as the number of days of obligated service provided by such member during such quarter (or other period) bears to the number of days in his period of obligated service under such Program.

The Secretary may waive in whole or in part the application of the requirement of subparagraph (C) to an entity if he determines that the entity is financially unable to meet such requirement or if he determines that compliance with such requirement would unduly limit the ability of the entity to maintain the quality of the services it provides. The excess (if any) of the amount collected by an entity in accordance with subparagraph (B) over the amount paid to the United States in accordance with subparagraph (C) shall be used by the entity to expand or improve the provision of health services to the population for which the entity submitted an application under subsection (c) or to recruit and retain health manpower to provide health services for such population. Funds received by the Secretary under such an arrangement shall be deposited in the Treasury as miscellaneous re-

Digitized by Google

ceipts and shall be disregarded in determining the amounts of appropriations to be requested under subsection (i) and the amounts to be made available from appropriations made under such subsection to carry out this section.

"(2) Any person who receives health services provided by Corps personnel under this section shall be charged for such services on a fee-for-service or other basis at a rate approved by the Secretary, pursuant to regulations, to recover the value of such services; except that if such person is determined under regulations of the Secretary to be unable to pay such charge, the Secretary shall provide for the furnishing of such services at a reduced rate or without charge.

"(f) (1) The secretary shall conduct at medical and nursing schools and other schools of the health professions and at entities which train allied health personnel, recruiting programs for the Corps. Such programs shall include the wide dissemination of written information on the Corps and visits to such schools by personnel of the Corps.

"(2) The Secretary may reimburse applicants for positions in the Corps for actual expenses incurred in traveling to and from their place of residence to an area in which they would be assigned for the purpose of evaluating such area with regard to being assigned in such area. The Secretary shall not reimburse an applicant for more than one such trip.

Digitized by Google

"(3) Commissioned officers and other personnel of the Corps assigned to provide health services for medically underserved populations shall not be included in determining whether any limitation on the number of personnel which may be employed by the Department of Health, Education, and Welfare has been exceeded.

"(4) The Secretary shall, under regulations prescribed by him, adjust the monthly pay of each physician and dentist member of the Corps who is directly engaged in the delivery of health services to a medically underserved population as follows:

"(A) During the first thirty-six months in which such a member is so engaged in the delivery of health services, his monthly pay shall be increased by an amount (not to exceed $1,000) which when added to the member's monthly pay and allowance will provide a monthly income competitive with the average monthly income from an established practice of a member of such member's profession with equivalent training.

"(B) During the period beginning upon the expi-

"(B) During the period beginning upon the expi-ration of the thirty-six months referred to in subparagraph (A) and ending with the month in which the member's monthly pay and allowances is equal to or exceeds the monthly income he received for the last

Digitized by Google

of such thirty-six months, the member shall receive in addition to his monthly pay and allowances an amount which when added to such monthly pay and allowances equals the monthly income he received for such last month.

For purposes of subparagraphs (A) and (B), the term 'monthly pay' includes special pay received under chapter 5 of title 37 of the United States Code. In the case of a member of the Corps who is directly engaged in the provision of health services to a medically underserved population in accordance with a service obligation incurred under the Public Health Service and National Health Service Corps Scholarship Training Program, the provisions of this paragraph shall apply to such member upon satisfactory completion of such service obligation and the first thirty-six months of his being so engaged in the delivery of health care shall, for purposes of this paragraph, be deemed to begin upon such satisfactory completion.

"(g) The Secretary shall report to Congress no later than May 15 of each year—

"(1) the number and identity of all medically underserved populations in each of the States in the calendar year preceding the year in which the report is made and the number of medically underserved popu-

Digitized by Google

lations which the Secretary estimates will be designated under subsection (b) in the calendar year in which the report is made;

"(2) the number of applications filed in such preceding calendar year for assignment of Corps personnel under this section and the action taken on each such application;

"(3) the number and types of Corps personnel assigned in such preceding year to provide health services for medically underserved populations, the number and types of additional Corps personnel which the Secretary estimates will be assigned to provide such services in the calendar year in which the report is submitted, and the need (if any) for additional personnel for the Corps;

"(4) the recruitment efforts engaged in for the Corps in such preceding year, including the programs carried out under subsection (f) (1) and the number of qualified persons who applied for service in the Corps in each professional category;

"(5) the total number of patients seen and patient visits recorded during such preceding year in each area where Corps personnel were assigned;

"(6) the number of health personnel electing to remain after termination of their service in the Corps to

Digitized by Google

provide health services to medically underserved populations and the number of such personnel who do not make such election and the reasons for their departure;

"(7) the results of evaluations made under subsection (c) (2) (B) (ii), and determinations made under subsection (c) (2) (B) (iii), during such preceding year; and

"(8) the amount (A) charged during such preceding year for health services by Corps personnel, (B) collected in such year by entities in accordance with arrangements under subsection (e) (1), and (C) paid to the Secretary in such year under such arrangements.

"(h) (1) There is established a council to be known as the National Advisory Council on the National Health Service Corps (hereinafter in this section referred to as the 'Council'). The Council shall be composed of fifteen members appointed by the Secretary as follows:

"(A) Four members shall be appointed from the general public to represent the consumers of health care, at least two of whom shall be members of a medically underserved population for which Corps personnel are providing health services under this section.

"(B) Three members shall be appointed from the medical, dental, and other health professions and health teaching professions.

Digitized by Google

"(C) Three members shall be appointed from State health or health planning agencies.

"(D) Three members shall be appointed from the Service, at least two of whom shall be members of the Corps directly engaged in the provision of health services for a medically underserved population.

"(E) One member shall be appointed from the National Advisory Council on Comprehensive Health Planning.

"(F) One member shall be appointed from the National Advisory Council on Regional Medical Programs.

The Council shall consult with, advise, and make recommendations to, the Secretary with respect to his responsibilities in carrying out this section, and shall review and comment upon regulations promulgated by the Secretary under this section and section 747.

"(2) Members of the Council shall be appointed for a term of three years and shall not be removed, except for cause. Members may be reappointed to the Council.

"(3) Appointed members of the Council, while attending meetings or conferences thereof or otherwise serving on the business of the Council, shall be entitled to receive for each day (including traveltime) in which they are so serving the daily equivalent of the annual rate of basic pay

Digitized by Google

in effect for grade GS–18 of the General Schedule, and while so serving away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 (b) of title 5 of the United States Code for persons in the Government service employed intermittently.

"(i) (1) To carry out the purposes of this section, there are authorized to be appropriated $25,000,000 for fiscal year ending 1975; $36,000,000 for fiscal year 1976; and $45,000,000 for fiscal year 1977.

"(2) An appropriation under an authorization under paragraph (1) of his subsection for any fiscal year may be made at any time before that fiscal year and may be included in an Act making an appropriation under an authorization under paragraph (1) for another fiscal year; but no funds may be made available from any appropriation under such authorization for obligation under this section before the fiscal year for which such appropriation is authorized.".

(b) (1) The Secretary of Health, Education, and Welfare shall report to Congress (1) not later than three months after the date of the enactment of this Act, the criteria used by him in designating medically underserved populations for purposes of section 329 of the Public Health Service Act, and (2) not later than six months after the date of the enactment

Digitized by Google

of this Act, the identity and number of medically underserved populations in each State meeting such criteria.

(2) The Secretary of Health, Education, and Welfare shall conduct or contract for studies of methods of assigning under section 329 of the Public Health Service Act National Health Service Corps personnel to medically underserved populations and of providing health care to such populations. Such studies shall be for the purpose of identifying (A) the characteristics of health manpower who are more likely to remain in practice in areas in which medically underserved populations are located, (B) the characteristics of areas which have been able to retain health manpower, (C) the appropriate conditions for assignment of nurse practitioners, physician's assistants, and expanded function dental auxiliaries in areas in which medically underserved populations are located, and (D) the effect that primary care residency training in such areas has on the health care provided in such areas and on the decisions of physicians who received such training respecting the areas in which to locate their practice.

(c) (1) The amendment made by subsection (a) which changed the name of the advisory council established under section 329 of the Publci Health Service Act shall not be construed as requiring the establishment of a new advisory council under that section; and the amendment made by such subsection with respect to the composition of such

Digitized by Google

advisory council shall apply with respect to appointments made to the advisory council after the date of enactment of this Act, and the Secretary of Health, Education, and Welfare shall make appointments to the Advisory Council after such date in a manner which will bring about, at the earliest feasible time, the Advisory Council composition prescribed by the amendment.

(2) (A) Section 741 (f) (1) (C) is amended by striking all that follows after "in a State" and inserting in lieu thereof "in which is located a medically underserved population designated under section 329 (b) ;".

(B) The amendment made by subparagraph (A) shall apply with respect to agreements entered into under section 741 (f) of the Public Health Service Act after the date of the enactment of this Act.

SEC. 305. (a) Section 747 is repealed and effective July 1, 1975, section 225 is transferred to subpart II of part C of title VII, is redesignated section 747, and is amended to read as follows:

"PUBLIC HEALTH AND NATIONAL HEALTH SERVICE CORPS SCHOLARSHIP TRAINING PROGRAM

"SEC. 747. (a) The Secretary shall establish the Public Health and National Health Service Corps Scholarship Training Program (hereinafter in this section referred to as the 'Program') to obtain trained physicians, dentists, and

Digitized by Google

nurses and, if needed by the Corps or other unit of the Service, podiatrists, optometrists, pharmacists, graduates of schools of public health, graduates of programs in health administration, and other health-related specialists.

"(b) To be eligible for acceptance in the Program, an applicant for the Program must—

"(1) be accepted for enrollment, or be enrolled, as a full-time student (A) in an accredited (as determined by the Secretary) educational institution in a State and (B) in (i) a course of study offered by such institution and approved by the Secretary which leads to a degree in medicine, osteopathy, dentistry, nursing, or other health-related specialty as determined by the Secretary or (ii) a program offered by such institution for the training of physician assistants, expanded function dental auxiliaries, or nurse practitioners;

"(2) be eligible for, or hold, an appointment as a commissioned officer in the Regular or Reserve Corps of the Service or be eligible for selection for civilian service in the Service; and

"(3) agree in writing to serve, as prescribed by subsection (d) of this section, in the Commissioned Corps of the Service or as a civilian member of the Service.

To remain in the Program an individual must pursue at such

49-476 O - 75 - 4

Digitized by Google

an institution such an approved course of study or such a program and maintain an acceptable level of academic standing in it.

"(c) (1) (A) Each participant in the Program shall receive a scholarship for each approved academic year of training, not to exceed four years. A participant's scholarship shall consist of (i) an amount equal to the basic pay and allowances of a commissioned officer on active duty in pay grade O–1 with less than two years of service, and (ii) payment of the tuition expenses of the participant and all other reasonable educational expenses incurred by the participant, including fees, books, and laboratory expenses.

"(B) The Secretary may contract with an institution in which participants in the Program are enrolled for the payment to the institution of the tuition and other educational expenses of such participants. Payment to such insitution may be made without regard to section 3648 of the Revised Statutes (31 U.S.C. 529).

"(2) When the Secretary determines that an institution has increased its total enrollment for the sole purpose of accepting members of the Program, he may provide under a contract with such an institution for additional payments to the institution to cover the portion of the increased costs of the additional enrollment which are not covered by the institution's normal tuition and fees.

Digitized by Google

"(d) (1) Each participant in the Program shall provide service as prescribed by paragraph (2) for a period of time (hereinafter in this section referred to as a 'period of obligated service') prescribed by the Secretary which may be not less than—

"(A) one year of such service for each academic year of training received under the Program, or

"(B) two years.

For persons receiving a degree from a school of medicine, osteopathy, or dentistry, the commencement of a period of obligated service shall be deferred by the Secretary, at the request of the participant, for the period of time required to complete internship, residency, or other advanced clinical training. For persons receiving degrees in other health professions the obligated service period shall commence upon completion of their academic training. Periods of internship, residency, or other advanced clinical training shall not be creditable in satisfying a service obligation under this subsection.

"(2) (A) Except as provided in subparagraphs (B), (C), and (D), an individual obligated to provide service on account of his participation in the Program shall provide such service for the period of obligated service applicable to him as a member of the National Health Service Corps or

Digitized by Google

the Indian Health Service in the clinical practice of his profession.

"(B) If at the time an individual is required by the Secretary to begin his period of obligated service neither the National Health Service Corps nor the Indian Health Service has a position available for a member of the profession for which such individual was trained, such individual shall serve as a member of the Service in the clinical practice of his profession in connection with the delivery of health services under the authority of section 321 (relating to hospitals), 322 (relating to care and treatment of seamen and others), 323 (relating to care and treatment of Federal prisoners), 324 (relating to examination and treatment of certain Federal employees), 325 (relating to examination of aliens), or 326 (relating to services to certain Federal employees) or part D of title III (relating to services for persons with Hansen's disease).

"(C) If at the time an individual is required by the Secretary to begin his period of obligated service—

"(i) the Corps and the Indian Health Service have no positions available for a member of the profession for which such individual was trained, and

"(ii) the Service has no need for such individual in

Digitized by Google

connection with the delivery of health services under the authorities referred to in subparagraph (B),

such individual shall serve in the clinical practice of his profession for such period in a medical facility of a State correctional facility, State mental hospital, community mental health center, migrant health center, community health center, or other medical entity designated by the Secretary as having a priority need for health personnel.

"(D) If at the time an individual is required by the Secretary to begin his period of obligated service—

"(i) the Corps and the Indian Health Service have no positions available for a member of the profession for which such individual was trained,

"(ii) the Service has no need for such individual in connection with the delivery of health services under the authorities referred to in subparagraph (B), and

"(iii) no entity designated under subparagraph (C) has positions available for a member of the profession for which such individual was trained,

such individual shall serve for such period as a member of the Public Health Service in such unit of the Department as the Secretary may prescribe.

"(e) If, for any reason, a person fails to either begin his service obligation under this section in accordance with subsection (d) or to complete such service obligation, the

Digitized by Google

United States shall be entitled to recover from such individual an amount determined in accordance with the formula

$$A = 2\phi\left(\frac{t-s}{t}\right)$$

in which 'A' is the amount the United States is entitled to recover, 'ϕ' is the sum of the amount paid under this section to or on behalf of such person and the interest on such amount which would be payable if at the time it was paid it was a loan bearing interest at the maximum legal prevailing rate; 't' is the total number of months in such person's service obligation; and 's' is the number of months of such obligation served by him in accordance with subsection (d). Any amount which the United States is entitled to recover under this subsection shall, within the three-year period beginning on the date the United States becomes entitled to recover such amount, be paid to the United States.

"(f) (1) (A) The Secretary shall release any participant in the Program from his service obligation under subsection (d) if such participant enters into a written agreement with the Secretary to engage on a full-time basis in the private practice of his profession—

"(i) in an area in a State in which is located a medically underserved population designated under section 329 (b) ; and

"(ii) for a period of—

Digitized by Google

"(I) one year for each academic year of training received under the Program, or

"(II) two years,

whichever is greater.

"(B) An agreement described in subparagraph (A) shall—

"(i) provide that during the period of private practice by a participant pursuant to the agreement—

"(I) any individual who receives health services provided by the participant in connection with such private practice will be charged for such services at the usual and customary rate prevailing in the area in which such services are provided, except that if such individual is unable to pay such charge (as determined in accordance with regulations prescribed by the Secretary) such individual shall be charged at a reduced rate or not charged any fee; and

"(II) the participant in providing health services in connection with such private practice shall not discriminate against any individual on the basis of such individual's ability to pay for such services or because payment for the health services provided to such individual will be made under the insurance program established under part A or B of title

Digitized by Google

XVIII of the Social Security Act or under a State plan for medical assistance approved under title XIX of such Act; and

"(ii) contain such additional provisions as the Secretary may require to carry out the purposes of this subsection.

"(2) (A) The Secretary may make one grant to any participant—

"(i) who has entered into an agreement under paragraph (1), and

"(ii) who has agreed to extend the period of practice under such agreement by a period of not less than one year,

to assist such participant in meeting the costs of beginning the practice of his profession in accordance with such agreement, including the costs of acquiring equipment and renovating facilities for use in providing health services, and of hiring nurses and other personnel to assist in providing health services. No such grant may be used for the purchase or construction of any health care facility.

"(B) The amount of the grant to any participant under subparagraph (A) shall be—

"(i) $12,500, if such participant agrees to extend the period of practice under the agreement under para-

Digitized by Google

graph (1) for a period of at least one year but less than two years; or

"(ii) $25,000, if such participant agrees to extend the period of practice under the agreement under paragraph (1) for a period of at least two years.

"(3) The Secretary may not enter into any agreement under paragraph (1) or make any grant under paragraph (2) unless an application therefor has been submitted to, and approved by, the Secretary.

"(4) (A) The Secretary shall pay, as soon as practicable after the close of each calendar quarter, to each participant who entered into an agreement under paragraph (1) an amount which is equal to the excess (if any) of—

"(i) the amount of basic pay and allowances which such participant would have received for the period—

"(I) in which he practiced his profession in accordance with the agreement under paragraph (1), and

"(II) which is in the calendar year in which such calendar quarter occurs and ends at the close of such calendar quarter,

(which period is hereafter in this paragraph referred to as the 'service period') if during his service period he was a commissioned member of the National Health

Digitized by Google

Service Corps providing service during a period of obligated service under subsection (d), over

"(ii) the sum of the net income (as determined under regulations prescribed by the Secretary) derived by such participant during his service period from the private practice of his profession and the amount (if any) paid before the close of such calendar quarter to such participant under this paragraph with respect to the portion of his service period which ended at the close of the preceding calendar quarter.

"(B) If after the close of any calendar year—

"(i) the amount described in subparagraph (A) (ii) which was received by the participant for the period in such year in which he practiced his profession in accordance with an agreement under paragraph (1), exceeds

"(ii) the amount of basic pay and allowances which the participant would have received for such period if during such period he was a commissioned member of the National Health Service Corps providing service during a period of obligated service under subsection (d),

the Secretary shall be entitled to recover from the participant an amount equal to the lesser of the amount of such excess or the amount paid to the participant under subparagraph

Digitized by Google

(A) for the period in such year in which he practiced his profession in accordance with an agreement under paragraph (1).

"(C) The Secretary may not make any payment to any participant under subparagraph (A) unless—

"(i) an application therefor has been submitted to the Secretary in such manner and containing such information as he shall by regulation prescribe; and

"(ii) such participant keeps such records as the Secretary may prescribe and makes such records available to the Secretary for any examination he may require.

"(g) (1) The Secretary may make one grant to any individual (other than an individual who entered into an agreement under subsection (f) (1))—

"(A) who has completed his period of obligated service under the Program, and

"(B) who has agreed in writing to engage on a full-time basis in the private practice of his profession in accordance with subsection (f) (1) for the period of not less than one year,

to assist such individual in meeting the costs of beginning the practice of his profession in accordance with such agreement, including the costs of acquiring equipment and renovating facilities for use in providing health services, and of hiring

Digitized by Google

nurses and other personnel to assist in providing health services. Such grant may not be used for the purchase or construction of any health care facility.

"(2) The amount of the grant under paragraph (1) to any individual shall be—

"(A) $12,500, if such participant agrees to practice his profession in accordance with subsection (f) (1) for a period of at least one year but less than two years; or

"(B) $25,000, if such participant agrees to practice his profession in accordance with subsection (f) (1) for a period of at least two years.

"(3) The Secretary may not make a grant under paragraph (1) unless an application therefor has been submitted to, and approved by, the Secretary.

"(h) If the Secretary determines that an individual has violated an agreement under subsection (f) (1) or (g) (1) (B), he shall, as soon as practicable after making such determination notify the individual of such determination. If within one hundred and twenty days after the date of giving such notice, such individual is not practicing his profession in accordance with the agreement under subsection (f) (1) or (g) (1) (B), as the case may be, and has not provided assurances satisfactory to the Secretary that he will not knowingly violate such agreement again, the United States shall be entitled to recover from such individual an

Digitized by Google

amount determined under subsection (e), except that in applying the formula contained in such subsection—

"(1) in the case of an agreement under subsection (f) (1), 'ϕ' shall be the sum of the amount paid under this section (other than any amount paid under subsection (f) (4)) to or on behalf of such person and the interest on such amount which would be payable if at the time it was paid it was a loan bearing interest at the maximum legal prevailing rate, 't' shall be the number of months that such individual agreed to practice his profession under such agreement, including the number of months that the period of practice under such agreement was extended under subsection (f) (2) (A), and 's' shall be the number of months that such individual practiced his profession in accordance with such agreement; or

"(2) in the case of an agreement under subsection (g) (1) (B), 'ϕ' shall be the sum of the amount of the grant made under subsection (g) to such person and the interest on such amount which would be payable if at the time it was paid it was a loan bearing interest at the maximum legal prevailing rate, 't' shall be the number of months that such individual agreed to practice his profession under such agreement, and 's' shall

Digitized by Google

be the number of months that such individual practiced his profession in accordance with such agreement.

"(i) (1) When a person undergoing training in the Program is academically dismissed or voluntarily terminates academic training, he shall be liable for repayment to the Government for an amount equal to the scholarship which he received under the Program.

"(2) (A) Any obligation of any individual under paragraph (1) or under subsection (e) or (h) shall be canceled upon the death of such individual.

"(B) The Secretary shall by regulation provide for the waiver or suspension of any obligation under paragraph (1) or under subsection (e) or (h) applicable to any individual whenever compliance by such individual is impossible or would involve extreme hardship to such individual and if enforcement of such obligation with respect to any individual would be against equity and good conscience.

"(j) Notwithstanding any other provision of law, persons undergoing academic training under the Program shall not be counted against any employment ceiling affecting the Department of Health, Education, and Welfare.

"(k) The Secretary shall issue regulations for the implementation of this section.

"(l) To carry out the Program, there are authorized to

Digitized by Google

be appropriated $80,000,000 for fiscal year 1976, and $120,000,000 for fiscal year 1977.".

(b) Effective July 1, 1975, the heading for subpart II of part C of title VII is amended to read as follows:

"Subpart II—Student Scholarships".

TITLE IV—GRANTS FOR HEALTH PROFESSIONS SCHOOLS

SEC. 401. (a) Subsection (a) of section 770 is amended to read as follows:

"(a) GRANT COMPUTATION.—The Secretary shall make annual grants to schools of medicine, osteopathy, dentistry, public health, veterinary medicine, optometry, pharmacy, and podiatry for the support of the education programs of such schools. The amount of the annual grant to each such school with an approved application shall be computed for each fiscal year as follows:

"(1) Each school of medicine and osteopathy shall receive—

"(A) $2,100 for each full-time student enrolled in such school in such year; and

"(B) $650 for each student who is enrolled in such year on a full-time basis in such school in a program for the training of physician assistants (as defined by section 701 (7)).

"(2) Each school of dentistry shall receive—

Digitized by Google

"(A) $2,100 for each full-time student enrolled in such school in such year; and

"(B) $650 for each student who is enrolled in such year on a full-time basis in such school in a program for the training of expanded function dental auxiliaries (as defined by section 701(9)).

"(3) Each school of public health shall receive $1,500 for each full-time student enrolled in such school in such year.

"(4) Each school of veterinary medicine shall receive $1,500 for each full-time student enrolled in such school in such year.

"(5) Each school of optometry shall receive $700 for each full-time student enrolled in such school in such year.

"(6) Each school of pharmacy (other than a school of pharmacy with a course of study of more than four years) shall receive $700 for each full-time student enrolled in such school in such year. Each school of pharmacy with a course of study of more than four years shall receive $700 for each full-time student enrolled in the last four years of such school. For purposes of sections 771, 772, and 782, a student enrolled in the first year of the last four years of such school shall be considered a first-year student.

Digitized by Google

"(7) Each school of podiatry shall receive $1,500 for each full-time student enrolled in such school in such year.".

(b) Subsection (c) of section 770 is amended to read as follows:

"(c) APPORTIONMENT OF APPROPRIATIONS.—If the total of the grants to be made in accordance with subsections (a) and (b) for any fiscal year to schools of medicine, osteopathy, dentistry, public health, veterinary medicine, optometry, pharmacy, or podiatry with approved applications exceed the amounts appropriated under subsection (f) for such grants, the amount of the grant for that fiscal year to a school which may not because of such excess receive for that fiscal year the amount determined for it under such subsections shall be an amount which bears the same ratio to the amount so determined for it as the total of the amounts appropriated for that year under subsection (f) for grants to such schools bears to the amount required to make grants in accordance with subsections (a) and (b) to such schools.".

(c) (1) Subsections (d), (e), (f), and (g) of section 770 are repealed.

(2) Subsection (h) of section 770 is (A) redesignated as subsection (d), and (B) is amended to read as follows:

"(d) ENROLLMENT DETERMINATIONS.—

"(1) For purposes of this section and sections 771

Digitized by Google

96-476 O - 75 - 5

and 772, regulations of the Secretary shall include provisions relating to the determination of the number of students enrolled in a school or in a particular year-class in a school on the basis of estimates, on the basis of the number of students who in an earlier year were enrolled in a school or in a particular year-class, or on such other basis as he deems appropriate for making such determination, and shall include methods of making such determination when a school or a year-class was not in existence in an earlier year at a school.

"(2) For purposes of this section and sections 771, 772, and 782 the term 'full-time students' (whether such term is used by itself or in connection with a particular year-class) means students pursuing a full-time course of study leading to a degree of doctor of medicine, doctor of dentistry or an equivalent degree, doctor of osteopathy, bachelor of science in pharmacy or an equivalent degree, doctor of optometry or an equivalent degree, doctor of veterinary medicine or an equivalent degree, or doctor of podiatry or an equivalent degree or to a graduate degree in public health or equivalent degree. In the case of a training program of a school designed to permit the students enrolled in such program to complete, within six years after completing secondary school, the requirements for degree of doctor of medicine, doctor

Digitized by Google

of dentistry or an equivalent degree, or doctor of osteopathy, the term 'full-time students' shall only include students enrolled on a full-time basis in the last four years of such program and for purposes of sections 771, 772, and 782, students enrolled in the first of the last four years of such program shall be considered as first-year students.".

(3) Subsection (i) of section 770 is (1) amended by inserting ", public health" after "osteopathy", and (2) redesignated as subsection (e).

(4) Subsection (j) of section 770 is redesignated as subsection (f) and is amended to read as follows:

"(f) AUTHORIZATIONS OF APPROPRIATIONS.—

"(1) (A) There are authorized to be appropriated $165,000,000 for fiscal year 1975, $170,000,000 for fiscal year 1976, and $167,000,000 for fiscal year 1977, for payments under grants under this section to schools of medicine, osteopathy, and dentistry based on the number of full-time students enrolled in such schools.

"(B) There are authorized to be appropriated $3,500,000 for fiscal year 1975, $4,000,000 for fiscal year 1976, and $4,500,000 for fiscal year 1977, for payments under grants under this section to schools of medicine, osteopathy, and dentistry based on the number of students enrolled in such schools in programs for the

Digitized by Google

training of physician assistants and programs for the training of expanded function dental auxiliaries.

"(2) There are authorized to be appropriated $6,000,000 for fiscal year 1975, $6,750,000 for fiscal year 1976, and $7,500,000 for fiscal year 1977, for payments under grants under this section to schools of public health.

"(3) There are authorized to be appropriated $9,250,000 for fiscal year 1975, $9,750,000 for fiscal year 1976, and $10,500,000 for fiscal year 1977, for payments under grants under this section to schools of veterinary medicine.

"(4) There are authorized to be appropriated $21,700,000 for fiscal year 1975, $22,600,000 for fiscal year 1976, and $23,500,000 for fiscal year 1977, for payments under grants under this section to schools of optometry and pharmacy.

"(5) There are authorized to be appropriated $2,800,000 for fiscal year 1975, $3,100,000 for fiscal year 1976, and $3,200,000 for fiscal year 1977, for payments under grants under this section to schools of podiatry.

"(6) No funds appropriated under any provision of this Act (other than this subsection) may be used to make grants under this section."

Digitized by Google

(d) For the fiscal year ending June 30, 1975, and for each of the next two fiscal years, there are authorized to be appropriated such sums as may be necessary to continue to make annual grants to schools of medicine, osteopathy, dentistry, veterinary medicine, optometry, pharmacy, and podiatry under section 770(a) of the Public Health Service Act (as in effect before the date of the enactment of this Act) based on the number of enrollment bonus students (determined in accordance with subsections (d) and (e) of section 770 of such Act (as so in effect)) enrolled in such schools who were first-year students in such schools for school years beginning before June 30, 1974, except that the amount of any grant made to such a school from sums appropriated under this subsection may not exceed the amount of the grant the school received in the fiscal year ending June 30, 1974, based on the number of such students enrolled in it.

(e) Effective with respect to fiscal years beginning after June 30, 1976, paragraphs (1)(A) and (2)(A) of section 770(a) are each amended by striking out "$2,100" and inserting in lieu thereof "$2,000".

(f) The heading for part E of title VII is amended to read as follows:

Digitized by Google

"PART E—GRANTS AND CONTRACTS TO IMPROVE THE QUALITY OF SCHOOLS OF MEDICINE, OSTEOPATHY, PUBLIC HEALTH, DENTISTRY, VETERINARY MEDICINE, OPTOMETRY, PHARMACY, AND PODIATRY".

SEC. 402. Part E of title VII is amended (1) by redesignating section 771 as section 772, and (2) by adding after section 770 the following new section:

"ELIGIBILITY FOR CAPITATION GRANTS

"SEC. 771. (a) IN GENERAL.—The Secretary shall not make a grant under section 770 to any school in a fiscal year beginning after June 30, 1974, unless the application meets the following requirements:

"(1) The application shall contain or be supported by reasonable assurances satisfactory to the Secretary that the first-year enrollment of full-time students in the school in the school year beginning after the fiscal year in which the grant applied for is to be made will not be less than the first-year enrollment of such students in the school in the preceding school year.

"(2) The application of each school shall contain or be supported by reasonable assurances satisfactory to the Secretary that the applicant will expend in carrying out its functions as a school of medicine, osteopathy,

Digitized by Google

dentistry, public health veterinary medicine, optometry, pharmacy, or podiatry, as the case may be, during the fiscal year for which such grant is sought, an amount of funds (other than funds for construction as determined by the Secretary) from non-Federal sources which is at least as great as the amount of funds expended by such applicant for such purpose (excluding expenditures of a nonrecurring nature) in the fiscal year preceding the fiscal year for which such grant is sought.

"(3) (A) The application of each school shall contain or be supported by reasonable assurances satisfactory to the Secretary that the school (i) will enter into a legally enforceable agreement with each student enrolled in the school in a school year beginning after June 30, 1976, under which the student agrees to pay, in equal annual installments in accordance with subparagraph (B), to the United States an amount equal to the amount which the school received under section 770 because of the enrollment of the student in the school in school years beginning after such date, and (ii) will make annual reports to the Secretary respecting the amount owed under such agreements.

"(B) (i) A student subject to an agreement entered into with a school pursuant to subparagraph (A) shall pay to the United States in equal annual

Digitized by Google

installments an amount equal to the total amount received by the school after June 30, 1976, under section 770 on account of the enrollment of the student in school years beginning after such date. The number of annual installments shall be equal to the number of fiscal year (beginning after June 30, 1976) in which the school received a grant under section 770 on account of the enrollment of the student in school years beginning after such date.

"(ii) The first annual installment under an agreement under subparagraph (A) shall be paid in the first calendar year which begins more than eleven months after the month in which the student subject to the agreement completed or terminated his course of study at the school, except that—

"(I) if the course of study was terminated in connection with a transfer to another school to pursue the same course of study and the transfer was made within twelve months of the termination date, the first annual installment shall be paid in the first calendar year which begins more than eleven months after the date the student completes his course of study at the school to which he transferred; or

"(II) if the student begins an internship, residency, or other advanced clinical training within

Digitized by Google

six months after the month in which he completed his course of study, the first annual installment shall be paid in the first calendar year which begins more than eleven months after the month in which such internship or residency training ends.

No installment shall be required to be paid in a calendar year in which more than six months is spent in an internship or in residency training.

"(C) For each year that an individual subject to such an agreement—

"(i) provides service during a period of obligated service in accordance with section 747 (d) or practices his profession in accordance with an agreement entered into under section 747 (f) ; or

"(ii) in the case of an individual who is not providing service during a period of obligated service in accordance with section 747 (d), practices his profession—

"(I) as a member of the National Health Service Corps in an area in which is located a medically underserved population designated under section 329 (b), or

"(II) as a member of the Indian Health Service;

Digitized by Google

the individual shall be relieved of his liability to pay one annual installment.

"(D) The obligation of an individual under an agreement shall be canceled upon his death. The Secretary shall by regulation provide for the waiver or suspension of such an obligation whenever compliance by the individual subject to it is impossible or would involve extreme hardship to such individual and if enforcement of such obligation with respect to him would be against equity and good conscience.

"(b) SCHOOLS OF MEDICINE, OSTEOPATHY, AND DENTISTRY.—

"(1) The Secretary shall not make a grant under section 770 to any school of medicine, osteopathy, or dentistry in a fiscal year beginning after June 30, 1974, unless the following requirements are met:

"(A) The application for such grant shall contain or be supported by reasonable assurances satisfactory to the Secretary that—

"(i) for the second school year beginning after the close of the fiscal year in which such grant is made and for each school year thereafter beginning in a fiscal year in which such a grant is made the first-year enrollment of

Digitized by Google

full-time students in such school will exceed the number of such students enrolled in the school year beginning during the fiscal year ending June 30, 1974—

"(I) by 10 per centum of such number if such number was not more than one hundred, or

"(II) by 5 per centum of such number, or ten students, whichever is greater, if such number was more than one hundred; or

"(ii) for the second school year beginning after the close of the fiscal year in which such grant is made and in each school year thereafter beginning in a fiscal year in which such a grant is to be made the school, if it is a school of medicine or osteopathy, it will offer a program for the training of physician assistants or, if the school is a school of dentistry, it will offer a program for the training of expanded function dental auxiliaries.

"(B) (i) In the case of an application for a grant to be made in a fiscal year beginning after June 30, 1975, the applicant shall submit to the Secretary and have approved by him before the

Digitized by Google

grant applied for is made, a plan to train, in the school year beginning after the close of the fiscal year in which the grant is made and in each school year thereafter beginning in a fiscal year in which such a grant is made and in areas geographically remote from the main site of the teaching facilities of the applicant (or any other school of medicine, osteopathy, or dentistry which has joined with the applicant in the submission of the plan), full-time students and students enrolled in programs of the applicant for the training of physician assistants and expanded function dental auxiliaries.

"(ii) More than one applicant may join in the submission of a plan described in clause (i). No plan may be approved by the Secretary unless—

"(I) the application for a grant under section 770 of each school which has joined in the submission of the plan contains or is supported by reasonable assurances satisfactory to the Secretary that each such school will obligate to implement the plan an amount equal to not less than 25 per centum of the amount received under such grant;

"(II) the application for a grant under section 770 of each school which has joined in the

Digitized by Google

submission of the plan contains or is supported by reasonable assurances satisfactory to the Secretary that all full-time students enrolled in such school will receive a majority of their training at the main site of the training facilities of the school and at least six weeks (in the aggregate) of training in an area geographically remote from such site during the last two years of enrollment in such school and that, in the case of a school of medicine or osteopathy, all students enrolled in its programs (if any) for the training of physicians' assistants and, in the case of a school of dentistry, all students enrolled in its program (if any) for the training of expanded function dental auxiliaries, will receive at least six weeks (in the aggregate) of training in an area geographically remote from such main site at any time during such program;

"(III) the plan contains a list of the areas where the training under such plan is to be conducted, a detailed description of the type and amount of training to be given in such areas, and provision for periodic review by experts in medical, osteopathic, or dental education (as may be appropriate) of the desirability of pro-

Digitized by Google

viding training in such areas and of the quality of training rendered in such areas;

"(IV) the plan contains a specific program for the hiring, as members of the faculty of the school or schools submitting the plan, of practicing physicians or dentists (as appropriate) to serve as instructors in the training program in areas geographically remote from the main site of the teaching facilities of such school or schools; and

"(V) the plan contains a plan for frequent counseling and consultation between the faculty of the school or schools at the main site of their training facilities and the instructors in the training program in the areas geographically remote from such site.

"(2) The Secretary may waive (in whole or in part) the requirement of paragraph (1) (A) with respect to any school of medicine, osteopathy, or dentistry if he determines, after consultation with the National Advisory Council on Health Professions Education, that, because of limitations of physical facilities available to the school for training or because of other relevant factors—

"(A) such school cannot increase its first-year

Digitized by Google

enrollment of full-time students in accordance with clause (i) of such paragraph; and

"(B) such school cannot offer a program for the training of physican assistants or a program for the training of expanded function dental auxiliaries to comply with clause (ii) of such paragraph;

without lowering the quality of education provided in such school.

'(c) SCHOOLS OF PUBLIC HEALTH.—

"(1) The Secretary shall not make a grant under section 770 to any school of public health in a fiscal year beginning after June 30, 1974, unless the application for such grant contains or is supported by reasonable assurances satisfactory to the Secretary that for the second school year beginning after the close of the fiscal year in which such grant is made and for each school year thereafter beginning in a fiscal year in which such a grant is made the first-year enrollment of full-time students in such school will exceed the number of such students enrolled in the school year beginning during the fiscal year ending June 30, 1974—

"(A) by 10 per centum of such number if such number was not more than one hundred, or

"(B) by 5 per centum of such number, or ten

Digitized by Google

students, whichever is greater, if such number was more than one hundred.

"(2) The Secretary may waive (in whole or in part) the requirements of paragraph (1) with respect to any school if he determines, after consultation with the National Advisory Council on Health Professions Education, that such school, because of limitations of physical facilities available to the school for training or because of other relevant factors, cannot increase its first year enrollment in accordance with such paragraph without lowering the quality of education provided in such school.

"(d) SCHOOLS OF VETERINARY MEDICINE, OPTOMETRY, PHARMACY, AND PODIATRY.—

"(1) SCHOOLS OF VETERINARY MEDICINE.—The Secretary shall not make a grant under section 770 to any school of veterinary medicine in a fiscal year beginning after June 30, 1974—

"(A) unless the application for such grant contains or is supported by reasonable assurances satisfactory to the Secretary that for the second school year beginning after the close of the fiscal year in which such grant is to be made and for each school year thereafter beginning in a fiscal year in which such a grant is made the first year enrollment of full-

Digitized by Google

time students in the school making the application will exceed the number of such students enrolled in the school year beginning during the fiscal year ending June 30, 1974—

"(i) by 10 per centum of such number if such number was not more than one hundred, or

"(ii) by 5 per centum of such number, or ten students, whichever is greater, if such number was more than one hundred; or

"(B) unless the application for such grant contains or is supported by reasonable assurances satisfactory to the Secretary that at least 20 per centum of the first year enrollment of full-time students in the school making the application will for the second school year beginning after the close of the fiscal year in which the grant applied for is to be made and in each school year thereafter beginning in a fiscal year in which such a grant is made be comprised of students who are residents of States in which are not located any accredited school providing the training provided by the school making the application.

"(2) SCHOOLS OF OPTOMETRY.—The Secretary shall not make a grant under section 770 to any school of optometry in a fiscal year beginning after June 30,

Digitized by Google

1974, unless the application for such grant contains or is supported by reasonable assurances satisfactory to the Secretary that for the second school year beginning after the close of the fiscal year in which such grant is to be made and for each school year thereafter beginning in a fiscal year in which such a grant is made the first year enrollment of full-time students in the school making the application will exceed the number of such students enrolled in the school year beginning during the fiscal year ending June 30, 1974—

"(A) by 10 per centum of such number if such number was not more than one hundred, or

"(B) by 5 per centum of such number, or ten students, whichever is greater, if such number was more than one hundred.

The Secretary may waive (in whole or in part) the requirements of this paragraph with respect to any school if he determines, after consultation with the National Advisory Council on Health Professions Education, that such school, because of limitation of physical facilities available to the school for training or because of other relevant factors, cannot increase its first year enrollment in accordance with such paragraph without lowering the quality of education provided in such school.

"(3) SCHOOLS OF PHARMACY.—The Secretary

Digitized by Google

shall not make a grant under section 770 to any school of pharmacy in a fiscal year beginning after June 30, 1974—

"(A) unless the application for such grant contains or is supported by reasonable assurances satisfactory to the Secretary that for the second school year beginning after the close of the fiscal year in which such grant is to be made and for each school year thereafter beginning in a fiscal year in which such a grant is made the first year enrollment of full-time students in the school making the application will exceed the number of such students enrolled in the school year beginning during the fiscal year ending June 30, 1974—

"(i) by 10 per centum of such number if such number was not more than one hundred, or

"(ii) by 5 per centum of such number, or ten students, whichever is greater, if such number was more than one hundred; or

"(B) unless the school has submitted to and had approved by the Secretary a plan for the establishment, expansion, improvement, or operation, in the second school year beginning after the fiscal year in which the grant applied for is to be made and in

Digitized by Google

each school year thereafter beginning in a fiscal year in which such a grant is made, of at least two of the following programs: (i) a program to teach pharmacy in a hospital, extended care facility, or other clinical setting, (ii) a program of training in clinical pharmacology, or (iii) a program to train pharmacists to assist physicians and counsel patients on the appropriate use and reactions to drugs.

"(4) SCHOOLS OF PODIATRY.—The Secretary shall not make a grant under section 770 to any school of podiatry in a fiscal year beginning after June 30, 1974—

"(A) unless the application for such grant contains or is supported by reasonable assurances satisfactory to the Secretary that for the second school year beginning after the close of the fiscal year in which such grant is to be made and for each school *year thereafter beginning in a fiscal year in which* year thereafter beginning in a fiscal year in which such a grant is made the first year enrollment of full-time students in the school making the application will exceed the number of such students enrolled in the school year beginning during the fiscal year ending June 30, 1974—

Digitized by Google

"(i) by 10 per centum of such number if such number was not more than one hundred, or

"(ii) by 5 per centum of such number, or ten students, whichever is greater, if such number was more than one hundred; or

"(B) unless the application for such grant contains or is supported by reasonable assurances satisfactory to the Secretary that at least 40 per centum of the first year enrollment of full-time students in the school making the application will for the second school year beginning after the close of the fiscal year in which the grant applied for is to be made and in each school year thereafter beginning in a fiscal year in which such a grant is made will be comprised of students who are residents of States in which are not located any accredited school providing the training provided by the school making the application.".

SEC. 403. (a) Section 772 (a) (1) (as so redesignated) is amended by striking out "or dentistry" and inserting in lieu thereof: ", dentistry, public health, veterinary medicine, optometry, pharmacy, or podiatry".

(b) Section 772 (a) (4) (as so redesignated) is amended by striking out "or dentistry" and inserting in lieu

Digitized by Google

thereof "dentistry, public health, veterinary medicine, optometry, pharmacy, or podiatry".

(c) Section 772(a)(6) (as so redesignated) is amended to read as follows:

"(6) There are authorized to be appropriated $5,000,000 for fiscal year 1975, $5,000,000 for fiscal year 1976, and $5,000,000 for fiscal year 1977, for payments under grants under this subsection. Sums appropriated under this paragraph shall remain available until expended."

(d) Section 772(b)(2) (as so redesignated) is amended (1) by striking out "1974" and inserting in lieu thereof "1977", and (2) by striking out "1975" and inserting in lieu thereof "1978".

SEC. 404. (a) Subsection (a) of section 773 is amended to read as follows:

"(a) There are authorized to be appropriated $5,000,000 for fiscal year 1975, $5,000,000 for fiscal year 1976, and $5,000,000 for fiscal year 1977, for payments under grants under this section."

(b) Section 773 is amended by inserting "public health," after "dentistry," in subsections (b) and (d).

SEC. 45. (a) Section 775 is redesignated section 774 and is amended—

Digitized by Google

(1) by striking out "770, 771, 772, or 773" each place it occurs and inserting in lieu thereof "770, 772, or 773";

(2) by inserting ", public health" after "dentistry" in subsection (b);

(3) by striking out "this part" in subsection (c) and inserting in lieu thereof "section 770, 772, or 773";

(4) by striking out "770, 771, or 773" in subsection (d) (1) and inserting in lieu thereof "770, 771, 772, or 773" and

(5) by amending subsection (d) (3) to read as follows:

"(3) provides for such fiscal control and accounting procedures and reports, including the use of such standard procedures for the recording and reporting of financial information as the Secretary may prescribe, and access to the records of the applicant, as the Secretary may require to enable him to determine the costs to the applicant of its program for the education or training of students."

(b) The section heading of section 774 (as so redesignated) is amended by striking out "SPECIAL PROJECT".

SEC. 406. Sections 312 and 313 are repealed.

Digitized by Google

TITLE V—SPECIAL PROJECT GRANTS AND CONTRACTS

SEC. 501. (a) Section 767 (entitled "GRANTS FOR TRAINING, TRAINEESHIPS, AND FELLOWSHIPS IN FAMILY MEDICINE") is transferred to part F of title VII and redesignated as section 781.

(b) Section 781 (as so redesignated) is amended as follows:

(1) Such section is amended by striking out "and" after "1973," and by inserting after "1974," the following: $40,000,000 for fiscal year 1975, $40,000,000 for fiscal year 1976, and $40,000,000 for fiscal year 1977,".

(2) Such section is amended by inserting "(a)" before "There are" and by inserting at the end thereof the following:

"(b) Sums appropriated under subsection (a) may be used by the Secretary to make grants to any public or nonprofit private school of dentistry or accredited postgraduate dental training institution—

"(1) to plan, develop, and operate an approved residency program in the general practice of dentistry; and

"(2) to provide financial assistance (in the form of

Digitized by Google

traineeships and fellowships) to residents in such a program who are in need of financial assistance and who plan to specialize in the practice of general dentistry.".

(3) The title of such section is amended by inserting after "FAMILY MEDICINE" the following: "AND IN THE GENERAL PRACTICE OF DENTISTRY".

SEC. 502. Section 772 (as in effect before the date of the enactment of this Act) is transferred to part F of title VII, is redesignated section 782, and is amended to read as follows:

"ASSISTANCE TO INDIVIDUALS FROM DISADVANTAGED BACKGROUNDS

"SEC. 782. (a) (1) For the purpose of assisting individuals from disadvantaged backgrounds, as determined in accordance with criteria prescribed by the Secretary, to undertake education to enter a health profession, the Secretary may make grants to and enter into contracts with schools of medicine, osteopathy, public health, dentistry, veterinary medicine, optometry, pharmacy, and podiatry and other public or private nonprofit health or educational entities to assist in meeting the costs described in paragraph (2).

"(2) A grant or contract under paragraph (1) may be used by the health or educational entity to meet the costs of—

"(A) identifying, recruiting, and selecting individ-

Digitized by Google

uals from disadvantaged backgrounds, as so determined, for the education provided by a health professional school,

"(B) facilitating the entry of those individuals into such a school,

"(C) providing counseling or other services designed to assist those individuals to complete successfully their education at such a school,

"(D) providing, for a period prior to the entry of those individuals into the regular course of education of such a school, preliminary education designed to assist them to complete successfully such regular course of education at such a school, or referring such individuals to institutions providing such preliminary education, and

"(E) publicizing existing sources of financial aid available to persons enrolled in the education program of such a school or who are undertaking training necessary to qualify them to enroll in such a program.

"(3) No grant may be made or contract entered into under paragraph (1) to a school of medicine, osteopathy, dentistry, public health, veterinary medicine, optometry, pharmacy, or podiatry unless its application for such grant or contract contains or is supported by assurances satisfactory to the Secretary that in the second school year beginning after

Digitized by Google

the close of the fiscal year for which such grant is made or contract entered into, such school will enroll in its first-year class a number of full-time students from disadvantaged backgrounds, as determined in accordance with criteria prescribed by the Secretary, which is at least equal to the lesser of—

"(A) 5 per centum of the number of full-time first-year students enrolled in the school in the preceding school year, or

"(B) ten.

"(b) There are authorized to be appropriated $20,000,000 for fiscal year 1975, $20,000,000 for fiscal year 1976, and $20,000,000 for fiscal year 1977, for payments under grants and contracts under subsection (a).".

SEC. 503. (a) Section 774 (as in effect before the date of the enactment of this section) is transferred to part F of title VIII, is redesignated section 783, and is amended to read as follows:

"AREA HEALTH EDUCATION CENTERS

"SEC. 783. (a) For the purpose of improving the distribution, supply, quality, utilization, and efficiency of health personnel in the health services delivery system and for the purpose of encouraging the regionalization of educational responsibilities of the health professions schools, the Secretary may make grants and enter into contracts for projects for area health education centers—

Digitized by Google

"(1) to conduct programs to alleviate shortages of health personnel in rural areas with sparse populations or urban areas with unusually dense populations through training or retraining of health personnel in community hospitals and other facilities located in such areas including training of students enrolled in residency programs in family medicine, general internal medicine, general pediatrics, psychiatry, and obstetrics and gynecology) or to otherwise improve the distribution in such areas of health personnel by area or by specialty group;

"(2) to provide training programs in such areas leading to more efficient utilization in such areas of health personnel, emphasizing multidisciplinary and interdisciplinary patterns of undergraduate, graduate, and continuing education of health personnel; and

"(3) to provide education programs for the general populations of such areas regarding the appropriate use of health services, the availability of health services in such areas (including services provided under federally funded programs), and the contribution each individual can make to the maintenance of his own health.

"(b) (1) The costs for which a grant or contract under this section may be made may include such stipends and allowances (including travel and subsistence expenses and dependency allowances) for the students in such programs

Digitized by Google

as the Secretary may deem necessary and costs of construction of new primary care facilities and of medical school facilities necessary for the administration of the training program for which the grant or contract is made.

"(2) An applicant for a grant or contract under this section shall be a public or nonprofit private educational entity which has, or which is affiliated with, at least three degree or diploma granting health professions education programs (of which at least one shall be a program offered by a school of medicine or osteopathy). No application for a grant or contract may be approved unless the application—

"(A) contains assurances satisfactory to the Secretary that, to the maximum extent feasible, the project of the applicant will be conducted in conjunction with (including the sharing of faculty and facilities with) the projects (if any) of any schools of medicine or osteopathy participating in the project of the applicant for the remote site training of undergraduate students of medicine or osteopathy conducted pursuant to plans approved under section 771 (b) (1) (B);

"(B) contains a designation of the geographic boundaries of the areas to be served by area health education centers established under the project;

"(C) contains a list of the manpower needs of the areas to be served by area health education centers estab-

Digitized by Google

lished under the project, the relative order in which those needs should be addressed, a detailed description of the types of programs to be carried out by the area health education centers and provision for periodic review and evaluation of such programs by experts in medical or osteopathic or other health professions education (as may be appropriate);

"(D) contains assurances that each medical and osteopathic school participating in the project will provide not less than six weeks of training per year in area health education centers for at least 50 per centum of the students enrolled in such schools in residency programs in family medicine, general internal medicine, general pediatrics, psychiatry, obstetrics, and gynecology;

"(E) contains assurances satisfactory to the Secretary that each participant in the project will contribute a significant portion of its faculty to serve as instructors in graduate training and continuing education programs in areas served by the area health education centers;

"(F) contains a specific program for multidisciplinary and interdisciplinary training programs both at the main site of the training or clinical facilities of the applicant and in area health education centers established under the project;

Digitized by Google

"(G) contains a plan for frequent counseling and consultation between the faculty of the applicant at the main site of its training or clinical facilities and instructors and other appropriate participants in the applicant's programs in the areas served by the area health education centers;

"(H) contains a detailed plan for frequent consultation and coordination of the applicant's project with appropriate local, regional, State, and Federal agencies in order to exchange information, and avoid unnecessary duplication of programs; and

"(I) contains assurances that the applicant will designate a local advisory board for each area health education center.

Each advisory board for an area health education center shall be comprised of consumers of health services residing in the area and shall, as a group, represent the residents of that area taking into consideration the employment, age, sex, race, place of residence, and other demographic characteristics. The advisory board shall meet on a regular basis (not less than twice a year) for purposes of determining the project's responsiveness to the health manpower needs of the area and making recommendations to the area health education centers with respect to the provision of health manpower in the area.

Digitized by Google

"(3) The amount of any grant or contract under this section shall be determined by the Secretary, except that no grant or contract for any project may exceed 75 per centum of the costs, as determined by the Secretary, of such project.

"(c) There are authorized to be appropriated $15,000,000 for fiscal year 1975, $20,000,000 for fiscal year 1976, and $25,000,000 for fiscal year 1977, for payments under grants and contracts under this section."

(b) For the fiscal year ending June 30, 1975, and for each of the next two fiscal years there are authorized to be appropriated such sums as may be necessary to continue payments to entities under contracts entered into under section 774 of the Public Health Service Act (as in effect before the date of the enactment of this Act) for projects for area health education centers, except that no payment shall be made to an entity under such a contract unless the entity provides assurances satisfactory to the Secretary that not later than January 1, 1976, the project for which the payment is to be made will be a project described in subsection (a) of section 783 of such Act and the entity and its application will meet the requirements of subsection (b)(2) of such section. Such payments may only be made from such sums for the periods and the amounts specified in such contracts.

(c) On and after January 1, 1976, the Secretary of

Digitized by Google

Health, Education, and Welfare shall assess the program of grants under section 783 of the Public Health Service Act to determine the effect of the projects funded under such grants on the distribution of health manpower and on the access to and quality of health care in the areas in which such projects are located. Not later than January 1, 1977, the Secretary shall submit to the Congress a report on the assessment conducted under this subsection.

SEC. 504. Part F of title VII is amended by adding after section 783 the following new section:

"PROJECT GRANTS AND CONTRACTS FOR SCHOOLS OF OPTOMETRY, PHARMACY, AND PODIATRY

"SEC. 784. (a) SCHOOLS OF OPTOMETRY.—The Secretary may make grants to and enter into contracts with schools and optometry to meet the costs of projects to assist in—

"(1) the affiliation between optometric training programs and medical, osteopathic, and other health professions training programs and academic institutions,

"(2) establishing cooperative arrangements between optometric training programs and medical, osteopathic, and other health professions training programs and academic institutions,

"(3) planning, developing, and operating residency training programs in special optometric services

Digitized by Google

95-476 O - 75 - 7

or in meeting the optometric needs of special populations, or

"(4) planning, developing, and operating educational programs which provide training in the early detection and diagnosis of health problems which are accompanied by visual or ocular symptoms.

"(b) SCHOOLS OF PHARMACY.—

"(1) The Secretary may make grants and enter into contracts with schools of pharmacy to meet the costs of projects to assist in—

"(A) the affiliation between clinical pharmacy training programs and medical, osteopathic, and other health professions training programs and academic institutions, or

"(B) establishing cooperative arrangements between clinical pharmacy training programs and medical, osteopathic, and other health professions training programs and academic institutions.

"(2) The Secretary may make grants to and enter into contracts with schools of pharmacy to meet the costs of projects to establish, expand, or improve—

"(A) programs for the teaching of pharmacy in hospitals, extended care facilities, and other clinical settings,

"(B) clinical pharmacology training, and

Digitized by Google

"(C) programs to train pharmacists to assist physicians and counsel patients on the appropriate use and effects of and reactions to drugs.

"(c) SCHOOLS OF PODIATRY.—The Secretary may make grants to and enter into contracts with schools of podiatry to meet the costs of projects to assist in—

"(1) the affiliation between podiatric training programs and medical, osteopathic, and other health professions training programs and academic institutions, or

"(2) establishing cooperative arrangements between podiatric training programs and medical, osteopathic, and other health professions training programs and academic institutions.

"(d) TECHNICAL ASSISTANCE.—If the Secretary does not approve an application for a grant or contract under this section, he shall advise the applicant of the reasons for disapproval of the application and provide the applicant such technical and other nonfinancial assistance as may be appropriate to enable the applicant to submit an approvable application.

"(e) AUTHORIZATION OF APPROPRIATIONS.—There are authorized to be appropriated $5,000,000 for fiscal year 1975, $5,000,000 for fiscal year 1976, and $5,000,000 for fiscal year 1977, for payments under grants and contracts under this section.".

Digitized by Google

SEC. 505. (a) Section 769A (entitled "GRANTS FOR COMPUTER TECHNOLOGY HEALTH CARE DEMONSTRATION PROGRAMS") is transferred to part F of title VII, inserted after section 784, and redesignated as section 785.

(b) Section 785 (as so redesignated) is amended (1) by striking out "and" after "1973,", and (2) by inserting after "1974," the following: "$3,000,000 for fiscal year 1975, $3,000,000 for fiscal year 1976, and $3,000,000 for fiscal year 1977,".

SEC. 506. (a) Section 766 (entitled "TRAINING IN EMERGENCY MEDICAL SERVICES") is transferred to part F of title VII, inserted after section 785, and redesignated as section 786.

(b) Section 786 (as so redesignated) is amended by striking out subsections (b), (c), (d), and (e) and inserting in lieu thereof the following:

"(b) No grant or contract may be made or entered into under this section unless the applicant therefor is a public or nonprofit private entity. Grantees and contractees under this section shall make such reports at such intervals, and containing such information, as the Secretary may prescribe.

"(c) For the purpose of making payments pursuant to grants and contracts under this section, there are authorized to be appropriated $7,000,000 for fiscal year 1975, $7,000,-

Digitized by Google

000 for fiscal year 1976, and $7,000,000 for fiscal year 1977.".

Section 507. Part F of title VII is amended by adding after section 786 the following new section:

"EDUCATION OF RETURNING UNITED STATES STUDENTS FROM FOREIGN MEDICAL SCHOOLS

"SEC. 787. (a) The Secretary may make grants to schools of medicine and osteopathy in the United States to plan, develop, and operate programs—

"(1) to train United States citizens who have been enrolled in medical schools in foreign countries before July 1, 1975, to enable them to meet the requirements for enrolling in schools of medicine or osteopathy in the United States as full-time students with advanced standing; or

"(2) to train United States citizens who have transferred from medical schools in foreign countries in which they were enrolled before July 1, 1975, and who have enrolled in schools of medicine or osteopathy in the United States as full-time students with advanced standing.

The costs for which a grant under this subsection may be made include the costs of identifying deficiencies in the medical school education of the United States citizens who have been enrolled in foreign medical schools, the development of

Digitized by Google

materials and methodology for correcting such deficiencies, and specialized training designed to prepare such United States citizens for enrollment in schools of medicine or osteopathy in the United States as full-time students with advanced standing.

"(b) More than one school of medicine or osteopathy may join in the submission of an application for a grant under subsection (a).

"(c) The Secretary may not approve an application for a grant under subsection (a) (1) unless such application contains assurances satisfactory to the Secretary, to the maximum extent feasible, that every individual who—

"(1) satisfactorily completes the training program for which such grant is to be made, and

"(2) is qualified to be accepted for enrollment in the school or schools which submitted such application as a full-time student with advanced standing,

will be accepted for enrollment as a full-time student with advanced standing in the school, or in one of the schools, which submitted such application.

"(d) Any school of medicine or osteopathy which receives a grant under subsection (a) for the final year ending June 30, 1975, shall submit to the Secretary before January 1, 1976, a report on the deficiencies (if any) identified by the school in the foreign medical education of the students

Digitized by Google

trained by such school under the program for which such grant was made. The Secretary shall compile the reports submitted under the preceding sentence, and before July 1, 1976, submit to the Congress his analysis and evaluation of the information contained in such reports.

"(e) There are authorized to be appropriated $2,000,000 for fiscal year 1975, $3,000,000 for fiscal year 1976, and $4,000,000 for fiscal year 1977, for payments under grants under subsection (a).".

SEC. 508. Part F of title VII is amended by adding after section 787 the following new section:

"PROJECT GRANTS FOR INSTRUCTION IN FAMILY MEDICINE

"SEC. 788. (a) The Secretary may make grants to schools of medicine and osteopathy to meet the costs of projects to establish and maintain academic administrative units (which may be departments, divisions, or other units) to provide clinical instruction in family medicine.

"(b) The Secretary may not approve an application for a grant under subsection (a) unless such application contains—

"(1) assurances satisfactory to the Secretary that the academic administrative unit with respect to which the application is made will (A) be comparable to academic administrative units for other major clinical spe-

Digitized by Google

cialties offered by the applicant, (B) be responsible for directing an amount of the curriculum for each member of the student body engaged in an education program leading to the awarding of the degree of doctor of medicine or doctor of osteopathy determined by the Secretary to be comparable to the amount for other major clinical specialties in the school, (C) have a number of full-time faculty which is determined by the Secretary to be sufficient to conduct the clinical instruction required in clause (B) and to be comparable to the number of faculty assigned to other major clinical specialties in the school, and (D) have control over a three-year approved or provisionally approved graduate training program in family practice or its equivalent as determined by the Secretary which shall have the capacity to enroll a total of no less than twelve interns or residents per year; and

"(2) such other information as the Secretary shall by regulation prescribe.

"(c) There are authorized to be appropriated $10,000,000 for fiscal year 1975, $15,000,000 for fiscal year 1976, and $20,000,000 for fiscal year 1977, for payments under grants under subsection (a).".

SEC. 509. (a) Section 769B is transferred to part F of title VII, inserted after section 788, and redesignated as section 789.

Digitized by Google

(b) Section 789 (as so redesignated) is amended—

(1) by striking out "grant may be made under sections 767, 769, and 769(A)" in subsection (a) and inserting in lieu thereof "grant may be made or contract entered into under this part";

(2) by adding at the end of subsection (a) the following: "The Secretary may not approve or disapprove any application for a grant or contract under this part except after consultation with the National Advisory Council on Health Professions Education.";

(3) by striking out "grants under sections 767 and 769(A)" in subsection (b) and inserting in lieu thereof "grants or contracts under this part"; and

(4) by striking out subsection (c) and inserting in lieu thereof the following:

"(c) The amount of any grant or contract under this part shall be determined by the Secretary. Payments under such grants may be made in advance or by way of reimbursement, at such intervals and on such conditions, as the Secretary finds necessary. Contracts may be entered into under this part without regard to sections 3648 and 3709 of the Revised Statutes (31 U.S.C. 529; 41 U.S.C. 5).".

SEC. 510. Section 768 (entitled "GRANTS FOR SUPPORT OF POSTGRADUATE TRAINING PROGRAMS FOR PHYSICIANS AND DENTISTS") and section 769 (entitled "GRANTS FOR TRAINING, TRAINEESHIPS, AND FELLOWSHIPS FOR HEALTH PROFESSIONS TEACHING PERSONNEL") are repealed.

SEC. 511. The heading for part F of title VII is amended to read as follows:

"PART F—SPECIAL PROJECT GRANTS AND CONTRACTS".

TITLE VI—PUBLIC AND ALLIED HEALTH PERSONNEL

SEC. 601. (a) Part G of title VII is amended to read as follows:

"PART G—TRAINING PROGRAMS FOR PUBLIC AND COMMUNITY HEALTH PERSONNEL

"DEFINITION

"SEC. 790. For purposes of this part, the term 'public and community health personnel' means individuals who are engaged in—

"(1) the planning, development, monitoring, or management of health care or health care institutions, organizations, or systems,

"(2) research on health care development and the

Digitized by Google

collection and analysis of health statistics, data on the health of population groups, and any other health data,

"(3) the development and improvement of individual and community knowledge of health and the health care system, or

"(4) the planning and development of a healthful environment and control of environmental health hazards.

"INSTITUTIONAL GRANTS FOR GRADUATE PROGRAMS IN HEALTH

"SEC. 791. (a) From funds appropriated under subsection (d), the Secretary shall make annual grants to public or nonprofit private educational entities (except schools of public health) to support the graduate educational programs of such entities in health administration, hospital administration, or health planning.

"(b) The amount of the grant for any fiscal year under subsection (a) to an educational entity with an application approved under subsection (c) shall be equal to the amount appropriated under subsection (d) for such fiscal year divided by the number of educational entities which have applications for grants for such fiscal year approved under subsection (c).

"(c) (1) No grant may be made under subsection (a) unless an application therefor has been submitted to the Secretary before such time as he shall by regulation pre-

Digitized by Google

scribe and has been approved by the Secretary. Such application shall be in such form, and submitted in such manner, as the Secretary shall by regulation prescribe.

"(2) The Secretary may not approve an application submitted under paragraph (1) unless—

"(A) such application—

"(i) contains assurances satisfactory to the Secretary that in each academic year (as defined in regulations of the Secretary) for which the applicant receives a grant under subsection (a)—

"(I) at least twenty-five individuals will complete the graduate educational program of the entity for which such application is submitted; and

"(II) such entity will expend or obligate at least $100,000 in funds from non-Federal sources to conduct such programs;

"(ii) contains such assurances as the Secretary shall by regulation prescribe respecting one or more of the following: Increases in overall enrollment in the programs for which such application is submitted and increases in enrollment in programs for the training of needed types of public and community health personnel; and

Digitized by Google

"(iii) contains such other information as the Secretary may by regulation prescribe; and

"(B) the programs for which such application was submitted have been accredited by a recognized body or bodies approved for such purpose by the Commissioner of Education and meet such other quality standards as the Secretary shall by regulation prescribe.

The Secretary may not approve or disapprove such an application except after consultation with the National Advisory Council on Health Professions Education.

"(d) There are authorized to be appropriated for payments under grants under this section $1,750,000 for fiscal year 1975, $2,000,000 for fiscal year 1976, and $2,500,000 for the fiscal year 1977.

"TRAINEESHIPS

"SEC. 792. (a) The Secretary may make grants to public or nonprofit private educational entities eligible for grants under section 791 for traineeships to train public and community health personnel for which the Secretary determines there is unusual need.

"(b) (1) No grants for traineeships may be made under subsection (a) unless an application therefor has been submitted to, and approved by, the Secretary. Such application shall be in such form, be submitted in such manner, and contain such information, as the Secretary by regulation may

Digitized by Google

prescribe. Traineeships under such a grant shall be awarded in accordance with such regulations as the Secretary shall prescribe. The amount of any such grant shall be determined by the Secretary and payments under such grant may be made in advance or by way of reimbursement and at such intervals and on such conditions as the Secretary finds necessary.

"(2) Traineeships awarded under grants made under subsection (a) shall provide for such stipends and allowances (including travel and subsistence expenses and dependency allowances) for the trainees as the Secretary may deem necessary.

"(c) For the purposes of making payments under grants under subsection (a), there are authorized to be appropriated $2,500,000 for fiscal year 1975, $2,500,000 for fiscal year 1976, and $2,500,000 for fiscal year 1977.

"STATISTICS AND ANNUAL REPORT

"SEC. 793. (a) The Secretary shall, in coordination with the National Center for Health Statistics, continuously develop, publish, and disseminate on a nationwide basis statistics and other information respecting public and community health personnel, including—

"(1) detailed descriptions of the various types of activities in which public and community health personnel are engaged,

Digitized by Google

"(2) the current and anticipated needs for the various types of public and community health personnel, and

"(3) the number, employment, geographic locations, salaries, and surpluses and shortages of public and community health personnel, the educational and licensure requirements for the various types of such personnel, and the cost of training such personnel.

"(b) The Secretary shall submit annually to the Committee on Interstate and Foreign Commerce of the House of Representatives and to the Committee on Labor and Public Welfare of the Senate a report on—

"(1) the statistics and other information developed pursuant to subsection (a); and

"(2) the activities conducted under this part, including an evaluation of such activities.

Such report shall contain such recommendations for legislation as the Secretary determines is needed to improve the programs authorized under this part. The Office of Management and Budget may review such report before its submission to Congress, but the Office may not revise the report or delay its submission beyond the date prescribed for its submission and may submit to Congress its comments respecting such report. The first report under this subsection shall be submitted not later than September 1, 1975."

Digitized by Google

(b) Title VII is amended by adding at the end the following new part:

"PART H—TRAINING PROGRAMS FOR ALLIED HEALTH PERSONNEL

"DEFINITION

"SEC. 795. For purposes of this part, the term 'allied health personnel' means individuals with training and responsibilities for (1) supporting, complementing, or supplementing the professional functions of physicians, dentists, and other health professionals in the delivery of health care to patients, or (2) assisting environmental engineers and other personnel in environmental health control activities.

"PROJECT GRANTS AND CONTRACTS

"SEC. 796. (a) The Secretary may make grants to public and nonprofit private entities and enter into contracts with individuals and public and private entities to assist in meeting the costs of planning, study, development, demonstration, and evaluation projects undertaken with respect to one or more of the following:

"(1) Methods of coordination, management, and articulation of education and training at various levels for allied health personnel within and among educational institutions and their clinical affiliates.

"(2) Methods and techniques for State and regional

Digitized by Google

coordination and monitoring of education and training for allied health personnel.

"(3) Educational programs (including programs in a junior college) which lead to—

"(A) a baccalaureate degree, an associate degree, or the equivalent of either degree, or

"(B) a higher degree,

in medical technology, opthalmic dispensing, dental hygiene, or such other of the curricula for the training of allied health personnel as the Secretary may by regulation specify, and other methods and curricula (including model curricula) for training various types of allied health personnel.

"(4) Programs, or means of adapting existing programs, for training as allied health personnel special groups such as returning veterans, the economically or culturally deprived, and persons reentering any of the allied health fields.

"(5) New roles and functions for allied health personnel and methods for increasing the efficiency of health manpower through more effective utilization of allied health personnel in various practice settings.

"(6) New methods of credentialing allied health personnel, including techniques for appropriate recognition (through equivalency and proficiency testing or

Digitized by Google

otherwise) of previously acquired training or experience, developed in coordination with the Secretary's program under section 1123 of the Social Security Act.

"(7) Methods of recruitment and retaining of allied health personnel.

"(8) Meaningful career ladders and programs of advancement for practicing allied health personnel.

"(9) Continuing education programs for practicing allied health personnel.

"(b) (1) No grant may be made or contract entered into under subsection (a) unless an application therefor has been submitted to, and approved by, the Secretary. Such application shall be in such form, submitted in such manner, and contain such information, as the Secretary shall by regulation prescribe.

"(2) Contracts may be entered into under subsection (a) without regard to sections 3648 and 3709 of the Revised Statutes (31 U.S.C. 529; 41 U.S.C. 5).

"(3) The amount of any grant under subsection (a) shall be determined by the Secretary. Payments under such grants may be made in advance or by way of reimbursement, and at such intervals and on such conditions as the Secretary finds necessary.

"(c) For the purpose of making payments under grants and contracts under subsection (a), there are authorized to

Digitized by Google

be appropriated $20,000,000 for fiscal year 1975, $20,000,000 for fiscal year 1976, and $20,000,000 for fiscal year 1977.

"TRAINEESHIPS FOR ADVANCED TRAINING OF ALLIED HEALTH PERSONNEL

"SEC. 797. (a) The Secretary may make grants to public and nonprofit private entities for traineeships provided by such entities for the training of allied health personnel to teach in training programs for such personnel or to serve in administrative or supervisory positions.

"(b) (1) No grant may be made under subsection (a) unless an application therefor has been submitted to and approved by the Secretary. Such application shall be in such form, submitted in such manner, and contain such information as the Secretary shall by regulation prescribe.

"(2) Payments under such grants (A) shall be limited to such amounts as the Secretary finds necessary to cover the cost of tuition and fees of, and stipends and allowances (including travel and subsistence expenses and dependency allowances) for, the trainees; and (B) may be made in advance or by way of reimbursement and at such intervals and on such conditions as the Secretary finds necessary.

"(c) For the purposes of making payments under grants under subsection (a), there are authorized to be appropriated $6,000,000 for fiscal year 1975, $6,000,000

Digitized by Google

for fiscal year 1976, and $6,000,000 for fiscal year 1977.

"GRANTS AND CONTRACTS TO ENCOURAGE FULL UTILIZATION OF EDUCATIONAL TALENT FOR ALLIED HEALTH PERSONNEL TRAINING

"SEC. 798. (a) The Secretary may make grants to and enter into contracts with State and local educational agencies and other public or nonprofit private entities—

"(1) to (A) identify individuals of financial, educational, or cultural need who have a potential to become allied health personnel, including individuals who are veterans of the Armed Forces with military training or experience similar to that of allied health personnel, and (B) encourage and assist, whenever appropriate, the individuals described in clause (A) to (i) complete secondary school, (ii) undertake such postsecondary training as may be required to qualify them to undertake allied health personnel training, and (iii) undertake postsecondary allied health personnel training; and

"(2) to publicize existing sources of financial aid available to individuals undertaking allied health personnel training.

"(b) (1) No grant may be made or contract entered into under subsection (a) unless an application therefor has been submitted to, and approved by, the Secretary. Such application shall be in such form, submitted in such manner, and

Digitized by Google

contain such information, as the Secretary shall by regulation prescribe.

"(2) Contracts may be entered into under subsection (a) without regard to section 3648 and 3709 of the Revised Statutes (31 U.S.C. 529; 41 U.S.C. 5).

"(3) The amount of any grant under subsection (a) shall be determined by the Secretary. Payments under such grants may be made in advance or by way of reimbursement, and at such intervals and on such conditions, as the Secretary finds necessary.

"(c) For payments under grants and contracts under subsection (a) there are authorized to be appropriated $1,000,000 for fiscal year 1975, $1,000,000 for fiscal year 1976, and $1,000,000 for fiscal year 1977.

"STATISTICS AND ANNUAL REPORT

"SEC. 799. (a) The Secretary shall, in coordination with the National Center for Health Statistics, continuously develop, publish, and disseminate on a nationwide basis statistics and other information respecting allied health personnel, including—

"(1) detailed descriptions of the various types of such personnel and the activities in which such personnel are engaged,

"(2) the current and anticipated needs for the various types of such health personnel, and

Digitized by Google

"(3) the number, employment, geographic locations, salaries, and surpluses and shortages of such personnel, the educational and licensure and certification requirements for the various types of such personnel, and the cost of training such personnel.

"(b) The Secretary shall submit annually to the Committee on Interstate and Foreign Commerce of the House of Representatives and to the Committee on Labor and Public Welfare of the Senate a report on—

"(1) the statistics and other information developed pursuant to subsection (a); and

"(2) the activities conducted under this subpart, including an evaluation of such activities.

Such report shall contain such recommendation for legislation as the Secretary determines is needed to improve the programs authorized under this part. The Office of Management and Budget may review such report before its submission to Congress, but the Office may not revise the report or delay its submission beyond the date prescribed for its submission and may submit to Congress its comments respecting such report. The first report under this subsection shall be submitted not later than September 1, 1975.".

(c) Section 704 (as so redesignated) is amended (1) by striking out "any training center for allied health personnel" and inserting in lieu thereof "an entity for the

Digitized by Google

training of public and community health personnel or allied health personnel", and (2) by striking out "or training center" each place it occurs and inserting in lieu thereof "or entity".

TITLE VII—MEDICAL RESIDENCY TRAINING PROGRAMS

SEC. 701. The Public Health Service Act is amended by adding at the end the following new title:

"TITLE XVII—MEDICAL RESIDENCY TRAINING PROGRAMS

"FIRST-YEAR POSITIONS IN MEDICAL RESIDENCY TRAINING PROGRAMS

"SEC. 1701. (a) (1) (A) The number of first-year positions in any accredited medical residency training program in the United States which may be made available in a calendar year beginning after calendar year 1977 may not exceed such number as may be established for such calendar year for such program under section 1703; and the aggregate number of first-year positions in all accredited medical residency training programs in the United States which may be made available in a calendar year beginning after calendar year 1977 to graduates of schools of medicine and osteopathy may not exceed 125 per centum of the estimated number of graduates from accredited schools of medicine in the preceding calendar year.

Digitized by Google

"(B) The Secretary shall prepare by October 1 of each calendar year an estimate of the number of graduates that there will be from accredited schools of medicine in the succeeding calendar year, and shall by that date report the estimate to the agency designated or established under section 1703.

"(2) For purposes of this title, the term 'medical residency training program' means a program which trains graduates of schools of medicine and schools of osteopathy in a medical specialty recognized by the Liaison Committee for Specialty Boards established jointly by the American Board of Medical Specialties and the Council on Medical Education of the American Medical Association (or any successor of such Committee) and which provides the graduate education required by the specialty board (recognized by such Liaison Committee) for certification in such specialty. Such term does not include a residency training program in an osteopathic hospital.

"(b) (1) No entity which is engaged in business as a health care facility may include in any charge (or otherwise collect) for the provision in any calendar year of any health service by any physician in a medical residency training program an amount which is attributable to compensation paid to the physician by the health care facility in connection with such program unless the medical

Digitized by Google

residency training program has been accredited under section 1702 for such calendar year and the number of first-year positions in such program made available in such calendar year does not exceed the number prescribed for such program under section 1703. Any entity which makes a charge or collection prohibited by this paragraph shall for each such charge or collection be subject to a civil penalty of not more than $5,000. Such penalty shall be assessed by the Secretary and may be collected in a civil action brought by the United States in a United States district court under section 1355 of title 28, United States Code.

"(2) If the Secretary determines that an entity is—

"(A) operating a medical residency training program which has not been accredited under section 1402, or

"(B) operating a medical residency training program with a number of first-year positions which exceeds the number established for that program under section 1403,

the Secretary shall notify the entity of his determination, shall publish the determination in the Federal Register, and shall not make any grant or to enter into any contract with such entity under this Act for the fiscal year beginning after the date the Secretary publishes such determination in the Federal Register.

Digitized by Google

"MEDICAL RESIDENCY TRAINING PROGRAM ACCREDITING AGENCY

"SEC. 1702. (a) (1) For the purpose of accrediting the medical residency training programs for which first-year positions may be authorized under section 1403, the Secretary shall in accordance with subsection (b) designate or establish a medical residency training program accrediting agency (hereinafter in this section referred to as the 'accrediting agency').

"(2) The accrediting agency shall review, in accordance with procedures established and published by the agency and made available to the public, each medical residency training program in the United States and shall either accredit or disapprove such program. Each such program shall be reviewed at least every three years and an accreditation of a program shall be in effect for three years unless the accrediting agency terminates the accreditation before the expiration of three years. During the three-year period beginning January 1, 1976, the accrediting agency may accredit such a program on the basis of an accreditation granted such program by an entity generally recognized by the medical profession for purposes of accrediting such a program, except that an accreditation made under this sentence may not be in effect after January 1, 1979.

Digitized by Google

"(3) The accrediting agency shall submit to the agency designated or established under section 1403 and keep current for it a list of the medical residency training programs the accreditations of which are in effect.

"(b) (1) Not later than March 31, 1975, the Secretary shall prescribe and publish in the Federal Register requirements which must be met by an entity before it may be designated as the accrediting agency for purposes of this title. Such requirements shall provide that an entity—

"(A) have a governing body which is comprised of representatives of the medical profession, medical specialty boards, medical specialty societies, hospitals, schools of medicine, and the general public; and

"(B) meet the criteria established by the Secretary for recognition of nationally recognized accrediting agencies and associations.

"(2) (A) An entity which seeks designation as the accrediting agency shall submit an application to the Secretary not later than August 31, 1975. If such an application has been submitted to the Secretary by the Liaison Committee for Graduate Medical Education of the Coordinating Council for Medical Education before such date, and—

"(i) if the Secretary determines that the Liaison Committee meets the requirements prescribed under

Digitized by Google

paragraph (1), he shall approve such application and designate it as the accrediting agency; or

"(ii) if the Secretary finds that the Liaison Committee does not meet such requirements, he shall provide it with such technical and other nonfinancial assistance as may be appropriate to enable it to meet such requirements, and if the Secretary determines not later than October 31, 1975, that it meets such requirements, he shall designate it as the accrediting agency.

"(B) If, by October 31, 1975, the Secretary has not designated the Liaison Committee as the accrediting agency he shall consider other applications for such designation and shall if he determines that an entity under such an application meets the requirements prescribed under paragraph (1) and that such entity is otherwise qualified to accredit medical residency training programs, designate, not later than January 1, 1976, such entity as the accrediting agency.

"(3) (A) A desgination of the accrediting agency shall be in effect for three years unless the Secretary terminates such designation before the expiration of three years upon a determination by the Secretary (after notice and reasonable opportunity for a public hearing) that the agency no

Digitized by Google

longer meets the requirements of paragraph (1) or is not qualified to accredit medical residency training programs. A designation may, upon application, be renewed for a period of three years.

"(B) If the Secretary terminates a designation or determines a designated accrediting agency is not qualified to have its designation renewed, the Secretary shall publish notice of such termination or determination and solicit application from other entities for designation as the accrediting agency.

"(4) (A) If—

"(i) by January 1, 1976, the Secretary determines that no entity which has applied for designation meets the requirements prescribed under paragraph (1) or is otherwise qualified to accredit medical residency training programs or if by such date no entity has applied for designation, or

"(ii) upon the expiration of a designation under this section, the Secretary determines that the designated agency is not qualified to have its designation renewed and that there are no other qualified applicants for designation, or upon the termination of such a designation, the Secretary determines that there are no qualified applicants for designation,

the Secretary shall, within three months of the determination, establish an accrediting agency for purposes of this title.

Digitized by Google

"(B) An accrediting agency established by the Secretary under subparagraph (A) shall meet the criteria established by the Secretary for recognition of nationally recognized accrediting agencies and associations and the membership of which shall be fairly representative of the medical profession, medical specialty boards, medical specialty societies, hospitals, schools of medicine, and the general public. Members of the agency shall carry out the functions of the agency in accordance with this title. While away from their homes or regular places of business in the performance of services for the agency, members of the agency shall be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as persons employed intermittently in the Government service are allowed expenses under section 5703 (b) of title 5 of the United States Code. The agency may appoint, without regard to the provisions of title 5, United States Code, respecting appointments in the competitive service, and pay, without regard to the provisions of such title respecting rates of pay, such personnel as it deems necessary for the agency to carry out its functions.

"(C) The establishment of an accrediting agency under subparagraph (A) shall be for such period (but not more than three years) as the Secretary prescribes. If an accrediting agency has been established by the Secretary an

Digitized by Google

entity may apply for designation as such agency upon the termination of the period for which the accrediting agency was established. If no entity submits an approvable application for designation before the date of such termination, the Secretary shall renew the authority of the established accrediting agency for a period not to exceed three years.

"ESTABLISHMENT OF POSITIONS

"SEC. 1703. (a) (1) The number of first-year positions in each medical residency training program, accredited under section 1702, in the United States which may be made available in any calendar year beginning after calendar year 1977 shall be established by an agency designated or established under this section by the Secretary.

"(2) The aggregate number of such positions which may be established by the designated or established agency for any calendar year may not exceed the limit prescribed by section 1701 (a) (1). In determining the number of such positions in any such accredited program the designated or established agency shall—

"(A) take into consideration the report made with respect to the study conducted under section 15 (c) of the Act of December 31, 1973 (Public Law 93-233), and the report made with respect to the study conducted under section 801 of the Health Manpower Act of 1975;

Digitized by Google

"(B) insure that first-year positions in medical residency training programs are distributed equitably throughout various geographical areas of the United States;

"(C) afford special consideration to first-year positions in medical residency training programs maintained in conjunction with area health education centers under section 783 of this Act; and

"(D) afford particular attention to the need for medical residency training programs in the primary care specialties of general internal medicine, general pediatrics, family medicine, and obstetrics and gynecology.

"(3) The agency designated or established under this section shall, by April 1, 1977, establish (and publish in the Federal Register) the number of first-year positions to be made available in calendar year 1978 by accredited medical residency training programs and shall give to each entity which maintains such a program written notice of the number of first-year positions which it may make available in such program. The number of positions established for any calendar year thereafter shall be published in the Federal Register not later than April 1 of the preceding calendar year and each entity which maintains an accredited medical residency training program shall be given written notice by such

Digitized by Google

date of the number of first-year positions which may be made available in such program.

"(b) (1) Not later than March 31, 1975, the Secretary shall prescribe and publish in the Federal Register requirements which must be met by an entity before it may be designated as the agency to establish the number of first-year positions which may be made available in accredited medical residency training programs. Such requirements shall provide that an entity have a governing body which is comprised of the Secretary (or his delegate) and representatives of the medical profession, medical specialty boards, medical specialty societies, hospitals, schools of medicine, and the general public.

"(2) (A) An entity which seeks designation under this section shall submit an application to the Secretary not later than August 31, 1975. If such an application has been submitted to the Secretary by the Coordinating Council for Medical Education before such date, and—

"(i) if the Secretary determines that the Coordinating Council meets the requirements prescribed under paragraph (1), he shall approve such application and designate it; or

"(ii) if the Secretary finds that the Coordinating Council does not meet such requirements, he shall provide it with such technical and other nonfinancial as-

Digitized by Google

sistance as may be appropriate to enable it to meet such requirements, and if the Secretary determines not later than October 31, 1975, that it meets such requirements, he shall designate it.

"(B) If, by October 31, 1975, the Secretary has not designated the Coordinating Council for Medical Education, he shall consider other applications for such designation and shall if he determines that an entity under such an application meets such requirements and is otherwise qualified to establish the number of first-year positions in medical residency training programs, designate such entity not later than January 1, 1976.

"(3) (A) A designation of an agency under paragraph (2) shall be in effect for three years unless the Secretary terminates such designation before the expiration of three years upon a determination by the Secretary (after notice and reasonable opportunity for a public hearing) that the agency no longer meets the requrements of paragraph (1) or is not qualified to establish the number of first-year positions in accredited medical residency training programs. A designation may, upon application, be renewed for a period of three years.

"(B) If the Secretary terminates a designation or determines a designated agency is not qualified to have its designation renewed, the Secretary shall publish notice of such

Digitized by Google

termination or determination and solicit applications from other entities for designation under this section.

"(4) (A) If—

"(i) by January 1, 1976, the Secretary determines that no entity which has applied for designation meets the requirements prescribed under paragraph (1) or is not otherwise qualified to establish the number of first-year positions in accredited medical residency training programs or if by such date no entity has applied for designation, or

"(ii) upon the expiration of a designation under this section, the Secretary determines that the designated agency is not qualified to have its designation renewed and that there are no other qualified applicants for designation, or upon the termination of such a designation, the Secretary determines that there are no qualified applicants for designation,

the Secretary shall, within three months of such determination, establish an agency to establish the number of first-year positions in accredited medical residency training programs.

"(B) The membership of an agency established by the Secretary under subparagraph (A) shall be fairly representative of the medical profession, hospitals, schools of medicine, medical specialty boards, medical specialty soci-

Digitized by Google

eties, and the general public. Members of the agency shall carry out the functions of the agency in accordance with this title. While away from their homes or regular places of business in the performance of services for the agency, members of the agency shall be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as persons employed intermittently in the Government service are allowed expenses under section 5703 (b) of title 5 of the United States Code. The agency may appoint, without regard to the provisions of title 5, United States Code, respecting appointments in the competitive service, and pay, without regard to the provisions of such title respecting rates of pay, such personnel as it deems necessary for the agency to carry out its functions.

"(C) The establishment of an agency under subparagraph (A) shall be for such period (but not more than three years) as the Secretary prescribes. If an agency has been established by the Secretary an entity may apply for designation as such agency upon the termination of the period for which the agency was established. If no entity submits an approvable application for designation before the date of such termination, the Secretary shall renew the authority of the established accrediting agency for a period not to exceed three years.

Digitized by Google

"(5) The Secretary may make grants to agencies designated under this section for their costs in carrying out their functions under this section. A grant to an agency under this paragraph shall be made for its costs incurred under this section during a period not to exceed one year after the date the grant was made. No single grant to an agency may exceed $300,000.".

TITLE VIII—MISCELLANEOUS

STUDY OF DISTRIBUTION OF PHYSICIANS

SEC. 801. (a) The Secretary of Health, Education, and Welfare shall, within ninety days after the date of the enactment of this Act, contract for the conduct of a study for the following purposes:

(1) To analyze the current distribution of physicians by specialty. In making such analysis—

(A) the geographical distribution of medical and osteopathic physicians by specialty and subspecialty and by geographic area shall be determined, and in connection with such determination physician specialties and subspecialties shall be defined in a manner consistent with recognized categories and geographical areas shall be defined as reasonable medical trade areas for each specialty or subspecialty; and

(B) special attention shall be given to de-

Digitized by Google

termining (i) the percentage of time physicians in each specialty and subspecialty spend in primary care activities and in other activities unrelated to their specialty training, and (ii) the percentage of time primary care physicians spend in specialty care.

(2) To project the expected distribution of physicians by specialty and subspecialty by geographic area in the years 1980, 1985, and 1990. Such projection shall be based on current trends in physician specialty training and choice of practice sites, the activities of various specialty boards and other organizations, and the retirement-death rate of physicians by specialty and subspecialty.

(3) To examine and evaluate the various methodologies for estimating the optimal distribution of physicians by specialty and subspecialty by geographic area controlling the supply of specialists and subspecialists. Methodologies examined and evaluated shall include (A) methodologies utilized by foreign countries, and (B) consideration of the use of nonphysicians to perform functions normally performed by physicians.

(4) To develop a reliable and appropriate methodology to establish the optimal distribution of physicians by specialty and subspecialty by geographic area. Utiliz-

Digitized by Google

ing such methodology, projections shall be made for the optimal number of physicians by specialty and subspecialty by geographic area for the years 1980, 1985, and 1990.

(b) The organization selected by the Secretary to conduct the study required by subsection (a) shall—

(1) have a national reputation for objectivity in the conduct of studies for the Federal Government;

(2) have the capacity to readily marshal the widest possible range of expertise and advice relevant to the conduct of such study;

(3) have a membership and competent staff which have backgrounds in government, the health sciences, and the social sciences;

(4) have a history of interest and activity in health policy issues related to such study; and

(5) have extensive existing contracts with interested public and private agencies and organizations.

(c) An interim report providing a plan for the study required by subsection (a) shall be submitted by the organization conducting the study to the Committee on Interstate and Foreign Commerce of the House of Representatives and the Committee on Labor and Public Welfare of the Senate by October 31, 1975; and a final report giving the results of the study shall be submitted by such organiza-

tion to the Committee on Interstate and Foreign Commerce of the House of Representatives and the Committee on Labor and Public Welfare of the Senate by October 31, 1976.

QUALITY ASSURANCES RESPECTING EDUCATION AND TRAINING OF ALLIED HEALTH PERSONNEL

SEC. 802. The Secretary of Health, Education, and Welfare shall within one year of the date of the enactment of this Act (1) submit to the Congress a report which identifies and describes each of the programs which he administers under which the costs of programs of education and training for allied health personnel (as defined in section 795 of the Public Health Service Act) are directly or indirectly paid (in whole or in part); and (2) take such action as may be necessary to require that such assistance is provided only those programs which meet such quality standards as the Secretary may by regulation prescribe.

ALLIED HEALTH PERSONNEL STUDY

SEC. 803. (a) (1) The Secretary of Health, Education, and Welfare shall, in accordance with paragraph (2) arrange for the conduct of studies—

(A) to identify the various types of allied health personnel and the activities in which such personnel are engaged and the various training programs currently offered for allied health personnel;

(B) to establish classifications of allied health per-

Digitized by Google

sonnel on the basis of their activities, responsibilities, and training;

(C) using appropriate methodologies, to determine the cost of educating and training allied health personnel in each classification; and

(D) to identify the classifications in which there are a critical shortage of such personnel and the training programs which should be assisted to meet that shortage.

(2) (A) The Secretary shall request the National Academy of Sciences to conduct such studies under an arrangement under which the actual expenses incurred by such Academy in conducting such studies will be paid by the Secretary. If the National Academy of Sciences is willing to do so, the Secretary shall enter into such an arrangement with such Academy for the conduct of such studies.

(B) If the National Academy of Sciences is unwilling to conduct one or more such studies under such an arrangement, then the Secretary shall enter into a similar arrangement with other appropriate nonprofit private groups or associations under which such groups or associations will conduct such studies and prepare and submit the reports thereon as provided in subsection (b).

(b) The studies required by subsection (a) shall be completed within the two-year period beginning on the date of

Digitized by Google

the enactment of this Act; and a report on the results of such study shall be submitted by the Secretary to the Committee on Interstate and Foreign Commerce of the House of Representatives and the Committee on Labor and Public Welfare of the Senate before the expiration of such period.

(c) Within six months after the date prescribed for the completion of the studies under subsection (a), the Secretary of Health, Education, and Welfare shall transmit to Congress such recommendations for legislation as he determines is necessary to provide appropriate support for the training programs referred to in subsection (a) (1) (D).

SEC. 804. If, within twenty years (or ten years in the case of a facility constructed under funds paid under part A of title VII of the Public Health Service Act (as in effect before the date of the enactment of the Health Manpower Act of 1975)) after completion of the construction of any facility for which funds have been paid under such part A (as so in effect) or under part D of such title VII (as in effect before July 1, 1967)—

(1) the applicant for such funds or other owner of such facility shall cease to be a public or nonprofit private entity, or

Digitized by Google

(2) such facility shall cease to be used for the purposes for which such funds for its construction were provided, unless the Secretary determines, in accordance with regulations, that there is good cause for releasing the applicant or other owner from the obligation to do so, the United States shall be entitled to recover from the applicant or other owner of the facility the amount bearing the same ratio to the then value (as determined by agreement of the parties or by action brought in the United States district court for the district in which such facility is situated) of the facility, as the amount of the Federal participation bore to the cost of construction of such facility.

94TH CONGRESS
1ST SESSION

H. R. 2957

IN THE HOUSE OF REPRESENTATIVES

FEBRUARY 6, 1975

Mr. ROGERS (for himself, Mr. PREYER, Mr. SYMINGTON, Mr. CARNEY, Mr. SCHEUER, Mr. WAXMAN, Mr. HEFNER, Mr. FLORIO, Mr. CARTER, Mr. HASTINGS, and Mr. HEINZ) introduced the following bill; which was referred to the Committee on Interstate and Foreign Commerce

A BILL

To amend title VIII of the Publish Health Service Act to revise and extend the programs of assistance under that title for nurse training.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE; REFERENCE TO ACT

SECTION 1. (a) This Act may be cited as the "Nurse Training Act of 1975".

(b) Whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to

Digitized by Google

be made to a section or other provision of the Public Health Service Act.

TITLE I—CONSTRUCTION ASSISTANCE

EXTENSION OF GRANTS AND LOAN GUARANTEES AND INTEREST SUBSIDIES

SEC. 101. (a) (1) Section 801 is amended by striking out "and" after "1973,"; and by inserting before the period a comma and the following: "$25,000,000 for fiscal year 1975, $25,000,000 for fiscal year 1976, and $25,000,000 for fiscal year 1977".

(2) Section 802 (a) (1) (A) is amended (A) by inserting "(i)" after "proposed facilities", and (B) by inserting before the semicolon ", or (ii) in expanding the capacity of the school to provide graduate training".

(b) (1) (A) Subsections (a) and (b) of section 809 are each amended by striking out "1974" and inserting in lieu thereof "1977".

(B) (i) The last sentence of subsection (a) of section 809 is amended (I) by striking out "(1)" and (II) by striking out all after "the project" and inserting in lieu thereof a period.

(ii) The amendment made by clause (i) shall apply with respect to loans guaranteed under subpart I of part A of title VIII of the Public Health Service Act after the date of the enactment of this Act.

Digitized by Google

(2) Subsection (e) of such section is amended by striking out "and" after "1973," and by inserting after "1974" a comma and the following: "$2,000,000 for fiscal year 1975, $3,000,000 for fiscal year 1976, and $4,000,000 for fiscal year 1977", and by inserting a period after "Treasury" the second time it appears in the fourth sentence and by striking out the remainder of that sentence.

(c) (1) Subsection (a) of section 809 is amended by inserting "or the Federal Financing Bank" after "non-Federal lenders".

(2) Subsection (b) of section 809 is amended by inserting "or the Federal financing bank" after "non-Federal lender".

TECHNICAL AMENDMENTS

SEC. 102. (a) (1) Title VIII is amended by inserting after the heading for part A the following:

"Subpart I—Construction Assistance

(2) The heading for part A is amended by striking out "GRANTS" and inserting in lieu thereof "ASSISTANCE".

(b) Section 809 is inserted after section 804 and is redesignated as section 805.

Digitized by Google

TITLE II—CAPITATION GRANTS

EXTENSION AND REVISION OF CAPITATION GRANTS

SEC. 201. (a) Section 806(a) is amended by striking out paragraphs (1) and (2) and inserting in lieu thereof the following:

"(1) Each collegiate school of nursing shall receive $400 for each student enrolled in each of the last two years of such school in such year.

"(2) Each associate degree school of nursing shall receive $275 for each student enrolled in the last year of such school in such year.

"(3) Each diploma school of nursing shall receive $250 for each full-time student enrolled in such school in such year."

(b) (1) Subsections (c), (d), and (f) of section 806 are repealed and subsections (e), (g), (h), and (i) are redesignated as subsections (c), (d), (e), and (f), respectively.

(2) Section 806(f)(1) (as so redesignated by paragraph (1) of this subsection) is amended by striking out "and" after "1973," and by inserting before "for grants" the following: "$45,000,000 for fiscal year 1975, $50,000,000 for fiscal year 1976, and $55,000,000 for fiscal year 1977,".

(c) For fiscal year 1975, and for each of the next two fiscal years, there are authorized to be appropriated such

Digitized by Google

sums as may be necessary to continue to make annual grants to schools of nursing under section 806(a) of the Public Health Service Act (as in effect before the date of the enactment of this Act) based on the number of enrollment bonus students (determined in accordance with subsections (c) and (d) of section 806 of such Act (as so in effect)) enrolled in such schools who were first-year students in such schools for school years beginning before June 30, 1974.

TECHNICAL AMENDMENT

SEC. 202. Title VIII is amended by inserting after section 805 (as so redesignated by section 102(b) of this Act) the following:

"Subpart II—Capitation Grants".

TITLE III—FINANCIAL DISTRESS GRANTS

EXTENSION OF FINANCIAL DISTRESS GRANT PROGRAM

SEC. 301. Title VIII is amended by inserting after subpart II of part A (as provided by title II of this Act), the following:

"Subpart III—Financial Distress Grants

"FINANCIAL DISTRESS GRANTS

"SEC. 815. (a) The Secretary may make grants to assist public or nonprofit private schools of nursing which are in serious financial straits to meet operational costs required to maintain quality educational programs or which have special need for financial assistance to meet accreditation

Digitized by Google

requirements. Any such grant may be made upon such terms and conditions as the Secretary determines to be reasonable and necessary, including requirements that the school agree (1) to disclose any financial information or data deemed by the Secretary to be necessary to determine the sources or causes of that school's financial distress, (2) to conduct a comprehensive cost analysis study in cooperation with the Secretary, and (3) to carry out appropriate operational and financial reforms on the basis of information obtained in the course of the comprehensive cost analysis study or on the basis of other relevant information.

"(b) (1) No grant may be made under subsection (a) unless an application thereof is submitted to and approved by the Secretary. The Secretary may not approve or disapprove such an application except after consultation with the National Advisory Council on Nurse Training.

"(2) An application for a grant under subsection (a) must contain or be supported by assurances satisfactory to the Secretary that the applicant will expend in carrying out its functions as a school of nursing, during the fiscal year for which such grant is sought, an amount of funds (other than funds for construction as determined by the Secretary) from non-Federal sources which is at least as great as the average amount of funds exended by such applicant for such purpose (excluding expenditures of a nonrecurring na

Digitized by Google

ture) in the three fiscal years immediately preceding the fiscal year for which such grant is sought. The Secretary may, after consultation with the National Advisory Council on Nurse Training, waive the requirement of the preceding sentence with respect to any school if he determines that the application of such requirement to such school would be inconsistent with the purposes of subsection (a).

"(c) For payments under grants under this section there are authorized to be appropriated $5,000,000 for fiscal year 1975, $5,000,000 for fiscal year 1976, and $5,000,000 for fiscal year 1977.".

TECHNICAL AMENDMENT

SEC. 302. Section 805 and 808 (as in effect on the date before the date of the enactment of this Act) are repealed.

TITLE IV—SPECIAL PROJECT ASSISTANCE

SPECIAL PROJECT GRANTS AND CONTRACTS

SEC. 401. (a) Title VIII is amended by inserting after subpart III of part A (as added by section 301(a) of this Act) the following:

"Subpart IV—Special Projects

"SPECIAL PROJECT GRANTS AND CONTRACTS

"SEC. 820. (a) The Secretary may make grants to public and other nonprofit private schools of nursing and other public or nonprofit private entities, and enter into contracts

Digitized by Google

with any public or private entity, to meet the costs of special projects to—

"(1) assist in—

"(A) mergers between hospital training programs or between hospital training programs and academic institutions, or

"(B) other cooperative arrangements among hospitals and academic institutions,

leading to the establishment of nurse training programs;

"(2) plan, develop, or establish new nurse training programs or programs of research in nursing education, significantly improve curriculums of schools of nursing, or modify existing programs of nursing education;

"(3) increase nursing education opportunities for individuals from disadvantaged backgrounds, as determined in accordance with criteria prescribed by the Secretary, by—

"(A) identifying, recruiting, and selecting such individuals,

"(B) facilitating entry of such individuals into schools of nursing,

"(C) providing counseling or other services designated to assist such individuals to complete successfully their nursing education,

Digitized by Google

"(D) providing, for a period prior to the entry of such individuals into the regular course of education at a school of nursing, prelininary education designed to assist them to compete successfully such regular course of education,

"(E) paying such stipends (including allowances for travel and dependents) as the Secretary may determine for such individuals for any period of nursing education, and

"(F) publicizing, especially to licensed vocational or practical nurses, existing sources of financial aid available to persons enrolled in schools of nursing or who are undertaking training necessary to qualify them to enroll in such schools;

"(4) provide continuing education for nurses;

"(5) provide appropriate retraining opportunities for nurses who (after periods of professional inactivity) desire again actively to engage in the nursing profession;

"(6) help to increase the supply or improve the distribution by geographic area or by specialty group of adequately trained nursing personnel (including nursing personnel who are bilingual) needed to meet the health needs of the Nation, including the need to in-

Digitized by Google

crease the availability of personal health services and the need to promote preventive health care; or

"(7) provide training and education to upgrade the skills of licensed vocational or practical nurses, nursing assistants, and other paraprofessional nursing personnel.

Contracts may be entered into under this subsection without regard to sections 3648 and 3709 of the Revised Statutes (31 U.S.C. 529; 41 U.S.C. 5).

"(b) The Secretary may, with the advice of the National Advisory Council on Nurse Training, provide assistance to the heads of other departments and agencies of the Government to encourage and assist in the utilization of medical facilities under their jurisdiction for nurse training programs.

"(c) No grant or contract may be made under this section unless an application therefor has been submitted to and approved by the Secretary. The Secretary may not approve or disapprove such an application except after consultation with the National Advisory Council on Nurse Training. Such an application shall provide for such fiscal control and accounting procedures and reports, and access to the records of the applicant, as the Secretary may require to assure proper disbursement of and accounting for Federal funds paid to the applicant under this section.

Digitized by Google

"(d) For payments under grants and contracts under this section there are authorized to be appropriated $20,000,000 for fiscal year 1975, $25,000,000 for fiscal year 1976 and $30,000,000 for fiscal year 1977. Not less than 10 per centum of the funds appropriated under this subsection for any fiscal year shall be used for payments under grants and contracts to meet the costs of the special projects described in subsection (a) (3).

"ADVANCED NURSE TRAINING PROGRAMS

"SEC. 821. (a) (1) The Secretary may make grants to and enter into contracts with public and nonprofit private collegiate schools of nursing to meet the costs of projects to—

"(A) plan, develop, and operate,

"(B) significantly expand, or

"(C) maintain existing,

programs for the advanced training of professional nurses to teach in the various fields of nurse training, to serve in administrative or supervisory capacities, or to serve in other professional nursing specialties (including service as nurse clinicians) determined by the Secretary to require advanced training.

"(b) For the purposes of making payments under grants and contracts under this section there are authorized to be appropriated $20,000,000 for fiscal year 1975, $25,000,-

Digitized by Google

000 for fiscal year 1976, and $30,000,000 for fiscal year 1977.

"NURSE PRACTITIONER PROGRAMS

"SEC. 822. (a) (1) the Secretary may make grants to and enter into contracts with public or nonprofit private schools of nursing, medicine, and public health, public or nonprofit private hospitals, and other public or nonprofit private entities to meet the cost of projects to—

"(A) plan, develop, and operate,

"(B) significantly expand, or

"(C) maintain existing,

programs for the training of nurse practitioners.

"(2) (A) For purposes of this section, the term 'programs for the training of nurse practitioners' means educational programs which meet guidelines prescribed by the Secretary in accordance with subparagraph (B) and which have as their objective the education of nurses (including pediatric and geriatric nurses) who will, upon completion of their studies in such a program, be qualified to effectively provide primary health care.

"(B) On or before March 1, 1975, after consultation with appropriate educational organizations and professional nursing and medical organizations, the Secretary shall prescribe guidelines for programs for nurse practitioners. Such guidelines shall, as a minimum, require—

Digitized by Google

"(i) a program of classroom instruction and supervised clinical practice directed toward preparing nurses to deliver primary health care;

"(ii) a minimum course of study of one academic year of which at least four months must be classroom instruction; and

"(iii) a minimum level of enrollment in each year of not less than eight students.

"(b) No grant may be made or contract entered into to plan, develop, and operate a program for the training of nurse practitioners unless the application for the grant or contract contains assurances satisfactory to the Secretary that the program will upon its development meet the guidelines which are in effect under subsection (a) (2) (B); and no grant may be made or contract entered into to expand or maintain such a program unless the application for the grant or contract contains assurances satisfactory to the Secretary that the program meets the guidelines which are in effect under such subsection.

"(c) The costs for which a grant or contract under this section may be made may include costs of preparation of faculty members in order to conform to the guidelines established under subsection (a) (2) (B).

"(d) For the purposes of making payments under grants and contracts under this section there are authorized

Digitized by Google

to be appropriated $20,000,000 for fiscal year 1975, $25,000,000 for fiscal year 1976, and $30,000,000 for fiscal year 1977."

(b) Sections 810 and 868 are repealed.

TITLE V—ASSISTANCE TO NURSING STUDENTS

EXTENSION OF TRAINEESHIPS

SEC. 501. (a) Subsection (a) of section 821 (as in effect on the day before the date of the enactment of this Act) is amended to read as follows:

"(a) There are authorized to be appropriated $20,000,000 for fiscal year 1975, $25,000,000 for fiscal year 1976, and $30,000,000 for fiscal year 1977, to cover the costs of traineeships for the training of professional nurses—

"(1) to teach in the various fields of nurse training (including practical nurse training),

"(2) to serve in administrative or supervisory capacities,

"(3) to serve as nurse practitioners, or

"(4) to serve in other professional nursing specialties determined by the Secretary to require advanced training."

(b) Subsection (b) of section 821 (as so in effect) is amended by adding at the end thereof the following: "In making grants for traineeships under this section, the Secretary shall give special consideration to applications for

Digitized by Google

traineeship programs which conform to guidelines established by the Secretary under section 822(a)(2)(B)."

EXTENSION OF STUDENT LOAN PROGRAM

SEC. 502. (a) Section 882(b)(4) (as in effect before the date of the enactment of this Act) is amended by striking out "1975" and inserting in lieu thereof "1977".

(b) Section 823(b)(2)(B) is amended by inserting "(or training to be a nurse anesthetist)" after "professional training in nursing".

(c) Effective July 1, 1974, section 824 is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS FOR STUDENT LOAN FUNDS

"SEC. 824. There are authorized to be appropriated for allotments under section 825 to schools of nursing for Federal capital contributions to their student loan funds established under section 822, $30,000,000 for fiscal year 1975, $35,000,000 for fiscal year 1976, and $40,000,000 for fiscal year 1977. For fiscal year 1978, and for each of the next two succeeding fiscal years there are authorized to be appropriated such sums as may be necessary to enable students who have received a loan for any academic year ending before July 1, 1977, to continue or complete their education.".

Digitized by Google

(d) Section 826 is amended by striking out "1977" each place it occurs and inserting in lieu thereof "1980".

(e) (1) Section 827 is repealed.

(2) The nurse training fund created within the Treasury by section 827 (d) (1) of the Public Health Service Act shall remain available to the Secretary of Health, Education, and Welfare for the purpose of meeting his responsibilities respecting participations in obligations acquired under section 827 of such Act. The Secretary shall continue to deposit in such fund all amounts received by him as interest payments or repayments of principal on loans under such section 827. If at any time the Secretary determines the moneys in the funds exceed the present and any reasonable prospective further requirements of such fund, such excess may be transferred to the general fund of the Treasury.

(3) There are authorized to be appropriated without fiscal year limitation such sums as may be necessary to enable the Secretary to make payments under agreements entered into under section 827 (b) of the Public Health Service Act before the date of the enactment of this Act.

EXTENSION OF SCHOLARSHIP PROGRAM

SEC. 503. Effective July 1, 1974, section 860 is amended—

(1) by striking out "1972" in subsection (b) and

Digitized by Google

in subsection (c) (1) (A) and inserting in lieu thereof "1975";

(2) by striking out "1975" in the second sentence of subsection (b) and in subsection (c) (1) and inserting in lieu thereof "1978"; and

(3) by striking out "1974" in the second sentence of subsection (b) and in subsection (c) (1) (B) and inserting in lieu thereof "1977".

TITLE VI—TECHNICAL AND CONFORMING AMENDMENTS

TECHNICAL AND CONFORMING AMENDMENTS

SEC. 601. (a) (1) Section 802 is amended—

(A) by striking out "this part" each place it occurs and inserting in lieu thereof "this subpart";

(B) by striking out "subsection 806 (e) of this Act" in subsection (b) (2) and inserting in lieu thereof "section 810 (c)";

(C) by striking out paragraph (5) of subsection (b) and inserting in lieu thereof the following:

"(5) the application contains or is supported by adequate assurances that all laborers and mechanics employed by contractors or subcontractors in the performance of work on a project will be paid wages at rates not less than those prevailing on similar con

Digitized by Google

struction in the locality as determined by the Secretary of Labor in accordance with the Act of March 3, 1931 (40 U.S.C. 276a—276a-5, known as the Davis-Bacon Act), and the Secretary of Labor shall have with respect to such labor standards the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 5 U.S.C. Appendix) and section 2 of the Act of June 13, 1934 (40 U.S.C. 276c).";

(D) by striking out "section 841 (hereinafter in this part referred to as the 'Council')" in the first sentence following paragraph (5) of subsection (b) and inserting in lieu thereof "section 851";

(E) by striking out "subsection (e) of section 806" in the second sentence following such paragraph and inserting in lieu thereof "section 810(c)";

(F) by striking out "section 806(e)" in the last sentence following such paragraph and inserting in lieu thereof "section 810(c)";

(G) by striking out in such last sentence "806(a)" and inserting in lieu thereof "810(a)"; and

(H) by striking out "paragraph (A)" in subsection (c)(1)(B) and inserting in lieu thereof "subparagraph (A)".

(b)(1) Subsection (a) of section 803 is amended to read as follows:

Digitized by Google

"(a) The amount of any grant for a construction project under this subpart shall be such amount as the Secretary determines to be appropriate after obtaining the advice of the National Advisory Council on Nurse Training; except that—

"(1) in the case of a grant—

"(A) for a project for a new school,

"(B) for a project for new facilities for an existing school in cases where such facilities are of particular importance in providing a major expansion of training capacity, as determined in accordance with regulations, or

"(C) for a project for major remodeling or renovation of an existing facility where such project is required to meet an increase in student enrollment,

the amount of such grant may not exceed 75 per centum of the necessary cost of construction, as determined by the Secretary, of such project; and

"(2) in the case of a grant for any other project, the amount of such grant may not, except where the Secretary determines that unusual circumstances make a larger percentage (which may in no case exceed 75 per centum) necessary in order to effectuate the purposes of this subpart, exceed 67 per centum of the necessary cost

Digitized by Google

of construction, as so determined, of the project with respect to which the grant is made."

(2) Subsections (b) and (c) of section 803 are each amended by striking out "this part" and inserting in lieu thereof "this subpart".

(c) Section 804 is amended (1) by striking out "this part" and inserting in lieu thereof "this subpart", and (2) by redesignating paragraphs (a), (b), and (c) as paragraphs (1), (2), and (3), respectively.

(d) Section 805 (as redesignated by section 102(b)) is amended by striking out "this part" each place it occurs and inserting in lieu thereof "this subpart".

(e) Section 806 is redesignated as section 810.

(f) Section 807 is redesignated as section 811 and is amended—

(1) by striking out "section 805, 806, or 810" in subsections (a) and (c) and inserting in lieu thereof "this subpart"; and

(2) by amending paragraph (1) of subsection (c) to read as follows:

"(1) is from a public or nonprofit private school of nursing;".

(g) (1) Title VIII is amended by inserting after the heading for part B the following:

"Subpart I—Traineeships".

Digitized by Google

(2) Section 821 (as amended by section 501) is redesignated as section 830.

(3) Title VIII is amended by inserting after section 830 (as so redesignated) the following:

"Subpart II—Student Loans".

(h) Sections 822, 823, 825, 826, 828, and 830 (as in effect before the date of the enactment of this Act) are amended as follows:

(1) Sections 822 (a), 823, 825, 826, and 828 are each amended by striking out "this part" and inserting in lieu thereof "this subpart".

(2) Sections 822 (a), 823 (b), 823 (c), 825 (b) (2), and 826 (a) (1) are each amended by striking out "of Health, Education, and Welfare".

(3) Section 822 (b) (2) (A) is amended by striking out "under this part" and inserting in lieu thereof "from allotments under section 838".

(4) (A) Section 825 is amended—

(i) by striking out "(whether as Federal capital contributions or as loans to schools under section 827)" in subsection (a); and

(ii) by striking out ", and for loans pursuant to section 827," in subsection (b) (1).

(B) Section 826 (b) is amended by striking out "(other than so much of such fund as relates to pay-

Digitized by Google

ments from the revolving fund established by section 827(d))".

(C) Section 828 is amended by striking out "or loans".

(5) Section 830 is—

(A) transferred to section 823 and inserted after subsection (i) of such section; and

(B) is amendedby striking out "SEC. 830. (a)" and inserting in lieu thereof "(j)".

(i) (1) Sections 822, 823, 824, 825, 826, 828, and 829 (as in effect on the day before the date of the enactment of this Act) are redesignated as sections 835, 836, 837, 838, 839, 840, and 841, respectively.

(2) Section 835 (as so redesignated) is amended (A) by striking out "829" each place it occurs and inserting in lieu thereof "841", and (B) by striking out "823" and inserting in lieu thereof "836".

(3) Section 837 (as so redesignated) is amended (A) by striking out "825" and inserting in lieu thereof "838", and (B) by striking out "822" and inserting in lieu thereof "835".

(4) Section 838 (as so redesignated) is amended by striking out "824" each place it occurs and inserting in lieu thereof "837".

(5) Section 839 (as so redesignated) is amended by

Digitized by Google

striking out "822" each place it occurs and inserting in lieu thereof "835".

(6) Section 841 (as so redesignated) is amended (A) by striking out "822" and inserting in lieu thereof "835", and (B) by striking out "part D" and inserting in lieu thereof "subpart III of this part".

(j) (1) Part D of title VIII is inserted after subpart II of part B of such title and redesignated as subpart III; and sections 860 and 861 are redesignated as sections 845 and 846, respectively.

(2) Section 845 (a) (as so redesignated) is amended by striking out "this part" and inserting in lieu thereof "this section".

(3) Section 846 (as so redesignated) is amended (A) by striking out "this part" the first time it occurs and inserting in lieu thereof "section 845", and (B) by striking out "to the sums available to the school under this part for (and to be regarded as) Federal capital contributions, to be used for the same purpose as such sums" and inserting in lieu thereof "to the student loan fund of the school established under an agreement under section 835. Funds transferred under this section to such a student loan fund shall be considered as part of the Federal capital contributions to such fund".

Digitized by Google

(4) Section 869 is repealed.

(k) (1) Sections 841, 842, 843, 844, and 845 (as in effect on the day before the date of enactment of this Act) are redesignated as sections 851, 852, 853, 854, and 855, respectively.

(2) Section 851 (as so redesignated) is amended (A) by striking out "part A of applications under section 805" in subsection (a) (2) and inserting in lieu thereof "subpart I of part A, of applications under section 805, and of applications under subpart III of part A"; (B) by striking out subsection (b); (C) by striking out "(a) (1)" and inserting in lieu thereof "(a)"; and (D) by striking out "(2)" and inserting in lieu thereof "(b)".

(3) Section 853 (as so redesignated) is amended—

(A) by striking out "part A" in paragraph (f) and inserting in lieu thereof "subpart I of part A";

(B) by striking out "806" in paragraph (f) and inserting in lieu thereof "810";

(C) by striking out "part B" each place it occurs in paragraph (f) and inserting in lieu thereof "section 835";

(D) by striking out "825" in paragraph (i) and inserting in lieu thereof "838";

(E) by redesignating paragraphs (a) through (j) as paragraphs (1) through (10) respectively;

Digitized by Google

(F) by redesignating clauses (1), (2), and (3) of paragraph (6) (as so redesignated) as clauses (A), (B), and (C), respectively.

(G) by redesignating subclauses (A) and (B) of such paragraph (6) as subclauses (i) and (ii), respectively; and

(H) by redesignating clauses (1) and (2) of paragraph (9) (as so redesignated) as clauses (A) and (B), respectively.

(4) Part C is amended by adding at the end thereof the following:

"DELEGATION

"SEC. 856. The Secretary may delegate the authority to administer any program authorized by this title to the administrator of a central or regional office or offices in the Department of Health, Education, and Welfare, except that the authority—

"(1) to review, and prepare comments on the merit of, any application for a grant or contract under any program authorized by this title for purposes of presenting such application to the National Advisory Council on Nurse Training, or

"(2) to make such a grant or enter into such a contract,

Digitized by Google

shall not be further delegated to any administrator of, or officer in, any regional office or offices.".

TITLE VII—MISCELLANEOUS

INFORMATION RESPECTING THE SUPPLY AND DISTRIBUTION OF AND REQUIREMENTS FOR NURSES

SEC. 701. (a) (1) Using procedures developed in accordance with paragraph (3), the Secretary of Health, Education, and Welfare (hereinafter in this section referred to as the "Secretary") shall determine on a continuing basis—

(A) the supply (both current and projected and within the United States and within each State) of registered nurses, licensed practical and vocational nurses, nurse's aides, registered nurses with advanced training or graduate degrees, and nurse practitioners;

(B) the distribution, within the United States and within each State, of such nurses so as to determine those areas of the United States which are oversupplied, undersupplied, or which have an adequate supply of such nurses in relation to the population of the area and the demand for the services which such nurses provide; and

(C) the current and future requirements for such nurses, nationally and within each State.

(2) The Secretary shall survey and gather data, on a continuing basis, on—

Digitized by Google

(A) the number and distribution of nurses, by type of employment and location of practice;

(B) the number of nurses who are practicing full time and those who are employed part time, within the United States and within each State;

(C) the average rates of compensation for nurses, by type of practice and location of practice;

(D) the activity status of the total number of registered nurses within the United States and within each State;

(E) the number of nurses with advanced training or graduate degrees in nursing, by specialty, including nurse practitioners, nurse clinicians, nurse researchers, nurse educators, and nurse supervisors and administrators; and

(F) the number of registered nurses entering the United States annually from other nations, by country of nurse training and by immigrant status.

(3) Within six months of the date of the enactment of this Act, the Secretary shall develop procedures for determining (on both a current and projected basis) the supply and distribution of and requirements for nurses within the United States and within each State.

Digitized by Google

(b) Not later than February 1, 1976, and February 1 of each succeeding year, the Secretary shall report to the Congress—

(1) his determinations under subsection (a) (1) and the data gathered under subsection (a) (2) ;

(2) an analysis of such determination and data; and

(3) recommendations for such legislation as the Secretary determines, based on such determinations and data, will achieve (A) an equitable distribution of nurses within the United States and within each State, and (B) adequate supplies of nurses within the United States and within each State.

(c) The Office of Management and Budget may review the Secretary's report under this section before its submission to the Congress, but the Office may not revise the report or delay its submission, and it may submit to the Congress its comments (and those of other departments or agencies of the Government) respecting such report.

94TH CONGRESS
1ST SESSION

H. R. 2958

IN THE HOUSE OF REPRESENTATIVES

FEBRUARY 6, 1975

Mr. ROGERS (for himself, Mr. PREYER, Mr. SYMINGTON, Mr. CARNEY, Mr. SCHEUER, Mr. WAXMAN, Mr. HEFNER, Mr. FLORIO, Mr. CARTER, Mr. BROYHILL, Mr. HASTINGS, and Mr. HEINZ) introduced the following bill; which was referred to the Committee on Interstate and Foreign Commerce

A BILL

To amend the Public Health Service Act to revise and extend the National Health Service Corps program.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 329(h) of the Public Health Service Act is amended by striking out "and" after "1973;", and by inserting before the period a comma and the following: "and $16,000,000 for the fiscal year ending June 30, 1975".

(b) Effective with respect to appropriations made for fiscal years beginning after June 30, 1975, under section

Digitized by Google

329 of the Public Health Service Act, such section is amended to read as follows:

"NATIONAL HEALTH SERVICE CORPS

"SEC. 329. (a) There is established, within the Service, the National Health Service Corps (hereinafter in this section referred to as the 'Corps') which shall consist of those officers of the Regular and Reserve Corps of the Service and such other personnel as the Secretary may designate and which shall be utilized by the Secretary under this section to improve the delivery of health services to medically underserved populations.

"(b) (1) The Secretary shall designate the medically underserved populations in the States. For purposes of this section, a medically underserved population is the population of an urban or rural area (which does not have to conform to the geographical boundaries of a political subdivision and which should be a rational area for the delivery of health services) which the Secretary determines has a critical health manpower shortage or a population group determined by the Secretary to have such a storage; and the term 'State' includes Guam, American Samoa, and the Trust Territory of the Pacific Islands. In designating medically underserved populations, the Secretary shall take into account (A) the recommendations of the entities responsible for the development of the plans referred to in section 314(b)

Digitized by Google

which cover all or any part of the areas in which populations under consideration for designation reside, and (B) in the case of any such area for which no such entity is responsible for developing such a plan, the recommendations of the agency of the State (or States) in which such area is located which administers or supervises the administration of a State plan approved under section 314 (a).

"(2) Any person may apply to the Secretary (in such manner as he may prescribe) for the designation of a population as a medically underserved population. In considering an application under this paragraph, the Secretary shall, in addition to criteria utilized by him in making a designation under paragraph (1), take into account the following:

"(A) Ratios of available health manpower to the population for which the application is made.

"(B) Indicators of the population's access to health services.

"(C) Indicators of the health status of the population.

"(D) Indicators of such population's needs and demand for health services.

"(3) The Secretary shall (A) provide assistance to persons seeking assignment of Corps personnel to provide under this section health services for medically underserved populations, and (B) conduct such information programs

Digitized by Google

in areas in which such populations reside as may be necessary to inform the public and private health entities serving those areas of the assistance available to such populations by virtue of their designation under this section as medically underserved.

"(c) (1) (A) The Secretary may assign personnel of the Corps to provide, under regulations prescribed by the Secretary, health services for a medically underserved population if—

"(i) the State health agency of each State in which such population is located or the local public health agency or any other public or nonprofit private health entity serving such population makes application to the Secretary for such assignment, and

"(ii) the

"(I) local government of the area in which such population resides, and

"(II) any State and district medical osteopathic, or dental society for such area, or any other appropriate health society (as the case may be) for such area,

certify to the Secretary that such assignment of Corps personnel is needed for such population.

"(B) The Secretary may not approve an application under paragraph (1) (A) (i) for an assignment unless the

Digitized by Google

applicant agrees to enter into an arrangement with the Secretary in accordance with subsection (e) (1) and has afforded—

"(i) the entity responsible for the development of the plans referred to in section 314 (b) which covers all or any part of the area in which the population for which the application is submitted resides, and

"(ii) if there is a part of such area for which no such entity is responsible for developing such plans, the agency of the State in which such part is located which administers or supervises the administration of a State plan approved under section 314 (a),

an opportunity to review the application and submit its comments to the Secretary respecting the need for and proposed use of the manpower requested in the application. In considering such an application, the Secretary shall take into consideration the need of the population for which the application was submitted for the health services which may be provided under this section; the willingness of the population aand the appropriate governmental agencies or health entities serving it to assist and cooperate with the Corps in providing effective health services to the population; and recommendations from medical, dental, or other health societies or from medical personnel serving the population.

Digitized by Google

"(C) If with respect to any proposed assignment of Corps personnel for a medically underserved population the requirements of clauses (i) and (ii) of subparagraph (A) are met except for the certification by a State and district medical, osteopathic, or dental society or by any other appropriate health society required by clause (ii) (II) and if the Secretary finds from all the facts presented that such certification has clearly been arbitrarily and capriciously withheld, the Secretary may, after consultation with appropriate medical, osteopathic, dental, or other health societies, waive the application of the certification requirement to such proposed assignment.

"(2) (A) In approving an application submitted under paragraph (1) for the assignment of Corps personnel to provide health services for a medically underserved population, the Secretary may approve the assignment of Corps personnel for such population during a period (referred to in this paragraph as the 'assistance period') which may not exceed four years from the date of the first assignment of Corps personnel for such population after the date of the approval of the application. No assignment of individual Corps personnel may be made for a period ending after the expiration of the applicable approved assistance period.

"(B) Upon expiration of an approved assistance period for a medically underserved population, no new assignment

Digitized by Google

of Corps personnel may be made for such population unless an application is submitted in accordance with paragraph (1) for such assignment. The Secretary may not approve such an application unless—

"(i) the application and certification requirements of paragraph (1) are met;

"(ii) the Secretary has conducted an evaluation of the continued need for health manpower of the population for which the application is submitted, of the utilization of the manpower by such population, of the growth of the health care practice of the Corps personnel assigned for such population, and of community support for the assignment; and

"(iii) the Secretary has determined that such population has made continued efforts to secure its own health manpower, that there has been sound fiscal management of the health care practice of the Corps personnel assigned for such population, including efficient collection of fee-for-service, third-party, and other funds available to such population, and that there has been appropriate and efficient utilization of such Corps personnel.

"(3) Corps personnel shall be assigned to provide health services for a medically underserved population on the basis of the extent of the population's need for health services

Digitized by Google

and without regard to the ability of the members of the population to pay for health services.

"(4) In making an assignment of Corps personnel the Secretary shall seek to match characteristics of the assignee (and his spouse (if any)) and of the population to which such assignee may be assigned in order to increase the likelihood of the assignee remaining to serve the population upon completion of his assignment period. The Secretary shall, before the expiration of the last nine months of the assignment period of a member of the Corps, review such member's assignment and the situation in the area to which he was assigned for the purpose of determining the advisability of extending the period of such member's assignment.

"(5) To assist in the recruitment of health manpower, the Secretary shall provide technical assistance to all medically underserved populations to which are not assigned Corps personnel. The Secretary shall also give such populations current information respecting public and private programs which may assist in securing health manpower for them.

"(d) (1) In providing health services for a medically underserved population under this section, Corps personnel shall utilize the techniques, facilities, and organizational forms most appropriate for the area in which the population resides and shall, to the maximum extent feasible, provide

Digitized by Google

such services (A) to all members of the population regardless of their ability to pay for the services, and (B) in connection with (i) direct health services programs carried out by the Service; (ii) any direct health services program carried out in whole or in part with Federal financial assistance; or (iii) any other health services activity which is in furtherance of the purposes of this section.

"(2) (A) Notwithstanding any other provision of law, the Secretary (i) may, to the extent feasible, make such arrangements as he determines necessary to enable Corps personnel in providing health services for a medically underserved population to utilize the health facilities of the area in which the population resides and if there are no health facilities in or serving such area, the Secretary may arrange to have Corps personnel provide health services in the nearest health facilities of the Service or the Secretary may lease or otherwise provide facilities in such area for the provision of health services, (ii) may make such arrangements as he determines are necessary for the use of equipment and supplies of the Service and for the lease or acquisition of other equipment and supplies, and (iii) may secure the temporary services of nurses and allied health professionals.

"(B) If such area is being served (as determined under regulations of the Secretary) by a hospital or other health

Digitized by Google

care delivery facility of the Service, the Secretary shall, in addition to such other arrangements as the Secretary may make under subparagraph (A), arrange for the utilization of such hospital or facility by Corps personnel in providing health services for the population, but only to the extent that such utilization will not impair the delivery of health services and treatment through such hospital or facility to persons who are entitled to health services and treatment through such hospital or facility.

"(3) The Secretary may make one grant to any applicant with an approved application under subsection (c) to assist it in meeting the costs of establishing medical practice management systems for Corps personnel, acquiring equipment for their use in providing health services, and establishing appropriate continuing education programs and opportunities for them. No grant may be made under this paragraph unless an application therefor is submitted to, and approved by, the Secretary. The amount of any grant shall be determined by the Secretary, except that no grant may be made for more than $25,000.

"(4) Upon the expiration of the assignment of Corps personnel to provide health services for a medically underserved population, the Secretary (notwithstanding any other provision of law) may sell to the entity which submitted the last application approved under subsection (c) for the

Digitized by Google

assignment of Corps personnel for such population equipment of the United States utilized by such personnel in providing health services. Sales made under this paragraph shall be made for the fair market value of the equipment sold (as determined by the Secretary).

"(e) (1) The Secretary shall require as a condition to the approval of an application under subsection (c) that the entity which submitted the application enter into an appropriate arrangement with the Secretary under which—

"(A) the entity shall be responsible for charging in accordance with paragraph (2) for health services by the Corps personnel to be assigned;

"(B) the entity shall take such action as may be reasonable for the collection of payments for such health services, including if a Federal agency, an agency of a State or local government, or other third party would be responsible for all or part of the cost of such health services if it had not been provided by Corps personnel under this section, the collection, on a fee-for-service or other basis, from such agency or third party the portion of such cost for which it would be so responsible (and in determining the amount of such cost which such agency or third party would be responsible, the health services provided by Corps personnel shall be considered as being provided by private practitioners); and

Digitized by Google

"(C) the entity shall pay to the United States as prescribed by the Secretary for each calendar quarter (or other period as may be specified in the arrangement) during which any Corps personnel are assigned to such entity the sum of—

"(i) the pay (including amounts paid in accordance with subsection (f)) and allowances of such Corps personnel for the portion of such quarter (or other period) during which assigned to the entity;

"(ii) if such entity received a grant under subsection (d)(3) for the assistance period, an amount which bears the same ratio to the amount of such grant as the number of days in such quarter (or other period) during which any Corps personnel were assigned to the entity bears to the number of days in the assistance period after such entity received such grant; and

"(iii) if during such quarter (or other period) any member of the Corps assigned to such entity is providing obligated service pursuant to an agreement under the Public Health and National Health Service Corps Scholarship Training Program, for each such member an amount which bears the same ratio to the amount paid under such Program to or

Digitized by Google

on the behalf of such member as the number of days of obligated service provided by such member during such quarter (or other period) bears to the number of days in his period of obligated service under such Program.

The Secretary may waive in whole or in part the application of the requirement of subparagraph (C) to an entity if he determines that the entity is financially unable to meet such requirement or if he determines that compliance with such requirement would unduly limit the ability of the entity to maintain the quality of the services it provides. The excess (if any) of the amount collected by an entity in accordance with subparagraph (B) over the amount paid to the United States in accordance with subparagraph (C) shall be used by the entity to expand or improve the provision of health services to the population for which the entity submitted an application under subsection (c) or to recruit and retain health manpower to provide health services for such population. Funds received by the Secretary under such an arrangement shall be deposited in the Treasury as miscellaneous receipts and shall be disregarded in determining the amounts of appropriations to be requested under subsection (i) and the amounts to be made available from appropriations made under such subsection to carry out this section.

"(2) Any person who receives health services provided

Digitized by Google

by Corps personnel under this section shall be charged for such services on a fee-for-service or other basis at a rate approved by the Secretary, pursuant to regulations, to recover the value of such services; except that if such person is determined under regulations of the Secretary to be unable to pay such charge, the Secretary shall provide for the furnishing of such services at a reduced rate or without charge.

"(f) (1) The Secretary shall conduct at medical and nursing schools and other schools of the health professions and at entities which train allied health personnel, recruiting programs for the Corps. Such programs shall include the wide dissemination of written information on the Corps and visits to such schools by personnel of the Corps.

"(2) The Secretary may reimburse applicants for positions in the Corps for actual expenses incurred in traveling to and from their place of residence to an area in which they would be assigned for the purpose of evaluating such area with regard to being assigned in such area. The Secretary shall not reimburse an applicant for more than one such trip.

"(3) Commissioned officers and other personnel of the Corps assigned to provide health services for medically underserved populations shall not be included in determining whether any limitation on the number of personnel

Digitized by Google

which may be employed by the Department of Health, Education, and Welfare has been exceeded.

"(4) The Secretary shall, under regulations prescribed by him, adjust the monthly pay of each physician and dentist member of the Corps who is directly engaged in the delivery of health services to a medically underserved population as follows:

"(A) During the first thirty-six months in which such a member is so engaged in the delivery of health services, his monthly pay shall be increased by an amount (not to exceed $1,000) which when added to the member's monthly pay and allowances will provide a monthly income competitive with the average monthly income from an established practice of a member of such member's profession with equivalent training.

"(B) During the period beginning upon the expiration of the thirty-six months referred to in subparagraph (A) and ending with the month in which the member's monthly pay and allowances is equal to or exceeds the monthly income he received for the last of such thirty-six months, the member shall receive in addition to his monthly pay and allowances an amount which when added to such monthly pay and allowances equals the monthly income he received for such last month.

Digitized by Google

For purposes of subparagraphs (A) and (B), the term 'monthly pay' includes special pay received under chapter 5 of title 37 of the United States Code. In the case of a member of the Corps who is directly engaged in the provision of health services to a medically underserved population in accordance with a service obligation incurred under the Public Health Service and National Health Service Corps Scholarship Training Program, the provisions of this paragraph shall apply to such member upon satisfactory completion of such service obligation and the first thirty-six months of his being so engaged in the delivery of health care shall, for purposes of this paragraph, be deemed to begin upon such satisfactory completion.

"(g) The Secretary shall report to Congress no later than May 15 of each year—

"(1) the number and identity of all medically underserved populations in each of the States in the calendar year preceding the year in which the report is made and the number of medically underserved populations which the Secretary estimates will be designated under subsection (b) in the calendar year in which the report is made;

"(2) the number of applications filed in such preceding calendar year for assignment of Corps personnel

Digitized by Google

under this section and the action taken on each such application;

"(3) the number and types of Corps personnel assigned in such preceding year to provide health services for medically underserved populations, the number and types of additional Corps personnel which the Secretary estimates will be assigned to provide such services in the calendar year in which the report is submitted, and the need (if any) for additional personnel for the Corps;

"(4) the recruitment efforts engaged in for the Corps in such preceding year, including the programs carried out under subsection (f) (1) and the number of qualified persons who applied for service in the Corps in each professional category;

"(5) the total number of patients seen and patient visits recorded during such preceding year in each area where Corps personnel were assigned;

"(6) the number of health personnel electing to remain after termination of their service in the Corps to provide health services to medically underserved populations and the number of such personnel who do not make such election and the reasons for their departure;

"(7) the results of evaluations made under sub-

Digitized by Google

section (c) (2) (B) (ii), and determinations made under subsection (c) (2) (B) (iii), during such preceding year; and

"(8) the amount (A) charged during such preceding year for health services by Corps personnel, (B) collected in such year by entities in accordance with arrangements under subsection (e) (1), and (C) paid to the Secretary in such year under such arrangements.

"(h) (1) There is established a council to be known as the National Advisory Council on the National Health Service Corps (hereinafter in this section referred to as the 'Council'). The Council shall be composed of fifteen members appointed by the Secretary as follows:

"(A) Four members shall be appointed from the general public to represent the consumers of health care, at least two of whom shall be members of a medically underserved population for which Corps personnel are providing health services under this section.

"(B) Three members shall be appointed from the medical, dental, and other health professions and health teaching professions.

"(C) Three members shall be appointed from State health or health planning agencies.

"(D) Three members shall be appointed from the Service, at least two of whom shall be members of the

Digitized by Google

Corps directly engaged in the provision of health services for a medically underserved population.

"(E) One member shall be appointed from the National Advisory Council on Comprehensive Health Planning.

"(F) One member shall be appointed from the National Advisory Council on Regional Medical Programs.

The Council shall consult with, advise, and make recommendations to, the Secretary with respect to his responsibilities in carrying out this section, and shall review and comment upon regulations promulgated by the Secretary under this section and section 747.

"(2) Members of the Council shall be appointed for a term of three years and shall not be removed, except for cause. Members may be reappointed to the Council.

"(3) Appointed members of the Council, while attending meetings or conferences thereof or otherwise serving on the business of the Council, shall be entitled to receive for each day (including traveltime) in which they are so serving the daily equivalent of the annual rate of basic pay in effect for grade GS–18 of the General Schedule, and while so serving away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 (b)

Digitized by Google

of title 5 of the United States Code for persons in the Government service employed intermittently.

"(i) (1) To carry out the purposes of this section, there are authorized to be appropriated $30,000,000 for fiscal year 1976.

"(2) An appropriation under an authorization under paragraph (1) of this subsection for any fiscal year may be made at any time before that fiscal year and may be included in an Act making an appropriation under an authorization under paragraph (1) for another fiscal year; but no funds may be made available from any appropriation under such authorization for obligation under this section before the fiscal year for which such appropriation is authorized.".

(c) (1) The Secretary of Health, Education, and Welfare shall report to Congress (1) not later than three months after the date of the enactment of this Act, the criteria to be used by him in designating medically underserved populations for purposes of section 329 of the Public Health Service Act (as amended by subsection (b)) and (2) not later than six months after the date of the enactment of this Act, the identity and number of medically underserved populations in each State meeting such criteria.

(2) The Secretary of Health, Education, and Welfare shall conduct or contract for studies of methods of assigning

Digitized by Google

under section 329 of the Public Health Service Act National Health Service Corps personnel to medically underserved populations and of providing health care to such populations. Such studies shall be for the purpose of identifying (A) the characteristics of health manpower who are more likely to remain in practice in areas in which medically underserved populations are located, (B) the characteristics of areas which have been able to retain health manpower, (C) the appropriate conditions for assignment of nurse practitioners, physician's assistants, and expanded function dental auxiliaries in areas in which medically underserved populations are located, and (D) the effect that primary care residency training in such areas has on the health care provided in such areas and on the decisions of physicians who received such training respecting the areas in which to locate their practice.

(d) (1) The amendment made by subsection (b) which changed the name of the advisory council established under section 329 of the Public Health Service Act shall not be construed as requiring the establishment of a new advisory council under that section; and the amendment made by such subsection with respect to the composition of such advisory council shall apply with respect to appointments made to the advisory council after June 30, 1975, and the Secretary of Health, Education, and Welfare shall make appointments to the Advisory Council after such date in

Digitized by Google

a manner which will bring about, at the earliest feasible time, the Advisory Council composition prescribed by the amendment.

(2) (A) Effective July 1, 1975, section 741 (f) (1) (C) is amended by striking all that follows after "in a State" and inserting in lieu thereof "in which is located a medically underserved population designated under section 329 (b) ;".

(B) The amendment made by subparagraph (A) shall apply with respect to agreements entered into under section 741 (f) of the Public Health Service Act after June 30, 1975.

SEC. 2. (a) Section 747 is repealed and effective July 1, 1975, section 225 is transferred to subpart II of part C of title VII, is redesignated section 747, and is amended to read as follows:

"PUBLIC HEALTH AND NATIONAL HEALTH SERVICE CORPS SCHOLARSHIP TRAINING PROGRAM

"SEC. 747. (a) The Secretary shall establish the Public Health and National Health Service Corps Scholarship Training Program (hereinafter in this section referred to as the 'Program') to obtain trained physicians, dentists, and nurses and, if needed by the Corps or other unit of the Service, podiatrists, optometrists, pharmacists, graduates of schools of public health, graduates of programs in health administration, and other health-related specialists.

Digitized by Google

"(b) To be eligible for acceptance in the Program, an applicant for the Program must—

"(1) be accepted for enrollment, or be enrolled, as a full-time student (A) in an accredited (as determined by the Secretary) educational institution in a State and (B) in (i) a course of study offered by such institution and approved by the Secretary which leads to a degree in medicine, osteopathy, dentistry, nursing, or other health-related specialty as determined by the Secretary or (ii) a program offered by such institution for the training of physician assistants, expanded function dental auxiliaries, or nurse practitioners;

"(2) be eligible for, or hold, an appointment as a commissioned officer in the Regular or Reserve Corps of the Service or be eligible for selection for civilian service in the Service; and

"(3) agree in writing to serve, as prescribed by subsection (d) of this section, in the Commissioned Corps of the Service or as a civilian member of the Service.

To remain in the program an individual must pursue at such an institution such an approved course of study or such a program and maintain an acceptable level of academic standing in it.

"(c) (1) (A) Each participant in the Program shall

Digitized by Google

receive a scholarship for each approved academic year of training, not to exceed four years. A participant's scholarship shall consist of (i) an amount equal to the basic pay and allowances of a commissioned officer on active duty in pay grade O–1 with less than two years of service, and (ii) payment of the tuition expenses of the participant and all other reasonable educational expenses incurred by the participant, including fees, books, and laboratory expenses.

"(B) The Secretary may contract with an institution in which participants in the Program are enrolled for the payment to the institution of the tuition and other educational expenses of such participants. Payment to such institution may be made without regard to section 3648 of the Revised Statutes (31 U.S.C. 529).

"(2) When the Secretary determines that an institution has increased its total enrollment for the sole purpose of accepting members of the Program, he may provide under a contract with such an institution for additional payments to the institution to cover the portion of the increased costs of the additional enrollment which are not covered by the institution's normal tuition and fees.

"(d) (1) Each participant in the Program shall provide service as prescribed by paragraph (2) for a period of time (hereinafter in this section referred to as a 'period of

Digitized by Google

obligated service') prescribed by the Secretary which may be not less than—

"(A) one year of such service for each academic year of training received under the Program, or

"(B) two years.

For persons receiving a degree from a school of medicine, osteopathy, or dentistry, the commencement of a period of obligated service shall be deferred by the Secretary, at the request of the participant, for the period of time required to complete internship, residency, or other advanced clinical training. For persons receiving degrees in other health professions the obligated service period shall commence upon completion of their academic training. Periods of internship, residency, or other advanced clinical training shall not be creditable in satisfying a service obligation under this subsection.

"(2) (A) Except as provided in subparagraphs (B), (C), and (D), an individual obligated to provide service on account of his participation in the Program shall provide such service for the period of obligated service applicable to him as a member of the National Health Service Corps or the Indian Health Service in the clinical practice of his profession.

"(B) If at the time an individual is required by the

Digitized by Google

Secretary to begin his period of obligated service neither the National Health Service Corps nor the Indian Health Service has a position available for a member of the profession for which such individual was trained, such individual shall serve as a member of the Service in the clinical practice of his profession in connection with the delivery of health services under the authority of section 321 (relating to hospitals), 322 (relating to care and treatment of seamen and others), 323 (relating to care and treatment of Federal prisoners), 324 (relating to examination and treatment of certain Federal employees), 325 (relating to examination of aliens), or 326 (relating to services to certain Federal employees) or part D of title III (relating to services for persons with Hansen's disease).

"(C) If at the time an individual is required by the Secretary to begin his period of obligated service—

"(i) the Corps and the Indian Health Service have no positions available for a member of the profession for which such individual was trained, and

"(ii) the Service has no need for such individual in connection with the delivery of health services under the authorities referred to in subparagraph (B),

such individual shall serve in the clinical practice of his profession for such period in a medical facility of a State correctional facility, State mental hospital, community

Digitized by Google

mental health center, migrant health center, community health center, or other medical entity designated by the Secretary as having a priority need for health personnel.

"(D) If at the time an individual is required by the Secretary to begin his period of obligated service—

"(i) the Corps and the Indian Health Service have no positions available for a member of the profession for which such individual was trained,

"(ii) the Service has no need for such individual in connection with the delivery of health services under the authorities referred to in subparagraph (B), and

"(iii) no entity designated under subparagraph (C) has positions available for a member of the profession for which such individual was trained,

such individual shall serve for such period as a member of the Public Health Service in such unit of the Department as the Secretary may prescribe.

"(e) If, for any reason, a person fails to either begin his service obligation under this section in accordance with subsection (d) or to complete such service obligation, the United States shall be entitled to recover from such individual an amount determined in accordance with the formula

$$A=2\phi\left(\frac{t-s}{t}\right)$$

Digitized by Google

in which 'A' is the amount the United States is entitled to recover; 'φ' is the sum of the amount paid under this section to or on behalf of such person and the interest on such amount which would be payable if at the time it was paid it was a loan bearing interest at the maximum legal prevailing rate; 't' is the total number of months in such person's service obligation; and 's' is the number of months of such obligation served by him in accordance with subsection (d). Any amount which the United States is entitled to recover under this subsection shall, within the three-year period beginning on the date the United States becomes entitled to recover such amount, be paid to the United States.

"(f) (1) (A) The Secretary shall release any participant in the Program from his service obligation under subsection (d) if such participant enters into a written agreement with the Secretary to engage on a full-time basis in the private practice of his profession—

"(i) in an area in a State in which is located a medically underserved population designated under section 329 (b); and

"(ii) for a period of—

"(I) one year for each academic year of training received under the Program, or

"(II) two years,

whichever is greater.

Digitized by Google

"(B) An agreement described in subparagraph (A) shall—

"(i) provide that during the period of private practice by a participant pursuant to the agreement—

"(I) any individual who receives health services provided by the participant in connection with such private practice will be charged for such services at the usual and customary rate prevailing in the area in which such services are provided, except that if such individual is unable to pay such charge (as determined in accordance with regulations prescribed by the Secretary) such individual shall be charged at a reduced rate or not charged any fee; and

"(II) the participant in providing health services in connection with such private practice shall not discriminate against any individual on the basis of such individual's ability to pay for such services or because payment for the health services provided to such individual will be made under the insurance program established under part A or B of title XVIII of the Social Security Act or under a State plan for medical assistance approved under title XIX of such Act; and

Digitized by Google

"(ii) contain such additional provisions as the Secretary may require to carry out the purposes of this subsection.

"(2) (A) The Secretary may make one grant to any participant—

"(i) who has entered into an agreement under paragraph (1), and

"(ii) who has agreed to extend the period of practice under such agreement by a period of not less than one year,

to assist such participant in meeting the costs of beginning the practice of his profession in accordance with such agreement, including the costs of acquiring equipment and renovating facilities for use in providing health services, and of hiring nurses and other personnel to assist in providing health services. No such grant may be used for the purchase or construction of any health care facility.

"(B) the amount of the grant to any participant under subparagraph (A) shall be—

"(i) $12,500, if such participant agrees to extend the period of practice under the agreement under paragraph (1) for a period of at least one year but less than two years; or

"(ii) $25,000, if such participant agrees to extend

Digitized by Google

the period of practice under the agreement under paragraph (1) for a period of at least two years.

"(3) The Secretary may not enter into any agreement under paragraph (1) or make any grant under paragraph (2) unless an application therefor has been submitted to, and approved by, the Secretary.

"(4) (A) The Secretary shall pay, as soon as practicable after the close of each calendar quarter, to each participant who entered into an agreement under paragraph (1) an amount which is equal to the excess (if any) of—

"(i) the amount of basic pay and allowances which such participant would have received for the period—

"(I) in which he practiced his profession in accordance with the agreement under paragraph (1), and

"(II) which is in the calendar year in which such calendar quarter occurs and ends at the close of such calendar quarter,

(which period is hereafter in this paragraph referred to as the 'service period') if during his service period he was a commissioned member of the National Health Service Corps providing service during a period of obligated service under subsection (d), over

"(ii) the sum of the net income (as determined

Digitized by Google

under regulations prescribed by the Secretary) derived by such participant during his service period from the private practice of his profession and the amount (if any) paid before the close of such calendar quarter to such participant under this paragraph with respect to the portion of his service period which ended at the close of the preceding calendar quarter.

"(B) If after the close of any calendar year—

"(i) the amount described in subparagraph (A) (ii) which was received by the participant for the period in such year in which he practiced his profession in accordance with an agreement under paragraph (1), exceeds

"(ii) the amount of basic pay and allowances which the participant would have received for such period if during such period he was a commissioned member of the National Health Service Corps providing service during a period of obligated service under subsection (d),

the Secretary shall be entitled to recover from the participant an amount equal to the lesser of the amount of such excess or the amount paid to the participant under subparagraph (A) for the period in such year in which he practiced his profession in accordance with an agreement under paragraph (1).

Digitized by Google

"(C) The Secretary may not make any payment to any participant under subparagraph (A) unless—

"(i) an application therefor has been submitted to the Secretary in such manner and containing such information as he shall by regulation prescribe; and

"(ii) such participant keeps such records as the Secretary may prescribe and makes such records available to the Secretary for any examination he may require.

"(g) (1) The Secretary may make one grant to any individual (other than an individual who entered into an agreement under subsection (f) (1))—

"(A) who has completed his period of obligated service under the Program, and

"(B) who has agreed in writing to engage on a full-time basis in the private practice of his profession in accordance with subsection (f) (1) for a period of not less than one year,

to assist such individual in meeting the costs of beginning the practice of his profession in accordance with such agreement, including the costs of acquiring equipment and renovating facilities for use in providing health services, and of hiring nurses and other personnel to assist in providing

Digitized by Google

health services. Such grant may not be used for the purchase or construction of any health care facility.

"(2) The amount of the grant under paragraph (1) to any individual shall be—

"(A) $12,500, if such participant agrees to practice his profession in accordance with subsection (f) (1) for a period of at least one year but less than two years; or

"(B) $25,000, if such participant agrees to practice his profession in accordance with subsection (f) (1) for a period of at least two years.

"(3) The Secretary may not make a grant under paragraph (1) unless an application therefor has been submitted to, and approved by, the Secretary.

"(h) If the Secretary determines that an individual has violated an agreement under subsection (f) (1) or (g) (1) (B), he shall, as soon as practicable after making such determination notify the individual of such determination. If within one hundred and twenty days after the date of giving such notice, such individual is not practicing his profession in accordance with the agreement under subsection (f) (1) or (g) (1) (B), as the case may be, and has not provided assurances satisfactory to the Secretary that he will not knowingly violate such agreement again, the United States shall be entitled to recover from such individual an

Digitized by Google

amount determined under subsection (e), except that in applying the formula contained in such subsection—

"(1) in the case of an agreement under subsection (f) (1), 'Φ' shall be the sum of the amount paid under this section (other than any amount paid under subsection (f) (4)) to or on behalf of such person and the interest on such amount which would be payable if at the time it was paid it was a loan bearing interest at the maximum legal prevailing rate, 't' shall be the number of months that such individual agreed to practice his profession under such agreement, including the number of months that the period of practice under such agreement was extended under subsection (f) (2) (A), and 's' shall be the number of months that such individual practiced his profession in accordance with such agreement; or

"(2) in the case of an agreement under subsection (g) (1) (B), 'Φ' shall be the sum of the amount of the grant made under subsection (g) to such person and the interest on such amount which would be payable if at the time it was paid it was a loan bearing interest at the maximum legal prevailing rate, 't' shall be the number of months that such individual agreed to practice his profession under such agreement, and 's' shall

Digitized by Google

be the number of months that such individual practiced his profession in accordance with such agreement.

"(i) (1) When a person undergoing training in the Program is academically dismissed or voluntarily terminates academic training, he shall be liable for repayment to the Government for an amount equal to the scholarship which he received under the Program.

"(2) (A) Any obligation of any individual under paragraph (1) or under subsection (e) or (h) shall be canceled upon the death of such individual.

"(B) The Secretary shall by regulation provide for the waiver or suspension of any obligation under paragraph (1) or under subsection (e) or (h) applicable to any individual whenever compliance by such individual is impossible or would involve extreme hardship to such individual and if enforcement of such obligation with respect to any individual would be against equity and good conscience.

"(j) Notwithstanding any other provision of law, persons undergoing academic training under the Program shall not be counted against any employment ceiling affecting the Department of Health, Education, and Welfare.

"(k) The Secretary shall issue regulations for the implementation of this section.

Digitized by Google

"(l) To carry out the Program, there are authorized to be appropriated $80,000,000 for fiscal year 1976."

(b) Effective July 1, 1975, the heading for subpart II of part C of title VII is amended to read as follows:

"Subpart II—Student Scholarships".

REFERENCES TO PUBLIC HEALTH SERVICE ACT

SEC. 2. Whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a title, part, section, or other provision, the reference shall be considered to be made to that title, part, section, or other provision of the Public Health Service Act.

TITLE I—GENERAL PROVISIONS

REPEAL OF RESEARCH FACILITY CONSTRUCTION PROVISIONS; TRANSFER OF GENERAL PROVISIONS

SEC. 101. (a) Sections 701 through 711 are repealed.

(b) Sections 724, 725, 799, and 799A are transferred to part A of title VII and are redesignated as sections 701, 702, 703, and 704, respectively.

(c) The heading of part H of title VII is deleted.

(d) The heading of part A of title VII is amended to read:

"PART A—GENERAL PROVISIONS"

DEFINITIONS

SEC. 102. Section 701 (as so redesignated) is amended—

(1) by striking out "As used in this part and parts

Digitized by Google

C, E, and F—" and inserting in lieu thereof "For purposes of this title:";

(2) by inserting "or an equivalent degree" after "degree in public health" in paragraph (4); and

(3) by adding at the end the following new paragraphs:

"(7) The term 'program for the training of physician assistant's means an education program which (A) has as its objective the education of individuals who will, upon completion of their studies in the program, be qualified to effectively provide primary health care under the supervision of a physician, and (B) meets guidelines prescribed by the Secretary; such guidelines shall be prescribed on or before October 1, 1975, after consultation with appropriate professional organizations and shall, as a minimum, require that such an educational program (C) and (i) a program of classroom instruction and supervised clinical practice directed toward preparing students to deliver primary health care and (ii) a minimum course of study of one academic year, and (D) have an enrollment in each year of not less than twenty-five students.

"(8) The term 'program for the training of nurse practitioners' means an educational program which (A) has as its objective the education of professional nurses

Digitized by Google

who will, upon completion of their studies in the program, be qualified to effectively provide primary health care, and (B) meets guidelines prescribed by the Secretary; such guidelines shall be prescribed on or before October 1, 1975, after consultation with appropriate professional organizations and shall, as a minimum, require that such an educational program (C) have (i) a program of classroom instruction and supervised clinical practice directed toward preparing nurses to deliver primary health care and (ii) a minimum course of study of one academic year, and (D) have an enrollment in each year of not less than twenty-five students.

"(9) The term 'program for the training of expanded function dental auxiliaries' means an educational program which (A) has as its objective the education of individuals who will, upon completion of their studies in the program, be qualified to effectively provide primary dental care under the supervision of a dentist, and (B) meet guidelines prescribed by the Secretary; such guidelines shall be prescribed on or before October 1, 1975, after consultation with appropriate professional organizations and shall, as a minimum, require that such an educational program (C) have (i) a program of classroom instruction and supervised clinical practice directed toward preparing students to deliver primary

49-476 O - 75 - 14

Digitized by Google

dental care and (ii) a minimum course of study of one academic year, and (D) have an enrollment in each year of not less than twenty-five students.

"(10) The term 'primary health care' means (with further definition of the following terms by the Secretary with the advice of the appropriate professional organizations) family medicine, general internal medicine, general pediatrics, obstetrics, and gynecology."

ADVISORY COUNCIL

SEC. 103. (a) The second sentence of subsection (a) of section 702 (as so redesignated) is amended to read as follows: "Of the appointed members of the Council (1) twelve shall be representatives of the health professions schools assisted under programs authorized by this title (other than part G), including at least one representative for schools of medicine, one for schools of veterinary medicine, schools of dentistry, one for schools of veterinary medicine, one for schools of optometry, one for schools of pharmacy, one for schools of podiatry, and one for schools of public health, (2) two shall be fulltime students each of whom is enrolled in one of the types of health professions schools described in clause (1), and (3) six shall be members of the general public.".

(b) The amendment made by subsection (A) with respect to composition of the National Advisory Council

Digitized by Google

on Health Professions Education shall apply with respect to appointments made to the Council after the date of the enactment of this Act, and the Secretary of Health, Education, and Welfare shall make appointments to the Council after such date in a manner which will bring about, at the earliest feasible time, the Council composition prescribed by the amendment.

ADVANCE FUNDING

SEC. 104. Section 703 (as so redesignated) is amended to read as follows:

"ADVANCE FUNDING

"SEC. 703. An appropriation under an authorization of appropriations for grants or contracts under this title for any fiscal year may be made at any time before that fiscal year and may be included in an Act making an appropriation under such authorization for another fiscal year; but no funds may be made available from any appropriation under such authorization for obligation for such grants or contracts before the fiscal year for which such appropriation is authorized."

LIMIT ON DELEGATION OF AUTHORITY

SEC. 105. Part A of title VII is amended by adding after section 704 (as so redesignated) the following new section:

"DELEGATION OF AUTHORITY

"SEC. 705. The Secretary may delegate the authority to administer any program authorized by this title to the admin-

Digitized by Google

istrator of a central or regional office or offices in the Department of Health, Education, and Welfare, except that the authority—

"(1) to review, and prepare comments on the merit of, any application for a grant or contract under any such program for purposes of presenting such application to the National Advisory Council on Health Professions Education, and

"(2) to make such a grant or enter into such a contract,

shall not be delegated to any administrator of, or officer in, a regional office or offices."

ACTIVE SERVICE UNDER SOLDIERS' AND SAILORS' CIVIL RELIEF ACT

SEC. 106. Section 212 is amended by adding after subsection (d) the following new subsection:

"(e) Active service of commissioned officers of the Service shall be deemed to be active military service in the Armed Forces of the United States for the purposes of all rights, privileges, immunities, and benefits now or hereafter provided under the Solders' and Sailors' Civil Relief Act of 1940 (50 App. U.S.C. 501 et seq.).".

Digitized by Google

TITLE II—ASSISTANCE FOR CONSTRUCTION OF TEACHING FACILITIES

GRANTS AND APPROPRIATIONS AUTHORIZED

SEC. 201. Section 720 is amended to read as follows:

"GRANTS FOR TEACHING FACILITIES; AUTHORIZATION OF APPROPRIATIONS

"SEC. 720. (a) The Secretary may make grants to assist in the construction of teaching facilities (including teaching hospitals) for the training of physicians, dentists, pharmacists, optometrists, podiatrists, veterinarians, and professional public health personnel.

"(b) There are authorized to be appropriated $100,000,000 each for the fiscal year beginning July 1, 1974, and the next three fiscal years.".

AMOUNT OF GRANTS

SEC. 202. (a) (1) Subsection (a) of section 722 is amended to read as follows:

"(a) The amount of any grant under this part for construction of a project shall be such amount as the Secretary determines to be appropriate after obtaining the advice of the Council, except that no grant for any project may exceed 80 per centum of the necessary costs of construction, as determined by the Secretary, of such project.".

Digitized by Google

(2) The amendment made by paragraph (1) shall apply with respect to grants made under part B of title VII of the Public Health Service Act from appropriations under section 720 of such Act for fiscal years beginning after June 30, 1975.

(b) Subsection (d) of section 722 is amended by striking out "(within the meaning of part A of this title)".

SPECIAL CONSIDERATION FOR CERTAIN FACILITIES

SEC. 203. (a) Section 727(a) is amended by adding at the end thereof the following new sentence: "In such regulations covering the order of priority in approving applications for grants under this part, the Secretary shall give special consideration first to projects for the construction of facilities for the provision of ambulatory care as part of the provision of training in primary health care, second to projects for the replacement or modernization of existing facilities for the provision of training, and third to construction of facilities for new schools or expansion of capacity of existing schools.".

(c) The amendment made by subsection (a) shall apply with respect to applications for grants under section 720 of the Public Health Service Act for fiscal years beginning after June 30, 1975.

LOAN GUARANTEES AND INTEREST SUBSIDIES

SEC. 204. (a) Subsections (a) and (b) of section 729

Digitized by Google

are each amended by striking out "June 30, 1974" and inserting in lieu thereof "June 30, 1978".

(b) The second sentence of section 729 (e) is amended by striking out "and" after "June 30, 1973," and by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "$24,000,000 for the fiscal year ending June 30, 1975, $1,000,000 for the fiscal year ending June 30, 1976, $2,000,000 for the first fiscal year thereafter, and $3,000,000 for the second fiscal year thereafter."; and the fourth sentence of such section is amended by inserting a period after "Treasury" the second time it appears in that sentence and by striking the remainder of that sentence.

(c) (1) Third sentence of section 729 (a) is amended to read as follows: "No such loan guarantee may, except under special circumstances and under such conditions as are prescribed by regulations, apply to any amount which, when added to any grant under this part or any other law of the United States, exceeds 90 per centum of the costs of the construction of the project.".

(2) The amendment made by paragraph (1) shall apply with respect to loans guaranteed under section 727 (a) of the Public Health Service Act (as redesignated by this Act) after the date of the enactment of this Act.

Digitized by Google

(d) Subsections (a) and (b) of section 729 are each amended by inserting "or the Federal Financing Bank" after "non-Federal lender".

APPROVAL OF APPLICATIONS FOR GRANTS

SEC. 205. Section 721 (c) is amended—

(1) by, in paragraph (2), striking out clause (D), inserting "and" after the comma at the end of clause (B), and striking out the comma at the end of clause (C) and inserting in lieu thereof a period;

(2) by striking out paragraph (5) and redesignating paragraphs (6) and (7) as paragraphs (5) and (6), respectively;

(3) by striking out "and" at the end of paragraph (5) (as so redesignated), by striking out the period at the end of paragraph (6) (as so redesignated) and inserting in lieu thereof "; and", and by inserting after paragraph (6) the following:

"(7) the application contains or is supported by adequate assurance that any laborer or mechanic employed by a contractor or subcontractors in the performance of work on the construction of the facility will be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Act of

Digitized by Google

March 3, 1931 (40 U.S.C. 276a—276a-5, known as the Davis-Bacon Act).

The Secretary of Labor shall have with respect to the labor standards specified in paragraph (7) the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 5 U.S.C. Appendix) and section 2 of the Act of June 13, 1934 (40 U.S.C. 276c)."; and

(5) by striking out "725" in the last sentence and inserting in lieu thereof "702".

REDESIGNATIONS

SEC. 206. Sections 726, 727, 728, and 729 are redesignated as sections 724, 725, 726, and 727, respectively.

TITLE III—STUDENT ASSISTANCE; NATIONAL HEALTH SERVICE CORPS

STUDENT LOAN AGREEMENTS

SEC. 301. (a) Subsection (a) of section 740 is amended by striking out "or veterinary medicine" and inserting in lieu thereof "veterinary medicine, or public health".

(b) (1) Subsection (b) of section 740 is amended (A) by striking out "and" at the end of paragraph (4), (B) by redesignating paragraph (5) as paragraph (6), and (C) by inserting after paragraph (4) the following new paragraph:

Digitized by Google

"(5) provide that the school shall advise, in writing, each applicant for a loan from the student loan fund of the provisions of section 741 under which outstanding loans from the student loan fund may be paid (in whole or in part) by the Secretary; and".

(2) Paragraph (4) of such subsection (b) is amended by striking out "veterinary medicine or an equivalent degree," and inserting in lieu thereof "veterinary medicine or an equivalent degree or to a graduate degree in public health or an equivalent degree,".

LOAN PROVISIONS

SEC. 302. (a) Subsection (a) of section 741 is amended to read as follows:

"(a) Loans from a student loan fund established under an agreement under section 740 may not exceed for any student for any academic year (or its equivalent) the sum of—

"(1) the cost of tuition for such year at the school for which such fund was established, and

"(2) $3,000.".

(b) Subsection (b) of section 741 is amended by striking "to a student in need of the amount thereof" and inserting in lieu thereof "to a student with exceptional financial need who needs the amount of such loan".

Digitized by Google

(c) Subsection (b) of section 741 is further amended by striking out the period at the end and inserting in lieu thereof "or to a graduate degree in public health or an equivalent degree.".

(d) Subsection (c) of section 741 is amended by striking out "or veterinary medicine" and inserting in lieu thereof "veterinary medicine, or public health".

(e) Subsection (e) of section 741 is amended by striking out "3 per centum" and inserting in lieu thereof "5 per centum".

(f) (1) Subsection (f) (1) of section 741 is amended—

(A) by inserting before the semicolon at the end of subparagraph (A) the following: "or a graduate degree in public health or an equivalent degree"; and

(B) by striking out "or podiatry" in subparagraph (B) and inserting in lieu thereof "podiatry, or public health".

(2) Subsection (f) of section 741 is further amended by striking out "30 per centum" each time it occurs in subparagraphs (A) and (B) of paragraph (2) and inserting in lieu thereof "25 per centum"; by striking out the semi-colon in paragraph (3) and all that follows before the period at the end thereof; by inserting "or (D)" after "(2) (C)" in such paragraph (3); and by inserting after subparagraph (C) in paragraph (2) the following:

Digitized by Google

"(D) Upon completion by that individual of a fourth year of such practice, the Secretary shall pay another 25 per centum of the principal of and the interest on each such loan.".

(g) The amendments made by this section (other than paragraph (2) of subsection (f)) shall apply with respect to loans made after the date of the enactment of this Act from student loan funds established under section 740 of the Public Health Service Act. The amendments made by paragraph (2) of subsection (f) in subparagraphs (A) and (B) of section 741 (f) (2) of the Public Health Service Act shall apply with respect to agreements entered into under such section 741 (f) after the date of the enactment of this Act. The other amendments made by such paragraph (2) shall also apply in the case of agreements entered into on or before such date of enactment but with the percentage in subparagraph (D) of such section 741 (f) (2) set at 15 per centum instead of 25 per centum.

(h) In the case of any individual who, on or after November 18, 1971, and before the date of the enactment of this Act, met the requirements of subparagraphs (A) and (B) of section 741 (f) (1) of the Public Health Service Act and who practiced his profession in an area described in subparagraph (C) of such section (as in effect before the date of the enactment of this Act) while a member of the Na-

Digitized by Google

tional Health Service Corps or as an officer of the Regular or Reserve Corps of the Public Health Service or as a civilian employee of the Public Health Service, the individual shall, for purposes of section 741 (f) of such Act, be deemed to have entered into the agreement required by such subparagraph (C) with respect to that practice.

AUTHORIZATION OF APPROPRIATIONS

SEC. 303. Effective with respect to appropriations under section 742 of the Public Health Service Act for fiscal years beginning after June 30, 1974, subsection (a) of section 742 is amended to read as follows:

"(a) For the purpose of making Federal capital contributions into the student loan funds of schools which have established such funds under an agreement under section 740 and making transfers under section 745, there are authorized to be appropriated $60,000,000 for the fiscal year ending June 30, 1975, $30,000,000 for the fiscal year ending June 30, 1976, and $30,000,000 each for the next two fiscal years. For each of the three fiscal years after such two fiscal years there are authorized to be appropriated such sums as may be necessary to enable students who have received a loan under this part for any academic year ending before the end of such two fiscal years to continue or complete their education."

Digitized by Google

DISTRIBUTION OF ASSETS

SEC. 304. Section 743 is amended by striking out "June 30, 1977" and "September 30, 1977" each place they occur and inserting in lieu thereof "September 30, 1981" and "December 31, 1981", respectively.

LOANS TO SCHOOLS

SEC. 305. (a) Section 744 is repealed.

(b) The health professions education fund created within the Treasury by section 744(d)(1) of the Public Health Service Act shall remain available to the Secretary of Health, Education, and Welfare for the purpose of meeting his responsibilities respecting participations in obligations acquired under section 744 of such Act. The Secretary shall continue to deposit in such fund all amounts received by him as interest payments or repayments of principal on loans under such section 744. If at any time the Secretary determines the moneys in the fund exceed the present and any reasonable prospective future requirements of such fund, such excess may be transferred to the general fund of the Treasury.

(c) There are authorized to be appropriated without fiscal year limitation such sums as may be necessary to enable the Secretary to make payments under agreements entered into under section 744(b) of the Health Service Act before the date of the enactment of this Act.

Digitized by Google

(d) Section 742 (b) is amended (1) by striking out ", and for loans pursuant to section 744" in paragraph (1); and (2) by striking out "(whether as Federal capital contributions or as loans to schools under section 744)" in paragraph (3).

REDESIGNATIONS

SEC. 306. (a) Section 740 is amended (A) by striking out "of Health, Education, and Welfare" in subsection (a).

(b) Section 745 is redesignated as section 744 and section 746 is redesignated as section 745.

(c) The heading for part C of title VII is amended to read as follows:

"PART C—STUDENT ASSISTANCE"

(d) The heading for subpart I of part C of title VII is amended to read as follows:

"SUBPART I—STUDENT LOANS"

TWO-YEAR SCHOLARSHIPS FOR NEEDY STUDENTS

SEC. 307. (a) Subsection (a) of section 780 is amended by striking out "or veterinary medicine" and inserting in lieu thereof "veterinary medicine, or public health" and by striking out "subpart" and inserting in lieu thereof "section".

(b) (1) The second sentence of subsection (b) of section 780 is amended by striking out "and the next fiscal

Digitized by Google

year" and inserting in lieu thereof "and each of the next two fiscal years".

(2) Such subsection (b) is further amended by striking out the last sentence and inserting in lieu thereof: "The amount of such grant for the fiscal year ending June 30, 1976, and each of the next two fiscal years shall be equal to the greater of

"(3) $3,000 multiplied by the number of full-time first-year students and second-year students of such school who are from low-income backgrounds, as determined under regulations of the Secretary, or

"(4) $3,000 multiplied by one-tenth of the number of full-time first-year students and second-year students of such school,

plus such amount as may be necessary to enable such school to continue making payments under scholarship awards to students who initially received such awards out of grants made to the schools hereunder for fiscal years ending before July 1, 1975. The amount of such grant for the third fiscal year after the fiscal year ending June 30, 1976, shall be such amount as may be necessary to continue making payments under scholarship awards to second-year students who initially received such awards out of grants made to the schools for the second fiscal year ending after June 30, 1976.".

Digitized by Google

(c) (1) Paragraph (1) of subsection (c) of section 780 is amended by striking out "next two fiscal years" in subparagraph (A) and inserting in lieu thereof "next three fiscal years"; and by striking out subparagraph (B) and inserting in lieu thereof:

"(B) in the case of awards from such grants for the fiscal year ending June 30, 1976, or any of the next two fiscal years, only to individuals enrolled and in good standing as (i) full-time first-year students; or (ii) full-time second-year students who initially received scholarship awards out of such grants for an earlier fiscal year; or (iii) other full-time students who initially received scholarship awards out of such grants for a fiscal year ending before July 1, 1975; and

"(C) in the case of awards from such grants for the third fiscal year ending after June 30, 1976, only to individuals enrolled and in good standing as full-time second-year students who initially received scholarship awards out of such grants for a fiscal year ending before such third fiscal year.".

(d) (1) The first sentence of paragraph (2) of subsection (c) of section 780 is amended by inserting before the period at the end thereof "leading to a degree of doctor of medicine, doctor of dentistry or an equivalent degree, doctor of osteopathy, bachelor of science in pharmacy or an equiv-

Digitized by Google

alent degree, doctor of podiatry or an equivalent degree, doctor of optometry or an equivalent degree, or doctor of veterinary medicine or an equivalent degree, or to a graduate degree in public health or an equivalent degree".

(2) The second sentence of such paragraph (2) is amended by striking out "$3,500" and inserting in lieu thereof "the amount of such tuition plus $3,000".

(c) Section 780 is further amended by adding at the end thereof the following new subsection:

"(f) There are authorized to be appropriated for grants under this section $30,000,000 for the fiscal year ending June 30, 1976, $22,500,000 for the first year thereafter, and $15,000,000 for the second fiscal year thereafter. If for any such year the amount appropriated pursuant to the preceding sentence is not sufficient to pay in full the amounts which schools would otherwise be paid under subsection (b), the amount to be paid to each such school for such year shall bear the same ratio to the amount payable to such school under subsection (b) as the appropriation for such year bears to the total required to pay in full the amounts provided for under such subsection for such year. There are also authorized to be appropriated for the third fiscal year ending after June 30, 1976, such sums as may be necessary to enable each school to continue making payments under scholarship awards to full-time second-year students who initially re-

Digitized by Google

ceived such awards out of grants made to the school for the preceding fiscal year."

(f) Section 781 is amended by striking out "this subpart" and inserting in lieu thereof "this section" by striking out its heading, by striking out "SEC. 781," and inserting in lieu thereof "(g)" and by transferring it, as so amended, to section 780 to be inserted after subsection (f) thereof.

(g) Section 780, as so amended, is transferred to subpart II of part C, is inserted after section 747 (as redesignated by this Act) and is redesignated section 748.

(h) Subpart II of part F of title VII, including the heading, is repealed.

(i) The amendments made by subsection (d) (2) shall apply with respect to scholarships awarded for school years beginning after June 30, 1975.

TEMPORARY CONTINUATION OF SHORTAGE AREA SCHOLARSHIPS

SEC. 308. (a) Subpart III of part F of title VII is amended by striking out the heading thereof, by striking out "this subpart" wherever it occurs in section 784 and inserting in lieu thereof "this section", by inserting "as in effect prior to the enactment of the Health Manpower Act of 1975" after "741 (f) (1) (C)" and after "768 (c) (3) (B)" in subsection (a) of such section, by striking out "this subpart" wherever it occurs in the next two sections and inserting in

Digitized by Google

lieu thereof "section 749" and by transferring section 784, the first section following it, and the second section following it, to subpart II of part C of title VII (after the section redesignated as section 748) and redesignating them as sections 749, 750, and 750A, respectively.

(b) The first sentence of section 750A (as so redesignated) is amended by inserting "each" after "$3,500,000" and inserting before the period at the end thereof "and the next fiscal year". The second sentence of such section 750A is amended by striking out "1975" and "1974" and inserting in lieu thereof "1976" and "1975", respectively.

PUBLIC HEALTH TRAINEESHIPS

SEC. 309. Part C of title VII is amended by adding after section 750A (as redesignated by this Act) the following new subpart:

"Subpart III—Traineeships for Students in Schools of Public Health

"TRAINEESHIPS

"SEC. 751. (a) The Secretary may make grants to schools of public health for traineeships to train students enrolled in such schools.

"(b) (1) No grant for traineeships may be made under subsection (a) unless an application therefor has been submitted to, and approved by, the Secretary. Such application shall be in such form, be submitted in such manner,

Digitized by Google

and contain such information as the Secretary by regulation may prescribe. Traineeships under such a grant shall be awarded in accordance with such regulations as the Secretary shall prescribe. The amount of any such grant shall be determined by the Secretary and payments under such a grant may be made in advance or by way of reimbursement and at such intervals and on such conditions as the Secretary finds necessary.

"(2) Traineeships awarded under grants made under subsection (a) shall provide for such stipends and allowances (including travel and subsistence expenses and dependency allowances) for the trainees as the Secretary may deem necessary.

"(c) For the purpose of making payments under grants under subsection (a), there are authorized to be appropriated $6,000,000 each for the fiscal year ending June 30, 1976, and the next two fiscal years.".

NATIONAL HEALTH SERVICE CORPS

SEC. 310. (a) Section 329 is amended to read as follows:

"NATIONAL HEALTH SERVICE CORPS

"SEC. 329. (a) There is established, within the Service, the National Health Service Corps (hereinafter in this section referred to as the 'Corps') which shall consist of those commissioned officers of the Service and such other personnel

Digitized by Google

as the Secretary may designate and which shall be utilized by the Secretary under this section to improve the delivery of health services to medically underserved populations.

"(b) (1) For purposes of this section, (A) a medically underserved population is the population of an urban or rural area (which does not have to conform to the geographical boundaries of a political subdivision, but which should be an area the boundaries of which are determined in the light of the relative ease or difficulty in the delivery of health services needed by the population) which the Secretary determines has a critical health manpower shortage or a population group determined by the Secretary to have such a shortage; and (B) the term 'State' includes Guam, American Samoa, and the Trust Territory of the Pacific Islands.

(2) The Secretary shall designate underserved populations in the States. In determining whether to make any such designation, the Secretary shall take into account—

"(A) the recommendations of the entity or entities responsible for the development of the plans referred to in section 314(b) which cover all or any part of the area in which the population is located;

"(B) in the case of any such area for which there is no such entity, the recommendations of the agency of the State (or States) in which such area is located

Digitized by Google

which administers or supervises the administration of a State plan approved under section 314(a);

"(C) ratios of available health manpower to the population;

"(D) the accessibility of health services to the population;

"(E) the health status of the population;

"(F) the population's need and demand for health services.

"(3) The Secretary shall (A) provide assistance to persons seeking assignment of Corps personnel to provide under this section health services for medically underserved populations, and (B) conduct such information programs in areas in which such populations reside as may be necessary to inform the public and public or private health agencies and other health entities serving those areas of the assistance available to such populations by virtue of their designation under this section as medically underserved.

"(c)(1)(A) The Secretary may assign personnel of the Corps to provide, under regulations prescribed by the Secretary, health services for a medically underserved population only if—

"(i) he approves an application therefor submitted by the State health agency of each State in which such population is located or the local public health agency

Digitized by Google

or any other public or nonprofit private health entity serving such population, and

"(ii) the local government of the area in which such population resides certifies to the Secretary that such assignment of Corps personnel is needed for such population.

"(B) The Secretary may not approve an application under paragraph (1) (A) (i) for an assignment unless the applicant agrees to enter into an arrangement with the Secretary in accordance with subsection (e) (1) and has afforded—

"(i) the entity responsible for the development of plans referred to in section 314(b) which covers all or any part of the area in which the population for which the application is submitted resides,

"(ii) if there is a part of such area for which no such entity is responsible for developing such plans, the agency of the State in which such part is located which administers or supervises the administration of a State plan approved under section 314(a), and

"(iii) any State or district medical, osteopathic, or dental society for such area, or any other appropriate health society (as the case may be) of the area in which the population resides,

an opportunity to review the application and submit its

Digitized by Google

comments to the Secretary respecting the need for and proposed use of the manpower requested in the application. In considering such an application, the Secretary shall take into consideration the need of the population for which the application was submitted for the health services which may be provided under this section; the willingness of the population and the appropriate governmental agencies or health entities serving it to assist and cooperate with the Corps in providing effective health services to the population; and recommendations from medical, dental, or other health societies or from medical personnel serving the population.

"(2) (A) The Secretary may assign Corps personnel to provide health services for a medically underserved population only during a period (referred to in this paragraph as the 'assistance period') not exceeding four years from the date of the first assignment of Corps personnel for such population after the date of the approval of the application therefor.

"(B) Upon expiration of an assistance period for a medically underserved population, no new assignment of Corps personnel may be made for such population unless an application is submitted in accordance with paragraph (1) for such assignment. The Secretary may not approve such an application unless—

Digitized by Google

"(i) the application and certification requirements of paragraph (1) are met;

"(ii) the Secretary has conducted an evaluation of the continued need for health manpower of the population for which the application is submitted, of the utilization of the manpower by such population, of the growth of the health care practice of the Corps personnel assigned for such population, and of community support for the assignment; and

"(iii) the Secretary has determined that such population has made continued efforts to secure its own health manpower, that there has been sound fiscal management of the health care practice of the Corps personnel assigned for such population, including efficient collection of fee-for-service, third-party, and other funds available to such population, and that there has been appropriate and efficient utilization of such Corps personnel.

"(3) Corps personnel shall be assigned to provide health services for a medically underserved population on the basis of the extent of the population's need for health services and without regard to the ability of the members of the population to pay for health services.

"(4) In making an assignment of Corps personnel the Secretary shall seek to match characteristics of the assignee

Digitized by Google

(and his spouse (if any)) and of the population to which such assignee may be assigned in order to increase the likelihood of the assignee remaining to serve the population upon completion of his assignment period. The Secretary shall, before the expiration of the last nine months of the assignment period of a member of the Corps, review such member's assignment and the situation in the area to which he was assigned for the purpose of determining the advisability of extending the period of such member's assignment.

"(5) To assist in the recruitment of health manpower, the Secretary shall provide technical assistance to all medically underserved populations to which Corps personnel are not assigned. The Secretary shall also give such populations current information respecting public and private programs which may assist in securing health manpower for them.

"(6) The Secretary may not assign personnel of the Corps to serve any medically underserved population unless such service will be provided as part of a unit consisting of such medical and other health personnel as the Secretary may determine to be reasonable for the efficient and effective delivery of health services to such population; except that in no case may the number of the doctors of medicine or osteopathy for any such unit be less than four. Where for fiscal or other sufficient reasons, such a unit is not appro-

Digitized by Google

priate for a medically underserved population, there may be a joint application filed under paragraph (1) for more than one such population.

"(d) (1) In providing health services for a medically underserved population under this section, Corps personnel shall utilize the techniques, facilities, and organizational forms most appropriate for the area in which the population resides and shall, to the maximum extent feasible, provide such services (A) to all members of the population regardless of their ability to pay for the services, and (B) in connection with (i) direct health services programs carried out by the Service; (ii) any direct health services program carried out in whole or in part with Federal financial assistance; or (iii) any other health services activity which is in furtherance of the purposes of this section.

"(2) (A) Notwithstanding any other provision of law, the Secretary (i) may, to the extent feasible, make such arrangements as he determines to be necessary to enable Corps personnel in providing health services for a medically underserved population to utilize the health facilities of the area in which the population resides and, if there are no health facilities in or serving such area, the Secretary may arrange to have Corps personnel provide health services in the nearest health facilities of the Service or the Secretary may lease or otherwise provide facilities in such area for the

Digitized by Google

provision of health services, (ii) may make such arrangements as he determines are necessary for the use of equipment and supplies of the Service and for the lease or acquisition of other equipment and supplies, (iii) may secure the temporary services of nurses and allied health professionals, (iv) may make such arrangements as he determines are necessary for such communications or transportation systems as may be appropriate in the case of a population in an area covering a distance which is unusually large in the light of the size of the population.

"(B) If the area in which an underserved population resides is being served (as determined under regulations of the Secretary) by a hospital or other health care delivery facility of the Service, the Secretary shall, in addition to such other arrangements as the Secretary may make under subparagraph (A), arrange for the utilization of such hospital or facility by Corps personnel in providing health services for the population, but only to the extent that such utilization will not impair the delivery of health services and treatment through such hospital or facility to persons who are entitled to health services and treatment through such hospital or facility.

"(3) The Secretary may make one grant to any applicant with an approved application under subsection (c) to assist it in meeting the costs of establishing medical practice

Digitized by Google

management systems for Corps personnel, acquiring equipment for their use in providing health services, and establishing appropriate continuing education programs and opportunities for them. No grant may be made under this paragraph unless an application therefor is submitted to, and approved by, the Secretary. The amount of any grant shall be determined by the Secretary, except that no grant may be made for more than $25,000.

"(4) Upon the expiration of the assignment of Corps personnel to provide health services for a medically underserved population, the Secretary (notwithstanding any other provision of law) may sell, to the entity which submitted the last application approved under subsection (c) for the assignment of Corps personnel for such population, equipment of the United States utilized by such personnel in providing health services. Sales made under this paragraph shall be made for the fair market value of the equipment sold (as determined by the Secretary).

"(5) In the case of any medically underserved population in an area too small to warrant assignment of personnel of the Corps to provide health services in accordance with this section as part of a unit meeting the requirements of this section, an arrangement may be made for the provision of such services by such a unit serving another medically underserved population. Such an arrangement shall

Digitized by Google

include provisions with respect to provision of services and facilities and payment therefor which are, as nearly as practicable (as determined under regulations of the Secretary in the light of the relevant conditions applicable to such population in such small area) in conformity with the requirements of this section.

"(e) (1) The Secretary shall require as a condition to the approval of an application under subsection (c) that the entity which submitted the application enter into an appropriate arrangement with the Secretary under which—

"(A) the entity shall be responsible for charging in accordance with paragraph (2) for health services by the Corps personnel to be assigned;

"(B) the entity shall take such action as may be reasonable for the collection of payments for such health services, including if a Federal agency, an agency of a State or local government, or other third party would be responsible for all or part of the cost of such health services if it had not been provided by Corps personnel under this section, the collection, on a fee-for-service or other basis, from such agency or third party of the portion of such cost for which it would be so responsible (and in determining the amount of such cost for which such agency or third party would be responsible, the

Digitized by Google

health services provided by Corps personnel shall be considered as being provided by private practitioners);

"(C) the entity shall pay to the United States for each calendar quarter (or such other period as may be specified in the arrangement) during which any Corps personnel are assigned to such entity the sum of—

"(i) the pay (including amounts paid in accordance with subsection (f)) and allowances of such Corps personnel for the portion of such quarter (or other period) during which they are assigned to the entity;

"(ii) if such entity received a grant under subsection (d)(3) for the assistance period, an amount which bears the same ratio to the amount of such grant as the number of days in such quarter (or other period) during which any Corps personnel were assigned to the entity bears to the number of days in the assistance period after such entity received such grant;

"(iii) if during such quarter (or other period) any member of the Corps assigned to such entity is providing obligated service pursuant to an agreement under the Public Health and national health service corps scholarship training program, for

Digitized by Google

each such member an amount which bears the same ratio to the amount paid under such program to or on the behalf of such member as the number of days of obligated service provided by such member during such quarter (or other period) bears to the number of days in his period of obligated service under such program; and

"(D) the entity shall pay to the United States such amount as the Secretary determines to be necessary to cover the cost of the provision or use under subsection (d) of facilities, equipment, supplies, services, and systems.

The Secretary may waive in whole or in part the application of the requirements of subparagraphs (C) and (D) to an entity if he determines that the entity is financially unable to meet such requirements or if he determines that compliances with such requirements would unduly limit the ability of the entity to maintain the quality of the services it provides. The excess (if any) of the amount collected by an entity in accordance with subparagraph (B) over the amount paid to the United States in accordance with subparagraphs (C) and (D) shall be used by the entity to expand or improve the provision of health services to the population for which the entity submitted an application under subsection (c) or to recruit and retain health man-

49-476 O - 75 - 16

Digitized by Google

power to provide health services for such population. Funds received by the Secretary under such an arrangement shall be deposited in the Treasury as miscellaneous receipts and shall be disregarded in determining the amount of appropriations to be requested under subsection (i) and the amounts to be made available from appropriations made under such subsection to carry out this section.

"(2) Any person who receives health services provided by Corps personnel under this section shall be charged for such services on a fee-for-service or other basis at a rate, approved by the Secretary pursuant to regulations, sufficient to recover the value of such services; except that if such person is determined under regulations of the Secretary to be unable to pay such charge, the Secretary shall provide for the furnishing of such services at a reduced rate (if any) based on such person's ability to pay.

"(f) (1) The Secretary shall conduct at medical and nursing schools and other schools of the health professions, and at entities which train allied health personnel, recruiting programs for the Corps. Such programs shall include the wide dissemination of written information on the Corps and visits to such schools by personnel of the Corps.

"(2) The Secretary may reimburse applicants for position in the Corps for actual expenses incurred in traveling to and from their place of residence to an area in which

Digitized by Google

they would be assigned for the purpose of evaluating such area with regard to being assigned in such area. The Secretary shall not reimburse an applicant for more than one such trip.

"(3) Commissioned officers and other personnel of the Corps assigned to provide health services for medically underserved populations shall not be counted against any employment ceiling affecting the Department of Health, Education, and Welfare.

"(4) The Secretary shall, under regulations prescribed by him, adjust the monthly pay of each physician and dentist member of the Corps who is directly engaged in the delivery of health services to a medically underserved population as follows:

"(A) During the first thirty-six months in which such a member is so engaged in the delivery of health services, his monthly pay shall be increased by an amount (not to exceed $1,000) which when added to the member's monthly pay and allowances will provide a monthly income competitive with the average monthly income from an established practice of a member of such member's profession with equivalent training.

"(B) During the period beginning upon the expiration of the thirty-six months referred to in subparagraph (A) and ending with the month in which the member's

Digitized by Google

monthly pay and allowances is equal to or exceeds the monthly income he received for the last of such thirty-six months, the member shall receive in addition to his monthly pay and allowances an amount which when added to such monthly pay and allowances equals the monthly income he received for such last month.

For purposes of subparagraphs (A) and (B), the term 'monthly pay' includes special pay received under chapter 5 of title 37 of the United States Code. In the case of a member of the Corps who is directly engaged in the provision of health services to a medically underserved population in accordance with a service obligation incurred under the Public Health Service and national health service corps scholarship training program, the provisions of this paragraph shall apply to such member upon satisfactory completion of such service obligation and the first thirty-six months of his being so engaged in the delivery of health services shall, for purposes of this paragraph, be deemed to begin upon such satisfactory completion.

"(g) The Secretary shall report to Congress no later than May 15 of each year—

"(1) the number and identity of all medically underserved populations in each of the States in the calendar year preceding the year in which the report is made and the number of medically underserved popu-

Digitized by Google

lations which the Secretary estimates will be designated under subsection (b) in the calendar year in which the report is made;

"(2) the number of applications filed in such preceding calendar year for assignment of Corps personnel under this section and the action taken on each such application;

"(3) the number and types of Corps personnel assigned in such preceding year to provide health services for medically underserved populations, the number and types of additional Corps personnel which the Secretary estimates will be assigned to provide such services in the calendar year in which the report is submitted, and the need (if any) for additional personnel for the Corps;

"(4) the recruitment efforts engaged in for the Corps in such preceding year, including the programs carried out under subsection (f) (1) and the number of qualified persons who applied for service in the Corps in each professional category;

"(5) the total number of patients seen and patient visits recorded during such preceding year in each area where Corps personnel were assigned;

"(6) the number of health personnel electing to remain after termination of their service in the Corps

Digitized by Google

to provide health services to medically underserved populations and the number of such personnel who do not make such election and the reasons for their departure;

"(7) the results of evaluations made under subsection (c) (2) (B) (ii), and determinations made under subsection (c) (2) (B) (iii), during such preceding year; and

"(8) the amount (A) charged during such preceding year for health services by Corps personnel, (B) collected in such year by entities in accordance with arrangements under subsection (e) (1), and (C) paid to the Secretary in such year under such arrangements.

"(h) (1) There is established a council to be known as the National Advisory Council on the National Health Service Corps (hereinafter in this section referred to as the 'Council'). The Council shall be composed of fourteen members appointed by the Secretary as follows:

"(A) Four members shall be appointed from the general public to represent the consumers of health care, at least two of whom shall be members of a medically underserved population for which Corps personnel are providing health services under this section.

"(B) Three members shall be appointed from the

Digitized by Google

medical, dental, and other health professions and health teaching professions.

"(C) Three members shall be appointed from State health or health planning agencies.

"(D) Three members shall be appointed from the Service, at least two of whom shall be members of the Corps directly engaged in the provision of health services for a medically underserved population.

"(E) One member shall be appointed from the National Council on Health Planning and Development. The Council shall consult with, advise, and make recommendations to the Secretary with respect to his responsibilities in carrying out this section, and shall review and comment upon regulations promulgated by the Secretary under this section and section 747.

"(2) Members of the Council shall be appointed for a term of three years and shall not be removed, except for cause. Members may be reappointed to the Council.

"(3) Appointed members of the Council, while attending meetings or conferences thereof or otherwise serving on the business of the Council, shall be entitled to receive for each day (including traveltime) in which they are so serving the daily equivalent of the annual rate of basic pay in effect for grade GS–18 of the General Schedule, and while so serving away from their homes or regular places

Digitized by Google

of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 (b) of title 5 of the United States Code for persons in the Government service employed intermittently.

"(i) (1) To carry out the purposes of this section, there are authorized to be appropriated $25,000,000 for the fiscal year ending June 30, 1976; $35,000,000 for the first fiscal year thereafter; and $50,000,000 for the second fiscal year thereafter.

"(2) An appropriation under an authorization under paragraph (1) of this subsection for any fiscal year may be made at any time before that fiscal year and may be included in an Act making an appropriation under an authorization under paragraph (1) for another fiscal year; but no funds may be made available from any appropriation under such authorization for obligation under this section before the fiscal year for which such appropriation is authorized.".

(b) (1) The Secretary of Health, Education, and Welfare shall report to Congress (1) not later than October 1, 1975, the criteria used by him in designating medically underserved populations for purposes of section 329 of the Public Health Service Act, and (2) not later than January 1, 1976, the identity and number of medically underserved populations in each State meeting such criteria.

Digitized by Google

(2) The Secretary of Health, Education, and Welfare shall conduct or contract for studies of methods of assigning, under section 329 of the Public Health Service Act, National Health Service Corps personnel to medically underserved populations and of providing health care to such populations. Such studies shall be for the purpose of identifying (A) the characteristics of health manpower who are more likely to remain in practice in areas in which medically underserved populations are located, (B) the characteristics of areas which have been able to retain health manpower, (C) the appropriate conditions for assignment of nurse practitioners, physician's assistants, and expanded function dental auxiliaries in areas in which medically underserved populations are located, and (D) the effect that primary health care (as defined in section 701 of such Act) residency training in such areas has on the health care provided in such areas and on the decisions of physicians who received such training respecting the areas in which to locate their practice.

(c) (1) The amendment made by subsection (a) which changes the name of the Advisory Council established under section 329 of the Public Health Service Act shall not be construed as requiring the establishment of a new Advisory Council under that section; and the amendment made by such subsection with respect to the composition of such Advisory Council shall apply with respect to appointments

Digitized by Google

made to the Advisory Council after the date of the enactment of this Act, and the Secretary of Health, Education, and Welfare shall make appointments to the Advisory Council after such date in a manner which will bring about, at the earliest feasible time, the Advisory Council composition prescribed by the amendment.

(2) (A) Section 741 (f) (1) (C) is amended by striking out all that follows after "in a State" and inserting in lieu thereof "in which is located a medically underserved population designated under section 329 (b) ;".

(B) The amendment made by subparagraph (A) shall apply with respect to agreements entered into under section 741 (f) of the Public Health Service Act after June 30, 1975.

(3) Section 329 (h), as in effect prior to the enactment of this Act, is amended by inserting before the period ", and $25,000,000 for the fiscal year ending June 30, 1975".

NATIONAL HEALTH SERVICE CORPS SCHOLARSHIPS

SEC. 311. (a) Effective July 1, 1975, section 747 is repealed and section 225 is transferred to subpart II of part C of title VII, is redesignated section 747, and is amended to read as follows:

"PUBLIC HEALTH AND NATIONAL HEALTH SERVICE CORPS SCHOLARSHIP TRAINING PROGRAM

"SEC. 747. (a) The Secretary shall establish the public health and national health service corps scholarship train-

Digitized by Google

ing program (hereinafter in this section referred to as the 'program') to obtain trained physicians, dentists, and nurses and, if needed by the Corps or other unit of the Service, podiatrists, optometrists, pharmacists, graduates of schools of public health, and other health-related specialists.

"(b) To be eligible to participate in the program, an individual must—

"(1) be accepted for enrollment, or be enrolled, as a full-time student (A) in an accredited (as determined by the Secretary) educational institution in a State and (B) in (i) a course of study offered by such institution and approved by the Secretary which leads to a degree in medicine, osteopathy, dentistry, nursing, or other health-related specialty as determined by the Secretary or (ii) a program offered by such institution for the training of physician assistants, expanded function dental auxiliaries, or nurse practitioners;

"(2) be eligible for, or hold, an appointment as a commissioned officer in the Service or be eligible for selection for noncommissioned service in the Service; and

"(3) agree in writing to serve, as prescribed by subsection (d) of this section, in the National Health Service Corps, the Indian Health Service or other parts of the Public Health Service or the Department of Health, Education, and Welfare, or other medical entities designated by the Secretary.

Digitized by Google

To remain as a participant in the program an individual must pursue at such an institution such an approved course of study or such a program and maintain an acceptable (as determined by the institution under regulations of the Secretary) level of academic standing in it.

"(c) (1) (A) Each participant in the program while pursuing such a course of study or such a program shall receive a scholarship for each academic year of training, not to exceed four years. The scholarship for any such year shall be equal to (i) the basic pay and allowances of a commissioned officer of the Service on active duty in pay grade O–1 with less than two years of service, and (ii) tuition and an amount to cover other reasonable educational expenses of the participant, including fees, books, and laboratory expenses.

"(B) The Secretary may make a contract with an institution in which participants in the program are enrolled providing for payment to the institution of the tuition and other educational expenses of such participants, in lieu of payment to such participants. Payment to such institutions may be made without regard to section 3648 of the Revised Statutes (31 U.S.C. 529).

"(2) If the Secretary determines that an institution has increased its total enrollment for the sole purpose of accepting members of the program, he may pay additional amounts

Digitized by Google

to the institution to cover the portion of the increased costs of the additional enrollment which are not covered by the institution's normal tuition and fees.

"(d) (1) Each participant in the program shall be obligated to provide service as prescribed by paragraph (2) for a period of time (hereinafter in this section referred to as a 'period of obligated service') equal to—

"(A) one year for each academic year of training for which a scholarship was received under the program, or

"(B) two years,

whichever is greater. For any person receiving a degree from a school of medicine or osteopathy, a period of obligated service shall begin at the end of the second year of postgraduate training in medicine or osteopathy, except that in the case of any such individual who prior to or immediately after the end of such second year of postgraduate training begins his residency in family medicine, general internal medicine, general pediatrics, or obstetrics and gynecology, or any other field of medicine which the Secretary determines has a shortage of practitioners, such period shall begin upon completion of such residency; and such period of obligated service shall continue without substantial interruption (as determined under regulations of the Secretary) until the period of service is completed.

Digitized by Google

For persons receiving degrees in other health professions the period of obligated service shall commence upon completion of the course of study or program, referred to in subsection (b) (1), with respect to which they received scholarships under this section. The commencement of a period of obligated service or of the postgraduate training or the residency, referred to in this paragraph, may be postponed for any individual only for such temporary period or periods after completion of such course of study or program (but not in excess of a total of six months) as the Secretary may prescribe pursuant to regulations in order to take account of customary delays or unusual circumstances. Periods of internship, residency, or other advanced clinical training shall not be creditable in satisfying a service obligation under this subsection.

"(2) The service which such an individual is obligated to perform for his period of obligated service is—

"(A) service as a member of the National Health Service Corps or the Indian Health Service in the clinical practice of his profession for which he was trained with the help of a scholarship hereunder; or

"(B) if at the time an individual's period of obligated service is to begin neither the National Health Service Corps nor the Indian Health Service has a need for such service, then service as a member of the Service

Digitized by Google

in the clinical practice of his profession in connection with the delivery of health services under section 321 (relating to hospitals), 322 (relating to care and treatment of seamen and others), 323 (relating to care and treatment of Federal prisoners), 324 (relating to examination and treatment of certain Federal employees), 325 (relating to examination of aliens), or 326 (relating to services to certain Federal employees) or part D of title III (relating to services for persons with Hansen's disease); or

"(C) if at the time an individual's period of obligated service is to begin there is no need for any of the foregoing service, then service in the clinical practice of his profession in a medical facility of a State correctional facility, State mental hospital, community mental health center, migrant health center, community health center, or other medical entity designated by the Secretary as having a priority need for health personnel; or

"(D) if at the time an individual's period of obligated service is to begin there is no need for any of the foregoing service, then service for such period as a member of the Public Health Service in such unit of the Department as the Secretary may prescribe.

Digitized by Google

"(e) If, for any reason, a person fails either to begin his service obligation under this section in accordance with subsection (d) or to complete such service obligation, the United States shall be entitled to recover from such individual an amount determined in accordance with the formula

$$A=2P\left(\frac{t-s}{t}\right)$$

in which 'A' is the amount the United States is entitled to recover; 'P' is the amount paid under this section to or on behalf of such person, plus the interest on such amount which would be payable if at the time it was paid it was a loan bearing interest at the maximum legal prevailing rate; 't' is the total number of months in such person's period of obligated service; and 's' is the number of months of the period of obligated service served by him in accordance with subsection (d). Any amount which the United States is entitled to recover under this subsection shall, within the three-year period beginning on the date the United States becomes entitled to recover such amount, be paid to the United States.

"(f) (1) (A) The Secretary shall release any participant in the program from his service obligation under subsection (d) if such participant enters into a written agreement with the Secretary to engage on a full-time basis in the private practice of his profession—

"(i) in an area in a State in which is located a

Digitized by Google

medically underserved population designated under section 329 (b) ; and

"(ii) for a period of—

"(I) one year for each academic year of training for which he received a scholarship under the program, or

"(II) two years,

whichever is greater.

"(B) An agreement described in subparagraph (A) shall—

"(i) provide that during the period of private practice by a participant pursuant to the agreement—

"(I) any individual who receives health services provided by the participant in connection with such private practice will be charged for such services at the usual and customary rate prevailing in the area in which such services are provided, except that if such individual is unable to pay such charge (as determined in accordance with regulations prescribed by the Secretary) such individual shall be charged at a reduced rate (if any) based on such individual's ability to pay; and

"(II) the participant in providing health services in connection with such private practice shall

Digitized by Google

not discriminate against any individual on the basis of such individual's ability to pay for such services or because payment for the health services provided to such individual will be made under the insurance program established under part A or B of title XVIII of the Social Security Act or under a State plan for medical assistance approved under title XIX of such Act; and

"(ii) contain such additional provisions as the Secretary may require to carry out the purposes of this subsection.

"(2) (A) The Secretary may make one grant to any participant—

"(i) who has entered into an agreement under paragraph (1), and

"(ii) who has agreed to extend the period of practice under such agreement by a period of not less than one year,

to assist such participant in meeting the costs of beginning the practice of his profession in accordance with such agreement, including the costs of acquiring equipment and renovating facilities for use in proivding health services, and of hiring nurses and other personnel to assist in providing health services. No such grant may be used for the purchase or construction of any building.

Digitized by Google

"(B) The amount of the grant to any participant under subparagraph (A) shall be—

"(i) $12,500, if such participant agrees to extend the period of practice under the agreement under paragraph (1) for a period of at least one year but less than two years; or

"(ii) $25,000, if such participant agrees to extend the period of practice under the agreement under paragraph (1) for a period of at least two years.

"(3) The Secretary may not enter into any agreement under paragraph (1) or make any grant under paragraph (2) unless an application therefor has been submitted to, and approved by, the Secretary.

"(4) (A) In the case of each participant who entered into an agreement under paragraph (1), the Secretary shall pay to him, as soon as practicable after the close of each calendar quarter in which he practiced his profession in accordance with such agreement, an amount which is equal to the excess (if any) of—

"(i) the basic pay and allowances such participant would have received for the period of such practice during such quarter and the preceding calendar quarters in the same calendar year if during that same period of practice he was a commissioned member of the Public Health Service serving in the National Health Service

Digitized by Google

Corps during a period of obligated service under subsection (d), over

"(ii) the sum of the net income (as determined under regulations prescribed by the Secretary) derived by such participant during that period of practice (from the private practice of his profession in accordance with such agreement) and the amount (if any) paid to such participant under this paragraph with respect to the portion of that period of practice which occurred in such preceding calendar quarters.

"(B) If after the close of any calendar year—

"(i) the amount described in subparagraph (A) (ii) which was received by the participant for the period in such year in which he practiced his profession in accordance with an agreement under paragraph (1), exceeds

"(ii) the amount of basic pay and allowances which the participant would have received for such period if during such period he was a commissioned member of the Public Health Service serving in the National Health Service Corps during a period of obligated service under subsection (d),

the Secretary shall be entitled to recover from the participant an amount equal to the lesser of the amount of such excess or the amount paid to the participant under sub-

Digitized by Google

paragraph (A) for the period in such year in which he practiced his profession in accordance with an agreement under paragraph (1).

"(C) The Secretary may not make any payment to any participant under subparagraph (A) unless—

"(i) an application therefor has been submitted to the Secretary in such manner and containing such information as he by regulation prescribes; and

"(ii) such participant keeps such records as the Secretary may prescribe and makes such records available to the Secretary for any examination he may require.

"(g) (1) The Secretary may make one grant to any individual (other than an individual who entered into an agreement under subsection (f) (1))—

"(A) who has completed his period of obligated service under the program, and

"(B) who has agreed in writing to engage on a full-time basis in the private practice of his profession in accordance with subsection (f) (1) for a period of not less than one year,

to assist such individual in meeting the costs of beginning the practice of his profession in accordance with such agreement, including the costs of acquiring equipment and renovating facilities for use in providing health services, and

Digitized by Google

of hiring nurses and other personnel to assist in providing health services. Such grant may not be used for the purchase or construction of any building.

"(2) The amount of the grant under paragraph (1) to any individual shall be—

"(A) $12,500, if such participant agrees to practice his profession in accordance with subsection (f) (1) for a period of at least one year but less than two years; or

"(B) $25,000, if such participant agrees to practice his profession in accordance with subsection (f) (1) for a period of at least two year.

"(3) The Secretary may not make a grant under paragraph (1) unless an application therefor has been submitted to, and approved by, the Secretary.

"(h) (1) If any doctor of medicine or osteopathy who has not been a participant in the program, and who has completed his residency in family medicine, general internal medicine, general pediatrics, or obstetrics and gynecology, or any other field of medicine which the Secretary determines has a shortage of practitioners, enters into a written agreement with the Secretary to engage for not less than two years on a full-time basis (A) in the clinical practice of his profession as a member of the National Health Service Corps or (B) in the private practice of his profession

Digitized by Google

in an area in a State in which is located a medically underserved population designated under section 329(a), then the Secretary may make (C) one grant to him of $15,000 as a bonus for entering into such agreement and (D) in the case of an agreement providing for such private practice, an additional grant equal to $25,000.

"(2) In the case of an agreement to which clause (B) of paragraphs (1) applies, the provisions of paragraph (1) (B) of subsection (f) shall apply to such agreement to the same extent as though the individual making the agreement were a 'participant' within the meaning of such subsection (f); the grant made pursuant to clause (D) of paragraph (1) of this subsection may be used only for the purposes for which a grant under paragraph (2) of subsection (f) may be used; and the provisions of paragraph (4) of subsection (f) shall apply with respect to the individual making the agreement under this subsection to the same extent as it applies to a 'participant' within the meaning of such subsection (f).

"(i) If the Secretary determines that an individual has violated an agreement under subsection (f) (1), (g) (1) (B), or (h), he shall, as soon as practicable after making such determination, notify the individual of such determination. If within one hundred and twenty days after the date of giving such notice, such individual is not practicing his

Digitized by Google

profession in accordance with the agreement under subsection (f) (1), (g) (1) (B), or (h), as the case may be, and has not provided assurances satisfactory to the Secretary that he will not knowingly violate such agreement again, the United States shall be entitled to recover from such individual an amount determined under subsection (e), except that in applying the formula contained in such subsection—

"(1) in the case of an agreement under subsection (f) (1), 'P' shall be the amount paid under this section (other than any amount paid under subsection (f) (4)) to or on behalf of such person plus the interest on such amount which would be payable if at the time it was paid it was a loan bearing interest at the maximum legal prevailing rate, 't' shall be the number of months that such individual agreed to practice his profession under such agreement, including the number of months that the period of practice under such agreement was extended under subsection (f) (2) (A), and 's' shall be the number of months that such individual practiced his profession in accordance with such agreement;

"(2) in the case of an agreement under subsection (g) (1) (B), 'P' shall be the amount of the grant made under subsection (g) to such person plus the interest on such amount which would be payable if at the time

Digitized by Google

it was paid it was a loan bearing interest at the maximum legal prevailing rate, 't' shall be the number of months (not in excess of twenty-four) that such individual agreed to practice his profession under such agreement, and 's' shall be the number of months that such individual practiced his profession in accordance with such agreement;

"(3) in the case of an agreement under subsection (h), 'p' shall be the amount of the grant or grants made under such subsection to such person plus the interest on such amount which would be payable if at the time it was paid it was a loan bearing interest at the maximum legal prevailing rate, 't' shall be the number of months (not in excess of 24) that such individual agreed to practice his profession under such agreement, and 's' shall be the number of months that such individual practiced his profession in accordance with such agreement.

"(j) (1) When a person undergoing training in the Program voluntarily terminates academic training, or is dismissed by the institution for failure to meet academic standing requirements or for disciplinary reasons, he shall be liable for repayment to the Government of an amount equal to the scholarship which he received under the program.

"(2) (A) Any remaining liability of any individual under paragraph (1) and any remaining entitlement of the

Digitized by Google

United States to recover from an individual under subsection (e) or (h) shall be cancelled upon the death of such individual.

"(B) The Secretary shall by regulation provide for the waiver or suspension of any obligation under paragraph (1), and any entitlement to recover under subsection (e) or (h), applicable to any individual whenever compliance by such individual is impossible or would involve extreme hardship to such individual and if enforcement of such obligation or entitlement to recover with respect to any individual would be against equity and good conscience.

"(k) Notwithstanding any other provision of law, persons undergoing academic training under the program shall not be counted against any employment ceiling affecting the Department of Health, Education, and Welfare.

"(l) The Secretary shall issue regulations for the implementation of this section.

"(m) To carry out the program, there are authorized to be appropriated $50,000,000 for the fiscal year ending June 30, 1976, $100,000,000 for the first fiscal year thereafter, and $150,000,000 for the second fiscal year thereafter."

(b) Effective with respect to appropriations for fiscal years ending after July 1, 1975, the heading for subpart II of part C of title VII is amended to read

Digitized by Google

"Subpart II—Student Scholarships"

and is inserted above the heading for section 747 (as redesignated by this Act).

TITLE IV—GRANTS FOR HEALTH PROFESSIONS SCHOOLS

SUPPORT GRANTS

SEC. 401. (a) Subsection (a) of section 770 is amended to read as follows:

"(a) GRANT COMPUTATION.—The Secretary shall make annual grants to schools of medicine, osteopathy, dentistry, public health, veterinary medicine, optometry, pharmacy, and podiatry for the support of the education programs of such schools. The amount of the annual grant to each such school with an approved application shall be computed for each fiscal year as follows:

"(1) each school of medicine or osteopathy shall receive—

"(A) for the fiscal year ending June 30, 1976,

"(i) $3,250 in the case of a school of medicine, or $2,300 in the case of a school of osteopathy, for each full-time student enrolled in such school in such year; and

"(ii) $1,000 for each student who is enrolled in such year on a full-time basis in such school in a program for the training of

Digitized by Google

physician assistants or nurse practitioners; and

"(B) for each of the next two fiscal years,

"(i) one-third of the net education expenditures per student for each full-time student enrolled in such school in such year, and

"(ii) $1,000 for each student who is enrolled in such year on a full-time basis in such school in such a program for the training of physician assistants or nurse practitioners;

"(2) each school of dentistry shall receive—

"(A) for the fiscal year ending June 30, 1976,

"(i) $2,450 for each full-time student enrolled in such school in such year; and

"(ii) $650 for each student who is enrolled in such year on a full-time basis in such school in a program for the training of expanded function dental auxiliaries; and

"(B) for each of the next two fiscal years,

"(i) One-third of the net education expenditures per student for each full-time student enrolled in such school in such year, and

"(ii) $1,000 for each student who is enrolled in such year on a full-time basis in such school in such a program for the training of expanded function dental auxiliaries;

Digitized by Google

"(3) each school of public health shall receive (A) for the fiscal year ending June 30, 1976, $2,000 for each full-time student enrolled in such school in such year, and (B) for each of the next two fiscal years, one-third of the net education expenditures per student for each full-time student enrolled in such school in such year;

"(4) each school of veterinary medicine shall receive (A) for the fiscal year ending June 30, 1976, $1,850 for each full-time student enrolled in such school in such year, and (B) for each of the next two fiscal years, one-third of the net education expenditures per student for each full-time student enrolled in such school in such year;

"(5) each school of optometry shall receive (A) for the fiscal year ending June 30, 1976, $1,050 for each full-time student enrolled in such school in such year, and (B) for each of the next two fiscal years, one-third of the net education expenditures per student for each full-time student enrolled in such school in such year;

"(6) each school of podiatry shall receive (A) for the fiscal year ending June 30, 1976, $1,650 for each full-time student enrolled in such school in such year, and (B) for each of the next two fiscal years, one-third

Digitized by Google

of the net education expenditures per student for each full-time student enrolled in such school in such year;

"(7) each school of pharmacy (other than a school of pharmacy with a course of study of more than four years) shall receive (A) for the fiscal year ending June 30, 1976, $1,000 for each full-time student enrolled in such school in such year, and (B) for each of the next two fiscal years, one-third of the net education expenditures per student for each full-time student enrolled in such school in such year; except that in the case of a school of pharmacy with a course of study of more than four years amounts referred to in clauses (A) and (B) shall apply only with respect to full-time students enrolled in the last four years of such school, and for purposes of section 748, 771, and 782, a student enrolled in the first year of the last four years of such school shall be considered a first-year student."

(b) Subsection (d) of section 770 is amended to read as follows:

"(c) APPORTIONMENT OF APPROPRIATIONS.—If the total appropriated under subsection (g) for any fiscal year for any schools is less than the aggregate of the amounts to which they would otherwise be entitled for such fiscal year under subsection (a) or (b), the sum to be paid each such school for such year shall, instead of the amount de-

Digitized by Google

termined under subsection (a) or (b), bear the same ratio to that amount as such total of appropriations bears to such aggregate of amounts.".

(c) (1) Subsections (d), (e), (f), and (g) of section 770 are repealed.

(2) Subsection (h) of section 770 is (A) redesignated as subsection (d), and (B) amended to read as follows:

"(d) ENROLLMENT DETERMINATIONS.—

"(1) For purposes of this section and sections 748, 771, and 782, regulations of the Secretary shall include provisions relating to the determination of the number of students enrolled in a school or in a particular year-class in a school on the basis of estimates, on the basis of the number of students who in an earlier year were enrolled in a school or in a particular year-class, or on such other basis as he deems appropriate for making such determination, and shall include methods of making such determination when a school or a year-class was not in existence in an earlier year at a school.

"(2) For purposes of this section and sections 748, 771, and 782, the term 'full-time students' (whether such term is used by itself or in connection with a particular year-class) means students pursuing a full-time course of study leading to a degree of doctor of medicine, doctor of osteopathy, bachelor of science in pharmacy or

Digitized by Google

an equivalent degree, doctor of optometry or an equivalent degree, doctor of veterinary medicine or an equivalent degree, or doctor of podiatry or an equivalent degree or to a graduate degree in public health or equivalent degree. In the case of a training program of a school designed to permit the students enrolled in such program to complete, within six years after completing secondary school, the requirements for degree of doctor of medicine, doctor of dentistry or an equivalent degree, or doctor of osteopathy, and in the case of schools of pharmacy with a course of study of more than four years, the term 'full-time students' shall only include students enrolled on a full-time basis in the last four years of such program (or course) and for purposes of section 748, 771, and 782, students enrolled in the first of the last four years of such program (or course) shall be considered as first-year students.".

(3) Subsection (i) of section 770 is (A) amended by inserting ", public health" after "osteopathy", and (B) redesignated as subsection (e).

(4) Section 770 is further amended by inserting after subsection (e) (as so redesignated) the following new subsection:

"(f) NET EDUCATION EXPENDITURES.—For purposes of this section, the net education expenditures per student

Digitized by Google

for any fiscal year for any school of medicine, osteopathy, dentistry, veterinary medicine, optometry, podiatry, pharmacy or public health means the total expenditures for the training of full-time students enrolled in the schools of medicine, osteopathy, dentistry, veterinary medicine, optometry, podiatry, pharmacy, and public health, respectively, made by such schools for the second school year ending before such fiscal year, divided by the number of full-time students enrolled in such schools of medicine, osteopathy, dentistry, veterinary medicine, optometry, podiatry, pharmacy, and public health, respectively, in such school year, including expenditures for research or patient care which was performed as part of such training, but minus any income of such schools received for such research or patient care. The determination of such expenditures shall be made by the Secretary on the basis of data furnished by such sampling of each of the various types of schools as the Secretary may find appropriate after consideration of the results of the study conducted pursuant to section 205 of the Comprehensive Health Manpower Act of 1971 (Public Law 92–157). To the extent practical, the Secretary shall vary the schools used in his sampling of each of the types of schools each year. The Secretary shall provide technical assistance and such financial assistance as he finds reasonably necessary for purposes of this subsection to the schools providing such data.".

Digitized by Google

(5) Subsection (j) of section 770 is redesignated as subsection (g) and is amended to read as follows:

"(g) AUTHORIZATIONS OF APPROPRIATIONS.—

"(1) (A) There are authorized to be appropriated $244,300,000 for the fiscal year ending June 30, 1976, $254,700,000 for the first fiscal year thereafter, and $262,800,000 for the second fiscal year thereafter, for payments under grants under this section to schools of medicine, osteopathy, and dentistry based on the number of full-time students enrolled in such schools.

"(B) There are authorized to be appropriated $4,000,000 for the fiscal year ending June 30, 1976, $6,000,000 for the first fiscal year thereafter, and $8,000,000 for the second fiscal year thereafter, for payments under grants under this section to schools of medicine, osteopathy, and dentistry based on the number of students enrolled in such schools in programs for the training of physician assistants and programs for the training of expanded function dental auxiliaries.

"(2) There are authorized to be appropriated $11,000,000 for the fiscal year ending June 30, 1976, $12,000,000 for the first fiscal year thereafter, and $13,000,000 for the second fiscal year thereafter, for payment under grants under this section to schools of public health.

Digitized by Google

"(3) There are authorized to be appropriated $11,600,000 for the fiscal year ending June 30, 1976, $11,900,000 for the first fiscal year thereafter, and $12,100,000 for the second fiscal year thereafter, for payments under grants under this section to schools of veterinary medicine.

"(4) There are authorized to be appropriated $29,100,000 for the fiscal year ending June 30, 1976, $30,000,000 for the first fiscal year thereafter, and $31,000,000 for the second fiscal year thereafter, for payments under grants under this section to schools of optometry and pharmacy.

"(5) There are authorized to be appropriated $3,300,000 for the fiscal year ending June 30, 1976, $3,500,000 for the first fiscal year thereafter, and $3,700,000 for the second fiscal year thereafter, for payments under grants under this section to schools of podiatry.

"(6) No funds appropriated under any provision of this Act (other than this subsection) may be used to make grants under this section.".

(d) (1) The amendments made by the preceding subsections of this section shall apply with respect to appropriations, and grants therefrom, for fiscal years ending after June 30, 1975. With respect to appropriations, and grants

Digitized by Google

therefrom, for the fiscal year ending June 30, 1975, subsection (j) of section 770 as in effect before the date of the enactment of this Act is amended by inserting "and $238,000,000 for the fiscal year ending June 30, 1975," after "June 30, 1974," in paragraph (1), and "and $41,000,000 for the fiscal year ending June 30, 1975," after "June 30, 1974," in paragraph (2).

(2) For the fiscal year ending June 30, 1976, and for each of the next two fiscal years, there are authorized to be appropriated such sums as may be necessary to continue to make annual grants to schools of medicine, osteopathy, dentistry, veterinary medicine, optometry, pharmacy, and podiatry under section 770(a) of the Public Health Service Act (as in effect before the date of the enactment of this Act) based on the number of enrollment bonus students (determined in accordance with subsections (d) and (e) of section 770 of such Act (as so in effect)) enrolled in such schools who were first-year students in such schools for school years beginning before July 1, 1975, except that the amount of any grant made to such a school from sums appropriated under this subsection may not exceed the amount of the grant the school received in the fiscal year ending June 30, 1975, based on the number of such students enrolled in it.

Digitized by Google

(e) The heading for part E of title VII is amended to read as follows:

"PART E—GRANTS TO IMPROVE THE QUALITY OF SCHOOLS OF MEDICINE, OSTEOPATHY, PUBLIC HEALTH DENTISTRY, VETERINARY MEDICINE, OPTOMETRY, PHARMACY, AND PODIATRY".

CONDITIONS OF ELIGIBILITY FOR SUPPORT GRANTS

SEC. 402. With respect to appropriations, and grants therefrom, for the fiscal year ending June 30, 1975, section 771 is amended by striking out "two" in subsection (a) (6) and inserting in lieu thereof "three" and by striking out "1974" and "1975" in subsection (b) (2) and inserting in lieu thereof "1975" and "1976", respectively. With respect to appropriations, and grants therefrom, for fiscal years after the fiscal year ending June 30, 1975, section 771 is amended to read as follows:

"ELIGIBILITY FOR CAPITATION GRANTS

"SEC. 771. (a) IN GENERAL.—The Secretary shall not make a grant under section 770 to any school in a fiscal year beginning after June 30, 1975, unless the application meets the following requirements:

"(1) The application shall contain or be supported by reasonable assurances satisfactory to the Secretary that the first-year enrollment of full-time students in the

Digitized by Google

school in the school year beginning after the fiscal year for which the grant is sought will not be less than the first-year enrollment of such students in the school in the preceding school year.

"(2) The application shall contain or be supported by reasonable assurances satisfactory to the Secretary that the applicant will expend in carrying out its functions as a school of medicine, osteopathy, dentistry, public health, veterinary medicine, optometry, pharmacy, or podiatry, as the case may be, during the fiscal year for which such grant is sought, an amount of funds (other than funds for construction as determined by the Secretary) from non-Federal sources which is at least as great as the amount of funds expended by such applicant for such purpose (excluding expenditures of a nonrecurring nature) from such sources in the fiscal year preceding the fiscal year for which such grant is sought.

"(b) CONDITIONS OF ELIGIBILITY FOR SECOND HALF OF GRANT.—

(1) SCHOOLS OF MEDICINE.—The Secretary shall limit the grant under section 770 to any school of medicine in a fiscal year beginning after June 30, 1975, to one-half of the amount determined thereunder unless the application therefor contains or is accompanied by reasonable assurances satisfactory to the Secretary that

Digitized by Google

such school will carry on at least one project in each of any two of the following three categories:

"(A) Projects under which for the second school year beginning after the fiscal year for which the grant sought and for each school year thereafter beginning in a fiscal year for which such a grant is made (i) the first-year enrollment of full-time students in such school, plus the number (if any) of full-time students enrolled in such school who have been enrolled with advanced standing after having previously been enrolled

(I) in such a school in a program not leading to a degree of doctor of medicine, or

(II) in a medical school in a foreign country,

will exceed the first-year enrollment of full-time students in such school in the school year beginning during the fiscal year ending June 30, 1975, by 5 per centum of such last-mentioned first-year enrollment or 10 students, whichever is greater, or (ii) the school will maintain (with the same or increased numbers of full-time students) a program approved by the Secretary for the training of physician assistants or nurse practitioners which was not in existence at such school in the school year which began

Digitized by Google

during the fiscal year ending June 30, 1975, or maintain an increase of not less than 25 per centum of the full-time students who were enrolled at such school in such a program which was in existence in the school year which began in the fiscal year ending June 30, 1975.

"(B) Projects under which for the second school year beginning after the fiscal year for which the grant is sought and for each school year thereafter beginning in a fiscal year in which such a grant is made—

"(i) first-year enrollment of full-time students in such school who are from a medically underserved population group or an area with such a population, as designated pursuant to section 329, will exceed the number of such students in the school year beginning during the fiscal year ending June 30, 1975, by not less than ten students, or

"(ii) the school will establish and maintain, or expand (and maintain the expansion), a program approved by the Secretary to train, in facilities which are in areas with medically underserved populations (as designated pursuant to section 329) and which are geo-

Digitized by Google

graphically remote from the main site of the teaching facilities of the school, full-time students and students enrolled on a full-time basis in programs of the school for the training of physician assistants or nurse practitioners.

"(C) Projects under which for the second fiscal year beginning after the fiscal year for which the grant is sought and for each fiscal year thereafter in which such a grant is made

"(i) if the number of primary health care residencies at general hospitals affiliated with the school is less than 50 per centum of all the residencies at such hospitals, there will, until they total not less than 50 per centum of all the residencies at such hospitals, be an annual increase in such primary health care residencies equal to not less than 5 per centum of all the residencies at such hospitals for the fiscal year ending June 30, 1975, or

"(ii) if the number of primary health care residencies at general hospitals affiliated with the applicant is not less than 50 per centum of all the residencies at such hospitals, the number of such primary health care residencies will

Digitized by Google

not decrease to less than 50 per centum of all the residencies at such hospitals, or

"(iii) the school will establish and maintain, or expand (and maintain the expansion), programs for training full-time students enrolled at the school in the provision of the primary health care in facilities providing outpatient or ambulatory care.

"(2) SCHOOLS OF OSTEOPATHY, DENTISTRY, VETERINARY MEDICINE, OPTOMETRY, PODIATRY, AND PHARMACY.—The Secretary shall limit the grant under section 770 to any school of osteopathy, dentistry, veterinary medicine, optometry, podiatry, or pharmacy in a fiscal year beginning after June 30, 1975, to one-half of the amount determined thereunder unless the application therefor contains or is accompanied by reasonable assurances satisfactory to the Secretary that such school will carry on at least one project in any one of the following two categories:

"(A) Projects under which for the second school year beginning after the close of the fiscal year for which the grant is sought and for each school year thereafter beginning in a fiscal year in which such a grant is made, (i) the first-year enrollment of full-time students in such school will

Digitized by Google

exceed the number of such students enrolled in the school year beginning in the fiscal year ending June 30, 1975, by 5 per centum of such number, or 10 students, whichever is greater, or (ii) in the case of a school of osteopathy or dentistry, the school will maintain (with the same or an increased number of students enrolled on a full-time basis) a program approved by the Secretary for the training of physician assistants or nurse practitioners (in the case of a school of osteopathy), or of expanded function dental auxiliaries (in the case of a school of dentistry), which program was not in existence at such school in the school year which began during the fiscal year ending June 30, 1975, or will maintain an increase of not less than 25 per centum of the students who were enrolled on a full-time basis at such school in such a program which was in existence in the school year which began during the fiscal year ending June 30, 1975, or

"(B) Projects under which for the second school year beginning after the fiscal year for which the grant is sought and for each school year thereafter beginning in a fiscal year in which such a grant is made

Digitized by Google

"(i) first-year enrollment of full-time students in such school who are from a medically underserved population group or an area with such a population, as designated pursuant to section 329, will exceed the number of such students enrolled in the school year beginning during the fiscal year ending June 30, 1975, by not less than 10 students, or

"(ii) the school will establish and maintain, or expand (and maintain the expansion), a program approved by the Secretary to train, in facilities which are in areas with medically underserved populations (as designated pursuant to section 329) and which are geographically remote from the main site of the teaching facilities of the school, full-time students and, in the case of schools of osteopathy or dentistry, students enrolled on a full-time basis in programs of the school for the training of physician assistants or nurse practitioners, and expanded function dental auxiliaries, respectively.

"(3) SCHOOLS OF PUBLIC HEALTH.—The Secretary shall limit the grant under section 770 to any schools of public health in a fiscal year beginning after

Digitized by Google

June 30, 1975, to one-half of the amount determined thereunder unless the application therefor contains or is accompanied by reasonable assurances satisfactory to the Secretary that such school will carry on a project under which, for the second school year beginning after the close of the fiscal year for which the grant is sought and for each school year thereafter beginning in a fiscal year in which such a grant is made, the first-year enrollment of full-time students in such school will exceed the number of such students enrolled in the school year beginning in the fiscal year ending June 30, 1975, by 5 per centum of such number or 10 students, whichever is greater.".

TEMPORARY CONTINUATION OF START-UP GRANTS

SEC. 403. For the fiscal year ending June 30, 1976, and each of the next two fiscal years, there are authorized to be appropriated such sums as may be necessary to continue to make grants under section 771 of the Public Health Service Act (as in effect before the date of the enactment of this Act) to schools which received a grant under such section from appropriations for a fiscal year ending before July 1, 1975.

GRANTS TO SCHOOLS IN FINANCIAL DISTRESS

SEC. 404. (a) Subsection (a) of section 773 is amended

Digitized by Google

by inserting "each" after "$10,000,000" and by inserting "and the fiscal year ending June 30, 1975," after "1974,". Effective with respect to appropriations for fiscal years ending after June 30, 1975, such subsection (a) is amended to read as follows:

"(a) There are authorized to be appropriated $20,000,000 each for the fiscal year ending June 30, 1976, and the next two fiscal years, for payments under grants under this section."

(b) Section 773 is further amended by inserting "public health," after "dentistry," in subsections (b) and (d).

REDESIGNATIONS AND TEMPORARY EXTENSIONS

SEC. 405. (a) Section 775 is redesignated as section 774 and is amended—

(1) by striking out "770, 771, 772, or 773" each place it occurs and inserting in lieu thereof "770, 781, or 773";

(2) by inserting ", public health" after "dentistry" in subsection (b);

(3) by striking out "this part" and "section 725" in subsection (c) and inserting in lieu thereof "section 770, 781, or 773" and "section 702", respectively.

(4) by striking out "770, 771, or 773" in subsection (d) (1) and inserting in lieu thereof "770, 781, or 773".

Digitized by Google

(b) The section heading of section 774 (as so redesignated) is amended by striking out "START-UP,".

(c) Sections 312 and 313 are repealed.

(d) The amendments (and repeals) made by this section shall apply with respect to appropriations, and grants therefrom, for fiscal years ending after June 30, 1975. Effective for appropriations for the fiscal year ending June 30, 1975, section 312 is amended by inserting "each" after "$10,000,000" and inserting "and the next fiscal year" after "1974", and subsections (a) and (c) of section 313 are each amended by inserting "each" after "$6,500,000" and inserting "and for the next fiscal year" after "1974".

TITLE V—SPECIAL PROJECT GRANTS AND CONTRACTS

REDESIGNATIONS AND TEMPORARY EXTENSIONS

SEC. 501. (a) Section 767 (entitled "GRANTS FOR TRAINING, TRAINEESHIPS, AND FELLOWSHIPS IN FAMILY MEDICINE") is repealed.

(b) Section 768 is amended by, in subsection (a), inserting "each" after "$15,000,000" and inserting "and the next fiscal year" after "1974," and, in subsection (b) (3) (B), inserting "or the next fiscal year," after "1974,".

(c) Section 769 (a) is amended by inserting "each"

Digitized by Google

after "$20,000,000" and inserting "and the next fiscal year," after "1974,".

(d) Section 769A is amended by inserting "each" after "$15,000,000" and inserting "and the next fiscal year," after "1974,".

(e) Section 776(e) is amended by inserting "each" after "$10,000,000" and inserting ", and the next fiscal year" after "1974".

SPECIAL PROJECTS FOR HEALTH PROFESSIONS SCHOOLS

SEC. 502. (a) Section 772 is transferred to the beginning of part F of title VII and redesignated as section 781.

(b) Subsection (a) of section 781 (as so redesignated) is amended as follows:

(1) Strike out "or" at the end of subparagraph (13);

(2) Strike out the period at the end of subparagraph (14) and insert in lieu thereof a semicolon.

(3) Insert after subparagraph (14) the following new subparagraphs:

"(15) plan, develop, and operate programs to increase the awareness by health professions personnel of the cultural sensitivities related to the health of individuals with limited English-speaking ability, with special emphasis on training programs which include clinical training and utilize team training, and on con-

Digitized by Google

tinuing education programs, in communities where a substantial proportion of the population is of limited English-speaking ability;

"(16) establish and operate programs to encourage greater knowledge of and sensitivity toward the special health problems of women;

"(17) establish and operate programs designed to provide increased emphasis on, and training in, rehabilitation medicine and encourage greater knowledge of and sensitivity toward the special health problems of handicapped individuals, especially women and who are handicapped;

"(18) provide increased emphasis on, and training in, the aging process, including the social, behavioral, and biomedical aspects of the aging process, and training in the diagnosis, treatment, and prevention of diseases and related problems of the aged; or

"(19) encourage experienced physicians and other health care personnel to relocate to areas with medically underserved populations, as designated pursuant to section 329.".

(c) Subsection (d) of section 781 (as so redesignated) is amended by striking out "and $156,000,000" and inserting in lieu thereof "$156,000,000 each" and by inserting after "1974," the following: "and the next fiscal year, and

Digitized by Google

$75,000,000 each for the fiscal year ending June 30, 1976, and the next two fiscal years,".

(d) The amendments made by this section shall apply with respect to appropriations, and grants therefrom, for fiscal years ending after June 30, 1975; and effective with respect to grants under section 781 (as so redesignated) from appropriations thereunder for fiscal years beginning after June 30, 1975, subparagraphs (9) and (11) of subsection (a) thereof are repealed.

ASSISTANCE TO DISADVANTAGED STUDENTS

SEC. 503. Part F of title VII is amended by inserting after section 781 (as redesignated by this Act) the following new section:

"ASSISTANCE TO INDIVIDUALS FROM DISADVANTAGED BACKGROUNDS

"SEC. 782. (a) (1) For the purpose of assisting individuals from disadvantaged backgrounds, as determined in accordance with criteria prescribed by the Secretary, to undertake education to enter a health profession, the Secretary may make grants to and enter into contracts with schools of medicine, osteopathy, public health, dentistry, veterinary medicine, optometry, pharmacy, and podiatry and other public or nonprofit private health or educational entities to assist in meeting the costs described in paragraph (2).

Digitized by Google

"(2) A grant or contract under paragraph (1) may be used by the health or educational entity to meet the costs of—

"(A) identifying, recruiting, and selecting individuals from disadvantaged backgrounds, as so determined, for the education provided by a health professional school,

"(B) facilitating the entry of those individuals into such a school,

"(C) providing counseling or other services designed to assist those individuals to complete successfully their education at such a school,

"(D) providing, for a period prior to the entry of those individuals into the regular course of education at such a school, preliminary education designed to assist them to complete successfully such regular course of education at such a school or referring such individuals to institutions providing such preliminary education, and

"(E) publicizing existing sources of financial aid available to persons enrolled in the education program of such a school or who are undertaking training necessary to qualify them to enroll in such a program.

"(3) No grant may be made or contract entered into under paragraph (1) with a school of medicine, osteopathy, dentistry, public health, veterinary medicine, optometry, pharmacy, or podiatry unless its application for such grant

Digitized by Google

or contract contains or is supported by assurances satisfactory to the Secretary that in the second school year beginning after the close of the fiscal year for which such grant is made or contract entered into such school will enroll in its first-year class a number of full-time students from disadvantaged backgrounds, as determined in accordance with criteria prescribed by the Secretary, which is at least equal to the lesser of—

"(A) 5 per centum of the number of first-year full-time students enrolled in the school in the preceding school year, or

"(B) ten.

"(b) There are authorized to be appropriated $20,000,000 each for the fiscal year ending June 30, 1976 and the next two fiscal years, for payments under grants and contracts under subsection (a).".

AREA HEALTH EDUCATION CENTERS

SEC. 504. (a) Section 774 (as in effect before the date of the enactment of this section) is transferred to part F of title VII, is inserted after section 782 (added by this Act) and redesignated section 783, and is amended to read as follows:

"AREA HEALTH EDUCATION CENTERS

"SEC. 783. (a) For the purpose of improving the distribution, supply, quality, utilization, and efficiency of health

Digitized by Google

personnel in the health services delivery system and for the purpose of encouraging the regionalization of educational responsibilities of the health professions schools, the Secretary may make grants and enter into contracts for projects for area health education centers—

"(1) to conduct programs to alleviate shortages of health personnel in rural areas with sparse populations or urban areas with unusually dense populations through training or retraining of health personnel in community hospitals and other facilities located in such areas (including training of students enrolled in residency programs in family medicine, general internal medicine, general pediatrics, and obstetrics and gynecology) or to otherwise improve the distribution in such areas of health personnel by area or by specialty group;

"(2) to provide training programs in such areas leading to more efficient utilization in such areas of health personnel, emphasizing multidisciplinary and interdisciplinary patterns of undergraduate, graduate, and continuing education of health personnel; and

"(3) to provide education programs for the general population of such areas regarding the appropriate use of health services, the availability of health services in such areas (including services provided under federally funded programs), and the contribution each

Digitized by Google

individual can make to the maintenance of his own health.

"(b) (1) A grant or contract under this section may be made only for such stipends and allowances (including travel and subsistence expenses and dependency allowances), for the students in the programs referred to in subsection (a), as the Secretary may deem necessary and costs of construction of new primary health care facilities and of medical school facilities necessary for the administration of the training program for which the grant or contract is made.

"(2) No application for a grant or contract under this section may be approved unless the application—

"(A) is made by a public or nonprofit private educational entity which has, or which is affiliated with, at least one school of medicine or osteopathy;

"(B) contains assurances satisfactory to the Secretary that, to the maximum extent feasible, the project of the applicant will be conducted in conjunction with (including the sharing of faculty and facilities) the projects (if any) under paragraph (1) (B) (ii) or (2) (B) (ii) of section 771 (b), of any schools of medicine or osteopathy participating in the project of the applicant for the remote site training of undergraduate students of medicine or osteopathy;

Digitized by Google

"(B) contains a designation of the geographic boundaries of the areas to be served by area health education centers established under the project;

"(C) contains a list of the manpower needs of the areas to be served by area health education centers established under the project, the relative order in which those needs should be addressed, a detailed description of the types of programs to be carried out by the area health education centers and provision for periodic review and evaluation of such programs by experts in medical or osteopathic or other health professions education (as may be appropriate);

"(D) contains assurances that each medical or osteopathic school participating in the project will provide not less than six weeks of training per year in area health education centers for at least 50 per centum of the students enrolled in such school in a residency program in family medicine, general internal medicine, general pediatrics, or obstetrics and gynecology;

"(E) contains assurances satisfactory to the Secretary that a significant portion of the faculty of each participant in the project will serve as instructors in graduate training and continuing education programs in areas served by the area health education centers;

Digitized by Google

"(F) contains a specific program for multidisciplinary and interdisciplinary training both at the main site of the training or clinical facilities of the applicant and in area health education centers established under the project;

"(G) contains a plan for frequent counseling and consultation between the faculty of the applicant at the main site of its training or clinical facilities and instructors and other appropriate participants in the applicant's programs in the areas served by the area health education centers; and

"(H) contains a detailed plan for frequent consultation and coordination of the applicant's project with appropriate local, regional, State, or Federal agencies in order to exchange information and avoid unnecessary duplication of programs.

"(c) There are authorized to be appropriated $40,000,000 for the fiscal year ending June 30, 1976, $70,000,000 for the first fiscal year thereafter, and $75,000,000 for the second fiscal year thereafter for payments under grants and contracts under this section.".

(b) For the fiscal year ending June 30, 1975, there are authorized to be appropriated such sums as may be necessary to continue payments to entities under grants or contracts entered into under section 774 of the Public Health

Digitized by Google

Service Act (as in effect before the date of the enactment of this Act).

PROJECT GRANTS FOR UNDERSERVED AREAS, PRIMARY HEALTH CARE TRAINING, BILINGUAL TRAINING CENTERS, AND HEALTH EDUCATION

SEC. 505. Part F of title VII is amended by inserting after section 783 (as redesignated by this Act) the following new sections:

"PROJECTS TO SUPPORT UNDERSERVED AREA SERVICES

"SEC. 784. There are authorized to be appropriated $10,000,000 for the fiscal year ending June 30, 1976, $20,000,000 for the first fiscal year thereafter, and $30,000,000 for the second fiscal year thereafter for grants by the Secretary to any school of medicine, osteopathy, dentistry, veterinary medicine, optometry, pharmacy, podiatry, or public health for special projects to assist in the provision of health services for medically underserved populations designated pursuant to section 329.

"PRIMARY HEALTH CARE RESIDENCIES AND UNDERGRADUATE TRAINING

"SEC. 785. (a) There are authorized to be appropriated $40,000,000 for the fiscal year ending June 30, 1976 and $50,000,000 each for the next two fiscal years for grants by the Secretary to any school of medicine or osteopathy, or any public or nonprofit private hospital, for special projects

Digitized by Google

to plan, develop, operate, or participate in residency programs for primary health care which are accredited pursuant to section 1702 or, in the case of grants for any fiscal year beginning before January 1, 1978, accredited by an entity generally recognized by the medical profession for purposes of accrediting such a program.

"(b) There are authorized to be appropriated $10,000,000 for the fiscal year ending June 30, 1976, $15,000,000 for the first fiscal year thereafter, and $20,000,000 for the second fiscal year thereafter for grants by the Secretary to any school of medicine or osteopathy for special projects to plan, develop, and operate programs for the training of physicians in primary health care provided in outpatient or ambulatory care facilities.

"PROJECTS FOR BILINGUAL HEALTH TRAINING CENTERS

"SEC. 786. There are authorized to be appropriated $2,500,000 each for the fiscal year ending June 30, 1976, and of the next two fiscal years for grants by the Secretary to any public or nonprofit private health or educational entity for projects for establishment and initial operation of not more than four bilingual health training clinical centers in communities, in widely separated areas of the United States, in which a substantial proportion of the residents is of limited English-speaking ability, such centers to place special em-

Digitized by Google

phasis on (1) the training of interns, residents, and other health personnel who are bilingual and (2) the provision of health services to the surrounding community.

"HEALTH EDUCATION

"SEC. 787. (a) There are authorized to be appropriated $5,000,000 for the fiscal year ending June 30, 1976, $10,000,000 for the first fiscal year thereafter, and $15,000,000 for the second fiscal year thereafter for grants by the Secretary to any school of medicine, osteopathy, or dentistry for the establishment and operation of programs to provide, in areas surrounding such school or any institutions or facilities affiliated with such school, education programs for the general population thereof regarding the importance of adequate preventive and remedial health care, the appropriate use of health services and facilities and the availability thereof, and the ways in which the population can contribute to their own health.".

TITLE VI—MEDICAL RESIDENCY TRAINING PROGRAMS; ADMISSION OF ALIEN DOCTORS; REPORTS

MEDICAL RESIDENCY TRAINING PROGRAMS

SEC. 601. The Public Health Service Act is amended by adding at the end the following new title:

Digitized by Google

"TITLE XVII—MEDICAL RESIDENCY TRAINING PROGRAMS

"EFFECT OF NONACCREDITATION OR EXCESS POSITIONS IN MEDICAL RESIDENCY TRAINING PROGRAMS

"SEC. 1701. (a) For purposes of this title, the term 'medical residency training program' means a program which trains graduates of schools of medicine and schools of osteopathy in a medical specialty recognized by the liaison committee for specialty boards established jointly by the American Board of Medical Specialties and the Council on Medical Education of the American Medical Association (or any successor of such committee) and which provides the graduate education required by the specialty board (recognized by such liaison committee) for certification in such specialty. Such term does not include a residency training program in an osteopathic hospital.

"(b) (1) In the case of any entity which is engaged in business as a health care facility, the compensation of a doctor of medicine or a doctor of osteopathy in a medical residency training program which has not been accredited under section 1702 for a fiscal year beginning after December 31, 1977, or which has for such year a total number of positions in excess of the number prescribed for such program under section 1703 or a number of first-year positions in excess of the number prescribed therefor under such sec-

Digitized by Google

tion (which compensation is paid for a health service provided by such a doctor of medicine or a doctor of osteopathy in connection with such program), may not be included in determining Federal payments under title V, XVIII, or XIX of the Social Security Act. With respect to any entity which is reimbursed on a per capita basis, in determining Federal payments under any such title for a year the Secretary shall exclude an amount which in his judgment is a reasonable equivalent to the amount which would otherwise be excluded under this paragraph for such year if payment were made on other than a per capita basis.

"(2) If the Secretary determines that an entity is—

"(A) operating a medical residency training program during a fiscal year beginning after December 31, 1977, which has not been accredited under section 1702, or

"(B) operating a medical residency training program with a number of all positions or of first-year positions which for such year exceeds the numbers prescribed for that program under section 1703,

the Secretary shall notify the entity of his determination, shall publish the determination in the Federal Register, and shall not make any grant to or enter into any contract with such entity under this Act for the fiscal year beginning after

Digitized by Google

the date the Secretary publishes such determination in the Federal Register.

"MEDICAL RESIDENCY TRAINING PROGRAM ACCREDITING AGENCY

"SEC. 1702. (a) (1) For the purpose of accrediting the medical residency training programs for which positions may be occupied or made available under section 1703, the Secretary shall in accordance with subsection (b) designate or establish a medical residency training program accrediting agency (hereinafter in this section referred to as the 'accrediting agency').

"(2) The accrediting agency shall review, in accordance with procedures established and published by the agency and made available to the public, each medical residency training program in the United States and shall either accredit or disapprove such programs. Each such program shall be reviewed at least every three years and an accreditation of a program shall be in effect for three years unless the accrediting agency terminates the accreditation before the expiration of three years. As soon after an accrediting agency is designated or established pursuant to this section as practicable, it shall review training programs for purposes of accrediting them or denying accreditation for purposes of this title. For the period prior to July 1, 1979, the accrediting agency may accredit a pro-

Digitized by Google

gram on the basis of an accreditation granted such program by an entity generally recognized by the medical profession for purposes of accrediting such a program.

"(3) The accrediting agency shall submit to the agency designated or established under section 1703 and keep current for it a list of the medical residency training programs the accreditations of which are in effect. The first such list shall be so submitted not later than January 1, 1977.

"(b)(1) Not later than September 30, 1975, the Secretary shall prescribe and publish in the Federal Register requirements which must be met by an entity before it may be designated as the accrediting agency for purposes of this title. Such requirements shall provide that an entity—

"(A) have a governing body which is comprised of representatives of the medical profession, medical specialty boards, medical specialty societies, hospitals, schools of medicine, and the general public; and

"(B) meet the criteria established by the Secretary for recognition of nationally recognized accrediting agencies and associations.

"(2)(A) An entity which seeks designation as the accrediting agency shall submit an application to the Secretary not later than January 1, 1976. If such an application has been submitted to the Secretary by the liaison committee for

Digitized by Google

graduate medical education of the coordinating council for medical education before such date, and—

"(i) if the Secretary determines that the liaison committee meets the requirements prescribed under paragraph (1), he shall approve such application and designate it as the accrediting agency; or

"(ii) if the Secretary finds that the liaison committee does not meet such requirements, he shall provide it with such technical and other nonfinancial assistance as may be appropriate to enable it to meet such requirements and, if the Secretary determines that it meets such requirements, he shall designate it as the accrediting agency.

"(B) If, by July 1, 1976, the Secretary (after providing such assistance) finds that the liaison committee still does not meet such requirements, he shall consider other applications for such designation and shall, if he determines that an entity filing such an application meets the requirements prescribed under paragraph (1) and that such entity is otherwise qualified to accredit medical residency training programs, designate, not later than September 30, 1976, such entity as the accrediting agency.

"(3) (A) A designation of the accrediting agency shall be in effect for three years unless the Secretary terminates such designation before the expiration of three years upon a

Digitized by Google

determination by the Secretary (after notice and reasonable opportunity for a public hearing) that the agency no longer meets the requirements of paragraph (1) or is not qualified to accredit medical residency training programs. A designation may, upon application, be renewed for a period of three years.

"(B) If the Secretary terminates a designation or determines a designated accrediting agency is not qualified to have its designation renewed, the Secretary shall publish notice of such termination or determination and solicit applications from other entities for designation as the accrediting agency.

"(4) (A) If—

"(i) by September 30, 1976, the Secretary determines that no entity which has applied for designation meets the requirements prescribed under paragraph (1) and is otherwise qualified to accredit medical residency training programs or if by such date no entity has applied for designation, or

"(ii) upon the expiration of a designation under this section, the Secretary determines that the designated agency is not qualified to have its designation renewed and that there are no other qualified applicants for designation, or upon the termination of such a designation,

Digitized by Google

the Secretary determines that there are no qualified applicants for designation,

the Secretary shall, within two months of the determination, establish an accrediting agency for purposes of this title.

"(B) An accrediting agency established by the Secretary under subparagraph (A) shall meet the criteria established by the Secretary for recognition of nationally recognized accrediting agencies and associations and be composed of members who are fairly representative of the medical profession, medical specialty boards, medical specialty societies, hosptials, schools of medicine, and the general public. While away from their homes or regular places of business in the performance of services for the agency, members of the agency shall be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as persons employed intermittently in the Government service are allowed expenses under section 5703(b) of title 5 of the United States Code. The agency may appoint, without regard to the provisions of title 5, United States Code, respecting appointments in the competitive service, and pay, without regard to the provisions of such title respecting rates of pay, such personnel as it deems necessary for the agency to carry out its functions.

"(C) The establishment of an accrediting agency under subparagraph (A) shall be for such period (but not more

Digitized by Google

than three years) as the Secretary prescribes. If an accrediting agency has been established by the Secretary an entity may apply for designation as such agency upon the termination of the period for which the accrediting agency was established. If no entity submits an approvable application for designation before the date of such termination, the Secretary shall renew the authority of the established accrediting agency for a period not to exceed three years.

"ESTABLISHMENT OF POSITIONS FOR MEDICAL RESIDENCY TRAINING PROGRAMS

"SEC. 1703. (a) (1) For purposes of this title, the Secretary shall, by April 1, 1977, with the approval of the agency designated or established by him under this section, (A) establish (and publish in the Federal Register) the aggregate number of all positions which may be occupied in the first fiscal year beginning not less than twelve months after such date in accredited medical residency training programs and the total number of first-year positions in such programs which may be made available in such fiscal year; and (B) establish, and give to each entity which maintains such a program, written notice of the number of all positions in its medical residency training program which may be occupied in such fiscal year and the number of first-year positions which it may make available in such program in such fiscal year. The numbers of positions so established

Digitized by Google

for any fiscal year thereafter shall be published in the Federal Register not later than April 1 of the preceding calendar year and each entity which maintains an accredited medical residency training program shall be given written notice by such date of the numbers of such positions for its program for such fiscal year.

"(2) The Secretary's and the designated or established agency's determinations under clause (A) of paragraph (1) in any year shall be based on his estimate of the number of graduates from schools of medicine in the fiscal year which began in the preceding calendar year, and the number of positions in medical residency training programs occupied in such fiscal year. In making their determinations under paragraph (1) in any year, the Secretary and the designated or established agency shall—

"(A) take into consideration the report made with respect to the study conducted under section 15(c) of the Act of December 30, 1973 (Public Law 93-233), and the annual reports of the Secretary under section 703 of the Health Manpower Act of 1975;

"(B) seek to insure that positions in medical residency training programs are distributed equitably throughout various geographical areas of the United States;

Digitized by Google

"(C) afford special consideration to positions in medical residency training programs maintained in conjunction with area health education centers under section 783 of this Act; and

"(D) afford particular attention to the need for medical residency training programs in the primary health care specialties of general internal medicine, general pediatrics, family medicine, and obstetrics and gynecology.

"(b) (1) Not later than September 30, 1975, the Secretary shall prescribe and publish in the Federal Register requirements which must be met by an entity before it may be designated as the agency to establish hereunder the number of positions which may be occupied or made available in medical residency training programs accredited pursuant to section 1702. Such requirements shall provide that an entity have a governing body which is comprised of the Secretary (or his delegate) and representatives of the medical profession, medical specialty boards, medical specialty societies, hospitals, schools of medicine, and the general public.

"(2) (A) If the coordinating council for medical education has submitted an application for designation under this section to the Secretary before December 31, 1975, and—

Digitized by Google

"(i) if the Secretary determines that the coordinating council meets the requirements prescribed under paragraph (1), he shall approve such application and designate it; or

"(ii) if the Secretary finds that the coordinating council does not meet such requirements, he shall provide it with such technical and other nonfinancial assistance as may be appropriate to enable it to meet such requirements, and if the Secretary determines not later than February 20, 1976, that it meets such requirements, he shall designate it.

"(B) If, by February 29, 1976, the Secretary has not designated the coordinating council for medical education pursuant to subparagraph (A), he shall as soon as practicable establish an agency consisting of the Assistant Secretary of Health and the Administrator of the Health Resources Administration from the Department of Health, Education, and Welfare, the Chief Medical Director of the Veterans' Administration, and the President of the Uniformed Services University of the Health Sciences, all ex officio, nonvoting members, and nineteen members appointed by the Secretary. Of the nineteen appointed members,

"(A) ten shall be appointed from lists of nominees submitted by the American Medical Association, the American Hospital Association, the Association of Amer-

Digitized by Google

ican Medical Colleges, the American Board of Medical Specialties, and the Council on Medical Specialty Societies, each such list to contain four or more nominees and two appointees to be appointed from each such list;

"(B) one each shall be appointed from lists of two or more nominees submitted by the American Osteopathic Association and the American Association of Colleges of Osteopathic Medicine;

"(C) six, none of whom may be providers of health care, shall be representatives of consumers of health care; and

"(D) one shall be in a full-time medical residency position.

"(3)(A) A designation of the coordinating council for medical education under paragraph (2) shall be in effect for three years unless the Secretary terminates such designation before the expiration of three years upon a determination by the Secretary (after notice and reasonable opportunity for a public hearing) that the agency no longer meets the requirements of paragraph (1) or is not qualified to pass upon the number of positions in medical residency training programs accredited pursuant to section 1702. Such a designation may, upon application, be renewed for a period of three years.

Digitized by Google

"(B) If the Secretary terminates such a designation or determines the designated agency is not qualified to have its designation renewed, the Secretary shall publish notice of such termination or determination.

"(4) (A) If upon the expiration of a designation under this section, the Secretary determines that the designated agency is not qualified to have its designation renewed, or upon the termination of such a designation, the Secretary shall, within three months of such determination, establish an agency as provided in paragraph (2) (B) to pass upon the numbers of positions in medical residency training programs accredited pursuant to section 1702.

"(B) While away from their homes or regular places of business in the performance of services for the agency, members of an agency established pursuant to paragraph (2) (B) shall be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as persons employed intermittently in the Government service are allowed expenses under section 5703 (b) of title 5 of the United States Code. The agency may appoint, without regard to the provisions of title 5, United States Code, respecting appointments in the competitive service, and pay, without regard to the provisions of such title respecting rates of pay, such personnel as it deems necessary for the agency to carry out its functions.

Digitized by Google

"(C) The establishment of an agency under paragraph (2) (B) shall be for such period (but not more than three years) as the Secretary prescribes. If such an agency has been established by the Secretary the coordinating council for medical education may apply for designation as such agency upon the termination of the period for which the agency was established. If the council does not submit such an approvable application for designation before the date of such termination, the Secretary shall renew the authority of the established agency for a period not to exceed three years.

"(5) The Secretary may make grants to the coordinating council for medical education if designated under this section for its costs in carrying out its functions under this section. Any such grant shall cover the council's costs incurred in carrying out such functions for a period of not to exceed one year; and no such grant for any year may exceed $300,000.".

ADMISSION OF ALIEN DOCTORS

SEC. 602. (a) Section 212 (a) of the Immigration and Nationality Act (8 U.S.C. 1182) is amended by renumbering paragraphs (15) through (31) as (16) through (32), respectively, and by inserting after paragraph (14) the following:

"(15) (A) Aliens who are members of the medical profession, unless the Attorney General finds, after con-

Digitized by Google

sultation with the Secretary of Health, Education, and Welfare, that—

"(i) the alien has passed parts I and II of the National Board of Medical Examiners Examination; and

"(ii) the alien has demonstrated competency in oral and written English; and

"(iii) the admission of the alien will not lead to a surplus of practitioners in a specialty area or geographical area in which there is no present or projected need.

"(B) The exclusion of aliens under this paragraph shall apply only to (i) special immigrants defined in section 101(a)(27)(A) (other than the parents, spouses, or children of United States citizens or of aliens lawfully admitted to the United States for permanent residence), (ii) to preference immigrant aliens described in section 203(a)(3) and (6), and (iii) to nonpreference immigrant aliens described in section 203(a)(8);".

(b) Section 212(a)(14) of the Immigration and Nationality Act is amended by inserting "(except aliens described in paragraph (15))" after "Aliens".

(c) The amendments made by this section shall take effect July 1, 1975.

REPORT ON HEALTH MANPOWER

SEC. 603. (a) The Secretary shall not later than June 30 of 1976, and of each year thereafter, report to the Congress on the supply of personnel of the various health professions, and of the various specialty groups within each profession, as of the end of the preceding calendar year, the distribution of such personnel and members of such groups within various geographical areas of the United States, the need for such personnel and members in the United States and in such area, the extent to which the anticipated additions of such personnel and members from the various training programs is likely to meet such needs, and other data relevant to the need for training of additional such personnel and members of such groups or redistribution thereof.

(b) Such report shall be made only after approval by a commission of ten persons not otherwise in the regular full-time employ of the United States, appointed by the Secretary, who by their training and experience are eminently qualified to assess health personnel supply and needs. Members of such commission while serving on business of the commission away from their homes or regular places of business shall be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as persons employed intermittently in the Government service are allowed expenses under section 5703 (b) of title 5 of the United States Code.

IDENTICAL AND SIMILAR BILLS BEING CONSIDERED BY THE SUBCOMMITTEE

H.R. 242, introduced by Mr. Downing on January 14, 1975;
H.R. 872, introduced by Mr. Price on January 14, 1975;
H.R. 1443, introduced by Mr. Carter on January 15, 1975;
H.R. 2304, introduced by Mrs. Burke of California on January 29, 1975;
H.R. 2306, introduced by Mr. Carter on January 29, 1975;
H.R. 2432, introduced by Mr. Dodd on January 30, 1975;
H.R. 2657, introduced by Mr. Dodd on February 4, 1975;
H.R. 2691, introduced by Mr. Lehman on February 4, 1975;
H.R. 2710, introduced by Mr. Pepper on February 4, 1975; and
H.R. 3268, introduced by Mr. Patten on February 19, 1975.

Mr. ROGERS. As our first witness today, I am pleased to welcome back—and wish to thank him for his continuing patience for the long hours involved—the distinguished Secretary of Health, Education, and Welfare, the Honorable Caspar Weinberger.

The Secretary is accompanied by Dr. Theodore Cooper, Acting Assistant Secretary for Health; Mr. Stephen Kurzman, Assistant Secretary for Legislation; and Dr. Stuart Altman, Deputy Assistant Secretary for Health Planning and Analysis.

We welcome all of you, and the committee will be pleased to receive your testimony.

STATEMENT OF HON. CASPAR W. WEINBERGER, SECRETARY, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, ACCOMPANIED BY THEODORE COOPER, M.D., ACTING ASSISTANT SECRETARY FOR HEALTH; STEPHEN KURZMAN, ASSISTANT SECRETARY FOR LEGISLATION; STUART ALTMAN, M.D., DEPUTY ASSISTANT SECRETARY FOR HEALTH PLANNING AND ANALYSIS; AND KENNETH M. ENDICOTT, M.D., ADMINISTRATOR, HEALTH RESOURCES ADMINISTRATION

Secretary WEINBERGER. Thank you, Mr. Chairman. We are pleased to discuss these matters with you.

I do have a long statement which you have before you. I will try to shorten it in the presentation. However, there are a large number of separate topics, so we will spend some time going through those. And the same as yesterday, if there are questions you would like to ask, I hope you won't hesitate to break in.

Three bills that are before you, the ones you have identified, and the administration's bills, entitled "The Comprehensive Health Professions Act of 1975" and the "National Health Service Corps Amendments of 1975," will be submitted to Congress within a week. [See p. 342.]

As we pointed out during our appearance last May when similar legislation was considered, although we did not fully agree with some of the provisions in bills similar to H.R. 2956 and H.R. 2957, the approach taken by these bills conforms in a number of areas to the administration's approach. Mr. Chairman, it remains our hope that we can work together to address constructively the complex health manpower issues confronting the Nation.

Before presenting our specific comments on the bills before you today, I think it would be useful to summarize briefly what we continue to feel are the major issues which surround new health manpower legislation.

Digitized by Google

Over the past decade, the nature and extent of Federal intervention in the health care system and its associated education and training programs have grown substantially. Only 10 years ago, the Health Professions Educational Assistance Act marked the beginning of the Federal role in providing direct support for the education of health professionals. Numerous studies had concluded that a health crisis would result unless the production of physicians was substantially increased. Initially, therefore, the primary objective of the Federal health manpower effort was to increase the aggregate supply of health manpower.

The Health Professions Educational Assistance Act was amended at various times to provide for the support of activities to demonstrate selected improvements in health manpower education, such as curriculum reform, maintenance of accreditation, relief of financial distress, and the recruitment of minorities. In 1971, the Federal role for the first time was expanded to provide basic operational support to the schools.

In 1969, concern over the issue of supply adequacy was intensified. Reports from both Government and nongovernmental groups suggested that there was a shortage of approximately 50,000 physicians, 200,000 nurses, and almost 150,000 technicians. In 1970, the Carnegie Commission issued a report which concluded that medical and dental education were inadequately funded and recommended that the Federal Government increase its role in the financing of health manpower education.

I would like to point out that while many of the studies have been helpful in highlighting certain manpower problems, for the most part, they only concentrated on aggregate numbers and provider-population ratios. Such undertakings fail to deal with the very complex questions of appropriate manpower utilization, for example, increased productivity, that can be obtained through various methods, and the proper use of allied health professionals, improved health delivery systems, and distribution. In 1971 the Comprehensive Health Manpower Training Act provided for the first time Federal operational support of schools of the health professions.

CHANGES IN THE TRAINING OF HEALTH MANPOWER

As we pointed out in earlier testimony before the subcommittee, health manpower training programs have experienced significant changes over the past 10 years. First, there has been a substantial increase in the national capacity to train health professionals.

Since 1963, Federal programs have assisted in the building of 21 medical schools, 9 dental schools, 1 school of osteopathy, and 1 school of veterinary medicine. Federal financial assistance has been provided to help create about 1,600 annual medical and 650 dental school slots.

Second, enrollment has increased significantly for schools of medicine, dentistry, and nursing. First-year medical school places have grown from 8,759 in 1965 to 14,153 in 1973–74. It is impossible to measure the exact impact of Federal programs in this increase. Nevertheless, we believe that our efforts have had a significant impact. Where first-year enrollment rose at an annual rate of 1.3 percent between 1950 and 1965, the annual growth since 1965 has been about 6.6 percent.

Digitized by Google

Third, minority group enrollment has risen substantially in medical and dental schools although it cannot be directly traced to Federal programs. First-year enrollment of black students in U.S. medical schools has increased from 4.2 percent in academic year 1969–70 to 7.2 percent in academic year 1973–74. There has also been a significant increase in the enrollment of women in medical schools from 9.1 percent in 1969–70 to 19.7 percent in 1973–74.

The ready availability of Federal funds, including medicare and medicaid reimbursement, has produced only limited cost consciousness in the health professional schools and, accordingly, we have seen the cost of such education rise substantially. Over the past 10 years, annual Federal obligations for health manpower programs, not including research training, mental health manpower or nursing, have grown from $65 million in 1963 to $525 million in 1974.

Between 1963 and 1973, a total of approximately $3.4 billion was obligated for the training of health professionals. Federal funds from all sources now account for nearly 50 percent of the revenue to U.S. medical schools, making the Federal Government the largest single supporter of medical schools. The programs providing support through the legislation being considered today amount to only between 5 and 10 percent of the schools' total revenue.

But even with this large investment in terms of Federal dollars, health professions education programs have had only very limited success in addressing issues beyond that of increasing numbers of health professionals. With the exception of expenditures for biomedical research, most Federal spending for health professional schools has gone for general institutional support rather than being directed toward solving specific problems. With the exception of recent programs in family medicine residency training, Federal programs have simply not been geared toward solving the problems of specialty allocation. Nor have Federal funds been focused on the need to provide additional health professionals to meet Federal direct health care responsibilities, for example, the Indian Health Service and the Veterans' Administration.

Furthermore, geographic distribution of health care providers has not been affected significantly by Federal policies which have relied upon loan forgiveness as the principal mechanism for change. Since 1965, 170,000 students were provided loans under the Health Professions Educational Assistance Act loan program which contained a forgiveness provision to encourage graduates to locate in medically underserved areas. While we cannot, of course, draw definitive conclusions about this program, since many of those who have taken out loans are still in training, it is important to note that since 1965 very few graduates have taken advantage of the loan-forgiveness provision.

This situation could be caused by the fact that the amount of student indebtedness has been quite small and the length of service requirement has been disproportionately burdensome when viewed in terms of the amount to be repaid. However, the expanded repayment provisions of the 1971 act, which allow Federal repayment of up to 85 percent of any educational loan, would seem to be more attractive.

Since the regulations were announced, almost 1,000 applications have been received. The requests far outstripped our expectations.

Digitized by Google

Whereas, we had budgeted about $500,000 for loan repayments in fiscal year 1975, using the experience of the past forgiveness program, we now believe that we will have to allocate about $3.5 million for this program this year. So, a great many more people are applying for this program and we hope it will have a more substantial effect than the other program. For fiscal year 1976, $6 million is being requested for this activity for health professions students, and an addditional $2.5 million for nursing students.

Mr. Chairman, last May we presented our views on the issues involving setting the appropriate future Federal role in the development of health manpower. We believed then and believe now that the critical issues which must be addressed involve (1) adequacy of supply; (2) foreign medical graduate—(FMG)—quality; (3) geographic and specialty distribution; (4) productivity; and (5) equity.

ADEQUACY OF SUPPLY

With respect to the supply of health professionals, we find that, in general, the allied health and nursing professions adjust reasonably well to market demands without substantial Federal assistance. The shortness and relatively low cost of these training programs, together with localized demand, contribute to this response. Both public and private training institutions have responded quickly as the demand for nurses annd allied health personnel grew.

Based on current projections which assume maintenance of our current and planned output capacity, we anticipate nearly a 60 percent increase in registered nurses from 1970 to 1985. For these reasons, continuing Federal subsidies are not necessary for these fields, in our opinion.

With respect to the medical and dental professions, we have developed a series of manpower supply and requirement projections. These projections indicate that if we maintain our present and planned output capacity, we can expect by 1985 to have increased the number of physicians by more than 50 percent and dentists by 40 percent. While about 9,000 graduated from medical school in 1971, the expected number of graduates in 1977 will be in excess of 13,000. The pipeline to train physicians is now in place and we are just beginning to feel its impact. Thus, in terms of absolute numbers, the U.S. physician pool is expected to be between 495,000 and 520,000 and the U.S. dental pool 140,000 by 1985, up from 323,000 and 102,220 respectively, in 1970. With respect to nursing, we estimate this pool to range between 1,000,000 to 1,100,000 individuals in 1980, up from the 720,000 in 1970.

Projected increases in physician supply are even more significant when viewed in connection with the expected population growth. Assuming a population growth rate of slightly greater than 1 percent, the physician population ratio will increase substantially from 158 per 100,000 in 1970 to between 207 and 217 in 1985. These rates would place the United States near the top of all the industrialized nations in terms of overall physician supply.

We have also considered how changes in insurance coverage and provider productivity may affect manpower requirements. Using what we consider to be a reasonable range of estimates for demand and productivity increases, we estimate that by 1980, physician requirements

Digitized by Google

will be between 400,000 and 450,000. This compares to a supply projection of between 435,000 and 450,000 for 1980. This supply projection assumed that the 1975 medical school capacity would be maintained. If the annual rate of enrollment increases of the past 5 years of over 6 percent were to continue, however, we would increase the already present likelihood of an excess above the number of health professionals needed, especially physicians and nurses.

A surplus of health professionals may at first seem attractive but upon more careful examination several undesirable consequences emerge. Because physicians tend to have considerable control over the volume and mix of services they deliver, and the pricing of these services, a surplus of physicians is likely to yield:

(1) an increase rather than decrease in the total and perhaps even per unit cost of health services—each graduate is expected to generate $100,000–$200,000 per year in fees and services;

(2) a reduction in productivity, which may affect the quality of care rendered; and

(3) a displacement of other types of health manpower from their roles in the health delivery system—for example, the physician extender.

These supply and requirement projections obviously raise the critical question of whether the Federal Government should continue to follow policies which would encourage continued expansion in the output capacity of U.S. health professional schools.

As you will see, we believe it should not. I have in mind particularly the problems that resulted from continuing too long funding of space scientists and others. We have substantial surpluses and different problems for people in those professions and certainly no lessening of inflation as a result. We would think the same thing would happen if we funded increased capacity for health professions schools too long. The problem is complex because of the length of time involved and the productivity rates.

But we think we are on a path that would bring us out where we should be and should have that in mind when viewing proposals to increase substantially supply capacities in the schools.

FOREIGN MEDICAL GRADUATE QUALITY

On foreign medical graduate quality—these supply projections for physicians, which I have just discussed, take into account the future inflow of foreign trained physicians, a subject of significant concern to this subcommittee. Increases in the numbers of U.S. graduates and the likely actions of both the private and public sectors in addressing the training of graduate physicians, both foreign and domestic educated, may well produce a downward trend in the influx of foreign medical graduates. Our estimates take into account a possible reduction by as much as 40 percent of the fiscal year 1972 level.

Since the mid-1960's FMG's have been entering this country at approximately the same level as U.S. medical school graduates. The increase in the inflow of FMG's resulted from the change in the immigration laws which permitted much higher levels of immigration from the Eastern hemisphere, particularly Asia. The increased numbers of foreign-trained physicians has resulted in concern expressed in a number of quarters that feel the high utilization of FMG's in this country is undesirable. Some are morally concerned with the "brain drain"

Digitized by Google

from underdeveloped countries, some with the fact that U.S. citizens are being denied a medical education and that others with a belief that patient care provided by FMG's is of poorer quality.

I think that is absurd. I think we have not the right to discourage anyone from coming to the United States if they wish to do so. I think that is not a contention that is constrainable.

I feel strongly that we should not restrict qualified foreign physicians from immigrating to this country. A fundamental strength of this country has been that it has permitted individuals to enter freely. Through such policy both the individual and this country have benefited greatly. I am equally strong in my belief that those foreign physicians who are allowed to practice here meet the same rigorous standards that we have for U.S. graduates.

Although there is no definitive work indicating that FMG's are of an inferior quality, the quality issue is of major concern to the Department as FMG's do not pass the same examination before entry into a residency program and many FMG's are providing care over a long period of time in governmental institutions on a restricted license. Under existing authorities, the Department is undertaking a number of actions to assure the quality of care provided by FMG's. They include the following:

(1) Working with appropriate organizations to establish a new qualifying examination for all U.S. medical graduates and foreign medical graduates for entrance into graduate medical education—such an examination will assure that all interns and residents are capable of providing patient care. The Department is actively engaged with the Board of Medical Examiners in developing this examination.

(2) Strengthening the residency training of foreign medical graduates who pass the qualifying examinations.

(3) Exploring the use of reimbursement mechanisms to achieve compliance with quality measures. Of course, our PSRO program will help to improve the quality of all medical care.

In addition, the Department is also considering whether changes in current immigration policies are warranted. We plan to discuss options with the Departments of State, Labor, and Justice before proposing anything to the Congress.

Examples of the kinds of things we would be considering but to which we are now not committed are:

(1) Removing physicians from the national shortage list developed by the Labor Department; and

(2) Modifying the educational exchange program to make conversion to immigration status more difficult by requiring individuals to return home after completing their residency training and to train such physicians only in specialties needed in their home country, and so on. I think removal of physicians from the national shortage list may be beneficial at this time.

Through these quality enhancements and other possible actions, the flow of FMG's into the United States may fall substantially. We are concerned that an abrupt cutoff in the flow of FMG's will adversely affect the quantity and quality of health care provided to those populations, often the poor and the elderly, now being served by FMG's. To soften this impact, we will utilize special projects to fund special training programs to upgrade the skills of FMG's currently employed,

Digitized by Google

but not fully licensed, in State and municipal institutions. This can be done within the President's 1976 requested funding level.

Before leaving this topic, I think any blanket method to keep out the foreign medical graduate, I would oppose. But I see no reason why those students should not pass exactly the same examination that U.S. students do before they are allowed to practice medicine.

Mr. ROGERS. May I ask one question there?

Secretary WEINBERGER. Yes, sir.

Mr. ROGERS. Does your projection for the number of physicians include FMG's?

Secretary WEINBERGER. Yes, at a reduced rate of inflow. Roughly 40 percent less than the present stream.

Mr. ROGERS. Your projections do include 60 percent of the present levels of FMG's?

Secretary WEINBERGER. Yes.

Mr. ROGERS. Now, if the immigration policy were to be changed, in other words, if we allowed FMG's to come for training but not to remain except under special circumstances, that would have a rather significant impact on the projection, would it not?

Secretary WEINBERGER. Yes, and I would not favor that kind of projection. It is an unjustified departure from the kind of policy that had a great deal to do with building America.

Mr. ROGERS. I think we have already taken this stand with respect to other labor markets. Right now it is very difficult to get a work permit for any immigrant coming into the country because of unemployment.

I think it would be well if you could project for us—I assume it wouldn't be difficult—what would happen if we passed this legislation with the change in the immigration policy which was projected by the Senate last year in their bill. This committee, I think, is not opposed to considering it as well.

Secretary WEINBERGER. We will get those projections.

[The following information was received for the record:]

IMPACT OF SENATE RESTRICTIONS ON IMMIGRATION FOR PHYSICIAN SUPPLY IN THE UNITED STATES

Senate bill would require all FMGs entering this country as immigrants to pass Parts I and II of the National Boards. Currently, FMGs take a special, relatively easy examination, the ECFMG, as a requirement for entry into graduate medical training.

Based upon the performance on the ECFMG and the Federal Licensure Examination (Flex), estimates have been made by the National Board of Medical Examiners and DHEW on the number of FMGs who would pass Parts I and II. These studies suggest that only 20 to 25 percent of all FMGs that have passed the ECFMG would be successful on Parts I and II of the National Boards. Accordingly, this would lead us to predict, at least initially, that 75 to 80 percent of the physician immigrants entering the U.S. for the first time would not be eligible for graduate training. However, over time, we expect the foreign medical schools to modify their curriculum in order to increase the passing rate. This could produce a significant increase in the number passing after a few years.

If an 80 percent decrease in newly entering immigrants occurred, this would reduce the net annual increase of FMGs in the U.S. from 5500 to about 2500, or by 3000 annually. As the Department's physician supply projection assumed an annual reduction of 2000 the net impact on the supply projections would be a 1000 physician reduction annually. This would result in an expected physician supply of 427,000 in 1980 and 485,000 in 1985. Finally, if the examination results were to pertain to all entering physicians, that is those that enter on J and H visas as well as immigrants, the impact on our physician supply projections would be substantially greater.

Digitized by Google

Secretary WEINBERGER. I would suggest to you that there are very substantial differences between immigration policies affecting construction workers and immigration policies affecting physicians. We would be concerned that all doctors be equal. We have to bear in mind a lot of foreign medical graduates are American citizens.

Mr. ROGERS. I understand that. That would perhaps be of some consideration. What do we have, about a thousand American FMG's returning each year?

Dr. COOPER. Our preliminary projection is that that would be down to 25 percent of the current flow.

Secretary WEINBERGER. The kind you describe.

Mr. ROGERS. If you could project those in actual figures I think that would be helpful.

Secretary WEINBERGER. One, you could remove them from the shortage list and the other, put in the provision about requiring them to go home after their training period. We have quite a range of assumptions.

[The following information was received for the record:]

U.S. CITIZENS STUDYING MEDICINE ABROAD AND RETURNING TO THE UNITED STATES

Although precise figures are not available, about 900 U.S. citizens might have returned to the U.S. in 1974 either to continue their undergraduate medical education or to begin graduate training. Over 250 U.S. citizens studying medicine abroad transferred to U.S. medical schools through the COTRANS program. Also, over 600 U.S. citizens passed the ECFMG examination, which allows them to enter into approved graduate training positions.

Mr. ROGERS. One of the concerns that has been expressed is the fact that many experts don't feel that the education in many instances has been comparable to American medical education that is given; and that many FMG's may not be able to speak the language well.

Secretary WEINBERGER. Of course the point I made in the testimony is to the extent there is any difference—as there is now—that we do have a uniform, high standard of test for all points of the career, at particularly the beginning of the career when the actual practice of medicine starts. This appears during residency and in some cases during internship.

As far as the language is concerned, the test would be administered in English and, therefore, there would have to be a proficiency in the English language. Instruction is given in English so there is an assumption there is that proficiency. And, as mentioned, a lot of them are American citizens going abroad for training.

Mr. ROGERS. I don't think it is too large a percentage of the total. Isn't it about 10 percent?

Secretary WEINBERGER. That is a significant number.

Mr. ROGERS. I understand the test scores indicate that only about 50 percent of foreign trained physicians pass the examination, whereas 90 percent of U.S. students pass an equivalent examination.

Secretary WEINBERGER. No one who is unable to pass the test should practice medicine. I think we have to get the test in at an early stage before anyone practices medicine.

Mr. CARTER. On that very thing, I know you said the flow of foreign graduates—although you didn't want to limit the number—would diminish in the next few years. What is your basis for that?

Digitized by Google

Secretary WEINBERGER. I think some of the points the chairman has made are——

Mr. CARTER. Why will they diminish?

Secretary WEINBERGER. I think because at this point there is not a testing early enough in the educational process to require them to pass a test before they enter upon practice. That would be one thing. They are now able to practice in the internships and residency and in some institutions of State Government without passing the qualifying examinations that domestic trained physicians have to pass.

The other would be a change in the immigration policies. If you remove the physicians shortage provision, few would be able to qualify under the existing immigration laws to enter.

Mr. CARTER. That is true, but I don't know you would recommend that.

You were commenting upon the quality of those particular physicians. I would tell you many go into the field of psychiatry and we find them in State institutions throughout the country. One of the basic requirements of the psychiatrist is to be able to communicate with the patient. The patients are at a total loss in many cases.

Secretary WEINBERGER. That is right, but we talked about English as part of the test. In many State institutions the foreign-speaking population is large and some of those doctors are assigned——

Mr. CARTER. I assure you in Kentucky we don't have a large foreign population, but we do have a large number of FMG's in institutions.

Secretary WEINBERGER. There are State licensing boards to test their proficiency.

Mr. CARTER. It is quite a problem, a severe problem.

I would like to ask you another question. What foreign medical college supplies most of our FMG's?

Secretary WEINBERGER. Mexico City, I believe.

Dr. COOPER. No; it is Guadalajara.

Mr. CARTER. How many does it furnish each year?

Secretary WEINBERGER. Somewhere in the neighborhood of 3,000 or 4,000.

Dr. COOPER. About 30 percent of all——

Mr. CARTER. I mean Guadalajara. How many come from Guadalajara?

Dr. COOPER. Approximately 400 per year.

Mr. CARTER. It is a pretty good school?

Secretary WEINBERGER. The largest in the world, I believe.

Mr. CARTER. What about its rating?

Secretary WEINBERGER. Again, under the provisions we are proposing, the graduate would be subjected to the same test as the American graduates and could not practice in a residency or otherwise until they had passed the test of proficiency.

Mr. ROGERS. Would you confirm for us—we understand 30,000 foreign trained physicians have applied to take the examination as of this last month. Is that a correct figure?

Dr. COOPER. That is correct.

Mr. ROGERS. Thank you.

Secretary WEINBERGER. That is from all over the world.

Digitized by Google

GEOGRAPHIC AND SPECIALTY DISTRIBUTION

On geographic distribution, in the past, Federal policies toward specialty and geographic distribution of health professionals have relied too heavily on a notion that an increase in total supply would solve the distributional problems. If large enough numbers of health professionals are produced, it was reasoned, competitive pressure would force them to practice in nonmetropolitan areas and in the medical specialties that offer lower income potentials, longer working hours, and/or relatively lower levels of prestige. Experience has shown this reasoning to be incorrect.

During the 1960's and 1970's, while there was a significant increase in the supply of physicans, the absolute number of primary care physicians decreased sharply. There are, for example, strong indications to suggest that we are training too many of certain specialists. A number of professional specialty associations are increasingly concerned about the likelihood of oversupply in their specialties. As a result of this oversupply of certain specialists, primary care is often delivered by high-priced specialists in expensive settings and, in addition, it may be of lower quality.

On the geographic side, while we have experienced a significant increase in our physician-population ratio during the 1960's and early 1970's, disparities in the distribution of physicians by States has actually worsened. Population groups in rural areas and in the inner city have had difficulty gaining access to health care.

Policies aimed at solving the problem of geographic and specialty maldistribution which concentrate on increasing the aggregate supply of health manpower probably will continue to be extremely expensive and largely ineffective.

PRODUCTIVITY

Sheer numbers do not seem to be the answer. Increased physician and dentist productivity, on the other hand, may have the potential to contain the cost of medical services. Even more important, increased productivity may lower the levels of health professionals required. If, for example, annual physician productivity, as measured by physician visits, were to increase by 1 percent annually for 10 years, over 30,000 fewer physicians would be needed to provide the same total number of visits. This is a goal clearly within our grasp.

It is now well documented that many tasks performed by physicians and dentists can be performed by health personnel who require a shorter period of training. Yet, there is evidence that physicians and dentists are employing and utilizing effectively too few assistants and that by increasing the number of assistants they use, they could greatly increase their output.

In addition, physician assistants, nurse practitioners, and expanded dental auxiliaries offer even greater potential for productivity increases than traditional aides. Dentists practicing with teams of four specialty trained auxiliaries have been known to increase their productivity by 130 percent over that of the dentists working alone or with only one chairside assistant.

Other studies have shown that a physician assistant can increase a physician's productivity by between 30 and 70 percent.

Digitized by Google

Therefore, it is in the interest of the Federal Government to continue to address the issue of appropriate task delegation and non-physician training programs, and that we are doing.

EQUITY

As a generalization, schools of the health professions are tending to look increasingly for Federal support as a primary source of income for many programs and have sought non-Federal support to meet financing requirements unmet by the Federal Government.

From 1959 to 1970, Federal support increased from 29.5 percent of the total income for medical schools to almost 50 percent. At the same time, State appropriations remained constant at 15 percent and tuition income decreased from 7.6 percent to 3.7 percent. It should be noted, however, that these figures relate to income from all sources.

Students of health professional schools have not been asked to assume a proportionate share of their increased educational costs. A review of the distribution of tuition charges by schools shows that 80 percent of the publicly supported institutions plan next year to charge resident students $1,200 or less, with 70 percent of the private schools expected to charge $3,000 or less. In view of the high earnings of health professionals, particularly physicians and dentists, and the relatively low educational costs they bear, the rate of return on a basic medical and dental education has been estimated to be two to three times that of graduate education generally.

Stated another way, the full personal investment in a medical education can be recouped on the average with 5 years of practice. Moreover, interest in these career fields is increasing. An example of the attraction of these professions is the ratio of the applicants to places—currently approximately 3 to 1—and increasing steadily. Also, an examination of the stated career plans of today's undergraduate student population reveals that enthusiasm for a health profession education and career is rising dramatically. Moreover, the health professions have experienced Federal financial support in major ways not generally available to other fields of education and training.

HEALTH MANPOWER OBJECTIVES

On health manpower objectives, after a thorough analysis of these issues, we have concluded that Federal support to health professions education should meet the following objectives:

(1) Encourage the maintenance of existing enrollment levels of critical health professional schools.

(2) Target Federal support on distribution, both specialty and geographic, through special project funding and service scholarships.

(3) Increase provider productivity through more efficient use of paramedical personnel through support of demonstration efforts; and

(4) Reduce unnecessary and inequitable Federal subsidies for health professional schools and students, because we believe students will enter without a subsidy under current conditions.

When we evaluated the alternative ways to meet these objectives, it became increasingly clear that the solutions to many of today's major issues would not be simple. Health manpower problems cannot be

Digitized by Google

attributed to any single cause but, in our view, are structural conditions of our complex, pluralistic, largely private national health care system. It is unlikely that any single solution will resolve these complex problems.

Our approach is to reinforce and facilitate those changes that will most effectively contribute to a resolution of the more persistent service delivery problems.

Two basic ways to provide support to solve persistent health professional training problems are direct grants to institutions or direct assistance to students. We weighted the efficacy of these two particular types of support apart from any budgetary implications. The question simply is, "What are the most effective funding mechanisms to accomplish the national objectives?" In the past year this question has become even more critical because of the Nation's serious economic difficulties.

Capitation grants to health professional schools can be viewed, at least in part, as a subsidization of enrolled students. Capitation grants also provide Federal funds to institutions without regard to their relative degrees of need. To the extent that health professional students are willing and able to pay, subsidization must be called into question. Of course, if training institutions are requested to take new actions, such as increasing enrollment which they would not otherwise undertake, one cannot view capitation as just a student subsidy.

In our view, capitation grants are less efficient than specially targeted projects in achieving changes that are necessary to address the major manpower problems of our country. Greater flexibility is necessary in negotiating with individual training institutions to mount innovative or special types of training projects. Special projects give us this flexibility. In such light, the current levels of capitation support are unnecessarily high. Given the relative levels of non-Federal sources of support (for example, State appropriations and tuition), the number of qualified applicants, and the public desire to maintain physician production, current levels of capitation are probably not needed to encourage health professional schools to maintain current enrollment levels.

Further, health professional students can and should be called upon to assume an increasing share of their educational costs. We are not asking students to pay for their entire educational costs. Capitation grants, which it should be noted amounted to about $2,000 in 1974 for schools of medicine, did not cover the entire costs either. Current tuitions covering only 10 or 20 percent of such costs are, in our view, much too low. Furthermore, the need and purpose of student assistance also have changed over the past decade; 10 years ago some health educators believed that scholarships and subsidized loans were necessary to assure enough qualified applicants. But today the high personal satisfaction and the anticipated financial rewards in all health professions are more than sufficient to attract adequate numbers of qualified applicants.

Instead, future Federal policy for health manpower student assistance should be directed toward achieving two goals:

(1) Equality of access to medical education, independent of students' financial resources. Access in this context does not mean a subsidy but the opportunity to obtain funds. As part of access, we should

Digitized by Google

have appropriate types and levels of support for economically disadvantaged students.

(2) Adequate numbers of health professionals to staff Federal program needs.

I have set forth these health manpower objectives and our approach in order to provide a framework for discussing the similarities and contrasts between our proposal and the corresponding bills pending before this subcommittee.

THE ADMINISTRATION PROPOSAL

Before proceeding to that discussion, Mr. Chairman, I would like to describe some of the major themes of the administration's proposal. Mr. Chairman, I would like to point out that—for the benefit of the new members of this committee—the proposal I will be discussing is identical to H.R. 14930, introduced at the request of the administration last May.

We feel that the changing nature of our health manpower problems necessitates a significant change in Federal policy direction and spending patterns. Federal dollars should be directed into new programs which promise to be effective in resolving the persistent manpower problems facing us and withdrawn from those that do not. Being cognizant that institutions, particularly complex ones like health science centers, need time to adjust, we will be phasing down or out of most old programs as we move into new areas.

Mr. ROGERS. May I ask one question at this point?

Secretary WEINBERGER. Yes, sir.

Mr. ROGERS. Didn't you say that 10 years ago health educators believed scholarships and loans were necessary?

Secretary WEINBERGER. That appeared to be the case.

Mr. ROGERS. Ten years ago we probably had more applicants than spaces, did we not?

Secretary WEINBERGER. I think that is so.

Mr. ROGERS. Hasn't that been the consistent pattern of schools, so that was not necessarily the basis for our action?

Secretary WEINBERGER. From the persistence with which the proposals were put forth for capitation and student subsidies, I think there was a feeling we had to do that to get students.

Mr. ROGERS. It was not the feeling that the capitation would attract more students, because we had and still have more requests than spots. It was the fact that 60 percent of the schools were in financial distress.

We said, "We will support medical schools because they are national resources. We are going to support medical education to improve that education so we can have good instructors who are not forced to divert their efforts into research in order to support medical education."

That was the basis and not because we were trying to get more students. We wanted to give them the capacity to increase enrollments.

Secretary WEINBERGER. Qualified applicants from medical schools did diminish during the sixties, and nurse applicants diminished substantially during that period. I don't think there was efficient use of funds in taking care of their problems.

We do have a table that shows in 1950 there were 3.6 applicants for one spot. From those 3.6 applicants to those accepted, the figure diminished to 1.9.

Digitized by Google

Mr. ROGERS. We also had more applicants than we had slots available.

Secretary WEINBERGER. But with the increased enrollment, I guess our feeling was some of the idea behind capitation was to get more students.

Mr. ROGERS. It was to open the schools to those being turned away. What is the ratio now?

Secretary WEINBERGER. Three to one now, I think, and probably climbing in view of the financial rewards.

Mr. ROGERS. I think tuition is rising now, is it not?

Secretary WEINBERGER. Yes.

Mr. ROGERS. Is not tuition increasing in all of the schools?

Mr. ENDICOTT. Yes, sir.

Secretary WEINBERGER. I think we have a problem of semantics. We are talking of accepted applicants.

Mr. CARTER. I believe we have six or seven applicants for every vacancy.

Mr. ROGERS. Mr. Florio?

Mr. FLORIO. Mr. Secretary, you mentioned the financial rewards that you say are coming to the medical profession and that you are concerned about the oversupply in the medical profession as a result of the enthusiasm for financial rewards.

Secretary WEINBERGER. Not yet.

Mr. FLORIO. Isn't it partly the financial rewards, aren't they attributing to the undersupply of the medical people at this point? Isn't that why the practice is so lucrative?

Secretary WEINBERGER. I wouldn't say so. I think there are Federal designs built into a lot of the medical programs, you have cost increases until recently that were out-racing the cost of living and setting all kinds of unpleasant records. You have a steadily increasing kind of built-in guaranteed demand. You have a lot of factors that make it a very attractive profession aside from the intrinsic attractiveness of it which is, of course, also there.

I think we would have to say that one of the major factors in increasing the number of applicants to such a wide degree over what it was just a few years ago is the fact it is one of the most lucrative professions there is.

I don't say that critically. It is just a fact. When you can get up to $40,000 or $45,000 income within the first year or so of your profession, it is attractive.

Mr. FLORIO. Just the divergence of the administration's general philosophy of supply and demand as being good things.

Secretary WEINBERGER. You don't have a free market in the health field when you have the Federal Government pumping $40 billion in in a year and other State governments adding to that, too, and then you have a series of Federal programs that encourage the most expensive modes of delivery of health care.

The problems of medicare are a whole separate set of subjects which I could go into if the chairman would allow me 4 hours.

There are a tremendous number of factors which are artificially distorting the market, so-called, but certainly they are there to an extent that doesn't require the Federal Government to encourage by

Digitized by Google

subsidies with scarce dollars anybody else to go into it. That is the point we were making.

Mr. FLORIO. Is not one of the factors in not having the free market situation as you described, the absence of competition which comes in part from the lack of supply in certain areas of specialty?

Secretary WEINBERGER. I don't think there is undersupply. We have to keep going under the projection we have and the pipeline is and should, properly, be long. We are concerned with the very recent experience of what happened with the Federal subsidies of secondary and elementary teachers and space scientists where the subsidies continue too long.

We ended up with major problems and those are things we can see ahead if we get into more efficient use of paramedicals, physician extenders, and personnel of that kind who can greatly increase the productivity of the physician.

Given all those things and the assumptions we ground into it, we think we will come out about even in the 1980's and, if we increase what we are doing now, by that time we will have substantial surpluses, even with national health insurance, which will not increase the demand enough to require more.

All these assumptions have been ground in and even though occassionally Government prophecy is not quite right, we think we are pretty accurate in our ability to project the future in this much smaller area than in the total economy.

Mr. HEFNER. Mr. Secretary, as Mr. Florio mentioned, in fact what you are saying to us is that we do have a danger that we could have too many doctors?

Secretary WEINBERGER. Very easily.

Mr. HEFNER. It could be that in the future doctors may not be able to charge exhorbitant fees. Competition would cause this and maybe people could get some health care that was more reasonable to them.

Secretary WEINBERGER. I have substantial qualms as to whether the normal free market apparatus would work if you had too many doctors. You don't have a great many things that characterize other parts of the industrial economy. You don't have advertising, you don't just wander in to a hospital when you want to go, you have to have a doctor who is on the staff and all the rest. You have a different set of factors involved plus very heavy governmental involvement in delivering and paying more and more for health care.

I don't think the way to lower health care cost is to get 10,000 too many physicians. I don't think it is going to work that way.

I think it will have an adverse effect on the quality of care if you do that.

You can argue all you want. Ten years ago I would have joined fully in any argument that decried the degree of Federal participation in all of this. But you are so far in now that you have to, I think, look ahead and base your assumptions on what is realistically to be anticipated for future legislation on a future path and try to predict where we will come out.

We have done that and I feel considerably more confident with the physician and manpower projections than I do with some of the economic and other projections where you have such a wide range of variables. You don't have that here.

Digitized by Google

I think these projections are accurate and I think, if we feel it necessary to subsidize and open 10 more medical schools, by 1990 we would have a great surplus of physicians. We would have a lot of doctors running around looking for things to do and not have better quality.

Dr. ALTMAN. In those areas which have the highest number of physicians relative to population, the cost of medicine is also highest. But the correlation seems to work opposite to other parts of the economy. One of the reasons is with reduced demand and the physician trying to keep his income at a level which he feels he deserves, there is a tendency to increase rates.

The Canadians also found this to be the case. They found with an increase in supply, there was an increase in the cost of medical care.

Mr. CARTER. On that very thing, isn't it true actually in those areas, your rates, your payments through medicare and medicaid are higher than they are in rural areas and other areas?

Secretary WEINBERGER. I am obviously not able to say what each rural area charges. We certainly have had a number of problems with medicare because of the initial design that virtually guaranteed payments. We are trying to overcome that now and, after 10 years, it is a long slow process.

Mr. FLORIO. There is one point the Secretary made about the fact of the Government's involvement in the medical field is in some way operating so to preclude a direct correlation between supply and demand, but isn't it the case that if there is a larger supply of physicians, Government involvement can be lessened with regard to setting fees for medicaid to a fair market value?

Secretary WEINBERGER. I have never seen any Government program adjusted except upward.

Mr. FLORIO. Hopefully that is what we are here for, to make the appropriate upward and downard adjustments.

Secretary WEINBERGER. I hope you are right.

Mr. HASTINGS. What is the average income of a physician in this country?

Secretary WEINBERGER. I guess it is $45,000.

Mr. HASTINGS. $45,000 in private, $65,000 in group practice. Is that substantial?

Secretary WEINBERGER. That plateau is reached much sooner in the health professions than in most of the others. That is an average, which means there are a few people above it.

Mr. HASTINGS. I understand.

And do we have a percentage figure that the Federal Government contributes to the total educational costs of a doctor as a percentage of the total cost of education?

Secretary WEINBERGER. For the years since medical assistance has been forthcoming from the Government on the scale it is now 50 percent.

Mr. HASTINGS. Does that include research, everything, grants to the schools, capitation, student assistance, loans, about 50 percent?

Secretary WEINBERGER. Yes.

Mr. HASTINGS. The Federal Government provided 50 percent of the educational costs to probably the highest paid profession in the country?

Secretary WEINBERGER. Yes.

Digitized by Google

Mr. HASTINGS. And it is not solving the problem of maldistribution and so on?

Secretary WEINBERGER. That is the point I was going to make. That is the point to which our bill is addressed and the things we hope we would accomplish.

Mr. CARTER. This is quite true, Mr. Secretary, that the Federal Government does pay 50 percent and has for the past 10 years.

Secretary WEINBERGER. Roughly, yes, sir. It started out at 30 percent in 1959, it is now 50 percent.

Mr. CARTER. And it has been at that level for the past 10 years or so. Still there are certain schools—the Federal Government, strangely enough, contributes more to than other medical schools; is that correct?

Secretary WEINBERGER. I think through the placement of projects, that is correct.

Mr. CARTER. What is the Federal contribution to Harvard, if I might ask?

Secretary WEINBERGER. I don't know, I could find out.

[The following information was received for the record:]

PERCENTAGE OF HARVARD MEDICAL SCHOOL'S OPERATING COSTS PROVIDED BY THE FEDERAL GOVERNMENT

Because the Federal Government does not compile information on the total budgets of individual schools of medicine and the portion of these budgets met from Federal funds, it is not possible for this Department to provide the percentage of Harvard Medical School's operating costs provided by the Federal Government. The Department does have information on *total DHEW obligations* to schools of medicine. In FY 1972, the latest year for which information is available, total DHEW obligations to Harvard Medical School were $25,364,000, broken down as follows:

	Amount (in thousands)
DHEW total	$25,364
NIH	21,505
BHRD	(1,910)
HSMHA	3,676
SRS	183

(Harvard Medical School ranked third among all medical schools in the U.S. in amount of DHEW obligations.)

Mr. CARTER. The last statistic on that was 70 percent. I don't know whether it has varied or not.

Secretary WEINBERGER. There certainly is probably a great many more Federal research projects and other things placed at Harvard, obviously because of their superiority.

But I think they also have, as far as I could gather from the letters I get every week, a substantial supply of outside income. I don't think they get 70 percent of their medical school income from the Government.

Mr. CARTER. Look it up and I think you will find I am correct. It has been correct, at least.

Secretary WEINBERGER. I will.

Dr. COOPER. I would like to make it clear when we talk of 50 percent of the costs, we are talking of total operating cost and not just educational costs.

Dr. ENDICOTT. I am uneasy with those figures. It isn't just a balance or mix of research, it is also influenced by a portion of Medicaid and

Digitized by Google

Medicare beneficiaries that the teaching hospital may provide services to. We are putting money into an institution that does three different things—research, education, and payment services—and there is Federal money flowing into all of these channels. The ranges are very substantial.

I wouldn't want us to go away leaving the impression that 50 percent Federal money going into the intitution means necessarily 50 percent of the educational costs. It is a very complex problem.

Secretary WEINBERGER. It is also an average and some schools are above and some below.

Mr. CARTER. This has been bandied about for ten years.

Mr. ROGERS. I think it might be well to let us know what services are being provided?

Dr. ENDICOTT. That is the most difficult figure to arrive at, the amount of funds going into the service dollar.

Mr. ROGERS. They have clinical centers and teaching hospitals and are delivering health care to people.

Dr. ALTMAN. We could estimate how much medicare gives to Harvard for medicare. We can't provide how much medicare and medicaid provide back into education. That is where we run into a problem.

Dr. ENDICOTT. As an example, some schools may have some responsibility for supervising the health services for as many as 8,000 beds of which perhaps not more than 2,000 are used for undergraduate medical education and, without a very extensive in-depth analysis, it is almost impossible to come up with anything other than crude approximations.

Mr. CARTER. With this you have your capitation, special project grants and so on. I maintain that my figures are correct.

Secretary WEINBERGER. I think perhaps the most illuminating study of those costs and sources of funds may well be the Institute of Medicine analysis which the Congress commissioned several years ago.

Mr. ROGERS. May I ask one other question and then we will proceed.

As I recall, there was an NIH study that projected a need for doctors presently at 30,000. Is that figure correct?

Secretary WEINBERGER. One of the earlier studies that I referred to, yes.

Mr. ROGERS. Wasn't it 50,000 a few years ago?

Mr. LYBRAND. That study included a range ranging from 4,000 to 30,000, depending on the kind of assumptions you would like to make.

Secretary WEINBERGER. The ratio is heavily involved. Whether you use 1 to 1,000, 1 to 2,000, rural areas, and so on.

Mr. ROGERS. I presume you are giving us figures that would not be at an undesirable ratio.

Secretary WEINBERGER. One study was done by NIH but what I think we have to understand is the ratio they used to get that 30,000 shortage was based on 1 physician per 1,000. I think there is a lot of discussion possible and a lot of argument back and forth as to whether that is necessarily a required ratio or a ratio that is effective.

We have the Health Service Corps that uses a ratio of about 1 to 2,000.

Mr. ROGERS. The Corps is not heavily funded yet.

Secretary WEINBERGER. That is just the figure, it has nothing to do with the experience. Your ratio can vary. If you used 1 to 2,500, your

Digitized by Google

shortage would be 1,800 doctors. So you have to build into these, I think, sir, the productivity increases that can come with a wider use of paramedical personnel and that is what we are trying to do.

Mr. ROGERS. You have included the productivity increases?

Secretary WEINBERGER. We have tried to indicate that as one of the factors that we think will be important in considering that by 1985 we will have enough. If you use that to a greater extent—which we think would be desirable—you would get to your surplus figure a little sooner and, allowing for all of the variations, this indicates clearly that we should not be on a path that would increase anything in excess of the roughly 495,000 physicians available at that time, given the same state of progress we have projected.

Mr. ROGERS. I thought Dr. Altman said this is not the trend, that as you have more doctors and they come together, there would be less productivity, not more.

I thought you told the committee earlier that productivity of the physicians in Boston is about one-third or one-half what it was in the past.

Dr. ALTMAN. I said there were more surgeons so they cut the amount of operations they do.

Mr. ROGERS. So productivity is less?

Secretary WEINBERGER. That is not a requirement——

Mr. ROGERS. You say we are going to increase medical personnel, so I am not sure that your increased productivity necessarily follows either.

Dr. ALTMAN. We did our projections under two assumptions, one with no increase in productivity and the other with a 1 percent increase.

Mr. ROGERS. I think it would be well for the committee to have laid out how you compiled your final results particularly with respect to the FMG input. I think we would like to know particularly those factors, increased productivity, how many increased paramedical people you are counting on, and their acceptance in use.

Secretary WEINBERGER. This points up the increase of paramedical people.

Let me, if I might, run through briefly and I will summarize now.

Mr. CARTER. I believe that you are right, there will be 1 physician to about 500 people according to your figure of 495,000 physicians.

Secretary WEINBERGER. I don't think we can bring out that kind of ratio. That includes a lot of people that would be actually in practice.

Mr. CARTER. Your number would be how many? Considering our population, if it is 500,000 it would be 1 to 500 by that time according to your projections.

Secretary WEINBERGER. That would clearly indicate we would not be in any kind of deficit position and might very well want to be sure we don't adopt solutions that would be designed to increase drastically the number of physicians now.

Mr. CARTER. We might be actually overproducing.

Secretary WEINBERGER. I think there is a real worry about it.

Mr. ROGERS. May I say I don't share that.

Digitized by Google

PROBLEMS OF DISTRIBUTION

Secretary WEINBERGER. In addressing the problems, we see many different provisions of our legislative proposal are directed at the twin distribution problems—specialty and geographic. These are complex problems which have no easy solution. We plan to address these problems through special projects in the health training legislation at both the professional and post professional training levels with incentives for both students and institutions.

In addressing the primary care problems, we proposed a new authority, National Priority Incentive Awards. Under part A of this authority, medical and osteopathy schools will receive $2,000 for each of their graduating students who enter a residency in family medicine. Obviously, those schools that have taken the lead in the production of primary care physicians would receive the largest bonus. I believe this is appropriate. However, given the magnitude of the problem, we would hope that all schools would increase their efforts to produce more primary care practitioners and therefore benefit from this program.

Part B of this authority would provide grants, including stipends, for post professional training, in shortage occupations. We will focus this authority on primary care training. In particular, we will support the development of ambulatory-based residency programs in family medicine and other primary care specialties. These grants will provide start-up and early operating assistance. When necessary, the grant will cover a portion of residency salaries.

In addition to the National Priority Incentive Awards, we propose to increase grant support for physician extender programs that train primary care specialists. Those training programs that emphasize the term training of physicians with physician extenders will be looked upon most favorably.

Finally, we plan on expending a larger portion of the special projects money on curriculum changes in medical and nursing schools. In particular, we will support efforts to develop family medicine departments and to reorient the pediatrics and internal medicine programs toward primary, rather than specialized, care.

I believe the geographic problem will be the harder of the distribution problems to solve. The days of the solo general practitioner (GP) establishing a practice in rural America are gone. Like the specialty distribution problem, I believe no one knows the exact size of the geographic problem. Many estimates have been bandied about. One study done by NIH and quoted widely reported a shortage of 30,000. This study was done on a country basis using a ratio of 1 physician per 1,000 population. The National Institutes of Health have also shown that the use of a geographic area more approximating medical service areas and a more reasonable physician to population ratio, would greatly reduce the number. For example, using a physician to population ratio of 1 to 2,000, which seems to be a more appropriate ratio for primary care providers in rural areas, drops the shortage number to about 4,000.

The long-run solution, I believe, hinges upon developing a medical-care delivery system which links physician practices with paramedical

Digitized by Google

personnel in those rural areas not capable of supporting physicians. Schools can encourage this development by admitting students who find rural life preferable, by developing educational centers in nonmetropolitan communities, and by moving more residency training out of major teaching hospitals. Through our legislation, we will encourage and support such efforts—particularly through area health education centers and special project grants.

We believe that physician extenders can contribute greatly in bringing about a better geographic redistribution of health services. Physician extenders programs, particularly MEDEX, have been directed at rural America. We plan to give high priority to those nurse practitioner and physician assistant programs that are concentrating on providing rural practitioners.

Finally, we will provide direct economic incentives for students to enter practice in underserved areas through scholarships for service. Loan forgiveness has not been successful in getting physicians to practice in underserved areas. However, we believe that a conditional scholarship program, that is, the national health service scholarship program, by providing larger awards, will be more effective because students will make an affirmative commitment early in their training.

In addition, the National Health Service Corps is available as a mechanism to assist selected communities in meeting health manpower problems.

As you can see, we plan a multifaceted approach to solving the distribution problems. This is because no one knows the single best way. If, with further study, we learn of better approaches, we will be able to implement them through our flexible grant program.

On capitation, over the next 3 years, as we increase our efforts to address the distributional problems, we plan on phasing down some Federal capitation support. The capitation grants set forth in the Comprehensive Health Manpower Training Act were unrealistically high. As you know, they have been funded at only 60 percent. Yet, at this reduced level, most schools have not been financially pressed. Since we asked schools to expand enrollment for the capitation support, they had to incur some additional costs. In our new proposal, no expansion in enrollment is required. Thus, we feel capitation can be reduced without causing financial hardship.

Mr. ROGERS. These projections—do they include the increased cost of malpractice insurance? Has that been cranked in?

Secretary WEINBERGER. We are not talking about physician expenses, we are talking about average income which is $45,000, and we think malpractice insurance is a major item. We are hopeful first that we have a short-range solution, which I generally agreed to, that will insure coverage at current rates of most professions and a longer range solution we hope will be worked out by the private sector.

We don't want the Federal Government getting into it, but we don't want physicians denied the opportunity of practice because of the doubling, tripling, and quadrupling of malpractice insurance premiums.

Mr. ROGERS. You say you have found a short-range solution?

Secretary WEINBERGER. We are hopeful that the insurees, who we gathered here in Washington, and State insurance commissioners and

Digitized by Google

others have what appears to them to be a model bill that the New York State Senate has passed and they believe can provide a short-term solution of holding the status quo while we work out the long range.

We had an insurance company that, after our first meeting, canceled everybody out as of March or May. We have had an increase in malpractice insurance rates in the case of neurosurgeons from something like $20,000 to $60,000 a year. All of that is a very major problem.

We have a lot of people who I know are very interested in this field and it is something that the Congress is addressing. Congressman Hastings has had meetings as have others. It is a major problem. It doesn't change the basic fact of whether we need to continue subsidy and capitation support for a profession where the rewards are great.

The risks are there, the expenses are there, as with everything.

Mr. ROGERS. Is this interim solution intended to be addressed by State legislatures?

Secretary WEINBERGER. Yes, a model act.

Mr. ROGERS. Not through the Congress?

Secretary WEINBERGER. That is right. I feel strongly that there is not at this point a role for the Federal Government and I hope there would not be given any predeliction for Federal powers and such. I think we just can't sit on the sidelines and see an increasing number of doctors afraid to interview a patient over the telephone because of no coverage. That is a very major crisis.

Mr. ROGERS. I know the committee is delighted to hear that you believe a short range solution has been agreed upon. It would be helpful to let the committee have a copy of this proposal.

Secretary WEINBERGER. We had a meeting yesterday, it is called the joint underwriting proposal and it is a State legislative act and New York, the State senate, has passed it.

Mr. HASTINGS. Isn't it essentially a pooling?

Secretary WEINBERGER. Yes.

Mr. HASTINGS. They point out it is just temporary. They in no way predict this is going to be necessary.

Secretary WEINBERGER. With the rate of cancellations and the rate of rate increases, we thought we should at least freeze the situation so the protection would be there.

Mr. ROGERS. I think this is important. Then I presume you would let us have your recommendations for any long-term solution that you might propose?

Secretary WEINBERGER. We are trying to move into this area and will keep the committee informed. We called the meeting initially because of the rapidly spreading nature of this problem.

Mr. CARTER. What is the average cost of malpractice insurance for a general surgeon, a certified general surgeon?

Dr. COOPER. It varies from State to State. In many States is is not a problem and even general surgeons in some jurisdictions pay $1,000 This is not the $15,000, $20,000 type of problem that currently some high risk specialists are incurring in some jurisdictions. An internist also often pays a fee less than that. The average fee might be between $1,000 and $2,000, in that category.

But I think in certain areas and in certain high risk specialties the current rates range up to $20,000 per year. Now this $35,000 figure

Digitized by Google

that the Secretary mentioned does include his total cost, but in this case since these are mostly people in general practice or internal medicine, the number would be on the order of several hundred dollars.

Mr. CARTER. I would like very much to see that average figure if you could get it. Most of my letters concerning this have been from surgeons being required to pay as much as $17,000 or $18,000, or even up to $30,000.

Dr. COOPER. The surgeons in the recent publication by the AMA in their most recent year's report, which was 1972, on the average were paying $2,370.

Secretary WEINBERGER. One of our staff members in our office said he had to pay $29.50 a year for malpractice insurance when he first started his practice.

I think we may need some fundamental restructuring of the tort laws. At the same time, we have to keep in mind there has to be redress for patients injured by negligent practice.

Mr. ROGERS. Thank you, Mr. Secretary.

Dr. ENDICOTT. Some of the rate changes are spectacular. There was a hospital in Chicago which just this week had their malpractice premium proposed to be increased from $500,000 last year to $3,500,000, a sevenfold increase. It is the rate of change which is disturbing.

Secretary WEINBERGER. We continue in my statement—

Continued capitation under our proposal amounts to a subsidy for currently enrolled students. Capitation is merely one source of revenue for meeting the costs of education; student tuition is another source. Given the high earnings one derives from a health professional education, for example, the average annual physician adjusted income is approximately $45,000, the rate of return to the student is in excess of almost all other professions. This relationship would not change if students were asked to assume a larger direct share of the costs of their own education. Given these facts, Mr. Chairman, we find little rationale for the current subsidy provided by capitation.

Let me emphasize one point. If students were paying tuitions that bear a reasonable relationship to the cost of their education, as in the case for most private undergraduate schools and most professional schools, our concern over the unnecessary subsidization provided by capitation would be greatly diminished.

However, immediate withdrawal of capitation support for graduate education would be very disruptive to some institutions, particularly those receiving the highest rates of capitation. Accordingly, we propose to extend capitation for most health professional schools for an additional 3 years.

For postbaccalaureate schools training providers of personal health services, we plan on gradually phasing down capitation. The statutory capitation amounts for schools of medicine, osteopathy, and denistry would be reduced to $1,500 per enrolled student—without regard to class year—for fiscal year 1975, $1,250 per student for fiscal year 1976, and $1,000 for fiscal year 1977 per student. For schools of optometry and podiatry, capitation will be reduced to $400, $300, and $200 for fiscal years 1975, 1976, and 1977, respectively. Schools of veterinary medicine will also receive capitation support for the next 3 years.

Digitized by Google

The effects of these phase-downs will be monitored closely and at the end of 3 years, we will reevaluate the need for continued capitation support.

We do not propose the continuation of capitation support for undergraduate education provided at schools of nursing and pharmacy. In general, these undergraduate professional schools are responsive to local needs and should, if necessary, be funded with local resources. We will continue to support particular program development such as clinical pharmacy through the special project mechanism.

STUDENT ASSISTANCE

1. Scholarship Program

While the several existing conditional scholarship programs—Public Health and National Health Service Corps, and physician shortage area scholarships—conceivably could continue to help to address the maldistribution problem, these separate programs were established at different times and for discrete purposes. In our view, much more could be accomplished through a single broad and conditional health manpower scholarship program.

A conditional scholarship program would also be consistent with the principle that the public is ordinarily entitled to public service, or service meeting a public need, from those individuals who receive special scholarship assistance while preparing for a health professions degree.

We propose the authority to consolidate the existing Public Health and NHSC, and physician shortage area scholarships into one broadened conditional scholarship program. Under the program, participants could be assigned to a Federal health service or other areas of critical need. Certain participants could serve in the National Health Service Corps, while others could serve in other parts of DHEW. Still others could serve elsewhere in other Federal agencies, or State or local governments.

A payback provision in lieu of service would be available. Payback would be equal to twice the cost of support—minus any time equivalent already fulfilled—plus compound interest at prevailing market rates dating back to the first year recipients would receive scholarship support.

Payback or service would begin immediately after the completion of training—in the case of medicine, deferments would be granted for the period of residency training; unlike some preceding scholarship programs, a direct Federal relationship would be established between DHEW and the student.

2. Loans

As a larger portion of the cost of education is shifted to the student, it is essential that we have adequate loan and scholarship assistance to assure that students, regardless of their family-income background not be denied access to a health professional career due solely to financial barriers.

Last year the administration proposed H.R. 13059, an expanded guaranteed student loan program for graduate-level training. We again recommend that the total existing loan ceiling be increased from

Digitized by Google

$10,000 to $25,000 and the annual ceiling also be increased from $2,500 to $7,000.

Most students should have little difficulty in paying back these higher loans. Students not wishing to incur loans, however, would be eligible for our proposed expanded scholarship/service program.

The current direct loan program would continue to be operated by the educational institutions. We will, however, phase out our capital contribution over the next 3 years. The capital contribution funds and the repaid loans would remain available to the schools for the making of new loans and the continuation of existing student loans.

The interest rate for these direct loans will be raised from 3 to 7 percent—the same rate paid by those assuming guaranteed loans.

3. *Preadmission and scholarship assistance for the disadvantaged.*

There has been significant underrepresentation of students in health professions schools from among individuals who, due to socio-economic factors, are financially or otherwise disadvantaged. This has been a major factor in the resulting underrepresentation of racial minorities among practitioners of the health professions.

In recent years significant progress has been made. For example, the percentage of minority representation in the first-year classes of medical schools has risen steadily from 6.2 percent in 1969–70 to 11.5 percent in 1973–74. These students are largely from families of low income, 20 percent are from families with less than $5,000 per year income and 67 percent from families of less than $10,000 per year. Regardless of the gains made through improved educational opportunities in the preparation of such students for entry into health profession schools, these students remain the most vulnerable in terms of educational and economic risks.

We propose that a special preadmissions and scholarship program be established for the disadvantaged enrolled in postbaccalaureate programs. It would provide: Stipends for students in preadmission programs, and scholarships for students from disadvantaged backgrounds for their entry year in a health professional school. The scholarship is limited to the entry year because upon successful completion of the first year in school, students gain confidence and therefore become more willing to take out loans, or agree to accept service scholarships.

Nursing students in both college and hospital training programs, as well as other health professional students in undergraduate training in need of financial assistance, will have access to the basic opportunity grant (BOGS) program, administered by the Office of Education.

COMPARISON OF PENDING BILLS

Mr. Chairman, I would now like to comment on the administration's Comprehensive Health Manpower Act of 1975 as compared to the three separate bills before your committee today: H.R. 2956, The Health Manpower Act of 1975; H.R. 2957, The Nurse Training Act of 1975; and H.R. 2958, to revise and extend the National Health Service Corps program.

With regard to H.R. 2956, I would repeat our concern over authorization levels. We recognize that H.R. 2956 authorize-amounts lower than the ones originally considered by this subcommittee last spring,

Digitized by Google

but the levels are still significantly above the amounts recommended by the President. Given the vigorous efforts which must be made to scale down Federal spending, the levels in this bill are simply too high and should be reduced to the levels in the President's 1976 budget.

In terms of program implication, we feel that H.R. 2956 reflects the continued reliance upon capitation grant subsidies as a major means of financing health manpower education. While it is true that the bill would decrease capitation in the third year and does make an effort through a repayment mechanism to shift a portion of the burden of educational costs to the students after their training is completed, we feel that these efforts do not go far enough.

Moreover, the bill would extend capitation grants to a new category of institutions—schools of public health—and continue capitation for pharmacy schools which we believe to be inappropriate as it involves prebaccalaureate training. Additionally, a new program of categorical grants to subsidize graduate programs in the field of health care administration would be authorized.

At a time when it is of critical importance to restrain Federal spending, and the President has stated that he would veto new programs, we oppose expanding Federal commitments to activities which could be considered marginal. A school that trains individuals who will work in the health area is not a sufficient reason for Federal subsidy. The question is whether a subsidy is needed.

As a health career is one of the most attractive today in terms of employment prospects, it is inequitable to subsidize such training while not subsidizing training in all of the other more risky and less lucrative areas. In this same vein, we are opposed to continuing the authority for teaching-facility construction.

Further, while we all agree that serious problems exist with regard to the distribution of medical specialties, we are strongly opposed to H.R. 2956's proposed system for control over the number of residency training positions. We feel that there is little basis for initiating this far-reaching regulatory mechanism at this time. The distributional and other problems to which these provisions are addressed are not sufficiently understood. It would be difficult to defend the distribution of residencies selected if the quotas established by the regulatory body lack sufficient basis. In our view, it is unwise to impose such limitations until their potential impact could be assessed and considered. We do not accept the proposition that regulation of residencies is the answer. We do believe that positive incentives should be tried before we turn to regulations which are difficult to revise or eliminate after being implemented.

The major residency problem is the imbalance between primary and nonprimary care. In large part, this imbalance has evolved from the inadequate insurance coverage of out-patient care and the associated lack of primary-care training. To overcome this problem, we plan on significantly increasing our support for primary-care training, particularly at the graduate level, with residency support, including stipends.

The ability of positive incentives to have an impact is clearly illustrated in the remarkable growth over the last few years in the demand for and support of family-medicine residency positions. This encour-

Digitized by Google

aging event leads me to conclude that we can achieve a better balance in the distribution of residencies without the total regulatory control proposed by H.R. 2956.

As an alternative to the regulating body proposed in H.R. 2956 and in recognition of the need for much further analysis, we will conduct a study to consider and evaluate various approaches for determining and financing the total number and geographic/specialty distribution of residencies. We envision a 2-year study so that the alternatives can be considered by the Department and Congress before the next renewal of the manpower legislation.

Mr. ROGERS. How do you think—if I may interrupt—the problem will be handled if you have a first-year-residency limit of 200 percent of U.S. graduating classes? Do you think you can see a significant change?

Secretary WEINBERGER. Maybe I didn't understand your question.

Mr. ROGERS. I thought you said you did not think anything should be done in regard to residency programs.

Secretary WEINBERGER. We are opposed to an arbitrary number of residency positions which I think has some of the undesirable features of a lottery, and we think it would be unwise to impose various limitations and quotas until we can assess the impact of such proposals.

Mr. ROGERS. We have been assessing this for some time and all of the groups involved have advised us that nothing will ever be done as long as we have a residency outlet of 200 percent of each graduating class. There is no way to get a handle on it.

Secretary WEINBERGER. We had an increase in demand for family residencies in the last few years. Our feeling is the greatest problem we have to address is to get more people out of specialties and into family care.

Mr. ROGERS. How can we as long as there are residency positions available and you have a surgeon out there who says, "I want a young man to help me"? The hospital says, "OK, we will give it to you," and they do.

Secretary WEINBERGER. One way not to do it is to put an arbitrary 120-percent limit on the residences as one of the bills before the committee does.

Mr. ROGERS. What is wrong with that? You think we need 200 percent?

Secretary WEINBERGER. No, I don't think that. We need to get the types of residencies we are most in need of filled.

Mr. ROGERS. How would you do that?

Secretary WEINBERGER. By the proposal we have made here. We have had some experience with this proposal and we believe distribution of residencies will be achieved without trying to control the total number.

Dr. COOPER. It is my understanding from talking to several of the specialty groups that they are willingly and actively pursuing on their own the inductive influence of the specialist and subspecialist aspects of their program. The chairmen of the departments of medicine, the cardiologists, orthopedics and others have been in to talk about this and about pursuing a way to address this problem. We are also concerned that the impact, without additional data might com-

Digitized by Google

plicate the problem of the utilization of the foreign medical graduate at the present time.

Mr. ROGERS. This bill gives 3 years to address the problem.

Secretary WEINBERGER. But it puts a limitation on the number of residencies and a mandatory reduction in the number of residencies. We think that, to be perfectly frank, is an arbitrary and capricious way to address the problem.

Mr. ROGERS. Let's look at the encouragements you are presently giving. As I understand it, of the $9.5 million for family-medicine training programs in the continuing resolution. Right now you are requesting a deferral of $1.3 million.

Secretary WEINBERGER. No, we have requested $27 million.

Mr. ROGERS. I am talking of the continuing resolution. Right now you are requesting a deferral of $1.3 million.

Secretary WEINBERGER. There is a little less than 4 months of the fiscal year left, and that is for the current fiscal year. 1976 is what we are trying to do and that is a $27 million request for family residents.

Mr. ROGERS. What has been the history on our support of such residencies? What have we been allocating in 1973 and 1974?

Dr. COOPER. Out of the 1973 appropriations, we spent the entire amount budgeted. We spent $5.9 million with the additional amount programed for 1974 for a total expenditure of over $13 million.

Secretary WEINBERGER. We are asking to go up to $27 million for family programs in 1976.

Mr. ROGERS. How many residencies would that support?

Secretary WEINBERGER. It would increase the enrollment by 500 or more in family medicine residencies. The family specialists would be supported by this amount.

Dr. COOPER. We expect to have new in 1976 up to 2,500 residencies, in family medicine, 174 programs in family medicine with 2,500——

Mr. ROGERS. Do you mean residency programs?

Dr. COOPER. 174 programs and we would project 2,500 residencies. In primary care residencies, aside from family medicine, we expect 68 programs with 120 residencies.

Mr. ROGERS. Now, how does that compare to the total number of the family medicine residencies? What percentage of such residencies are you supporting? How much funding is going for family or primary care compared to residencies as a whole?

Dr. COOPER. All residencies or vacant slots? There are 40,000 residency slots in the country.

Mr. ROGERS. There are really 50,000. We have more than we know what to do with.

What I want to know is what percentage are we supporting out of the total residency positions of 50,000?

Dr. COOPER. If there are 50,000 total residency slots, we would be supporting 2,500 out of the 50,000.

Mr. ROGERS. How many primary care physicians do you estimate we need?

Dr. COOPER. The general figure is about 50 percent.

Mr. ROGERS. What percentage are we assisting? Twenty-five hundred out of 50,000; that is not quite 50 percent.

Digitized by Google

Dr. COOPER. Those are just the family medicine residencies. Primary care is the objective given by a spectrum of physicians in specialties other than family medicine. The calculation that I recall recently reviewing was that at the present time there are about 30 percent of the physicians that could be included in primary care and our objetcive would be to move that to the 50 percent figure.

In order to accomplish that, we would have to progressively increase our effort toward family practice residencies and restructure primary care emphasis in the other residency programs.

Mr. ROGERS. Many experts tell us that limitation is the proper approach. What is your objection to the limitation?

Secretary WEINBERGER. Well, we have a number—if you would permit me at this time—first of all, you would have to have some sort of regulatory body.

Mr. ROGERS. The professor already has a rudimentary body. They have the council on medical education and their accrediting body. The college of surgeons has done their study; the institute of medicine is doing a study.

Secretary WEINBERGER. We think we first should try the positive incentive of the kind we have talked about rather than that kind of regulation. The powers that would be delegated to that regulatory body would establish the number of primary residencies. They would establish the number of primary care specialists.

The Congress has had these studies requested, the institute of medicine has already done the first steps and I think to rush into a regulatory policy with respect to total residencies as to who can go where and who can study what, before you could get that study, that would be a rash policy.

Mr. ROGERS. We are simply setting up a mechanism. It doesn't happen for 3 years.

Secretary WEINBERGER. You could postpone it for 3 years Armageddon. But if you are going to get it, I don't think you should start with 3 years. You are saying so many people can be surgeons, so many people this, and so many people that, and it is a degree of control, and an attempt to predict the future that is unwarranted and I think it will fail.

Mr. ROGERS. You say I want to restrict the total number of overall doctors?

Secretary WEINBERGER. No, we say we don't think the Government should subsidize any more. We are saying if we continue an unnecessary subsidy at an expanded rate, we will have more than we need. We are saying nobody knows enough to register the number and types of specialties. What you should do is offer incentives.

Mr. ROGERS. How will incentives get them to do it if they don't know how? How will you bring the knowledge with incentives? You said no one knows how to do it.

Secretary WEINBERGER. I said no one knows how to force the allocation into each of these residencies. What we are saying is we would offer a substantial incentive to people who take family and primary care residencies. We would expect that to continue.

That is the way we would like to start and that is what we propose rather than a commission that will tell you in 3 years whether you can be a surgeon.

Digitized by Google

Mr. ROGERS. Some of the professions have already done it. The neurologists have already started.

Secretary WEINBERGER. They have a lot of totals and numbers but we don't have a guild system.

Mr. ROGERS. It is pretty much a guild system. All the specialty groups have organizations.

Secretary WEINBERGER. We should move away from that. Rather than setting up a commission and saying you will reduce the total number of slots and so many can go here and so many there and we will tell you to do it by a Government commission, we think you should offer more incentive for family care and see if that won't solve the problem.

We have very encouraging experience that it will.

Mr. ROGERS. When will it be solved?

Secretary WEINBERGER. As Dr. Cooper mentioned, as you move along these paths, with other people already providing this care, I would think you would come out in 4 or 5 years with the kind of help needed.

Dr. COOPER. I think it would take closer to 10 to 15 years.

Mr. ROGERS. Ten to 15 years and that's assuming we got all of them to follow your incentive.

Dr. COOPER. There has been experience in the past when a carrot was offered to areas like psychiatry and neurology and it did have a significant impact on the number of physicians that have gone into the areas. We have had some significant evidence that the incentive approach can affect the mix.

Secretary WEINBERGER. Forty-six schools of medicine have departments of family medicine. These are quite recent developments and we think they are essential.

Mr. CARTER. On that, would you decribe a department of family medicine in a medical school, please, sir?

Dr. COOPER. I think they vary in different places because of the philosophy of family medicine might vary. But one I recently visited, the program emphasizes first ambulatory care and total family involvement, a total family relationship with a physician in continuity that will see all the family members. The trainee has an initial exposure to the training in internal medicine, pediatrics, obstetrics and gynecology, and emergency care.

There is additionally an option for some special interests with particular suggestions that they go into an experience in behavioral science or techniques of interview and that sort of thing. They have that rotation and then they begin their relationship with a prescribed family population which has subscribed to this particular program. The residency or training begins after his preliminary residency, when he begins to take care of these families subscribed to him under the school's supervision.

They are assigned to members of the full-time staff. When their patients require inpatient treatment, they have hospital privileges in the university hospitals with a hospital consultant and they have the opportunity for total followthrough care in an ambulatory setting in an inpatient setting and posthospital setting.

Mr. CARTER. I still maintain a family physician should be trained in different specialties that you mentioned. Every family physician

Digitized by Google

should have pediatrics, obstetrics, and disciplines of that nature. He has to have a basic rounding in all these fields. If he has any common sense, he will obtain some knowledge of behavioral science.

Thank you, Mr. Chairman.

Secretary WEINBERGER. I would like to make the point that, finally, we strongly oppose the internal interference in the management of the Department through proposed restrictions on our ability to administer the health manpower program on a decentralized basis. The reasons for our opposition are, first, that it would conflict with the Department's and the administration's general objective of moving the operating program management activities from Washington to the regions where people are most affected by Federal policies; and second, the provision would seriously restrict the Secretary's general authority for administering HEW programs. We feel, therefore, that such a limitation is unnecessary and inappropriate, and strongly recommend its removal.

With regard to H.R. 2957, the nurse training bill, we have continually objected to separate legislation for nurse training and a categorical program of subsidies to this undergraduate field.

By treating nurse training apart from other health professions categories, this bill would perpetuate the fragmentation that results in gaps in some instances and overlap in others. The bill would set policy precedents that may limit what we can subsequently do in other health professions areas. And, as is the case with H.R. 2956, the authorization levels proposed vastly exceed the amounts that the administration believes should be allocated to nurse training within a flexible set of integrated health professions authorities.

Also, present evidence leads us to believe that a number of the provisions of H.R. 2957 are unnecessary. We very strongly oppose continued stimulation of output through capitation as we believe that such a continuation may set the stage for real employment problems during the next 5 years.

Since 1970, enrollments have increased by over 35 percent and the number of active nurses has risen from 722,000 in 1970 to 815,000 in 1973. Yet this increase in supply does not even take into consideration the 74-percent increase in baccalaureate enrollments which only began to graduate and practice last summer. Our projections indicate that even if the nurse-training system expands no further, the active nurse supply will reach about 1.1 million in 1980 which was the objective identified in nursing needs analyses.

Yet even the present rate of growth is not without its problems. Some programs, particularly those offering baccalaureate degrees are finding that service delivery sites in which clinical training is conducted are becoming glutted with students, and that the universities in which their programs are located are beginning to resist further expansion because the nursing programs are unbalancing the institution's general educational objectives and are putting a strain on shared resources.

In addition, although only anecdotal evidence is available, it is clear that there is already some tightening in employment opportunities for nurses in some local markets. At the same time, however, there is severe geographic maldistribution which the proposed legislation virtually

Digitized by Google

neglects. For example, Georgia, South Carolina, and Kentucky fall in the lowest quarter of States in terms of nurse-to-population ratios for both RN's and licensed practical nurses. Arkansas and Alabama have ratios only 45 percent of the New England States' average. Yet only 7 percent of the fiscal year 1973 nursing capitation support went to these most needy States.

With nearly 25 percent of the proposed budget committed to general nationwide capitation, we believe that we are likely to face growing pockets of nurse oversupply which will not be pushed out into these underserved areas. Only vigorous, targeted initiatives can address these gross deficiencies and imbalances.

THE NATIONAL HEALTH SERVICE CORPS PROGRAM AND THE NHSC/PHS SCHOLARSHIP PROGRAM

Mr. Chairman, I would now like to turn our attention to proposals on the National Health Service Corps. There are two portions of the bill, H.R. 2958; one would extend the National Health Service Corps program; the other would extend the NHSC/PHS scholarship program. If you will recall, the administration offered testimony in hearings on the extension of the program on May 20, 1974, before this subcommittee.

Let me now address briefly the bill's provisions to extend the National Health Service Corps and Public Health Service scholarship program. We strongly believe this is an issue which should be considered in the context of health professions legislation.

As I noted earlier in my statement, we believe that overcoming geographic maldistribution is one of our major problems. The NHSC/PHS scholarship program is our major means of encouraging more medical students to work in underserved areas. The program provides up to 4 years of financial support in return for a commitment to serve in the NHSC or in PHS programs. Medical students agree to serve 1 year for each year of support, with a minimum of 2 years of service.

The 1976 budget request included $22.5 million for the scholarship program in fiscal year 1976. This compares with the $3 million appropriated in fiscal year 1974, and $12.5 million requested for fiscal year 1975.

Because we believe that the scholarship program is an integral part of our assistance to medical education, we oppose including it in a separate bill along with the National Health Service Corps management provisions.

I would now like to turn to those provisions of H.R. 2958 dealing with the operation of the National Health Service Corps. We continue to feel that the National Health Service Corps should be strengthened and extended.

The corps represents an exciting and challenging mechanism for placing health professionals in areas with critical health manpower shortages. The National Health Service Corps is in every sense a people program—linking health professionals in a very important personal and professional way to communities and to patients with needs and problems, who in many cases have not had other than distant emergency care available for long periods of time. The primary mis-

Digitized by Google

sion of the National Health Service Corps addresses the documented problems of geographic maldistribution of providers, especially in rural communities. In addition, this program assists communities in developing the capability to independently attract and retain health professionals.

Considering such factors as the loss of the physician draft and the difficulties associated with establishing new programs, we believe the National Health Service Corps has made reasonable progress in its first years of operation. We have, in the last year, focused significant attention on the Corps and brought about a beneficial redirection and strengthening of the program.

The Corps has emphasized the development of an effective long-term recruitment program for provider personnel, especially physicians. Through an organized campaign of visits to over 100 medical schools and 250 house officer training programs, and other communication efforts including two special mailings to 52,000 house officers, the Corps has increased its recruitment of physicians and dentists from 14 in 1971 to over 300 in 1975. This major recruitment effort was conducted as an integrated effort with the Indian Health Service and Bureau of Medical Services.

Fiscal year 1975 saw considerable refinement in the process of matching NHSC assignees to communities. Data on every approved community are available through the NHSC data bank. Each candidate is matched with at least four sites in two regions which most closely resemble preferences expressed by the applicant; this process will be repeated, if necessary, until satisfaction with the choices is expressed. Based on both applicant and community needs and preferences, the most acceptable match is made. This interchange of information minimizes the possibility of future dissatisfaction of either party.

In 1975, 500 of these matching site visits have occurred. As a result, we are pleased that we can now report that over 300 physicians will be in practice in critical shortage areas by this summer. In 1975, the Corps has approved 428 sites for Corps assistance and has placed 405 doctors, dentists, nurses and other health professionals in 180 communities in 40 States. It has experimented successfully with utilizing physician extenders (nurse practitioners and physicians' assistants) to provide health services and will have over 70 in shortage areas by this July. The presence of Corps personnel is also drawing other health professionals to areas which have a critical shortage of health manpower.

A major activity has been assisting community groups in setting up programs that link assignees to other provider units. These programs, which foster improved systems of care and develop professional and personal relationships, will greatly improve the possibility of the health provider's remaining in the community. The Corps' retention rate for 1975, to date, was 30 percent compared to 25 percent in 1974 and 3 percent for 1973. Because of improved matching techniques and community assistance activities, this rate should increase in 1976.

The accomplishments I have cited as examples provide us with sufficient encouragement to wholeheartedly endorse the continuation of this program for 3 years. The Corps has now proven that it is an effective mechanism for assisting communities critically short of

Digitized by Google

health manpower to establish and sustain appropriate health practices.

Because of the objective to ultimately have as many National Health Service Corps communities as possible establish independent practices. we have analyzed the current legislation in order to identify any existing impediments to achieving such status. We have identified three areas where legislative changes would facilitate development of strong local capabilities leading to independence.

First, we propose that communities beginning practices be given considerable latitude with regard to cost recovery in the initial stages of operation. Sites are now required to pay for the services received through National Health Service Corps on the basis of a cost recovery formula. The present formula does not allow flexibility during the start-up period of the practice when utilization and billings may be low and at a time when the community is assuming the largest share of the start-up costs. Many practices thus incur large debts during the initial 6 to 12 months of operation. These debts serve as a disincentive with respect to moving away from Federal support.

The administration's bill would provide the Department flexibility to deal with cost recovery as most appropriate during initial periods and would aid communities in avoiding large initial operating debts and would also serve to develop local resources. Presently, the Department conducts initial surveys of communities and helps to prepare the site for the arrival of a provider. Most of these functions, such as locating and setting up proper facilities and establishing billing and practice systems, could be done through local resources. We are not, however, authorized to provide funds to the communities for this purpose.

We note that H.R. 2958 does authorize grants for the purpose of assisting communities prepare for a practice. This provision is similar to the administration's bill but raises the ceiling to $25,000 rather than the $10,000 proposed in our bill. In view of the fact that most of these grants will be considerably less than $10,000, we believe it is inappropriate to place the ceiling so high.

Another impediment identified is the absence of an effective mechanism for transferring equipment to the communities.

Purchase of equipment being used at the site should not be permitted to stand in the way of the site becoming independent. It should be borne in mind, of course, that title would not go to the health practitioner but to the nonprofit entity established by the community. Also, no buildings or facilities would be involved since the Corps does not now fund construction or renovation of facilities.

We also note that H.R. 2958 provides for the transfer of equipment to the community at the fair market value cost. The administration bill would simply permit the Department to release such equipment under such condition as may be prescribed in regulations. Under such a provision the community will, of course, benefit from the receipt of such equipment, but also the Government may realize some economy by having a simple method of transferring the equipment. Requiring that the equipment be sold at fair market value may not be as convenient and would create another disincentive to moving toward full independence. We would, therefore, prefer the approach of the administration's bill.

Digitized by Google

It is important to make a distinction between critical health manpower shortage areas and medically underserved areas. The National Health Service Corps is directed to the problem of availability of health manpower resources. Although we do not wish to enter into a difference of semantics, we do believe that the confusion of using medically underserved population indicators for the purpose of the National Health Service Corps program results in confusion with other programs in the Department such as HMO's or community health centers.

Many communities seen as medically underserved do not call for the manpower assistance available under the National Health Service Corps program. For example, their needs might be limited to transportation, organization, or delivery of services or financial barriers.

We believe the National Health Service Corps resources should appropriately be used where a fundamental health problem is a critical shortage of manpower and not as a mechanism to solve other health service problems where manpower resources are available.

We do not object to a separate bill on management aspects of the National Health Service Corps so that the program can plan for recruitment and operation in the current and future fiscal years.

We also feel that the additional pay incentive provisions in H.R. 2958 overlap legislative provisions in Public Law 93-274 and would create unfair salary differentials for NHSC assignees in comparison with other PHS personnel stationed in critical shortage areas (i.e., in the Indian Health Service). As such, they are unnecessary and we oppose them.

CONCLUSION

In summary, Mr. Chairman, I strongly recommend enactment of the administration's health manpower proposals. These proposals on the level of Federal support and funding mechanisms reflect a careful assessment of priorities and projections of health manpower. I know we can move forward together in developing new health manpower strategy that is financially prudent and appropriately targeted.

We look forward to working with you and your colleagues on this important legislation.

[Testimony resumes on p. 353.]

[The following letter from Secretary Weinberger to Speaker Albert, with draft bill attached, was subsequently received for the record:]

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
Washington, D.C., March 3, 1975.

HON. CARL ALBERT,
Speaker of the House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: There is enclosed for the consideration of the Congress a draft bill "To amend titles VII and VIII of the Public Health Service Act, and for other purposes." The bill, when enacted, would be cited as the "Comprehensive Health Professions Education Act of 1975".

The draft bill is intended to translate into legislation the health professions education themes of the President's budget for fiscal year 1976.

"In 1976, total HEW outlays for training health professionals are estimated at $620 million. Measures undertaken since 1969 have assured major increases in the number of graduates of U.S. health professions schools. From 1965 to 1974, medical school enrollments and the number of graduates each grew by 56%. Medical school enrollments have grown from 32,428 to 50,477 and the annual number of graduates has increased from 7,409 to 11,580.

Digitized by Google

"As in other fields of higher education, Federal assistance in 1976 will emphasize aid to students rather than to institutions. Unnecessary Federal institutional subsidies will be gradually phased out. Since students in the health professions can anticipate high earnings, they can be expected to finance a greater share of their own educational costs. Federally guaranteed private loans are available, and recently increased ceilings on such loans will heighten their usefulness to students in the health professions. Proposed legislation will reflect this appropriate Federal role in the support of health professions training.

"An expanded National Health Service Corps program of scholarships in return for service will both assist students financially and help meet Federal needs for health professionals." (At p. 133.)

Of the 1976 outlay estimate of $620 million for all of the Department's health, education, and training activities, approximately $380 million is attributable to programs to be authorized in this bill.

Construction of health teaching facilities

Projections of the current volume of health professions graduates against expected population increases persuade us that existing facilities, if maintained, are sufficient to meet foreseeable future need. For example, in 1970 there were some 323,200 practicing physicians in the United States, or 159 physicians per 100,000 population. If the number of first-year training places existing at the end of 1972 are maintained without change through 1990, and we may assume a constant net addition of foreign medical graduates approximating the net increment during the mid-1960's, about 3,800 a year, the number of practicing physicians in the United States will grow to at least 435,000 in 1980—about 192 per 100,000 population, and 554,000 in 1990, or about 221 per 100,000. If there is sufficient public and private support to allow for a post-1978 growth in output capacity of 1.3 percent for medical schools and 0.6 percent for osteopathic schools, and a net addition of 5,200 foreign medical graduates per year (a level approximating recent levels) we would estimate the number of physicians in 1990 per 100,000 population to arrive at 237. We are aware of no studies that suggest that a projected increase of this size—almost 40 percent, and probably nearly 50 percent, more physicians per 100,000 population within sixteen years—would be insufficient, if appropriately distributed geographically and by specialty (concerns addressed by aspects of our proposal discussed below) to meet prospective national requirements for medical care.

Accordingly, the draft bill would change the focus of the current health professions teaching facilities, and nurse training facilities, construction programs. Rather than continuing to encourage, through the making of Federal grants, the multiplication of teaching facilities, we would instead concentrate resources on encouraging existing facilities to mantain and improve their adequacy. The bill would accomplish this (1) by allowing the expiration of the construction grant programs of part B of title VII of the Public Health Service Act and of title VIII; and (2) by amending the provisions that now make Federal guarantees available for loans for the construction of health professions and nursing teaching facilities, to instead provide assistance limited to the replacement or remodeling of facilities. Loan guarantees for the construction of new buildings (except as replacements for old buildings) or the expansion of existing buildings, would no longer be available. In addition, consistent with the philosophy expressed in the President's budget of aiding students rather than institutions, we would no longer offer to subsidize interest payments on new guaranteed loans under the program.

Loan guarantees would no longer be available under the program for schools of pharmacy and public health, because the replacement or remodeling of these facilities does not serve a significant national need. The draft bill also omits the long unfunded authorization for appropriations for the construction of health research facilities.

Capitation awards

In the Comprehensive Health Manpower Training Act of 1971, the establishment of a capitation grant program reflected a judgment by both the Congress and the Administration that "first dollar" funding of health professions education was an appropriate and needed mechanism of Federal support. Experience to date suggests that the capitation grant program has achieved certain of its original objectives, in that the financial viability of many of these educational

Digitized by Google

institutions has improved, and in that some portion of the enrollment increases experienced would probably not have come about in the absence of the expansion requirements in the capitation grant law.

Despite these positive aspects, which the Administration recognizes, an analysis of the capitation program and consideration of future trends reveal serious flaws in the capitation grant concept. These defects call into question the appropriateness and desirability of the capitation mechanism as the Federal Government's primary tool for the support of health professions education. Chief among the deficiencies are that the capitation program:

due to its inherently rigid allocation formula, resulted in comparative windfalls for certain schools and shortfalls for other schools—that is to say, the funds were not targeted based on an assessment of need for such support;

the incremental enrollment increases that may have resulted from the program proved to be very costly;

the amounts authorized and appropriated for the program were arbitrary and unrelated to any concept of actual educational costs;

the costs of this program would only be expected to continue to increase, with the schools and the students becoming increasingly and undesirably dependent upon the continued flow of Federal subsidies for the health professions educational process; and

reasonable alternative sources of funding support for the health education process are available in lieu of Federal across-the-board, formula-type institutional subsidies.

In this regard, we would emphasize that capitation support must be viewed, at least in part, as a means of subsidizing health professions students indirectly through institutions. In conjunction with other assistance to health professions schools, Federal capitation grants enable a student to pay a tuition that commonly defrays from 10 to 20 percent of a school's costs of training that student. Nevertheless, health professionals, particularly physicians and dentists, have high earnings. The annual rate of return on the total costs of a basic medical and dental education has been estimated to be over 20 percent, a rate that is two to three times the rate of return for graduate education generally.

In view of these earnings, health professions students can and should be called upon to pick up a larger share of their educational costs. The Federal Government should not call upon the general public, through tax revenues, to subsidize the training of individuals who are themselves able to bear the real costs of their training and who, because of that training, will quickly recoup those costs from members of the public in the form of compensation for their professional services.

We recognize that immediate withdrawal of capitation support for health professions education would be very disruptive to some institutions, particularly those receiving the highest rates of capitation.

Accordingly, we propose to extend capitation for most health professions schools for an additional three years, but modified as follows:

1. The statutory capitation amounts for schools of medicine, osteopathy, and dentistry, now $2,500 for each student in each of the first three years of training and $4,000 for each student in a graduating class, would be set at $1,500 per enrolled student (without regard to year-class) for fiscal year 1975, $1,250 per student for fiscal year 1976, and $1,000 per student for fiscal year 1977. This compares to an average actual capitation level, under the 1974 appropriation for this activity, of about $2,000 per student.

2. Schools of veterinary medicine, for which capitation is now set at $1,750, would be set at $900, $600, and $300, for the fiscal years 1975, 1976, and 1977, respectively. Again, this compares with the actual 1974 appropriations level of about $1,325 per student.

3. Schools of optometry and podiatry, for which capitation is now set at $800 per student, would be set at $400, $300, and $200, for fiscal years 1975, 1976, and 1977, respectively. The actual 1974 appropriation for these disciplines averaged about $625 per student.

4. Because the draft bill would not impose any enrollment increase requirements on the school (merely requiring that the schools maintain their 1974 level of first-year enrollment), the capitation for "enrollment bonus students" (i.e., students in year-classes meeting certain enrollment increase requirements) would be dropped.

Digitized by Google

5. Capitation of undergraduate training—*i.e.*, the training provided by schools of pharmacy and nursing—as well as general assistance, under section 309(c) of the Public Health Service Act, to schools of public health, would be allowed to expire.

6. The current program of grants for small medical, osteopathic, and dental schools—essentially a one-time bonus of $50,000—and the capitation for three-year schools of medicine ($2,500 for each student enrolled in a fiscal year, plus $6,000 for each student graduating in that year) would be repealed.

Start-up assistance

The current program of start-up assistance would be phased out by limiting it to schools that have received a start-up grant for fiscal year 1974.

National Priority Incentive Awards

The draft bill would establish a new program of National Priority Incentive Awards to increase the number of health professionals who enter critical health shortage specialties. The program would have two principal features:

1. It would award to each school of medicine and osteopathy an amount equal to $2,000 for each of its graduates who enters a residency in the practice of family medicine. As a condition of receiving this award, a school would be required to use its best efforts to increase the number of its graduates who enter such practice.

2. It would award grants to pay part of the cost of planning, developing, and operating for an initial period (not to exceed three years), programs of graduate or specialized education or training in family medicine, pediatrics, internal medicine, and other health care shortage fields. The grants could include amounts intended to augment the compensation otherwise payable to an individual in consideration of his participation in a program.

Consolidation of special project authorities

The existing health manpower special projects authority would be amended in order to embrace assistance now authorized under comparable special project authority contained in the nursing, allied health, and public health professions portions of the Public Health Service Act. Those latter authorities would be allowed to expire.

Consolidation of special project and HMEIA appropriations authorizations

The authorizations of appropriations for the special project grants for the health professions and the health professions Health Mnapower Education Initiative Awards would be consolidated in a single provision. That provision would extend both programs for three years.

Financial distress

The health professions financial distress grant program would be extended for three years, but would be amended to terminate the eligibility for financial distress grants of schools of pharmacy. The bill would also limit the financial distress grant to any school for a fiscal year to 75 percent of the financial distress grant awarded for the preceding fiscal year. This limitation is intended to make clear that amounts awarded under the financial distress provisions of the law are not intended as an increase of the general educational support that a school receives under the previously-described capitation provisions, but are truly amounts awarded on a short-term basis to meet an extreme and unusual exigency.

Pre-admission and follow-up assistance to the disadvantaged

The draft bill would amend the existing program of special assistance to the disadvantaged, for training in the health care field, by authorizing the payment to eligible individuals of stipends, with allowances for travel and for dependents, for post-secondary education or training required to qualify the individual for admission to a school providing health training, or to assist a person in undergoing that training.

The Department proposes to administer this authority as follows:

1. It would restrict the assistance to study in preparation for, or leading to, a first professional degree in the health care field. That is, stipends would not be provided in connection with training, such as in nursing or pharmacy, at the undergraduate level.

Digitized by Google

2. It would limit assistance to fields that prepare the individual to provide health care. Stipends would not be provided, for example, for the study of public health administration.

3. As previously discussed, persons who enter most health care fields enjoy a high income potential. As their professional education progresses they are increasingly able to command loans for the completion of their education.

Accordingly, stipends awarded for professional study (as distinct from pre-admission assistance) under the amended health professions program of special assistance to the disadvantaged will be limited to the first year of training.

Scholarships for service

We believe that the Public Health and National Health Service Corps Scholarship Training Program offers the potential not only of assuring an adequate future supply of health professionals to meet essential Federal health care delivery responsibilities, but also of truly opening the door to a health professions education to sizeable numbers of deserving students. For these reasons, the President's 1976 Budget contemplates funding for this program, at a level of $22.5 million. Funding of the program at that level would provide full support for in excess of 2,000 health professions students, and would accompany the phasing out of the traditional scholarship programs operated by the Bureau of Health Resources Development in the Health Resources Administration. The basic philosophy reflected in this disposition of resources is that the public is ordinarily entitled to public service, or service meeting a public need, from those individuals who are beneficiaries of special scholarship assistance while receiving their health professions degrees. The traditional scholarship programs—which do not require such service—are inconsistent with that principle.

We propose to broaden and strengthen the program, consistent with these views, as follows:

1. We would extend the Program indefinitely, and authorize appropriations for it of such sums as may be necessary.

2. We would provide the Secretary with clear and unambiguous authority to assign participants in the Program to any civilian or uniformed Federal health service. The National Health Service Corps and other health service delivery programs of this Department would doubtless be the primary users of the program participants, and perhaps in the short run would be the sole users. At some future time, however, the Secretary might determine that certain of the participants could more appropriately serve elsewhere in the Department, or even in other Federal agencies (e.g., the Veterans Administration) or State or local governmental units. It would be preferable to not have to appoint individuals to the Commissioned Corps of the Public Health Service in order to do this, but rather to be able to assign them directly to other health service duties.

3. Finally, we believe there should be room within the Program to assist individuals who wish to remain in the private sector, but who are prepared to practice a health profession in a geographic area of critical health manpower shortage. These individuals would not be employed by the Federal Government but would undertake to serve in shortage areas, as determined by the Secretary, for the same period of service to which other individuals assisted under the program are obligated to serve the Federal Government: that is, one year of service for each year of scholarship assistance.

Health professions and nursing student loan programs

The draft bill would also limit further Federal capital contributions to health professions and nursing student loan funds to the amounts required to continue loans to students previously assisted from the funds. However, the funds would remain available, for the next three years, for the schools to make new student loans from amounts revolving back into the student loan funds; and for continuation loans.

The bill would also raise the interest rate on these loans from 3 to 7 percent (the same maximum rate of interest now prescribed under the student loan insurance program contained in the Higher Education Act of 1965).

We believe that enactment of this legislation would be an important step toward assuring an adequate future supply of health professionals, both for meeting the general needs of the public and meeting essential Federal health care responsibilities. It would remedy the problem of unnecessary public subsidization of the education of individuals preparing to enter highly paid health care occupations. Nevertheless, it would significantly improve the possibility of a

Digitized by Google

health professions education for large numbers of students. We urge the Congress to give the measure its prompt and favorable consideration.

We are advised by the Office of Management and Budget that enactment of this draft bill would be in accord with the program of the President.

Sincerely,

CASPAR W. WEINBERGER, *Secretary.*

Enclosure.

A BILL To amend titles VII and VIII of the Public Health Service Act, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE; REFERENCES TO ACT

SECTION 1. (a) This Act may be cited as the "Comprehensive Health Professions Education Act of 1975".

(b) Whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a title, part, section or other provision, the reference shall be considered to be made to a title, part, section or other provision of the Public Health Service Act.

TITLE I—LOAN GUARANTEES FOR CONSTRUCTION FOR REPLACEMENT OR REMODELING OF TEACHING FACILITIES

SEC. 101. (a)(1) Section 729 (including the caption thereof) is amended to read as follows:

"LOAN GUARANTEES

"SEC. 729. (a) To assist eligible nonprofit private entities to carry out approved projects for the construction of teaching facilities of private nonprofit schools of medicine, osteopathy, dentistry, veterinary medicine, optometry, or podiatry, other than the construction of new buildings or the expansion of existing buildings, the Secretary may, during the period beginning July 1, 1974, and ending with the close of September 30, 1977, guarantee (in accordance with this section and subject to subsection (f)) to any non-Federal lender that makes a loan to an eligible entity, for that project, payment when due of the principal of and interest on that loan. The Secretary may make commitments, on behalf of the United States, to make those loan guarantees prior to the making of the loans."

(2) Section 729(b) is repealed. This repealer shall not be construed to impair the obligation of the Secretary to pay any amount that the Secretary has agreed to pay, under that section, with respect to any loan made under section 729 prior to the enactment of this Act.

(3) There is added after section 729(a) a new section 729(b) to read as follows:

"(b) A nonprofit private entity shall be eligible to receive a loan guaranteed under subsection (a) if the entity meets the requirements (as determined under regulations of the Secretary) of sections 721, 722, and 723, insofar as they are applicable to nonprofit private entities, except that in lieu of any requirement of section 721(c) respecting the maintenance or increase of student enrollment, an application for a loan guarantee under this section shall contain or be supported by reasonable assurances that the teaching facility with regard to which the loan guarantee is obtained will maintain a first-year enrollment of full-time students after the completion of the construction, and for each of the next nine school years, that is not less than that enrollment during the fiscal year ending June 30, 1974. For purposes of the application of sections 721, 722, and 723 to this section, the term 'grant', as used in sections 721, 722, and 723 is deemed to mean 'grant by the Secretary of a loan guarantee under section 729'."

(4) Section 729(c) is amended by striking out "or interest subsidy payment" in the first and second sentence.

(5) Section 729(e) is amended (A) by striking out "interest subsidy payments authorized by this section" each time it appears and inserting in lieu thereof "interest subsidy payments for which an agreement was entered into under this section prior to its amendment by the Comprehensive Health Manpower Act of 1975"; and (B) by inserting before the period after "1974" the following: ", and for each succeeding fiscal year such sums as may be necessary to make interest subsidy payments for which an agreement was entered into under this

Digitized by Google

section prior to its amendment by the Comprehensive Health Manpower Act of 1975".

(6) Section 729(f) is amended (A) by striking out "(1)" after "(f)", and (B) by striking out paragraph (2).

(b)(1) Section 809(a) (including the caption thereof) is amended to read as follows:

"LOAN GUARANTEES

"SEC. 809. (a) In order to assist nonprofit private schools of nursing to carry out construction projects for training facilities, other than the construction of new buildings or the expansion of existing buildings, the Secretary may, during the period beginning July 1, 1974, and ending with the close of September 30, 1977, guarantee (in accordance with this section and subject to subsection (f)) to non-Federal lenders making loans to such schools, for such construction projects, payment when due of the principal of and interest on any loan for that construction. The Secretary may make commitments, on behalf of the United States, to make those loan guarantees prior to the making of the loans."

(2) Section 809(b) is repealed. This repealer shall not be construed to impair the obligation of the Secretary to pay any amount that the Secretary has agreed to pay, under that section, with respect to any loan made under section 729 prior to the enactment of this Act.

(3) There is added after section 809(a) a new section 809(b) to read as follows:

"(b) A nonprofit private school of nursing shall be eligible to receive a loan guaranteed under subsection (a) if it meets the requirements (as determined under regulations of the Secretary) of sections 802, 803, and 804, insofar as they are applicable to nonprofit private schools of nursing, except that in lieu of any requirement of section 802(b) respecting the maintenance or increase of student enrollment, an application for a loan guarantee under this section shall contain or be supported by reasonable assurances that the applicant with respect to which loan is guaranteed under this section will maintain a first-year enrollment of full-time students after the completion of the construction, and for each of the next nine school years, that is not less than tha enrollment during the fiscal year ending June 30, 1974. For purposes of the application of sections 802. 803, and 804 to this section, the term 'grant', as used in sections 802, 803, and 804 is deemed to mean 'grant by the Secretary of a loan guarantee under section 809'."

(4) Section 809(c) is amended by striking out "or interest subsidy payment" in the first and second sentence.

(5) Section 809(e) is amended (A) by striking out "interest subsidy payments authorized by this section" each time it appears and inserting in lieu thereof "interest subsidy payments for which an agreement was entered into under this section prior to its amendment by the Comprehensive Health Manpower Act of 1975"; and (B) by inserting before the period after "1974" the following: ", and for each succeeding fiscal year such sums as may be necessary to make interest subsidy payments for which an agreement was entered into under this section prior to its amendment by the Comprehensive Health Manpower Act of 1975".

(6) Section 809(f) is amended (A) by striking out "(1)" after "(f)", and (B) by striking out paragraph (2).

TITLE II—CAPITATION GRANTS, START-UP ASSISTANCE, AND NATIONAL PRIORITY INCENTIVE AWARDS

CAPITATION AMENDMENTS

SEC. 201. (a) Section 770 is amended to read as follows:

"SEC. 770. (a) GRANT COMPUTATION.—The Secretary shall make annual grants to schools of medicine, osteopathy, dentistry, optometry, podiatry, and veterinary medicine for the support of the education programs of those schools. The amount of the annual grant to each school with an approved application shall be computed as follows:

"(1)(A) Each school of medicine, osteopathy, and dentistry shall receive for the fiscal year ending June 30, 1975, 1976, and 1977, $1,500, $1,250, and $1,000, respectively for such years, for each full-time student enrolled, in each of those years, in the medical or dental training program of the school.

"(B) In the case of a school that conducts a training program designed to permit the student to complete, within six years after completing secondary

Digitized by Google

school, the requirements for the degree of doctor of medicine, osteopathy, or dentistry the medical or dental training program of the school, within the meaning of subparagraph (A), shall be deemed to be the last three years of the school's training program.

"(2) Each school of optometry and podiatry shall receive for the fiscal year ending June 30, 1975, 1976, and 1977, $400, $300, and $200, respectively for those years, for each full-time student enrolled in the school in each of those years.

"(3) Each school of veterinary medicine shall receive for the fiscal year ending June 30, 1975, 1976, and 1977, $900, $600, and $300, respectively for those years, for each full-time student enrolled in the school in each of those years.

"(b) APPORTIONMENT OF APPROPRIATIONS.—If the total of the grants to be made under subsection (a) for any fiscal year—

"(1) to schools of medicine, osteopathy, and dentistry with approved applications exceeds the amounts appropriated under subsection (f)(1) for the grants, or

"(2) to schools of optometry, podiatry, and veterinary medicine with approved applications exceeds the amounts appropriated under subsection (f)(2) for the grants,

the amount of the grant for that fiscal year to each school under subsection (a) shall be an amount that bears the same ratio to the amount determined for the school for that fiscal year as the total of the amounts appropriated for that year under subsection (f)(1) or (f)(2), as the case may be, bears to the amount required to make grants in accordance with subsection (a) to each school referred to in clause (1) or (2), as the case may be.

"(c) MAINTENANCE OF EFFORT.—The Secretary shall not make a grant under this section to any school for a fiscal year beginning after June 30, 1974, unless the application therefor contains or is supported by reasonable assurances satisfactory to the Secretary that in the school year that ends during, or with the close of, that fiscal year, the school will maintain a first-year enrollment of full-time students that will be not less than the school's first-year full-time enrollment for the school year ending during, or with the close of, the fiscal year ending June 30, 1974. For purposes of this subsection, a student enrolled in the first year of the last three years of the training program of a school described in subsection (a)(1)(B), or a student enrolled in the first of the two years of the medical training program of a two-year school of medicine, shall be considered a first-year student.

"(d) ENROLLMENT DETERMINATIONS.—

"(1) For purposes of this part and part F, regulations of the Secretary shall include provisions relating to determination of the number of students enrolled in a school, or in a particular year-class in a school, or entering residencies in the practice of family medicine, as the case may be, on the basis of estimates or on such other basis as he deems appropriate.

"(2) For purposes of this part and part F, the term 'full-time student' means a student pursuing a full-time course of study leading to a degree of doctor of medicine, doctor of osteopathy, doctor of dentistry (or its equivalent), doctor of optometry (or its equivalent), doctor of podiatry (or its equivalent), or doctor of veterinary medicine (or its equivalent).

"(e) APPLICATIONS FOR NEW SCHOOLS.—In the case of a new school of medicine, osteopathy, dentistry, optometry, podiatry, or veterinary medicine that applies for a grant under this section in the fiscal year preceding the fiscal year in which it will admit its first class, the enrollment for purposes of subsection (a) shall be the number of first-year full-time students that the Secretary determines, on the basis of assurances provided by the school, will be enrolled in the school, in the fiscal year after the fiscal year in which the grant is made.

"(f) AUTHORIZATION OF APPROPRIATIONS.—

"(1) There are authorized to be appropriated $118,000,000 for the fiscal year ending June 30, 1975, $95,500,000 for the fiscal year ending June 30, 1976, and $82,914,000 for the succeeding fiscal year for grants under this section to schools of medicine, osteopathy, and dentistry.

"(2) There are authorized to be appropriated $6,600,000 for the fiscal year ending June 30, 1975, $5,500,000 for the fiscal year ending June 30, 1976, and $3,228,000 for the succeeding fiscal year for grants under this section to schools of optometry, podiatry, and veterinary medicine."

(b) Section 775(b) is amended by striking out "pharmacy,".

Digitized by Google

START-UP ASSISTANCE AMENDMENTS

SEC. 202. (a) Section 771(a)(1) is amended by inserting before the period at the end of the first sentence thereof the following: "; except that for any fiscal year beginning after June 30, 1974, no grant may be made under this subsection except to a new school that has received a grant under this subsection for the preceding fiscal year".

(b) Section 771(a)(6) is amended in the first sentence by inserting before the period at the end thereof the following: ", $4,620,000 for the fiscal year ending June 30, 1975, and $3,000,000 for each of the next two fiscal years".

NATIONAL PRIORITY INCENTIVE AWARDS

SEC. 203. (a) Sections 775 and 776 are redesignated sections 776 and 777, respectively, and there is added after section 774 the following new section:

"NATIONAL PRIORITY INCENTIVE AWARDS

"SEC. 775. (a) FAMILY PRACTICE RESIDENCY GRANTS.—To each school of medicine and osteopathy eligible, in a fiscal year, for a grant under section 770, the Secretary shall make a grant, from the sums appropriated under section 770(f)(1) for that fiscal year, of $2,000 for each individual (i) who entered, in the preceding fiscal year, the first year of a residency in the practice of family medicine approved by the Council on Medical Education of the American Medical Association; and (ii) who, during the school year ending in that or the preceding fiscal year, received from the school a degree of doctor of medicine or doctor of osteopathy.

"(b) GRADUATE TRAINING IN SHORTAGE SPECIALISTS.—

"(1) In order to enable the Secretary to award grants to public or nonprofit private entities providing graduate or specialized education or training in the provision of health care (including education or training in systems or methods of health care delivery), there are authorized to be appropriated $23,800,000 for the fiscal year ending June 30, 1975, and $39,000,000 for each of the next two fiscal years.

"(2) Grants under this subsection may be awarded to an entity to plan, develop, and, as provided by paragraph (3), pay part of the cost to operate or participate in, for an initial period, a new or expanded program of education or training (accredited, certified, or approved by such professional bodies, and in such manner, as the Secretary may deem appropriate) in family medicine, pediatrics, internal medicine, or such other specialties for the delivery of health care services as the Secretary may determine to lack practitioners sufficient to serve a national need, including augmentation of stipends of individual participants in any such program who plan to specialize or work in the field in which they are to receive training under the program.

"(3) A grant under paragraph (2) for payment of part of the cost, for a fiscal year, to operate or (insofar as it may require the payment of operational costs) participate in a new or expanded program may be awarded only to an entity that has provided assurances satisfactory to the Secretary that there are sufficient non-Federal funds to pay the remainder of that cost for that fiscal year; that for each year a grant is awarded for such operation of or participation in a new or expanded program, the proportion of non-Federal funds employed in the operation of, or participation in, that program shall be increased over the preceding fiscal year; and, if the award is for the operation of a program, that there is a reasonable prospect that the program (or the program as expanded) will be continued, without Federal financial assistance, after eligibility for assistance under this subsection has terminated. The Secretary may not award grants under this subsection for defraying more than the first three years of the costs of operating or participating in any new or expanded program."

(b) Section 776 (as redesignated by this section) is amended (1) by striking out "or 773" each time it appears and inserting in lieu thereof "773, or 775(a)", and (2) by (A) striking out "and" at the end of subsection (d)(2), (B) redesignating subsection (d)(3) as subsection (d)(4), and (C) inserting a new subsection (d)(3) to read as follows:

"(3) contains, in the case of an application for a grant under section 775(a), a description of the activities to be undertaken by the applicant to

Digitized by Google

assist and encourage its students to enter the practice of family medicine, and a certification by the applicant that it will use its best efforts to increase the number of its students applying for residencies in, and entering the practice of, family medicine; and".

(c) Section 770, as amended by this Act, is further amended (1) by adding before ", or" at the end of subsection (b)(1) the following: "(after reduction of the amounts appropriated by the total of grants to be made under section 775"; (2) by adding at the end of subsection (b) the following new sentence: "If the total of the grants to be made under section 775 for any fiscal year to schools of medicine or osteopathy with approved applications exceeds the total of the amounts appropriated under subsection (f)(1) for that fiscal year, the amount of the grant for that fiscal year to each such school shall be reduced proportionately."; and (3) by adding "and section 775" after "this section" in subsection (f)(1).

TITLE III—SPECIAL PROJECTS, HEALTH MANPOWER EDUCATION INITIATIVE AWARDS, AND FINANCIAL DISTRESS GRANTS

Consolidation of Special Projects Authorities

SEC. 301. (a)(1) Section 772(a) is amended in the matter preceding clause (1) by striking out "and podiatry" and inserting in lieu thereof "podiatry, nursing, and public health, and any training center for allied health professions".

(2) Section 772(a) is further amended (A) by striking out "or" at the end of clause (13); (B) by striking out the period at the end of clause (14) and inserting "; or" in lieu thereof; and (C) by adding after clause (14) the following new clauses:

"(15) assist in—

"(A) mergers between hospital training programs or between hospital training programs and academic institutions, or

"(B) other cooperative arrangements among hospitals and academic institutions,

leading to the establishment of nurse training program; or

"(16) provide appropriate retraining opportunities for nurses who (after periods of professional inactivity) desire again actively to engage in the nursing profession."

(3) Section 772(a)(3) is amended by inserting "nurse practitioners," before "physicians' assistants".

(4) Sections 772(a)(4) and 772(a)(5) are amended by striking out "in such health professions" and inserting in lieu thereof "or training in health care".

(5) Section 772(a)(6) is amended by striking out "in such health professions".

(6) Section 772(a)(8) is amended by striking out "and podiatry of," and inserting in lieu thereof "podiatry, nursing, and public health, and any training center for allied health professions of,".

(7) Section 772(a)(9) is amended by inserting "or training centers" after "such schools".

(b) Section 724 is amended by adding at the end thereof the following new paragraphs:

"(7) The term 'school of nursing' means a school of nursing as defined by section 843.

"(8) The term 'training center for allied health professions' means a training center for allied health professions as defined by section 795."

Consolidation of Special Project and Education Initiative Award

Appropriations Authorizations

SEC. 302. (a) Section 777 (as redesignated by section 203 of this Act) is redesignated section 778, and there is added after section 776 a new section to read as follows:

"Appropriations Authorized for Sections 772 and 774

"SEC. 777. There are authorized to be appropriated $110,000,000 for the fiscal year ending June 30, 1975, and $122,000,000 for each of the next two fiscal years for the purpose of making payments under sections 772 and 774."

(b) Sections 772(d) and 774(e) are repealed.

Digitized by Google

EXTENSION OF FINANCIAL DISTRESS GRANT PROGRAM; INELIGIBILITY OF SCHOOLS OF PHARMACY; AMOUNT OF GRANT; TECHNICAL ASSISTANCE

SEC. 303. (a) Section 773(a) is amended (1) by striking out "and" before "$10,000,000", and (2) by inserting "and $5,000,000 for each of the next three fiscal years," after "1974,".

(b) Sections 773(b) and 773(d) are amended by striking out "pharmacy,".

(c) Section 773(b) is further amended by adding at the end thereof the following new sentence: "In the case of a school that has received a grant in the immediately preceding fiscal year, the sums of amounts granted to that school under this section for any fiscal year may not exceed 75 per centum of the sum of amounts granted to that school under this section for that immediately preceding fiscal year."

(d) Section 773(c) is amended by adding at the end thereof the following new sentence: "The Secretary may provide, to any school of medicine, osteopathy, dentistry, optometry, podiatry, or veterinary medicine which is in serious financial straits to meet its costs of operation or which has a special need for financial assistance to meet accreditation requirements, technical assistance to enable the school to conduct a comprehensive cost analysis study of its operations, to identify operational inefficiencies, or to develop or carry out appropriate operational or financial reforms."

TITLE IV—STUDENT ASSISTANCE

PRE-ADMISSION AND FOLLOW-UP ASSISTANCE TO THE DISADVANTAGED

SEC. 401. Section 774(b) is amended—

(1) in clause (2)(A) by inserting after "assisting them" the following "(including the payment to them of such pertinent stipends, with allowances for travel and for dependents, as the Secretary deems appropriate)"; and

(2) by striking out the matter following clause (2)(C).

SCHOLARSHIPS FOR SERVICE

SEC. 402. (a) Section 225(a) is amended by striking out "other units of the Service" and inserting in lieu thereof "such other uniformed or civilian Federal health service as the Secretary may determine is appropriate, and to promote the more adequate provision of medical care for persons who reside in areas determined by the Secretary, under section 329(b)(1), to have critical health manpower shortages".

(b) Section 225(b)(4) is amended to read as follows:

"(4) agree in writing to serve, as prescribed by subsection (e) of this section, (A) as a civilian member of the National Health Service Corps or in such other uniformed or civilian Federal health service as the Secretary may determine is appropriate; or (B) in an area determined by the Secretary, under section 329(b)(1), to have a critical health manpower shortage".

(c) Section 225(b)(3) is amended to read as follows:

"(3) except in the case of an applicant who enters into an agreement under clause (4)(B), be selected for civilian service in the National Health Service Corps or in such other uniformed or civilian Federal health service as the Secretary may determine is appropriate; and".

(d) Section 225(e) is amended (1) by amending the first clause of the first sentence to read "In accordance with his agreement under subsection (b)(4), a person participating in the Program shall be obligated following completion of academic training to serve as a civilian member of the National Health Service Corps or in such other uniformed or civilian Federal health service as the Secretary may determine is appropriate, or in an area determined by the Secretary, under section 329(b)(1), to have a critical health manpower shortage,"; (2) by striking out the second sentence; and (3) by amending the last sentence by inserting "Federal health" before the word "facility", by placing a period after the word "facility", and by striking out "of the Service or other facility of the National Health Service Corps."

(e) Section 225(f)(1) is amended by striking out "an active duty service obligation" and inserting "a service obligation" in lieu thereof.

Digitized by Google

(f) Section 225(i) is amended to read as follows:

"(i) There are authorized to be appropriated $12,500,000 for fiscal year 1975, and $22,500,000 for each of the two succeeding fiscal years to carry out the Program."

FEDERAL CAPITAL CONTRIBUTIONS TO STUDENT LOAN FUNDS; DIRECT LOAN INTEREST RATE MADE EQUIVALENT TO INSURED LOAN INTEREST RATE; AND CLARIFYING CHANGE

SEC. 403. (a) Sections 743, 794D(e), and 826 are each amended by striking out "1977" each time it appears and inserting in lieu thereof "1980".

(b) Sections 741(e), 794D(b)(2)(E), 823(b)(5) are each amended by striking out "3 per centum" and inserting "7 per centum" in lieu thereof.

(c) Section 741(f)(1) is amended by adding at the end thereof the following sentence: "In the case of any individual who, on or after November 18, 1971, meets the requirements of subparagraphs (A) and (B) and who practices his profession as described by subparagraph (C) by virtue of his employment as a member of the National Health Service Corps, the individual shall be deemed to have entered into the agreement required by subparagraph (C) with respect to that practice."

TITLE V—EFFECTIVE DATE

SEC. 501. This Act is effective with respect to appropriations for fiscal years beginning after June 30, 1974, except for section 403(c) which is deemed to have become effective on November 18, 1971.

Mr. ROGERS. It is my understanding that about 35 percent of the practicing physicians are now in primary practice.

Dr. COOPER. Yes, about.

Secretary WEINBERGER. It is a little hard to say.

Dr. COOPER. Primary care.

Mr. ROGERS. Thirty percent of persons in residencies now are in primary care, is that right?

Dr. COOPER. In residencies, about 30 percent.

Mr. ROGERS. So if 90 percent of the current students entered primary care today, residencies today, only 38 percent of the total number of physicians in 10 years would be primary care. We are at 35 percent and we need 50 percent so, if we want to have an impact on delivery of care in the Nation, I think we must have the profession do something about it.

Secretary WEINBERGER. You are giving a nongovernmental commission awesome powers that I wouldn't want a governmental commission to have and I wouldn't want a guild to have.

Mr. ROGERS. Such groups accredit schools now. If you see what has been done in the past, it is not too much out of line.

Secretary WEINBERGER. I am afraid I will have to remain in solid disagreement with you.

Mr. ROGERS. Now, on a different subject, how many employees are in HEW regional offices?

Secretary WEINBERGER. Of the whole Department?

Mr. ROGERS. Yes.

Secretary WEINBERGER. We have 10 regional offices and I would suppose—I will have to get it exactly—but I would suppose we have something like maybe 20,000 or 25,000, or 30,000, roughly in that range.

[The following statement was received for the record:]

On duty as of January 18, 1975, there were 258 persons in health manpower programs in the DHEW Regional Offices.

Mr. ROGERS. How many work in the health manpower field?

Digitized by Google

Secretary WEINBERGER. 270.

Mr. ROGERS. Has there been any reduction in the Washington health manpower staff due to regionalization?

Dr. ENDICOTT. I believe we moved about 230 to regional offices.

Mr. ROGERS. How large a staff remains in the Washington area?

Dr. ENDICOTT. 330.

Mr. ROGERS. You had 500 before?

Secretary WEINBERGER. Just in health manpower. That is what we are talking about.

Mr. ROGERS. Now how much of the health manpower initiative award moneys were turned over to regional offices for regional office initiatives last year? Wasn't it about 10 percent?

Secretary WEINBERGER. Yes.

Mr. ROGERS. What was this money spent for?

Secretary WEINBERGER. There were several principal purposes. One was in the area of educational development. There were also several contracts that were awarded from the regional office in support of additional training programs and projects of that nature.

Mr. ROGERS. Were any of those awarded out of the central office?

Secretary WEINBERGER. There were some from health funds that were spent out of the central office for specific kinds of contract activities related to developing special curriculum, for instance at a place like Michigan State University for the development of educational programs in underserved areas.

Mr. ROGERS. Do you know what the regional office has done? Do you know what each region has done?

Secretary WEINBERGER. We do have the data, for instance, on the physician-assistance training program. The brief answer to that is, yes, Mr. Chairman.

Of course, we have a communication network and we do know and are aware, as indeed we have to be for a number of reasons for accounting, what the regions are doing. We do not try to tell them what to do because we believe that they should operate under the way they have been delegated.

Mr. ROGERS. First I would like to have a breakdown of regional decisions where they have the jurisdiction, and I would like to know what has been done by the central office. I would like to know if there is duplication.

Why have you delegated such authority to the regional offices? It seemed to the committee this was not too heavy a load for one central office to carry.

Secretary WEINBERGER. It is not the heaviness of the load on any one particular program. It is the fact that you have an accumulation of a very large number of programs in the Department, well over 300, and it is also the basic philosophy that the people in the individual regions know their problems and should be able to deal with local government, local schools, local people on a direct decisionmaking basis.

[The following information was received for the record:]

REVIEW OF APPLICATIONS UNDER DECENTRALIZED GRANT PROGRAMS OF BUREAU OF HEALTH RESOURCES DEVELOPMENT, HEALTH RESOURCES ADMINISTRATION

BACKGROUND

Prior to the decentralization of several Bureau grant programs in the fall of 1973, the review of competitive applications was accomplished through pre-

Digitized by Google

liminary consideration for technical merit by non-Federal peer review committees and final review by the appropriate National Advisory Council. The decentralization of Bureau programs required an adjustment in review procedures for 12 discretionary grant programs, including 3 health professions programs for which National Advisory Council review was not required. In addition, 6 formula-type programs were decentralized.

Rather than establish preliminary review committees in each of the 10 DHEW Regional Offices, it was determined to adopt a system of reader review to accomplish the preliminary merit review of applications. This initial review of competitive applications is the only aspect of the review system that has changed. All applications continue to receive the same reviews by PHS staff as in the past, except that staff is now based in the Regional Offices. This greatly enhances opportunities for closer liaison with applicants and a better understanding of their needs and capabilities. There has been no change in the National Advisory Council's review of applications.

READER SYSTEM

Under the reader system, qualified government and non-government experts are identified to review and comment on grant applications. Each competitive application is assigned to three to five readers who must submit a written report of their findings, recommendations, and a merit rating for acceptable proposals. The readers are furnished with standard instructions (developed for each specific grant program) for carrying out their review and preparing their written report. The reports are assembled by regional staff, who incorporate the reviews into a summary statement on each application which includes a summary of the proposal, staff comments, the readers comments and recommendations, any site visit reports and the regional recommendation. As in the past, the summary statements are provided to the National Advisory Council together with site visit reports and other pertinent documents. A copy of each application is also available to the Council should they request it.

STANDARDIZATION OF PROGRAM MANAGEMENT

To ensure consistent management of the decentralized grant programs, a manual ("Guide for Health Manpower Grant Programs—Regional Office Operations") was drafted at headquarters and forwarded to regional staff in the fall of 1973. The manual includes detailed information concerning administration of the grant programs, as well as specific instructions for each program to be provided to readers, formats for readers reports, site visit reports, summary statements, etc.

A copy of the general "Guide" chapter (Part I, Chapter 1) on grant application review procedures is attached, along with a sample chapter (Part IV, Chapter 7) on one of the decentralized grant programs (Health Professions Special Project Grants). Instructions to reviewers and formats for preparing materials required to be prepared by regional staff are found in the chapter exhibits.

OPERATIONAL IMPROVEMENTS

The complete "Guide" was revised in December 1973, following a series of regional meetings conducted by headquarters staff to brief regional office staff on operation of the decentralized programs. A few minor revisions and a complete re-draft of the construction grants section were made early in 1975 to keep the "Guide" current. Another complete revision of the "Guide" will be undertaken following the forthcoming enactment of new health manpower legislation. Detailed operational instructions are routinely furnished to the regional staff by the Bureau's headquarters staff. This has included specific instructions dealing with merit review under the decentralized programs (copy attached).

PHS Agencies and regional offices are currently implementing a new PHS Chapter (1-507) to the DHEW Grants Administration Manual, which formalizes recommendations of the Secretary concerning the objective review of grant applications. The policy includes a system of objective review involving persons outside the immediate organization in which the granting authority is vested, as well as the issuance by each principal operating component of internal rules and procedures for implementing such a policy. The implementation of this chapter (copy attached) as formal policy will be beneficial to all PHS granting programs, including the decentralized programs of the Bureau.

[Editor's note: The attachments referred to above may be found in the committee's files.]

Digitized by Google

Mr. ROGERS. I don't find that true. In Atlanta they don't know any more what is going on in Florida than you do here. In some instances, they know even less.

Secretary WEINBERGER. We also have the question of how well any work is done in Washington, Atlanta, or Houston, but the simple fact of the matter is that with a Department as large and complex and diverse as ours, I don't think the constant restrictions we are having imposed on us—not just in this area but education, public assistance, vocational rehabilitation, and everything else—is serving the public well.

I think they are centralizing and forcing long delays with people who have no familiarity with the problem.

Mr. ROGERS. We can't determine who is making the decision. The regional offices say they don't know.

Secretary WEINBERGER. That is because of the constant attempts to defeat the decentralization we have done in the last few years.

Mr. ROGERS. I think it is a lack of competency. How many regions do we have now?

Secretary WEINBERGER. Ten.

Mr. ROGERS. I think it is more difficult to duplicate the expertise 10 times over what we could perhaps gather here in Washington when you are dealing with a limited number of entities.

Secretary WEINBERGER. The people deal not with this alone but with a lot of other things and I think they build their experience and competence by assignments. I don't think you do by assuming all the experience resides on the Potomac.

Mr. ROGERS. I think you bring competent people here and for the most part you have gathered some excellent people. We have great confidence in their competency here, but we don't know everybody you have gathered in the field and it is difficult for us to find out.

Secretary WEINBERGER. They don't wear different uniforms or anything of the kind. We recruit them by the same methods and we do have extraordinary and capable people here and we think the regions would be able to serve better if we assign that kind of competency.

Mr. ROGERS. Well, the expense in paying all those additional salaries when a smaller group could do the same work here in Washington——

Secretary WEINBERGER. There is not any duplication, there is simply desire.

Mr. ROGERS. Then why not abolish them?

Secretary WEINBERGER. You could abolish the regions and centralize in Washington but I think all the management and administrative problems we have now would be compounded at least to a magnitude of 150, and I think when you see any organization of this size and this complexity and with the diversity of the problems we have, the only way to manage effectively is to get the best people you can as close to the people involved in the decisionmaking and who know more about the priorities.

Mr. CARTER. The 10 regions I suppose in our country have a high recognition factor, is that quite true?

Secretary WEINBERGER. Maybe I don't understand the import of the question. You mean are they well known?

Digitized by Google

Mr. CARTER. Yes.

Secretary WEINBERGER. We assume so.

Mr. CARTER. I want to inform you we have polled this committee last year and fewer than half knew where his region was.

Secretary WEINBERGER. I would hesitate to say that was not a representative sample.

Mr. CARTER. That is quite true. This committee has purview over the legislation concerning these regions and fewer than one-half knew where his region happened to be.

I am impressed by the expertise of the group which you have around you.

Secretary WEINBERGER. So am I. That is why they are here.

Mr. CARTER. I am not impressed with the expertise of the regions. they are people who are out there; we don't know them and certainly we are not famiilar with what they do.

Secretary WEINBERGER. To know them is to like them, if you have the opportunity to work with them.

Mr. CARTER. I was one of the few who knew where my region was and I know the director. I will not expound further on it; I would rather do that in private. I can't agree with you as to the expertise of these gentlemen.

The effectiveness of the amount of work they do I think it is——

Secretary WEINBERGER. We have personnel problems locally, regionally, and nationally. We try to resolve them.

Mr. CARTER. I am glad you recognize you know you have problems.

Secretary WEINBERGER. We do all over, but I have not noticed anything basically inferior about a person working in the regions. I have noticed the skill and efficiency of persons in Washington and we have tried to duplicate that.

Mr. CARTER. I would hope you would impart some of that knowledge and expertise to the regions.

Secretary WEINBERGER. Mr. Carter, I am beginning to sense you have had an unpleasant experience.

Dr. COOPER. I would comment on behalf of the regional people, Dr. Carter. There was considerable complaint a year or so ago about the process of the review of applications in this field which were interpreted as being of inferior quality in their operation. At that time, when the process was being initiated, the central council members did complain they were not satisfied with the quality of the review. This was undertaken at a time when we had imposed upon the regions a very short turnaround time to get a very large job done because of the change in the appropriation process. We think we are on top of that and have improved the quality of that process which will result in better service of the applications to the region.

I think you would find many know where the regional office is. And I think there will be a greater satisfaction here with the process.

Secretary WEINBERGER. The way to guarantee mediocrity is to refuse to permit the assigning of any meaningful kinds of duties. I think the operation of a 140,000-man Department with a budget of $118 billion in one office alone is totally undesirable.

The trend, and not just in this committee, has been going that way.

Mr. SCHEUER. Did you say it was $118 billion?

Digitized by Google

Secretary WEINBERGER. Yes, sir.

Mr. SCHEUER. That is the budget, $118 billion?

Mr. KURZMAN. The current budget is less.

Secretary WEINBERGER. That is for the entire country and we feel we have to manage it in a way that organizations similarly large are managed.

Dr. ENDICOTT. I wonder if I may comment?

Mr. ROGERS. Certainly.

Mr. ENDICOTT. I was probably less than totally enthusiastic about the decentralization for a variety of reasons, one of which was I was not familiar with that type of operation, particularly coming from NIH, which does not operate through regional offices.

However, because of my concern, I watched this very carefully and have, since we started decentralization, visited every regional office at least once a year. I have taken particular pains to make inquiries of the institutions who seek funds, or technical help, or whatever from the manpower programs.

I must say that I was pleasantly surprised with the quality of people that we were able to recruit in the regional offices. Many of the central staff refused to go and took other positions so that we started with our newcomers who had to learn something about what they were to do.

I have found enthusiastic and complimentary comments coming from the universities and the college officials. And interacting directly with the staffs out there, I found they were extremely well informed and I thought quite properly motivated. As a program operator, I can see many advantages in a decentralized method.

We have talked about medical schools but there are 1,400 nurse training programs in the United States and over 2,500 institutions involved in the training of allied health personnel and, whereas it is relatively easy to become quite familiar with 100 institutions, it represents quite a different magnitude for them to become familiar with a large number of junior colleges and programs in that area. So there are tradeoffs and in the overall balance, if you were to ask me as a program operator what I would like to do to get the best administration, sir, I would say, let's leave it alone. I think it is working very well and it is working better every day.

Mr. ROGERS. Thank you.

Mr. Hefner?

Mr. HEFNER. Three questions. First, I would like to know what region North Carolina is in.

Secretary WEINBERGER. Frank Rochelle is the regional director for Atlanta which would include your area.

Mr. HEFNER. This would be almost as close to Washington as to Atlanta.

Secretary WEINBERGER. The regions, I might say, are practically uniform for the entire Federal Government. They are regional boundaries for almost all the Federal offices that have regional offices and the boundaries coincide.

Mr. HEFNER. How much authority does the Regional Director have? Is he able to make the decisions in the region without coming to Washington?

Secretary WEINBERGER. To the extent we have been allowed to do so, yes. In a great many areas we have been forbidden to do any decen-

Digitized by Google

tralization and in some areas we are not allowed to decentralize. It has been counterproductive in that respect. The policy is to make each region a microcosm of the Department with each region having authority comparable to the Secretary over programs decentralized and developed to his administration. Some we do not, but we try not to be doctrinaire.

It is a simple matter of trying to manage an operation of a size that absolutely mandates decentralization to the greatest extent you can do so. We think it is better for the individuals, Governors, people, to be able to get a final decision from someone generally closer to home who is by reason of his assignment more familiar with the priorities than we here in Washington where we deal with the entire country.

We don't feel that everything we have to do is to be decentralized. We also, in every case where we have done so, have set up policy guidelines, policy directives, formulas, and we have open lines of communication. We have regional meetings with the regional directors and there is a full realization of the fact that some coordination is necessary.

But there is also a full realization that you can't administer an operation of this size from a single central office in Washington.

Mr. HEFNER. I understand, but still there are many decisions that still have to come to the God-head as such.

Secretary WEINBERGER. Yes; and everytime a bill is passed, more.

Mr. HEFNER. In other words, the regional director has limited jurisdiction?

Secretary WEINBERGER. He has limited authority by statute limitations.

Mr. ROGERS. If I may pursue that—what limitation is there on your regional people? Is it essentially up to you to delegate some or all of your authority to the regional offices?

Secretary WEINBERGER. The normal pattern, Mr. Chairman, has been that the Congress would pass a bill and ask us to administer it and enforce it. The way in which that was done would be left to the Department and we, in common with many other groups of comparable size—though there are not many of comparable size—would delegate certain——

Mr. ROGERS. I understand that. What I am saying is that we put no restrictions on you. Any restrictions in regions, you put on.

Secretary WEINBERGER. That is right.

Mr. ROGERS. So it is a Departmental restriction on manpower.

Secretary WEINBERGER. The thing I am addressing myself to is an attempt in the bill to carry forward undesirable practices.

Mr. ROGERS. I understand.

Mr. Preyer?

Mr. PREYER. Thank you, Mr. Chairman. I will make just one brief comment in view of the hour.

I want to thank the Secretary for a comprehensive review and I think a stimulating one on this.

This question of whether we have enough physicians or nurses is a very baffling one to me. In one sense I think you could say we will never have too many doctors. It is like opening a super highway, the next day you need to open another. You create more demand.

Digitized by Google

Also, with the knowledge explosion, it is so hard to know what services are going to be considered essential in the future and, with the changes that you point out in productivity and training, the past estimates we have based on numbers and statistics don't seem to mean anything.

I guess the question is how much the Federal Government should go toward encouraging the highest form of care or the least expensive form.

I just wonder if we don't need a new Carnegie Commission report. I am wondering if this council which we set up, isn't it under the Health Planning Act, the National Council?

Secretary WEINBERGER. Yes.

Mr. PREYER. Isn't this a question they might properly address themselves to?

Secretary WEINBERGER. I would think the health planning groups would be most anxious and apt to get into this field. I share your feeling. The projections are a very difficult and dangerous and tricky area. The problem is, if you don't try to do it and if you just operate on the basis of the present perceived needs, you are apt to end up with major, and we think quite undesirable, surpluses.

I don't think I share your feeling you can't have too many. I think you might well get in a situation where there are too many. I think you may be misallocating scarce Federal dollars to unnecessary purposes.

As I say, some Government projections have been wrong and it may be that some of these are not all that accurate. I do think they are within range and they are conservative, if anything, and I would certainly agree the health planning councils and others would want to address themselves to this problem, too.

Dr. COOPER. The proposed bills all also include a National Advisory Council for the manpower area with broad advisory powers as well so the activity of these two bodies would necessarily have to be coordinated.

Mr. PREYER. In the meantime, I would agree in this pluralistic system we should proceed with some care and not have sweeping solutions that may well prove to be wrong.

Secretary WEINBERGER. That is what we proposed, a slight downward trend of what we are doing because we hope that will give us the distribution we need.

Mr. ROGERS. Mr. Scheuer?

Mr. SCHEUER. This was a very stimulating and provoking statement. The time is late so I will ask only a couple of questions.

First, on page 33 you propose a special readmissions and scholarship program for the disadvantaged.

In New York City a few months ago one of our city universities had a medical services program with scholarship funds available for disadvantaged people. It was for a paraprofessional program of some kind and it was admittedly administered with a racial bias and it caused a great amount of bitterness and unhappiness and it was ultimately changed.

Would it be your view that a program with scholarship help for the disadvantaged be based on a criterion of the degree of need and on an

Digitized by Google

objective criterion of ability and that such a program be administered on a nonracial basis?

Secretary WEINBERGER. I think it would have to be. We have all the basic elements that are designed to require that, the Bill of Rights and so on. I know some programs, in their eagerness to overcome a hundred years of discrimination, over-looked some of the problems involved in inverse discrimination.

We are aware of those and we have corrected the balance or revised the perception and I would certainly think any program of this kind would have to be administered on an objective basis with regard to need and potential ability of the student and so forth. You don't serve anyone by admitting a student on the idea because he wants to be admitted, he should be, regardless of any possibility of success.

I think it does a disservice in the sense it disappoints many and so forth. We would try to administer these and they should be administered within basic civil rights and title 9 regulations that now exist.

Mr. SCHEUER. Would it be your intent in your current programs that both education and medical education programs be administered on a colorblind basis?

Secretary WEINBERGER. That is the way it is being done.

Mr. SCHEUER. There has been evidence in the past there has been a racial skewing.

Secretary WEINBERGER. I call your attention to memorandum recently issued from the Office of Civil Rights and the regulations that will be forthcoming under title 9 and all the others that are designed to prevent inverse discrimination as well as discrimination.

Mr. SCHEUER. I would like to carry forward Congressman Preyer's question. It is very difficult to estimate the over-supply of medical professionals absent some concept of effective demand. Now in your testimony, on page 39, you talked about unemployment among nurses or an oversupply of nurses.

Yet I would be hard to put to describe a single place in this country, urban or rural, where general hospitals aren't desperately underserved or where the elderly in nursing homes aren't desperately underserved by nurses.

You talk about that on the last two lines. "It is clear that there is already some tightening in employment opportunities for nurses in some local markets." Certainly that is a question of effective demand. This is not a question of the need for nurses but a question of the dollars for nurses. We are on the brink of developing a national health program, be it insurance or some other kind of funding program.

But we will in the next year or year and a half be funding a nursing program. It seems to me we are going to have an overabundance of every kind of health service.

Secretary WEINBERGER. I think there will be a national health program within the next 2 or 3 years. We think it would increase the demand for health service by about 3 percent. We think it would bring about a distribution geographically and otherwise that will be beneficial.

Mr. SCHEUER. I don't know how you can talk about the kind of medical services personnel we are going to need without thinking about the system in which they are going to be placed. I don't see

Digitized by Google

any evidence in your testimony, or much which is stimulating and creative——

Mr. ROGERS. If we are going to make the quorum call, we are going to have to run.

Mr. SCHEUER. Are we coming back?

Mr. ROGERS. If you could, would you put the question in writing?

Mr. SCHEUER. I will be happy to.

Mr. ROGERS. I also have some questions I would like to get in writing. Also I would like a comment on the reader system.

Mr. SCHEUER. I would be willing to miss this quorum call.

Mr. ROGERS. All right, you may continue.

I would like the policy you developed and submitted to OMB and which they rejected on the national standard for entering residencies and a National Residency Commission.

Secretary WEINBERGER. We will get that.

[The information requested was not available to the committee at the time of printing.]

Mr. ROGERS. Mr. Scheuer, will you adjourn the committee until 2?

Secretary WEINBERGER. I will not be able to be back at 2.

Mr. SCHEUER. I want to express to our chairman my thanks for his cooperation when one of these dynamic young freshmen are able to take over the Chair and preside.

Let me give you my perception as a freshman Congressman looking at the business of trying to quantify the need for medical personnel. It seems to me we have to think first about the system in which they are going to be placed. I believe we have to make structural changes in our system. You used the word "structural" once in your testimony on page 19, but it was in the context of structural problems, not structual changes, which is all right.

Secretary WEINBERGER. I would like to tell you some of the structural changes which we think will come about if the proper kind of health insurance is adopted.

We believe first of all you will have a substantial lessening for demand for hospitalization and untilization of hospitalization. You will have a substantial increase in home care and a substantial increase in medical care in rural areas. With this kind of readjustment, we believe this will be around an 8 percent increase in the total demand.

We assume the present manpower policies, modified as we indicated, would bring us to a balance in the 1980's.

Mr. SCHEUER. It seems you can't have manpower policies without other kinds of policies. As you say, in trying to design a health care system that puts the patients at the lowest level of appropriate sophisticated care. In other words, those that can be are treated at home, those needing an ambulatory clinic for treatment during the day get that; those needing a modest kind of long-term recuperative facility without intensive care get that; and only those needing the extensive and intensive facilities and personnel of a large hospital get that.

Secretary WEINBERGER. That is what we are working toward.

Mr. SCHEUER. A family doctor kind of role where the family doctor treats the patients in the locality but has the backing of the labs, and specialized services he may need. This kind of family doctor would

Digitized by Google

have paraprofessional help, as you indicated, in a health services system where you extend professional skills through technology, wherever possible—through a telecommunications system that will enable paraprofessionals in a nursing home or rural area to link a patient to a centralized group of highly trained specialists.

Secretary WEINBERGER. These are very dramatic and magnificent possibilities in the future.

Mr. SCHEUER. Yes. I just left a hearing of NASA where they are involved in this situation.

Secretary WEINBERGER. A good example is the Alaskan Indian where you can only get in about once a year. It is a very dramatic achievement. We need to make greater use of it.

Mr. SCHEUER. It seems to me you really can't estimate your need for any one element of these medical personnel people until you design the system—going from the hospital with intensive care services to a neighborhood person with a year of training who is delivering services in the home—a system where you have a better mix of paraprofessionals.

And with your professionals, a better mix of technology, backing up manpower, and a major thrust toward preventive medicine rather than cure of illness. Until you design the system, I would think it is almost impossible——

Secretary WEINBERGER. It is a question of where you break into it because we have been a long time in designing national health insurance, probably 10 years, maybe more; during that time I don't think it was responsible not to try to do something.

We didn't do very much and as a result we have some imbalances which we are trying to correct.

Dr. Cooper mentioned a good point, that is we are attempting at the same time we are attacking the isolated issue of manpower—I would like Dr. Cooper to mention some of that.

Dr. COOPER. I think all of us in the planning functions in the departments are aware there needs to be, at the same time we consider each specific item, some overall conception of how the structure needs to go.

Mr. SCHEUER. I don't see that in this testimony.

Dr. COOPER. It is not in that document but in the planning office of the Secretary of Health, Education, and Welfare, these kinds of questions are being addressed and it is against the background we have reached our understanding of how we are trying to reach those objectives.

Mr. SCHEUER. I think if you could give us that basic framework it would be helpful.

Secretary WEINBERGER. I would like to have you see this piece of work.

Mr. SCHEUER. I would like to see it. It seems that is the indispensable piece that is missing.

Secretary WEINBERGER. It is possible that unkind people could attack that and say some of the kinds of things in that are wrong.

Mr. SCHEUER. But at least you provided a framework.

Secretary WEINBERGER. Indeed, we have and a great deal of work has gone into it. I am proud—although I had no personal participa-

Digitized by Google

tion in the beginning stages—but I think it is a fine piece of work that indicates we had all of these broader issues in mind.

Dr. COOPER. At the end of the last session the members did receive some material on this but we have not provided it here this year.

Mr. SCHEUER. Would you provide it for this dynamic, promising young freshman?

You see we already have incentives for hospital overuse and waste. The Veterans' Administration not long ago put out a mandate that their hospitals have X percentage of occupants.

Secretary WEINBERGER. That was a requirement. That was a requirement that they have to maintain a certain level of occupancy.

Mr. SCHEUER. And it is ——— foolishness.

Secretary WEINBERGER. I am glad you said that.

Mr. SCHEUER. Yesterday I read your letter showing how the same is done in the private sector, the hospital administrator was urging attending physicians to load up the hospital. I hope you will be providing economic disincentives for overuse and waste.

Secretary WEINBERGER. If you insure home health care, doctors home visits, doctors office visits and you do not insure unnecessary hospitalization and overutilization and you have a sufficient contribution required from the users on a cost sharing factor, I think you would address a lot of these problems.

At the moment, it is the other way. There is direct inducement to send the man or woman to the hospital whether she needs it or not. The utilization regulations are trying to address these problems.

Mr. SCHEUER. Are they out?

Secretary WEINBERGER. Yes, they are and are causing a certain amount of activity.

Dr. COOPER. They were provided the first of February.

Mr. SCHEUER. May I be provided with a copy of that?

Secretary WEINBERGER. Yes, sir, we will get a copy to you this afternoon.[1]

Mr. SCHEUER. Thank you very, very much.

The hearing is recessed until 2 o'clock this afternoon.

[The following letter was received for the record:]

OFFICE OF THE SECRETARY,
DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
Washington, D.C., March 10, 1975.

Hon. PAUL ROGERS,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. ROGERS: During my testimony on health manpower legislation on February 20th, we spent insufficient time discussing the important specialty distribution problem. I am writing to explain and to reassert the Department's opposition to the regulatory mechanism established in H.R. 2956. The recent amendments offered in your Subcommittee do not address my concerns. Even in the unlikely situation that the Coordinating Council for Medical Education is unable to undertake the regulatory tasks and the responsibility is relegated to the Department, the fundamental deficiencies of the regulatory approach would remain overwhelming.

H.R. 2956 would limit the total number of first-year residency positions to 125% of the previous year's graduating class after 1979. I sincerely believe that

[1] Medicaid, Utilization Control of Care and Services—Rules and Regulations published in the Federal Register, Vol. 39, No. 231—Friday, November 29, 1974, by DHEW, Social and Rehabilitation Service. A copy of these rules and regulations may be found in the committee files.

Digitized by Google

this type of restriction is not the appropriate way to deal with the inflow of Foreign Medical Graduates (FMGs). Although the phasing down to 125% will help the Department to assure continuing health care to those populations now being served by FMGs, the real challenge is to assure that those FMGs entering this country are as qualified as U.S. graduates.

If the Coordinating Council qualifies as the regulatory body, a fundamental difference would exist between the private accreditation bodies approved by the Office of Education and that proposed in H.R. 2956. Currently, accrediting bodies limit their concern to quality standards while H.R. 2956 will provide the private agency with quantity controls that could eliminate many programs which meet established quality standards. The accrediting body established in H.R. 2956 is empowered to determine the number of residency positions in every specialty and to approve programs so that the number of residencies in each specialty will be equitably distributed among geographic areas. Since the various constituencies of the private regulatory body could benefit significantly from its decisions, you would in essence be placing the regulated in a position as the regulator. History is replete with undesirable examples of what ultimately results from such a system.

Even more important than who controls the regulatory body is the lack of any real evidence that such an approach is desirable or even feasible. Regulation can be justified only when positive incentives fail to bring about the proper solution. Specialty maldistribution can be, and has been, dealt with by using positive incentives. Therefore, the creation of a regulatory body is, in my view, an unnecessary, unwarranted and hazardous overreaction to the specialty problem.

Let me review the problem and try to clarify more precisely why I believe positive incentives should be given a real chance. Certainly, a medical specialty problem exists, but we must not forget that it was only a few years ago that Federal attention was drawn to this problem. As recently as 1971, when the health manpower legislation was renewed, specialty maldistribution was not identified as a major problem requiring extraordinary Federal initiative and actions. The 1971 legislation did, of course, recognize and support the burgeoning specialty of family medicine, which was an initiative of the private sector. This leads me to wonder whether the family medicine specialty would have developed at all if the regulatory commission had been already in place.

The key feature of the specialty maldistribution problem is the imbalance between primary care and non-primary care specialties. In large part ,this imbalance has arisen because of the peculiar nature of the growth in graduate training over the last thirty years. Residency training developed in large hospital settings. As a result, inpatient, rather than ambulatory training, was emphasized.

An important factor reinforcing this primary care/non-primary imbalance is he financing of graduate medical education. The bulk of the revenue to meet the costs of residencies comes from third party payments. Insurance coverage is adequate to support inpatient residencies. However, inadequate insurance exists for ambulatory care today. Even when it does exist, it may not reimburse for educational costs of residency training.

To overcome those deficiencies, you were instrumental in establishing the family medicine residency program to finance the development of new residency programs. Over the last five years, more than 220 approved residency programs in family medicine have been established. The growth rate in the number of individuals entering these residencies is remarkable. Family medicine today is the fastest growing specialty. Whereas approximately one percent of U.S. medical school graduates went into family medicine five years ago, last year more than ten percent entered the first year of this specialty. Moreover, the applicants seeking positions in family medicine last year significantly exceeded the number of places available. Thus, I am confident that if we expand Federal support for such residency training and make funds available for undergraduate family medicine departments or administrative units, the percentage of U.S. graduates entering family medicine can reach 25% by 1980. With this growth plus the residencies in other primary care specialties, we expect to have over 50% of our first-year residencies in primary care by 1980.

The growth we have already seen accomplished in family practice points out the importance of proper financing of graduate medical education. As the Commission proposal in H.R. 2956 omits any attention to the financing of residencies, this could bring havoc to the entire process you have recommended.

Digitized by Google

There are other significant weaknesses to the proposed regulatory body. The unaccountability of this body is one of the most glaring. The body is not even required to provide a methodology on how it reached decisions. Given our inability to define the need for medical specialists, it would seem crucial that any regulatory body divulge its determination process. In this regard, I think it is of interest that my staff has had discussions with Institute of Medicine personnel on their study pursuant to P.L. 93-233 to determine the appropriate specialty distribution. The Institute of Medicine staff has indicated that it is difficult, if not impossible, to justify any one specialty distribution as preferable over another.

In summary, the Administration believes this regulatory approach to be a premature and unwise overreaction to the specialty problem. Rather than create such a regulatory body, we should expand our effort of using positive incentives, which have worked in the past. Only after this approach has been tried and judged a failure, should we consider direct regulation. So as to fully explore the various alternative methods of distributing residencies and financing graduate medical education, the Department is prepared to embark immediately on a comprehensive study. The results of this study could be shared with the Congress during the life of the upcoming health manpower legislation. With such an analysis in hand, we could work together in developing a proper and accountable regulatory body if such an approach is found necessary.

Thank you for the courtesy shown to me during my testimony. Members of my staff and I will be most willing to engage in any further discussions with you on this problem.

Sincerely,

CASPAR W. WEINBERGER,
Secretary.

[Whereupon, at 12:30 p.m., the subcommittee recessed until 2 p.m., the same day.]

AFTER RECESS

[The subcommittee reconvened at 2 p.m., Hon. Paul G. Rogers, presiding.]

Mr. ROGERS. The subcommittee will come to order, please.

Without objection, the chair wishes to place in the record, as though read, statements submitted by congressmen Claude Pepper of Florida, James C. Cleveland of New Hampshire, and Christopher J. Dodd of Connecticut.

STATEMENT OF HON. CLAUDE PEPPER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF FLORIDA

Mr. Chairman, the health needs of the American people are of the highest importance to all of us. Last year over $100 billion was spent on health services—$485 for every man, woman and child in our country. Our nurses all over the United States played a large part in aiding our ill and caring for the sick.

We in the 93d Congress realized the invaluable contribution that nurses make to our health care system, and we sent the Nurses Training Act of 1974 to the President for his signature last year.

President Ford chose to veto this essential legislation after Congress had adjourned. The main thrust of his argument—opposition to categorical nursing student assistance and institution support through capitation grants to nursing schools—are areas we had considered long and hard. It should be noted that the administration felt the same way in 1971, and vetoed legislation that was overruled to become Public Law 92-158.

Digitized by Google

With authorizations to these crucial programs in nurse training and education expiring, it is again time to reaffirm our confidence in our nurses and the fine job they do to promote our health and well-being. Our need for qualified nursing personnel is growing more acute. Last year the Senate Committee on Labor and Public Welfare conducted a study concluding that the Nation presently needs 150,000 additional nurses, and may need close to 1,000,000 by 1980.

We are presently considering health measures that will require even greater numbers of nurses to amply provide health care to our people. The Health Maintenance Organization legislation passed last Congress requires the help of nurses in the areas of preventive and primary care. Our nurses also have a crucial job to do in baby clinics, family health centers, and in other ambulatory service facilities.

We in the 94th Congress will be considering national health insurance and other measures to improve health care. We must also act to insure that adequate numbers of nurses will be trained and available to carry out our plans. I have sponsored the Nurse Training Act of 1975, H.R. 2710, and I urge my colleagues to join with me in supporting this vital legislation. The Nurse Training Act of 1975 affirms our confidence in our nurses, and our realization of the acute need for the specialized services they provide. The bill authorizes construction, start-up, capitation, and special assistance grants which will aid the expansion of nurses training enrollments. Innovative curriculums encouraging concentration in areas of our greatest demand are mandated by this legislation.

Nurses perform an invaluable service to our people who need medical assistance. With a shortage of medical personnel in our rural areas, sometimes the nurse becomes the primary keeper of a county's health and well-being. With all the furor about health care these days, it is essential to realize the crucial role nurses have in utilizing services. Our nurses are called upon daily to administer and assist with the latest breakthroughs in medical technology while remaining a compassionate and calm human being, sometime in the face of the greatest human tragedies.

It is not an overstatement to say that being a nurse involves a special untiring strength and courage. We are all the better for their commitment. We should affirm our confidence in the nursing professions by speedy passage of the Nurse Training Act.

STATEMENT OF HON. JAMES C. CLEVELAND, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW HAMPSHIRE

Mr. Chairman and members of the subcommittee, I would like to address myself to a particular aspect only of the health manpower legislation before you; namely, the requirements for qualification for capitation grants by medical schools.

As the attached letter from the Dean of the Dartmouth Medical School will show, requirements that schools of medicine must either increase their enrollment by a certain percentage or conduct a program for the training of physicians' assistants in order to obtain assistance under this legislation cannot be met by all medical schools without lowering the quality of the programs offered.

Digitized by Google

I therefore urge the subcommittee to provide assurance that a waiver of these requirements will not be unreasonably difficult to obtain by schools which have reached their physical capacity or have other serious problems in meeting the qualifications which would be detrimental both to teaching and to healing.

I submit for the subcommittee's consideration the following letter from Dr. James C. Strickler, Dean of the Dartmouth Medical School:

DARTMOUTH MEDICAL SCHOOL,
OFFICE OF THE DEAN,
Hanover, N.H., December 9, 1974.

Miss KATHIE CASWANDIK,
Rayburn House Office Building,
Washington, D.C.

DEAR MISS CASWANDIK: In response to your further inquiry about the enrollment of students at the Dartmouth Medical School:

The Dartmouth Medical School is one of the smallest, perhaps the smallest, medical school in this country. For several decades and until recently the school was a two-year medical school and as such offered only pre-clinical training to its students. The school's graduates transferred to other medical schools to complete their requirements for the M.D. degree. In the late 1960's, the Trustees of Dartmouth College authorized a return to an M.D. program. I say return because the school did offer a complete curriculum in medicine from 1797 until 1914 when it became a two-year medical school. This return to the full M.D. program is almost complete.

Enrollment at Dartmouth Medical School has increased significantly over the past several years. Class size and total enrollment for the period 1967 through 1977 are shown as follows:

DARTMOUTH MEDICAL SCHOOL

	Year I [1]	Year II	Year III	Total
1967-68	48	48		96
1968-69	53	47		100
1969-70	55	45		104
1970-71	53	52		105
1971-72	61	52		113
1972-73	64	52	18	134
1973-74	64	59	21	144
1974-75	64	60	32	156

1976-77	64	64	64	192

[1] Includes new students only.

Note that the maximum enrollment is projected at 64 students per class. Only three classes are shown because the Dartmouth M.D. curriculum is a three-year program rather than the traditional four. Note that total enrollment is projected at 192 students. Counting "repeaters" and other students in special categories total enrollment will approximate 200.

Sizable hospital and ambulatory care facilities are required to teach medical students. The size and number of those facilities in and about Hanover, New Hampshire are barely adequate to accommodate the numbers of students we have projected for full expansion of the Dartmouth M.D. program. Our teaching hospitals, the Mary Hitchcock Memorial Hospital and the VA Hospital in White River Junction, Vermont, have a maximum of 640 beds. There is a rule of thumb that says a medical school should have about 10 hospital beds available for teaching for every entering student. The point is that our hospital facilities compared to those available to urban medical schools are relatively small, even allowing for the fact that their classes are somewhat larger. Furthermore, they have the potential to affiliate with many more hospitals than do we in a rural area where the health care system is widely dispersed geographically.

Further increases in enrollment, over those projected, would in my view and that of our clinical faculty compromise the efficiency, dignity, and quality of

Digitized by Google

patient care at this medical Center. How many medical students should examine a patient? How many students should be crowded around a single hospital bed? These are the key questions.

Two final points:

1. The Dartmouth Medical School is accredited by the Liaison Committee of Medical Education for an entering class of 64 students. We could not matriculate additional students unless this accrediting body were to approve. I personally doubt that this approval would be forthcoming because our clinical teaching facilities are limited.

2. Last Saturday I discussed this matter of increased enrollment with the Joint Council of the Dartmouth-Hitchcock Medical Center. This Council includes the chief executive officers of the hospitals, the President of the Hitchcock Clinic as well as trustees of Dartmouth College and the Mary Hitchcock Memorial Hospital. The Council agreed unanimously that the Dartmouth Medical School should not be asked to admit more than 64 students per annum.

Please let me know if you would like additional information. I very much appreciate your help.

Yours sincerely,

JAMES C. STRICKLER, M.D.

STATEMENT OF HON. CHRISTOPHER J. DODD, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CONNECTICUT

Mr. DODD. Mr. Chairman, I represent Connecticut's Second District which comprises most of the eastern half of the State. This district also has a health care situation that is quite frankly depressing. The statistics on the supply of trained medical personnel are outrageous, and the result of this shortage is an intolerable strain on the existing health care facilities. Needless to say, I strongly favor continued Government support for nurses training provided in the Nurses Training Act. Despite the opinion of other persons involved in deciding the fate of this legislation, I feel very strongly that health care is a vital priority for the United States.

I should first like to expand on my description of the dearth of health care facilities and personnel in my own district. I am sure that other Representatives will recognize a similarity to problems in other areas of the Nation. Currently there is 1 doctor for every 840 people in New London, in Middletown there is 1 doctor for every 590 people, and this is compared to 1 doctor for every 480 people in Hartford and 1 doctor for every 356 people in New Haven. In comparison to the rest of the Northeast region, the eastern Connecticut towns of New London and Middletown have the lowest ratio of doctors to population in the entire region. Furthermore, there are only 8 hospitals in this area with a combined total of only 1,449 beds. This is for an area that has a population of 555,800.

As one can easily imagine, this shortage places a considerable strain on the existing facilities. One alarming result is that many people, unable to obtain or in some cases afford medical care elsewhere, have turned to hospital emergency rooms to satisfy routine health needs. The emergency rooms are in turn less able to cope with the emergency cases for nonemergency use of these facilities drives up the cost of operating them, which must ultimately increase the cost of medical care in general.

The shortages in eastern Connecticut could very well forecast health care personnel shortages for the entire Nation. The future need for nurses in the United States is considerable. It is currently

Digitized by Google

estimated that there is a need for 150,000 nurses today. In 1980, the number of nurses that will be required for adequate health care in this Nation is estimated at 1 million additional nurses, and this estimate does not include the possible required increases in the event of the creation of a national health insurance program. In contrast, President Ford has said that the number of active duty registered will increase by 60 percent over this decade without any further efforts on the part of the Federal Government. This was one of the reasons he offered for vetoing last year's Nurses Training Act. I have yet to verify the President's figures, but even assuming that they are correct, an increase of 60 percent is still inadequate in light of projected needs. Another reason the President offered for vetoing last year's act was that since most nursing students are at the undergraduate level, they will be eligible for Office of Education student loans. The President concludes that these students do not need a special program. This consideration entirely overlooks the objective of the act which is indeed to create a special program for nursing students in order to increase the number of nurses.

Beyond the need to increase the number of nurses is the importance of expanding the knowledge at the nursing force in this Nation. Nurses are now assuming an increasing role in the area of primary care of patients. This includes screening health problems, assessing health needs, managing programs of care within established standing orders of a physician, deciding if a physician's attention is needed for a patient, and providing health counseling and teaching. Furthermore, nurses are bringing health services to rural and urban communities where such services are inadequate or absent all together. For example, the American Nurses Association reports that "nurse practitioners provide much of the primary care at the pioneer Square inner-city clinic in Seattle serving a population of about 9,000." Nurses are also providing continuing care for stroke patients following hospitalization. This is just one example of the many roles being assumed by nurses today. They are also becoming increasingly important in the care and rehabilitation or maintenance of diabetics, heart attack patients, and persons suffering from mental illness. Expanding roles demand the kind of advanced education provided for under the Nurses Training Act. Projections show that there will be an increasing need for the number of nurses with a master's or other advanced degree. Many nurses today have less than a baccalaureate degree. If the supply of properly trained nurses is to keep pace with the ever-increasing educational requirements brought on by the expanding duties of nurses, then the legislation such as the Nurses Training Act is vital.

The Nurses Training Act of 1971 has shown that this type of program can be very successful. In just the first year of its implementation, the Nurses Training Act increased enrollments of nursing students by 25,000, and by 19,400 over 1972 in 1973. Graduation of these students increased by 4,783 in 1972 and by 7,600 in 1973 over 1972. In addition, more nurses have been able to get advanced education in new nursing roles such as pediatrics, nurse midwifery, and family nursing. Research into better nursing methods has improved the quality of patient care in this Nation. Finally, more minority students have been able to study for nursing careers. Yet more funding must come for-

Digitized by Google

ward if these successes are to be continued, and national health care is to improve.

Yet, President Ford insists that we must consider spending priorities, and vetoed last year's renewal of the Nurses Training Act. The President has said that he would veto any new nonenergy spending by the Congress, but then he requests more aid for the war in Southeast Asia. The question appears to be whether or not President Ford's priorities are realistic. He is asking that the workers, the poor, and the elderly, those hit hardest by the current economic crisis, give up their social security benefits, their food stamps, and quality health care. He is asking that they give up this for a cause of questionable value to the United States in Southeast Asia. Perhaps President Ford does not see health care as a major national priority, but I do and most other Americans do. This is why I introduced a bill for continuing the Nurses Training Act. Soon health care will be too expensive for many Americans, especially the elderly who need it the most. Nursing students and schools have been hampered by funding uncertainties in the first few years of the act. As the American Nurses Association reports, only by continued congressional support for increased and continued funding can schools increase their enrollments. Just as medical costs have increased, so have the costs of medical education. The Congress and the Nation must not allow high educational costs to prevent an adequate number of people from receiving medical training. Only through programs with Federal financial assistance can an adequate number of such persons be assured. The Nurses Training Act is certainly a step toward this goal.

Mr. ROGERS. We are very pleased this afternoon to welcome back to the committee Dr. Philip R. Lee, who is director of the health policy program, University of California, San Francisco, and former Assistant Secretary of Health, Education, and Welfare for Health, a man who this committee has relied on a great deal in the past.

We are honored to have you with us and will be pleased to receive your statement. It will be put in the record at this point without objection.

STATEMENT OF PHILIP R. LEE, M.D., PROFESSOR OF SOCIAL MEDICINE AND DIRECTOR, HEALTH POLICY PROGRAM, SCHOOL OF MEDICINE, UNIVERSITY OF CALIFORNIA, SAN FRANCISCO

Dr. LEE. It is a pleasure to have this opportunity to respond to the committee's request to discuss the major health manpower questions facing the country.

I would like to focus on the problems and the issues rather than the specifics in the proposed legislation.

I will submit my full statement for the record [see p. 384]. At the end of the statement there are two appendices with tables dealing with U.S. physician supply and distribution and a number of tables relating to foreign medical graduates that I will refer to during the course of my testimony [see p. 402].

Unless there is time at the end of the discussion of the issues to discuss my recommendations, I will just submit those for the record [see p. 426].

Digitized by Google

Mr. ROGERS. That will be fine.

Dr. LEE. Last year the committee identified nine issues affecting the quantity and distribution of health manpower and health services. Those issues were: First, the need to insure financing stability of health professions schools and to increase manpower supply.

Second, the need to correct geographic maldistribution.

Third, the need to correct specialty distribution.

Fourth, foreign medical graduates.

Fifth, the need for physician assistants and expanded function dental auxiliaries.

Sixth, the need for students from disadvantaged backgrounds in health professional schools.

Seventh, the need for public health and health administration personnel.

Eighth, the need for allied health personnel.

And ninth, the need for proper implementation of health manpower legislation by the Department of Health, Education, and Welfare.

This committee and the health subcommittee in the U.S. Senate spent many hours during the second session of the 93d Congress grappling with these issues. The reports of these committees are the two most valuable sources of information currently available on the subject.

I want to take the opportunity at this time, Mr. Chairman, to commend the committee and particularly the committe staff who wrote the House committee report, which is a superb, invaluable document. It is "must" reading for anybody concerned with these issues.

Mr. ROGERS. Thank you, the committee was very pleased with the staff work on that as well.

Dr. LEE. My discussion of the issues today is from the perspective of a physician who believes that the need to provide good primary care for everyone is the major health care problem facing the country. In my statement, I deal with the problems of aggregate numbers, geographic maldistribution, specialty maldistribution, foreign medical graduates, and the problems of data, which are very serious. Also in the early portion of my statement I discuss primary care, what it is, and why we have the needs that we have in primary care.

In my full statement I deal with the problem of demands for medical care, discussing the impact of the medicaid and medicare programs on demand as well as the impact of the community mental health centers, the neighborhood health centers, the title V programs, including the maternal and infant care projects, children and youth projects, on demand and the way in which these programs have been utilized to correct some of the maldistribution problems.

One thing that we have learned, particularly from the neighborhood health centers and some of the children's health care programs, is the need for a team approach at the primary care level, particularly the physicians-nurse practitioner team. In addition, for those patients who have complicated social as well as medical problems there is the need to provide social as well as medical services in an integrated fashion at that primary care level.

In December of 1973 the committee in its hearings on national health insurance made clear the complex interrelationships between health manpower policy and policies on financing of medical care and the organization and delivery of care.

Digitized by Google

Some of the questions that were raised in those hearings will have to be dealt with as this legislation evolves over the next year or two include:

What percentage of gross national product will be put into health services? What services will be provided and who will receive these services? How will providers be reimbursed for their services, that is, fee for service, prepayment, fixed hospital budgets? Will there be a more equal balance in reimbursement for ambulatory care and hospital based services? How will providers be regulated with respect to quality, utilization and cost control?

How you answer these questions will significantly affect the demand for physicians' services and for the services of other health professionals, as well as the demand for hospital and other institutional services.

The legislation you are now considering can have a profound effect on the Nation's ability to meet the demands for medical care that will be generated by national health insurance, the improvements in technology and the other forces affecting the quality of medical care that tend to increase demand.

In my statement I deal in some detail with the problems relating to the inadequacies of the health manpower data currently available. This is a critical issue which the committee must deal with.

In my statement I deal in some detail with the problem of aggregate supply of physicians. The data is not available for making unquestionably positive decisions.

Estimates of need depend on such things as the health status of the population, the ability of the people to use the services offered and the availability of those services to the population. The productivity of the physician is highly variable depending on the demand for services, the number of other health workers associated with the physicians, the facilities in which the services are provided, the means of remunerating physicians, and the individual styles of the physicians.

We know, for example, in underserved physician short areas physicians will see twice as many patients during the course of a year as they do in areas that are better served, such as the New England area. For example, physicians in the New England region will probably have 4,000 patient visits a year. In the Southeastern region, where there is a shortage of physicians, a physician may average 8,000 patient visits annually.

By working longer hours, seeing more patients per day, having more paramedical personnel associated with them, the physician in the unserved areas is more productive; but it stretches the capacity of those physicians to the limit when they have to work under those conditions.

We know the ratios of physicians to population do not reflect available services because they don't reflect the number of physicians who provide primary care, or those whose principal activity is primary care, nor do they reflect the many other physicians who provide only specialty or consulting services.

In the District of Columbia the physician to population ratios is over 300 physicians per 100,000 population, or about twice the national average. In spite of this, there are large segments within the District

Digitized by Google

without adequate access to medical care. The physicians are not well distributed geographically in the District. In San Francisco the ratio is even higher, 530 physicians for every 100,000 population.

Mr. ROGERS. Excuse me, may I interrupt? These are the second bells for a record vote. We hope they will be the last this afternoon.

The committee stands in recess for 5 minutes. If members will return immediately it will be appreciated.

[Brief recess.]

Mr. ROGERS. The subcommittee will come to order, please.

We will continue hearing from Dr. Lee.

Dr. LEE. Thank you, Mr. Chairman.

Before you had to recess temporarily, I noted that in San Francisco, there are 530 physicians for every 100,000 people. That is more than double the statewide average, and it is more than three times the national physician-to-population ratio. In San Francisco, as in the District of Columbia, there are neighborhoods without adequate access to medical care because of geographic maldistribution within the city.

Ratios don't provide a reliable measure of the adequacy of health manpower. They are useful for comparative purposes, however.

The United States compares quite favorably in terms of physician-to-population ratios when compared with other countries (table 1). In the United States, physician supply has increased in the last 20 years (table 2). The physician-to-population ratio in 1950 was 141 per 100,000; in 1960, 136 per 100,000 population; and in 1970, 154 per 100,000 population. The impact of the Federal programs for the support of medical education, particularly those that were designed to increase the enrollments and increase output of physicians, is also evident (table 2).

Federal programs began in 1963 when Federal aid for facilities construction and student loans was first authorized. The first signs of enrollment increase were evident in 1965, and we are now seeing an accelerated impact of those policies designed to increase enrollments (table 3). They had a specific purpose, and I think they are achieving their objectives.

In projecting into the future, the Secretary this morning discussed the HEW projections, and there is an excellent document which DHEW has published, which the committee members may be familiar with: "The Supply of Health Manpower, 1970; Profiles and Projections to 1990."

In my statement submitted for the record, I give the details of many of the projections contained in that excellent monograph. The HEW projections are based on several assumptions; one is, that in the projections of aggregate supply, the supply of foreign medical graduates will be sustained at quite high levels. I will submit an additional table from the HEW document which indicates those supplies will increase from 60,000 in 1970 to 112,000 in 1980 and 164,000 in 1990 (table 7, app. 2).

Mr. ROGERS. This is foreign medical graduates?

Dr. LEE. Yes; and I will get into more detail on that when I deal with the problem. These HEW projections indicate that aggregate supply appears to be adequate. Projecting only the supply of the graduates of American schools, U.S. schools, both M.D.'s and D.O.'s, the

Digitized by Google

figures come out quite differently. The aggregate supply of physicians is estimated to be 251,200 in 1970, increasing to 318,000 in 1980, 407,000 by 1990.

Those numbers will still provide, with the population growth and improvements in the quality of care, maintenance of the current physician-to-population ratios. The Federal policies that were instituted in the middle 1960's are going to have continuing benefits through the 1970's, 1980's, and 1990's in terms of the numbers of U.S. graduates available to provide medical care in the United States.

The HEW aggregate supply projections, as I indicated, included a significant segment of foreign medical graduates. Dr. Mark Blumberg, who is a physician now working with the Kaiser Health Plan, did a study for the Carnegie Commission, and he based his projections on a decline in the foreign medical graduates in the United States. His projections were based on the assumption that the number of foreign medical graduates immigrating would drop to zero by 1978. His future predictions were significantly different than those of the Department, with a much slower growth in terms of the aggregate supply of physicians.

The question of foreign medical graduates is really a very basic question for the committee and the Congress. We must recognize that the increase in the ratio of physicians to population in the United States in the last decade has been largely due to the influx of foreign medical graduates.

In my full statement, I deal at length with the policies that have permitted large numbers of foreign medical graduates to enter the United States. Actually, legislation was first introduced by Senator Fulbright in 1946 through amendments to the 1944 Surplus Property Act. In 1948, the United States Information and Education Exchange Act, the Smith-Mundt Act, authorized fuller exchange programs and created the exchange visitor program, which has been very important in relation to foreign medical graduates.

The number of foreign medical graduates began to increase substantially after World War II, and in 1957 the Educational Council for Foreign Medical Graduates was established to certify the basic qualifications for the foreign medical graduates to enter training in the United States.

This had some effect in improving the qualifications of those physicians coming to the United States. In 1965, there were further amendments which abolished the system of quotas based on national origin. This set in motion a transitional process which lasted 2½ years. Quotas were distributed on a first-come, first-served basis. The foreign medical graduates fell into two preference categories which provided further stimulation for their immigration into the United States. (Tables 1 and 2, app. 2.)

In 1965, the Labor Department determined that there was a physician shortage and eased the entry of foreign graduates into the United States. In that same year, medicare and medicaid were enacted.

Medicare and medicaid increased the demand for services and also guaranteed hospitals reimbursement for the costs of interns' and residents' services provided to medicare and medicaid beneficiaries. The number of intern and residency positions grew very rapidly, and there

Digitized by Google

were a large number of unfilled positions. The Labor Department looked at those vacancies and said, in effect, "We have a shortage." The vacant positions became kind of a suction cup providing positions for foreign medical graduates who began to come into the United States in increasing numbers.

There are a number of tables in appendix 2 that provide more clinical information on foreign medical graduates in the United States. Table one (appendix two) illustrates the impact of the policy changes made with respect to foreign medical graduates in 1970. You will note the immigrants to the United States began to increase substantially after 1970. Many of the foreign medical graduates immigrating after 1970 were in the United States on foreign exchange programs; they weren't new immigrants. The result is that for the last 4 years, we have had more foreign medical graduates entering practice or training in the United States than we have had graduates of U.S. medical schools. The bulk of the foreign medical graduates are now entering as immigrants not on an exchange visitor agreement.

The status of foreign medical graduates has been confused and blurred so that many of these physicians who entered the United States for training in the early 1960's were found to still be in the United States in the early 1970's.

The impact of the expansion of the residency programs can be seen by looking at some figures. In 1950–51 there were 28,734 approved graduate training positions in hospitals in the United States; 68 percent were filled by U.S. and Canadian graduates, 7 percent by FMG's, and 25 percent were vacant (table 5, app. 2).

Twenty years later in 1972–73, there were 65,308 positions available, 58 percent filled by U.S. and Canadian graduates, 28 percent filled by FMG's, and 14 percent vacant.

Another important shift was occurring during this period. Initially most of the FMG's came from Europe and Latin America, but by 1972 almost 70 percent of the physicians admitted to the United States were from Asian countries. A very dramatic shift from 1965 when only 10 percent came from those countries (table 4, app. 2).

Mr. SCHEUER. Were they mostly from the Philippines?

Dr. LEE. The Philippines, India, Indonesia, Thailand, Korea, and Pakistan.

Mr. SCHEUER. Would you say a word about the quality of their medical education and their prior experience?

Dr. LEE. In my opinion the quality of medical education of foreign medical graduates in some schools, particularly the European schools, British, Swiss, some of the others, is equal to that in the United States. That is also true of the Canadian schools and it is true of some of the Latin American schools. In the medical schools from which the majority of these students come, however, their clinical experience is much less adequate than in U.S. schools and their performance on State boards, national boards, specialty boards and their performance on even the ECFMG examination is well below the graduates of U.S. medical schools.

Mr. SCHEUER. Excuse me, ECFMG?

Dr. LEE. Educational Council for Foreign Medical Graduates. FMG's have to take the ECFMG examination before entering U.S. training programs.

Digitized by Google

Mr. SCHEUER. Is there a language problem?

Dr. LEE. Yes, but this is not the main problem. The American students who go to the foreign schools and take the ECFMG examination perform no better than, say, the foreign born student, indicating that the language is not the problem. It is the fact that they do not have an equivalent medical education, either basic science or clinical experience.

These generalizations do not apply to all the medical schools or to all the students because some of our most outstanding physicians are graduates of foreign medical schools.

The basic problem is that the FMG's preparation is not up to that in the American medical schools. We have a double standard of admission to residency training in the United States and a double standard of admission to medical practice. In addition, the foreign medical graduates have not contributed significantly to solving our health manpower problems. The majority of FMG's are in training or in other hospital-based positions. Two-thirds of the Asian FMG's are in hospital-based practice, either in residency practice or full-time hospital positions. Only about 20 percent of the U.S. and Canadian graduates are in similar positions. The European FMG's follow a pattern similar to U.S. and Canadian graduates. The foreign medical graduates are geographically maldistributed even worse than U.S. medical school graduates. The States with the highest physician-to-population ratios tend to have the largest number of foreign medical graduates (table 10, app. 2). The FMG's have gone into hospital-based specialties more so than the American and Canadian graduates (table 9, app. 2). They have gone into primary care specialties less often and are geographically maldistributed mostly in New York, Delaware, New Jersey, Illinois, and Rhode Island. At least 25 percent or more of the physicians in each of those States are graduates of foreign medical schools (table 10, app. 2).

Mr. SCHEUER. You mentioned that we have established two standards for admission both to the residency programs and to practice. Could you elaborate on that?

Dr. LEE. Yes; the foreign student, to get into a residency in the United States, has to take the ECFMG examination and has to come from a medical school that is listed in the *World Dictionary of Medical Schools*. To graduate, the medical student in the United States has to go to an approved medical school, approved in the United States after very careful peer review by people not from that school, and pass either State or national boards. Almost all students have taken the national boards which are considerably tougher than the ECFMG examination, plus they have had to graduate from their own schools and the standards in the United States are relatively uniform. I think we have a high quality product from the medical schools here. That is one factor.

State licensure is another test. There are a large number of foreign medical graduates who are unlicensed. The number estimated last year was around 10,000, and many of those are performing the services normally performed by licensed physicians (table 12, app. 2). They are not just technicians or physician assistants, they are performing physician services.

Digitized by Google

It seems the quality aspect of this is an extremely critical one. The second aspect is that they have not contributed to the solution of our problems. As a matter of fact, they have made our problems worse.

Mr. SCHEUER. In what way?

Dr. LEE. The geographic maldistribution for FMG's is as bad or worse than U.S. graduates. They have not helped solve that problem. They don't go to the States in greatest need.

One other factor, is that there is an increasing number of American students who have not been admitted to U.S. medical schools who have had to go to foreign schools. That number is increasing. The last figures I had available indicated there was 3,600 such students abroad in 1969–70 and I am sure the figure is higher, possibly double that now. There has been a program developed to help those students return to U.S. medical schools. They have to pass the same examinations that the U.S. students have to pass who are in U.S. schools, namely, the national boards. This helps to provide an assurance that these students are up to U.S. standards. There are provisions in the proposed health manpower legislation to further enhance that training by funding programs in U.S. medical schools that would permit more of these American students in foreign medical schools to return and measure up to the standard in the U.S. schools.

Moving on from the foreign medical graduates, the second sort of critical problem, and one where I disagree strongly with Secretary Weinberger, is the specialty distribution of physicians. It was originally thought that increasing the aggregate supply of physicians would assure an appropriate distribution by specialists to meet the needs.

A variety of forces have been at work that have produced a very different result: serious shortages of primary care physicians; excess numbers of surgical specialists, such as general surgeons and neurosurgeons; disproportionate reimbursement for surgical services as opposed to primary care and large numbers of physicians performing sugery who have not had adequate surgical training.

I believe in every surgical subspecialty we have an excess supply of physicians. The American College of Surgeons has sponsored a study of surgery in the United States, including a study of surgical manpower. As part of this effort Dr. Osler Peterson of Harvard and his associates did a study of the supply, geographic distribution and work load of surgeons. Their data indicates both oversupply and maldistribution. I think you might want to get the data directly from Dr. Peterson because the data is very impressive.

Mr. ROGERS. Was this done for the College of Surgeons?

Dr. LEE. Yes.

Mr. SCHEUER. If we performed on an annual basis most of the operations or all the operations that reasonably should be performed, would we still have an oversupply? In other words, if there were some way of funding the operations that ought to be performed, would we still have an oversupply of surgeons?

Dr. LEE. The reason we have an oversupply of surgeons is that they are underemployed.

Mr. SCHEUER. Because there isn't the money to hire them to do certain operations?

Digitized by Google

Dr. LEE. In certain geographic areas where there are fewer surgeons they do twice as many operations as do surgeons in areas where there are large numbers of surgeons in relation to the population, such as the Pacific Coast area and the New England area. The surgeons, to keep up their skills, have to perform a certain number of operations every year. If they don't perform an adequate number their skills will diminish. They are well trained and most of the surgical operations are performed by either board certified or board qualified surgeons. The number of operations by general practitioners in terms of the total is a relatively small amount.

By diverting more physicians into these surgical specialties, we do not have physicians available to provide primary care; or we find surgeons and other specialists providing primary care where primary care physicians are not available.

It is the diversion into these surgical and other subspecialty fields that is a problem. I do not believe that this specialty maldistribution can be corrected entirely on a voluntary basis, we need more primary care physicians and fewer surgeons and medical subspecialists.

In my statement submitted for the record, I deal in some detail with the declining ratios of primary care physicians to population—dramatic for general practitioners and not compensated for by increases in the internists, pediatricians, and obstetricians.

Rosemary Stevens, a professor at Yale, has stated the problem clearly. She said the training has changed from—

> One based on general undergraduate training and general practice to a complex array of specialists, each with his own training and examination system. Medicine, as no other profession, is now functionally fractional and internally stratified. The change is largely the product of the last 30 years.
>
> Not only has the march of specialism lengthened the training of the medical student to the present eight or nine years, it also has created an unwieldly superstructure of specialty board examinations, a crisis in graduate medical education, a haphazard assignment of educational and training responsibility, and acute manpower problems.

I completely agree with her statement.

There are a number of other factors. Students perceive that primary care is not an intellectual challenge. There has been an explosion of knowledge so that students don't want to be a "Jack-of-all-trades." They want to know a great deal about a given area. These are influential forces.

The current structure of medical education provides physician models who are largely specialists or subspecialists in institutions and not primary care models.

The shortage of primary care physicians is serious. In a study done by Shonfeld, Heston & Falk, it was estimated that the optimal number of physicians needed to provide primary care was 133 per 100,000 population. This is almost three times the estimates of the current national average. In contrast to the optimal number of primary care physicians estimated by Schonfeld, the average primary physician/population ratio for the United States and the ratio of general practioners to population in England was estimated to be 40 per 100,000 population in 1971.

In contrast to the primary care physician in the United States, the English general practitioner usually limits himself to home and office

Digitized by Google

based care, referring all patients requiring specialty consultation or inpatient care to hospital based specialists. In addition, the British general practitioner has better organized home nursing and other social services to meet the needs of his patients.

He or she does not practice in the hospital but devotes his or her full time practice to primary care either in the office, in the community, or at home.

Mr. SCHEUER. Don't they also practice preventive care to a larger extent than we do?

Dr. LEE. I doubt it. The possibility is there but I don't think they do. Just as in the prepaid group practice programs in the United States, it is alleged they do more health maintenance and prevention but I don't believe that is the case.

The system of medical care significantly influences need for physicians services. If, for example, more nurse practitioners, physician extenders, and physician assistants working interdependently with the physician were available, significantly more services would be provided to more patients.

A change in the method of remuneration could improve the productivity of physicians, particularly increasing needed primary care services.

To determine the need for primary care physicians it has been suggested that the physician to population ratios in prepaid group practices be examined—Table 7. The Portland Permanente Medical Group, which is associated with the Kaiser Health Plan, there are 33 primary care physicians per 100,000 population.

The Permanente Medical Groups in Oakland and Los Angeles have 59 primary care physicians for every 100,000 people enrolled, and in the Group Health Association in Washington, D.C. there are 65 primary physicians for every 100,000 population.

The populations that each group serves are somewhat different, and the populations served by these groups are quite different than the general population—there are fewer older people, fewer poor people, and more working people in relation to the total population served. Why the differences between the Permanente Medical Group in Portland and the other cities? I really can't explain it.

Mr. SCHEUER. Would you elaborate on your statement that the guarantee of payment to nurse practitioners and physician assistants would be an incentive?

Dr. LEE. Adequate reimbursement of nurse practitioners and physician assistants would provide an important incentive for physicians to work with them and to bring these physician extenders into service with them. Increasing reimbursement of physician extenders for ambulatory care would improve the utilization of those personnel. Increased use of physician extenders could not only extend the medical service more broadly but could also improve the quality of service. Studies on nurse practitioners indicate that under appropriate conditions nurses do as good a job as physicians.

Mr. SCHEUER. Can you provide those studies for us?

Dr. LEE. Certainly we can [see p. 436].

Projecting into the future is the critical area with respect to specialization of physicians. We can look back at the record for the past

Digitized by Google

20 or 30 years and project ahead, as HEW has done, and as Gerald Weber did for this committee last year—he was at the University of California at Berkeley, then, and is now with us at the University of California at San Francisco.

Dr. Weber looked at primary care specialists using only general practitioners, internists, and pediatricians in his estimates of primary care providers, and he noted that these providers increased from 103,000 to 104,000 in the two decades between 1950 and 1970. There was an increase of 12,000 in other medical specialties as compared to increases of 56,000 in other specialities such as laboratory medicine, pathology, and radiology. He also found that there had been an increase of 41,000 in the various surgical specialties during the same 20-year period.

Doctor Weber then examined the data on the number of physicians in training and projected those figures into the future. He estimated that the average physician would practice for 30 years. This would require 3.5 residents in training for every 100 physicians in a particular specialty for replacement.

In 1970 in general surgery there were 12.2 new trainees for every 100 physicians in practice, three times the replacement level. For primary care specialties the number of physicians in training was 4.5, just barely over the replacement level. The recent HEW projections confirm Dr. Weber's projections and indicate a decline in the percentage of physicians in primary care specialties from 44.2 percent in 1970 to 41.2 percent in 1980; 39.3 percent in 1990.

In his testimony this morning Secretary Weinberger said everything is going to work out fine if family practice residencies are expanded. Even if those increase optimally these ratios will be unchanged. As you pointed out this morning, Mr. Chairman, only 4 percent of the 51,568 residences offered are in family practice.

Those numbers, even if you double or triple them, rise only to 7,500; and it is not easy to triple the number of residencies. But even with that, these future projections would change relatively little.

Thus, projecting the impact of current policies, the problem of specialty maldistribution is going to grow steadily worse.

Now there are some hopeful signs: Developments of the family practice residency programs, development of family practice departments in the medical schools and the fact that the family practice board is the only one that is going to require recertification after the physician is certified, 5 years later he has to be recertified.

The fact that the American Board of Internal Medicine is paying a good deal more attention to primary care is another hopeful sign. Although these are hopeful signs I don't think there is the slightest likelihood that the present voluntary mechanisms will set any limit on the number of residency training positions available—reducing significantly the number of surgical training positions available or increasing the number of primary care training positions. Additional measures, such as those under consideration by this subcommittee will be needed.

Geographic maldistribution of physicians is a problem that has been without solution in every country of the world. We are not alone. Even in countries as different as Israel and the Soviet Union, with very

Digitized by Google

much better physician-to-population ratios than the United States, the problem exists.

In Israel, a relatively small country geographically, physicians won't work in the rural areas. We also have been relatively unsuccessful here.

In my testimony submitted for the record I detail the very significant differences in the geographic distribution of physicians both by region, by State, and within States. In California, for example, as of December 31, 1973, there were 38,749 active non-Federal physicians in California. That is a ratio of 189.9 physicians per 100,000 population, considerably better than the nationwide average.

The ratios ranged from 203 in the major metropolitan areas to 82.8 in the isolated rural areas. The range was from 530 in San Francisco to zero in rural Alpine county. It is a northern county with 650 people and no doctor. Another county, Medoc County, had two general practitioners serving over 8,000 patients.

The distribution of specialists providing primary care, internists, pediatricians, obstetricians and general practitioners illustrates the problem of meeting the needs in small towns and rural areas. Internists, pediatricians, and obstetricians settle in the metropolitan areas or in lesser metropolitan areas. In the isolated rural areas and isolated semirural areas, there are very few internists, almost no pediatricians and few obstetricians. The general practitioner is better distributed in relation to the population in metropolitan, adjacent isolated semirural and isolated rural areas. This pattern of geographic distribution is another reason that family practice residencies are important. Internists, pediatricians, and obstetricians tend not to settle even in towns of less than 10,000 people. General or family practitioners will settle in those areas. No physicians seem to settle in areas smaller than 1,000 people because of certain circumstances or conditions. In a study done for the AMA on factors that influence people to settle in rural areas it was found that prior exposure, professional relationships, economic factors, and demand for services were important.

In the remainder of my testimony submitted for the record I deal with some of the alternatives developed to deal with the problem of geographic maldistribution: area health centers, loan forgiveness, and the National Health Service Corp. Loan forgiveness programs have been quite unsuccessful to date. The major reason is that students were not informed about the provisions permitting loan forgiveness. This morning Secretary Weinberger indicated that with a change in that policy there is a significant improvement of physician participation in the loan forgiveness program.

The best program that has been developed to deal with this problem is the National Health Service Corps. I give some facts and figures in the testimony and you have had more available.

The decentralization of medical education has been developed in such States as Wisconsin and Indiana and last year in your hearings on health planning, the dean of the Indiana University Medical School detailed the results of that program. What they have achieved there is impressive. They have 56 community hospitals and 140 private physicians who are involved as preceptors in their program. Virtually all of their senior medical students, in recent years, over 90 percent, spent

Digitized by Google

at least 2 months in these decentralized programs. They have almost doubled the number of internships in the State. They have 90 percent of those positions filled by the graduates of U.S. medical schools and the State is retaining an increasing percentage of its medical school graduates.

Last year 60 percent of their own graduates, the graduates of the University of Indiana Medical School, were staying in Indiana. That is a State that was supplying California, Florida, and Arizona with physicians at very low cost to California, Florida, and Arizona.

Illinois has taken a different approach to the decentralization of medical education. There are many States that are now looking at the Indiana program as a possible alternative for meeting their needs.

In the statement submitted for the record I also discuss some of the issues related to nurse training. I just want to make one point there which is that we need to look at the relationship of the nurse practitioner programs and the primary care physician training programs as cooperative ventures. You know that with separate legislative authority, those tend to be separate. In practice they need to be together in area health education centers, in community hospitals, and university medical centers. There should be programs for physician extenders, physician assistants and/or nurse practitioners in training with physicians.

The country has a large pool of nurses. Many nurses, including graduate nurses, are not in nursing practice, providing a talent potential there for dealing more effectively with the problems.

Many of the geographic maldistribution problems are the same in nursing as they are in the other health professions. Most of the States oversupplied with physicians have a better supply of nurses, those that are undersupplied with physicians have a relatively small supply of nurses.

My summary and recommendations are in the statement submitted for the record [see p. 426]. I would like to stress several recommendations.

The Congress must set a limit on the number of residencies and create a mechanism so that if the existing Coordinating Council on Medical Education and the Liaison Committee on Graduate Medical Education do not prove to be effective for controlling residencies, there will be an alternative mechanism which comes into play. I do not believe it will be done on a voluntary basis.

There are multiple specific actions that should be taken to deal with the problems posed by the increasing number of foreign medical graduates. The immigration laws need to be changed and made more restrictive. Every physician that goes into residency training should meet the same requirements; the Department of Labor should indicate that there is no longer an aggregate shortage of physicians so that the movement will not be as accelerated as it currently is, and finally the reimbursements under medicare and medicaid should limit reimbursement for approved residency positions and fund only those positions. Now the Federal Government is underwriting close to 50 percent of the costs of residency training through these mechanisms—through Medicare and Medicaid principally.

Digitized by Google

There are a number of other recommendations that I am submitting with my statement, but I did want to stress the recommendation related to residency training and foreign medical graduates.

[Testimony resumes on p. 430.]

[Dr. Lee's prepared statement, appendixes, and summary and recommendations, referred to, follow:]

STATEMENT BY PHILIP R. LEE, M.D.[1]

Mr. Chairman and members of the Subcommittee on Health and the Environment:

It is a pleasure to respond to your request to discuss the major health manpower problems facing the country. These problems translate into health manpower policy issues facing this Subcommittee and the Congress as you consider extension and revision of the Health Manpower Training Act of 1971 and the Nurse Training Act of 1971.

Last year the Committee identified nine issues affecting the quality, quantity and distribution of health manpower and health services it considered to be of major importance. The issues were:

1. The need to insure financial stability of health professions schools and increase manpower supply.
2. The need to correct geographic maldistribution.
3. The need to correct specialty distribution.
4. Foreign medical graduates.
5. The need for Physician Assistants and Expanded Function Dental Auxiliaries.
6. The need for students from disadvantaged backgrounds in health professional schools.
7. The need for Public Health and Health Administration personnel.
8. The need for Allied Health Personnel.
9. The need for proper implementation of health manpower legislation by the Department of Health, Education and Welfare.

This Committee and the Health Subcommittee in the U.S. Senate spent many hours during the second session of the 93rd Congress grappling with these issues. The reports of these committees are the two most valuable sources of information currently available on the subject. I want to take the opportunity to commend the Committee and particularly Committee staff who drafted the report. I consider it essential reading for anyone seriously concerned with the issues.

THE NEED TO PROVIDE PRIMARY MEDICAL CARE

I will discuss the problems of physician manpower, particularly aggregate numbers, geographic maldistribution, specialty maldistribution, and foreign medical graduates from the perspective of one who believes that the need to provide good primary care for everyone is the major health care problem facing the nation.

Recognition of the problem in the United States has been slow for a number of reasons, including: (1) the lack of a clear and widely accepted definition of primary health care (2) the lack of adequate data on health manpower, particularly data related to the actual activities of physicians in patient care; (3) the growing emphasis on scientific achievement, technical skill and specilization in medicine; (4) the growing dependence of physicians on institutonally based technologies, such as radiological and laboratory services; and (5) the long separation of curative medicine from public health and preventive medicine.

In addition to discussing the problems related to physician manpower I will briefly discuss some of the problems related to nursing services and nurse training.

It is necessary to discuss each issue separately, but we must recognize their interrelationship. Health manpower policies cannot be separated from policies related to the organization, delivery, and financing of health care. In examining the questions of supply and distribution it is essential to keep the demand side of the equation in mind.

---

[1] Professor of Social Medicine; Director, Health Policy Program, School of Medicine, University of California, San Francisco.

Digitized by Google

Before turning to a discussion of the health manpower issues, I want to say a few words about primary care. Doctor Alberta Parker has contributed very significantly to our understanding of primary care. She has stated:

Primary health care serves as the entry point to the personal health care system; provides the full range of health services adequate to meeting the majority of daily personal health needs, including preventive health maintenance, dentistry, podiatry, and social work; and assures continuity and coordination of all the personal health care needed.

Primary medical care is identical except it does not provide the full range of services; it provides only physician, paramedical and auxillary services.

Primary care physicians include general and family practitioners, pediatricians, internists, and obstetrician-gynecologists. Although they may, on occasion, provide consultant or specialized services, the bulk of their practice is general medical care.

Secondary medical care is medical care that does not care for common everyday conditions, but focuses on the less common problems that require a combination of specialized skills, knowledge and complex equipment. It can be provided in hospitals or ambulatory settings, such as group practice clinics, hospital outpatient departments or specialists' offices.

Tertiary medical care is medical care largely limited to uncommon conditions that require highly specialized personnel and equipment, such as those found in university medical centers and large teaching hospitals. (23)

THE DEMAND FOR MEDICAL CARE

Turning from definitions to issues, I want to begin with a brief discussion of the demand for medical care and impact of Medicare, Medicaid and national health insurance on that demand.

Medicare and Medicaid were enacted in 1965 as amendments to the Social Security Act. They were designed to increase the access of the aged and the poor to medical care. With a reduction in the financial barriers there was an increased demand for physician's services and for hospital care. Because of the rapid increase in the number of public assistance recipients since 1967, the total number of Medicaid recipients rose from 9.5 million in 1967 to 23.5 million in 1973. Financial barriers to access had been eliminated for millions of poor people. The demand for care rose rapidly, but cost increases were more rapid.

Medicare presented a different picture. Financial barriers to access were always part of the program in terms of the supplementary medical insurance premium, the deductibles on both physician's and hospital's charges, the limited payment for physician's services and the hospital coinsurance. Despite these financial barriers and the fact that the number of aged Medicare beneficiaries has been about 20 million, costs have risen rapidly. The increased costs are related to more services, improved quality and increased prices. Last year Medicare benefits were extended to individuals with end-stage renal disease and to those covered under Social Security who are under age 65 and permanently disabled.

Because of the increased demand generated by Medicare and Medicaid and the fact that both programs reimbursed hospitals for the services provided by interns and residents in training, these programs expanded rapidly. Residency programs, particularly, grew rapidly. In 1965–66, the year before Medicare and most Medicaid programs began, the total number of residencies offered was 38,750 with 31,095 positions filled. By 1972–73, the positions available had risen to 51,658 with 45,081 filled. The increase of 14,000 physicians in residency training in this seven year period exceeded the increase in the twelve years before Medicare and Medicaid.

Maternal and Child Health Programs, Crippled Children's Services, Maternal and Infant Care, Children and Youth, Family Planning, Community Mental Health Center and Neighborhood Health Center projects have all had an impact on access to care. Expenditures for these programs are dwarfed by Medicare and Medicaid, but we have learned a great deal from these efforts. One lesson has been the value of the team approach to medical care. In addition to physician services, the neighborhood health center utilizes the team approach with nurse practitioners, community health aids and nurse midwives. In expanded facilities clinical laboratory and radiologic services are available. Since the definition of health care is not limited to provision of medical services, nutrition and social

Digitized by Google

services are also important elements in a neighborhood health center program. For many patients with complex social problems, these services can become as important as medical services.

We have learned from the Neighborhood Health Center Program that nurse practitioners and community health aids can render invaluable assistance to physicians. Their availability can extend the geographic reach of services and provides access to care for individuals who would otherwise be without services or could obtain them only with the greatest difficulty and at a cost to their health.

Medicare, Medicaid, Community Mental Health Centers, and neighborhood health centers are fairly new programs, created in the 1960's. The Maternal and Child Health program was authorized under Title V of the original 1935 Social Security Act forty years ago. The programs under this title accounted for expenditures of $440 million in 1973—twice that of the Neighborhood Health Center Program, but only about two percent of the Medicare and Medicaid expenditures.

Although these programs do not appear to be directly related to health manpower, they can play a significant role in addressing health manpower issues. They can be used to improve the distribution of services to areas currently underserved. Through reimbursement to hospitals for intern and resident salaries, they can also be used to improve the current geographic distribution of physicians in training and they can also be one means to help correct the current shortage of training positions for physicians in family practice and other primary care specialties.

This Committee, in its examination of the key issues as they relate to national health insurance in December 1973, made it clear that it understands the relation between health manpower policy and policies affecting the organization and delivery of health care services and appreciates the complexity of these problems. There are a number of questions related to national health insurance, the answers to which will influence health manpower requirements and policies:

1. What percentage of the Gross National Product will be put into health services?
2. What services are to be provided?
3. Who will receive these services?
4. How will providers be reimbursed for their services (i.e., fee for service, prepayment, fixed hospital budgets), and will there be a more equal balance in reimbursement for ambulatory care and hospital based services?
5. How will providers be regulated with respect to quality, utilization and cost control?

How we answer these questions will significantly affect the demand for physicians' services and for the services of other health professionals, as well as the demand for hospital and other institutional services.

The legislation you are now considering can have a profound impact on the nation's ability to meet the demands for medical care that will be generated by national health insurance, the improvements in technology and the other forces affecting the quality of medical care.

DATA PROBLEMS

In attempting to discuss the need for physicians and other health professionals, it is necessary to use numbers and ratios that seem to confuse rather than illuminate the issues. In developing policy alternatives, it is necessary to recognize the serious problems that remain because of the limitations of available health manpower data.

A major obstacle facing the Congressional committees and others concerned with health manpower policies is the lack of adequate health manpower and health care data and an agreed upon set of assumptions as to what numbers of health professionals and distribution patterns will provide adequate, accessible care to all individuals. The two-volume record from the hearings held by this Committee last May and June attests to the abundance of information, opinions and statistical studies which are readily available. However, the absence of both a basic data base and defined criteria for determining the adequacy of numbers of health professionals and their distribution requires the development of policy to be derived from educated guesses. This process leaves the issue vulnerable to a broad spectrum of interpretations and recommendations.

Many of the inquiries into questions of numbers of physicians and their distribution, both geographically and by specialty, utilize data collected from the

Digitized by Google

American Medical Association (AMA). This data is among the best available in the country. Due to revisions in the AMA's classification of physicians (made in 1968) it is difficult to draw comparisons between data gathered before and after that year. Additionally, survey data collected by the AMA depend on the physician to identify his area of specialization. While a physician may indicate that he provides services in several specialty areas, the published data refers only to the primary specialty of each physician surveyed.

Even if it were possible to determine the percentage of time spent by each physician in the practice of his primary specialty area, provision of primary care and other defined services, one is still left with the even more perplexing problem of determining appropriate physician-population ratios and specialty and geographic distribution patterns. The problem of determining the number of physicians currently providing primary medical care and the number needed to provide such care illustrates the problems. It has been estimated by Dr. Robert Huntley of Georgetown University (13) and Dr. Alberta Parker of the University of California that there are approximately 40 physicians providing primary care for every 100,000 people in the United States. (23)

In attempting to estimate what the ratio should be, the ratios in prepaid group medical practices (PPGP) providing a comprehensive range of health services to a defined patient population have been studied. The distribution of physicians to this patient population cannot be directly applied to the nation's health care system for a variety of reasons. The socioeconomic and demographic characteristics of the PPGP patient population vary from those of the population at large. Patients over the age of 65 are substantially underrepresented. Primary care is most often provided in PPGP's by specialists rather than general practitioners. Depending on the volume of services required by the PPGP patient population, the organization may purchase certain specialty services as needed, rather than maintaining the specialist on the PPGP staff. The distinctive financial, benefit, reimbursement and organizational characteristics of PPGP's must all be recognized when extrapolating their experience nationwide. Additionally, PPGP physician statistics do not include physicians engaged in training, teaching, research or other activities such as public health administration. Data from several group practice plans indicate the ratio of primary care physicians per 100,000 population varies from 33 to 65/100,000, while the total ratio of physicians to membership varies from a low of 69 to a high of 104/100,000 population (Table 7—tables in text all appear in Appendix one except those on foreign medical graduates which are in Appendix two).

A second technique for projecting physician requirements is based on epidemiological studies of illness distribution. This procedure was utilized by Schonfeld, Heston and Falk of Yale University in 1972 to estimate the number of physicians required per 100,000 population for the adequate provision of primary care. The Schonfeld study developed data on the incidence and prevalence of conditions requiring primary care from information provided by the National Center for Health Statistics. This data was then used to survey internists and pediatricians as to the services required for the defined conditions and the amount of time required for each procedure. This method is based on the physician's estimates of needs rather than extensions of existing ratios which primarily reflect demand. At the same time, however, the technique is limited by the use of physician survey data and does not provide an accurate reflection of actual physician and consumer behavior patterns in the seeking of medical care. (26)

As with the procedures of extrapolating from prepaid group practice data or utilizing the epidemiological approach, a model approach for all states or localities is subject to similar pitfalls. One finds considerable variance among geographic areas in demographic characteristics, income levels, numbers and types of physicians, and behavior patterns of both physicians and patients. Each of these factors must be accounted for in determining the area's health manpower requirements. Physician productivity must also be considered. Available statistics indicate that physician-population ratios in doctor-rich areas are growing at a faster rate than those of doctor-poor areas. At the same time, it has been estimated by Professor Reinhardt that the average physician in a doctor-rich area sees 4,808 patients annually, while the physician in the doctor-poor area will have as many as 8,408 visits per year. This substantially larger patient load is in part a result of longer working hours and demand straining supply in underserved areas. However, it does serve to fill the gap between doctor-rich and doctor-poor areas and must be taken into account (24).

Digitized by Google

AGGREGATE SUPPLY OF HEALTH PROFESSIONALS

Data on the optimum number of health professionals needed to provide medical care is not available, nor can any absolute answers be obtained. The answers will depend both on the nature of the population served and the system within which the services are provided.

Estimates of need are dependent on several variables: the health status of the population; the ability of people to use the services offered; and the availability of those services to the population. The productivity of physicians is highly variable, dependent on demand for services, the number of other health workers associated with the physicians, the facilities in which the services are provided, the means of remunerating physicians, and the individual style of the physicians.

The Department of Health, Education, and Welfare has estimated that there were 1.3 million health professionals in the United States on December 31, 1970. They project increases to 1.9 million in 1980 and to 2.5 million in 1990. Active physicians were projected to increase from 323,000 in 1970 to 446,800 in 1980 and 593,800 in 1990 (10). These projections were based on the assumption that upon expiration of current legislation, the amount of overall public and private funding provided would be such as to maintain at least the current level of professional school enrollment and the supply of foreign medical graduates. These aggregate figures are of little help in developing a national health manpower policy or deciding how best to meet the nation's need for physicians.

We know the ratios of physicians to population do not reflect available services because they do not reflect the number of physicians available and providing primary care nor do they reflect the number who provide only specialty or consulting services. Even in an area like the District of Columbia which has a physician/population ratio of over 300/100,000 (twice the national average), there are large segments of the population without adequate access to medical care. The same can be said for San Francisco with a ratio of 530 physicians per 100,000 people. These ratios also do not show that doctors in areas with fewer physicians work longer hours, employ more paramedical or auxiliary personnel, see more patients per hour and more patients per year than doctors in areas where the supply of physicians is greater.

Although ratios do not alone provide a reliable measure of medical manpower adequacy, they can be useful for general comparative purposes as long as their limitations are recognized. Significantly large disparities can suggest discrepancies in adequacy of various levels of service. Internationally the United States compares favorably with other countries in terms of physician/population ratios (Table 1). The comparison shows the United States to be relatively well supplied with physicians. Aggregate supply appears to be adequate. The impact of federal aid for health professions education has been an important factor in increasing the numbers of U.S. physicians. According to DHEW statistics, the U.S. physician/population ratios for 1950, 1960, and 1970 were 141/100,000 and 158/100,000 respectively. (Table 2). Throughout the last ten years of federal support for health manpower education, a primary concern has been to increase the overall supply of health profesionals. As recently as 1971, when the current health manpower law was enacted, experts were estimating shortages of 50,000 physicians.

The impact of federal aid for medical education and the stimulus given to increased enrollments is evident on an examination of the data since 1960–1961. In 1960–1961 there were 86 medical schools in the United States graduating 6,994 students. By 1963–1964 when federal aid was first authorized the number of schools had grown to only 87 and the number of graduates to 7,336. The impact of federal assistance has been particularly evident since 1965–1966. By 1971–72 the number of medical schools had increased to 108 and the number of graduates to 9,551 (Table 3). By 1972–1973 four more schools were added and the number of graduates had risen to 10,391. Since 1963, Federal programs have assisted in the building of 21 medical schools.

While it seems clear that national health insurance will result in an increased demand for physicians and other health professionals to provide these services, there are no definitive answers to the questions of how many, what types, and where to locate them.

It is surprising that very few studies have been done on the anticipated increase in demand for physician services as a result of national health insurance. Depending on the type of program enacted, physician requirements may range from as few as 400,000 (an increase of approximately 50,000) to as many as

Digitized by Google

400,000 (an increase of approximately 150,000) physicians by 1980. The Department of Health, Education, and Welfare anticipates the physician supply by 1980 will be between 433,600 and 459,900. The ratio of physicians to population would rise from the 1970 level of 158.6 physicians/100,000 population to 191–202 physicians/100,000 population by 1980 (10).

Earlier projections by Dr. Mark Blumberg for the Carnegie Commission on Higher Education, based on assumptions that are different from those of the Department of Health, Education and Welfare, indicate significantly lower physician to population ratios than those projected by DHEW. Doctor Blumberg projected ratios of 169.5 to 190.4 physicians per 100,000 population by 1987. Dr. Blumberg based his projections on the assumption that immigration of foreign medical graduates would decline to 0 by 1978 and DHEW projections continued immigration at high levels (4).

The question of how many foreign medical graduates will enter the United States is a key one, and one that must be resolved by policy makers at the national level. It is federal policy that permits the large influx of foreign medical graduates and federal payments to hospitals for patient care that pay the salaries for many of these hospital-based physicians.

FOREIGN MEDICAL GRADUATES

In addition to the rapid increase in the graduates of United States medical schools during the past decade, there has also been a great increase in the number of graduates of foreign medical schools in training and practice in the United States. (Appendix two provides a statistical summary of the FMG situation in the U.S., including Table 6 which shows this increasing number of FMG's). Some have looked upon immigration of foreign medical graduates as an important source to meet health care needs in the United States. It has been shown that most of the increase in the ratio of physicians to population is due to the influx of foreign medical graduates. Increases in production of United States medical graduates alone would have only kept pace with population growth, not raised the ratios. I would encourage the committee to look at the data on foreign medical graduates and then decide on a course of action which is more appropriate than developing projections which heavily rely on the continued flow of foreign medical graduates into the United States.

In discussing the issue of foreign medical graduates, it is first necessary to place the issue in a historical context. The history is important because it indicates, to some extent at least, why we are where we are, and it suggests what can be done.

Prior to the Second World War there were few graduates of foreign medical schools taking advanced training in the United States. In 1946 Senator Fulbright introduced amendments to the Surplus Property Act of 1944 that provided for an international educational exchange, including support for foreign students to come to the United States to study. In 1948 the United States Information and Education Exchange Act (Smith-Mundt Act) was enacted authorizing a fuller exchange program and creating the Exchange Visitor (J Visa) immigration category. This did not have much impact on medical school admissions, but it did bring an increasing number of foreign medical graduates into internship and residency programs which began to expand rapidly.

It was originally assumed that the students or trainees who came into the United States under exchange visitor programs would all be part of government-sponsored programs. Gradually the boundaries of eligible programs expanded until any sponsor could apply to the Secretary of State to obtain exchange visitor program status. The program was based on the premise that persons would come to the United States for training and then return to their homelands. They would not be brought in to meet U.S. health care needs.

House staff foreign medical graduates fell under the exchange visitor program because:

They were not considered to be coming to an established institution of learning—even if their program was affiliated—and therefore were not eligible for a student visa.

They did not fall under the H visa category which applied to persons with ability to perform a needed service in the United States.

The sponsoring institutions made the selection of exchange visitors in their programs. This became a popular vehicle for hospitals to bring in foreign medical

Digitized by Google

graduates. By 1961 there were 2,735 exchange visitor programs and 1,300 of them were sponsored by hospitals. Many hospitals had previously expanded their capacity to provide training for physicians who were returning from World War II. When the veteran population declined, the hospitals needed a new source of trainees—and this was to be the foreign medical graduate. The number of foreign medical graduates doubled between 1950 and 1952. It doubled again by 1958 and again by 1967 to fill the expanding number of approved internships and residencies.

The Educational Council for Foreign Medical Graduates was established in 1957 to certify the basic qualifications of foreign medical graduates to enter training. The ECFMG was not officially recognized by the Immigration and Naturalization Service and physicians could still enter the country without holding the minimal criteria of adequacy as defined by the American medical profession.

By 1960 the concerns of the Nation regarding exchange visitor programs turned from national security to U.S. manpower shortages and the "Brain Drain" from foreign countries.

The guidelines for admitting foreign medical graduates were often changing and were very flexible so that waivers to the law were considered more the rule than the exception.

Before 1965, immigrating physicians were included in the U.S. quota for total immigration from their home country. The exchange visitor program was not subject to national quotas and was thus used as a vehicle for many foreign medical graduates to come into the United States. The 1965 act abolished the system of quotas based upon national origin—in a transitional process which would last two and one half years. By 1968, the quotas were distributed on a first-come, first-served basis with special preference and nonpreference categories.

Foreign physicians fell under two of the preference categories: Members of professions or persons with exceptional abilities in science and art; and persons with skills which are in short supply in the United States (Table 2, Appendix two).

With the new quota system, the allocation of immigrants from Asian countries was enlarged from what it had been under national quotas. The mix of immigrants changed both nationally and for foreign medical graduates. Before WWII the flow of physician migrants was small and primarily from advanced to developing countries. Since 1946, the flow has reversed with developing countries now losing health manpower to developed countries.

Prior to the 1965 immigration amendments, almost 50 percent of FMG's entering the United States came from countries in the Western Hemisphere (28 percent from Europe) and only 10 percent from Asia. In 1972, 70 percent of the FMG immigrants came from Asian countries (Tables 3 and 4, Appendix two). The major countries of origin for these foreign medical graduates are India (representing 18% of all FMG's), the Philippines (14%), and Korea (7%). While the United States enjoys a physician-population ratio of 158 physicians per 100,000 population, India has 20 physicians, the Philippines has 75 and Korea estimates 37 physicians for every 100,000 individuals. Despite the limitations of international comparisons and the need to address questions of distribution, these figures indicate a significant disparity between the professional resources of the United States and the countries from which it receives its FMG's.

In 1965, the Labor Department determined that there was a physician shortage in the United States, thus easing entry of foreign medical graduates into this country. This determination allowed physicians to apply to the Immigration and Naturalization Service for a visa without first applying for Labor Department clearance. The change in the Immigration Law in 1965 had allowed those foreign medical graduates entering the United States for training to obtain an immigrant visa rather than an exchange visitor visa, thus leaving them a broader spectrum of options when their training is completed.

For foreign medical graduates the distinction between immigrant status and exchange visitor status has been so blurred by waivers and exceptions that it is very easy for the foreign medical graduate to switch from one category to the other if forced to enter the United States as an exchange visitor.

The programs to recruit graduates of foreign medical schools for internship and residency positions began after the Smith-Mundt Act in 1948 and the creation of the exchange visitor (J visa) immigration category. By 1950, 722 graduates of foreign medical schools filled 10 percent of the available internships and 1,350 filled 9 percent of the available residencies. By 1952, the number of both interns

Digitized by Google

and residents who were graduates of foreign medical schools doubled; and, as a percentage of the available positions, their numbers rose to about 20–25 percent of the total, where it was to remain until 1965 (Table 5, Appendix two).

While the percentage of internship and residency positions filled by foreign medical graduates remained relatively stable, the numbers increased steadily, rising from 1,116 interns and 1,350 residents in 1950–51 to 2,361 interns and 9,133 residents in 1965–66 (Table 5, Appendix two). The great majority of these residents entered as exchange visitors (J visas) rather as immigrants. Between 1962 and 1965, 17,285 foreign medical graduates entered as visitors and 8,151 entered as immigrants.

The same year that the Department of Labor determined that there was a physician shortage and eased the entry of foreign medical graduates into the United States, Medicare and Medicaid were enacted. Medicare and Medicaid increased the demand for services and also guaranteed hospitals reimbursement for the costs of interns' and residents' services provided to Medicare and Medicaid beneficiaries.

Following these events, the number of residency positions offered rose from 38,750 in 1964–65 to 51,658 in 1972–73. Of the 51,658 positions available now, only 45,081 are filled. The number filled in that period by foreign medical graduates rose from 8,153 to 14,471 (Table 5, Appendix two). The increase of 6,300 in 8 years was more than double the increase in the preceding 8 years. Foreign medical graduates represented 32 percent of all residents in 1972–73. In 1967, for the first time, the number of foreign medical graduates entering the United States exceeded the number of graduates of U.S. medical schools. It was not until 1971, however, that the number entering as immigrants exceeded the number entering as exchange visitors.

Several forces were at work: hospitals increasing the number of residency positions because payment for their services was assured; the Department of Labor declaring a shortage because of the unfilled positions; and increasing numbers of foreign medical graduates coming into those positions because the positions were available and they were permitted to come either as immigrants or under special J visas. Over the past 22 years, internships and residencies combined have increased 127 percent. During this same period, the number of medical school graduates has increased by 70 percent. In 1950–51 there were 28,734 approved training programs in United States hospitals. Sixty-eight percent were filled by U.S. and Canadian graduates, 7 percent by FMG's and 25 percent were vacant. In 1972–73 there were 65,308 positions, 58 percent of which were filled by U.S. and Canadian graduates. Twenty-eight percent were filled by FMG's and 14 percent were vacant. If only U.S. and Canadian graduates were available to fill these positions, 42 percent would have remained vacant.

Many hospitals have developed exchange visitor programs which entitle them to sponsor FMG's who wish to train in the United States. Unfortunately, the intention of the hospital is often more one of meeting staffing requirements to maintain the daily operation of the facility than one of providing a well planned and staffed education program. Sixty-seven percent of the positions filled by FMG's in 1972 were in programs not affiliated with a medical school. As long as the number of intern and resident positions far exceeds the number of American medical graduates, the incentive for bringing in large numbers of foreign medical graduates to fill vacant slots will remain.

No matter what the immigration status of a foreign medical graduate when (s)he enters the United States, many remain well beyond their anticipated stay. In 1971, J. S. Millis indicated that forty-three percent of FMG's entering the United States intended to remain here. (21). Data from the AMA registry shows that 84 percent of the FMG's identified in the registry as residing in the United States in 1963 were still residing in the U.S. in 1971. For those FMG's who were in training status in the United States in 1963, 74 percent were residing in this country eight years later.

The issue of foreign medical graduates does not simply arise because of the numbers entering the United States or their countries of origin. The fact is, however, that this great influx of foreign medical graduates has contributed very little to solving the critical problems of geographic maldistribution of physicians and the relative shortage of physicians in primary medical specialties.

There are important differences in the role of FMG's and the graduates of U.S. and Canadian medical schools that diminishes their potential impact in meeting the health care needs in the United States, particularly the need for

Digitized by Google

primary medical care. According to the Department of Health, Education, and Welfare, only about one-third of all FMG's were in office based practice in 1970 as compared with about two-thirds of the active physician graduates of U.S. and Canadian medical schools. Almost one-third of all FMG's were interns or residents, about 2½ times the proportion of Canadian and U.S. graduates. Adding to the interns and residents the FMG's who were full time physicians on hospital staffs, 50 percent of all FMG's were hospital based as contrasted to 23 percent of U.S. graduates and 21.8 percent of Canadian graduates (Table 8, Appendix two).

Within the aggregate supply there were substantial differences in the activities of physicians from European and Asian countries. The FMG's from Europe and other developed countries had an activity distribution similar to U.S. and Canadian graduates while two-thirds of FMG's from Asian and other developing countries were hospital based. Increasing numbers of FMG's are coming to the U.S. from Asian countries.

Most of the foreign medical graduates in residency training seem to be distributed much as the American medical school graduates' residencies are distributed. More important, when it comes to practice, where do they go? Well, they largely practice where the graduates of American medical schools practice. They largely practice in the States with the highest physician-to-population ratio. FMG's are disproportionately located in the New England, Middle Atlantic and East Central regions of the United States. Well over one third of all FMG's are located in New York, New Jersey and Pennsylvania. Although FMG's represent only 17 percent of all physicians in the United States, they represent over 25 percent of physicians in New York, Rhode Island, New Jersey, Illinois and Delaware (Table 10, Appendix two).

For instance, the 10 states with the largest number of foreign medical graduates in practice have 137.5 physicians per 100,000 population in office-based practice while the 10 states with the lowest number of foreign medical graduates have only 86.1 per 100,000 population in the national average was 122 in 1970, the year this data was gathered.

For the United States as a whole, 14.9 percent of practicing physicians were foreign medical graduates in 1962. In nonmetropolitan areas the percentage was 8.6 and in metropolitan areas it was 16.1 percent. A similar pattern was still evident in 1970 (Table 11, Appendix two). In other words, the foreign medical graduates don't contribute to a solution to the maldistribution problem.

An examination of specialty choices by foreign medical graduates is also of interest. In some specialties, such as physical medicine, anesthesiology, and pathology, the percentage of foreign medical graduates exceeds the average for U.S. graduates. The primary care specialties have about one-third of the residency positions filled by foreign medical graduates. This percentage is similar to the number occupied by U.S. graduates (Table 9, Appendix two).

The issue most often advanced in the debate regarding FMG's is the difference in training and background between American and foreign medical graduates and the influence of this difference on quality of care. The United States medical graduate (USMG) brings to a graduate program basic medical knowledge and a substantial amount of clinical experience. (S)he is capable of reaching diagnostic conclusions from the time (s)he enters the program. Since the USMG was educated in an American institution (s)he understands the ethics and the cultural and social patterns within the American hospital setting. (S)he is able to learn quickly from his/her peers because (s)he already feels comfortable in the clinical surroundings and, besides speaking English, understands nonverbal communication among the hospital personnel. The problem for the FMG is further aggravated by the fact that many either speak English poorly or not at all when they enter residency programs.

In contrast, the ability of the foreign medical graduate to become an integrated member of a graduate program is inhibited by a combination of performance characteristics and external forces. The majority of FMG's who enter the United States residency programs have had minimal clinical experience. The FMG's often have acquired less medical knowledge than their American counterparts, as well. The disparity in medical knowledge between the USMG and the FMG can be illustrated by FMG performance on the Educational Council for Foreign Medical Graduates (ECFMG) medical knowledge examination and on state licensing examinations. It is projected that the questions included in the ECFMG exam could be answered correctly by ninety-eight percent of the United

Digitized by Google

States 4th year medical students. Roughly forty percent of the FMG's taking the exam pass the first time. Ultimately sixty-six percent pass the test; however, the majority of those who pass score only slightly above the minimum passing grade.

Current procedures for certifying FMG's have created a system of dual standards for admission to graduate medical education in the United States. The quality of the American medical school graduates' education and performance is based on a series of indicators including accreditation of educational programs, national medical college admissions tests and other standards for entrance, faculty evaluation, and Parts I and II of the National Board Examination. In contrast, the Educational Council for Foreign Medical Graduates bases its certification on only two criteria:

—fulfillment of all requirements of a medical school listed in the *World Dictionary of Medical Schools* published by the World Health Organization;

—an examination constructed by the National Board of Medical Examiners.

This dual standard of admissions criteria supports a dual standard of quality as well. The ECFMG examination does not provide an adequate measure of professional competence. The performance of FMG's on the examination compares poorly with USMG performance on the same questions. The Task Force of Foreign Medical Graduates of the Association of American Medical Colleges has reiterated the recommendation that all applicants for admission to U.S. graduate medical programs be required to pass the same qualifying examinations. Such a requirement would have the effect of reducing the number of FMG's to those whose performance was at a level equivalent to USMG's. The results of the Federation Licensure Examination (FLEX) of the Federation of State Medical Boards, which is now utilized as the state licensure examination by nearly all of the states, show a similar disparity. For the FLEX examinations given between June 1968 and December 1972, eighty-five percent of USMG's passed, while only fifty percent of the FMG's attained a passing score.

An increasing number of FMG's are taking the ECFMG examination in the United States and are therefore not certified before entering the U.S. They form a medical underground of persons working in the health professions without certification. Many of these persons have direct patient care responsibilities. Recently, Weiss and his associates estimated that, in addition to the approximately 10,000 unlicensed physicians determined by the AMA to be working in the health field, another 9,000 were so occupied. The Weiss study also indicated that many of these individuals have direct patient care responsibilities and, because of their background, often perform medical or surgical procedures for which they have not been licensed (Tables 12 and 13, Appendix two).

Finally, there is the growing number of U.S. citizens who have not gained admission to medical school in the United States, and have entered foreign medical schools. The numbers have increased from 1,730 in 1954–1955 to 3,368 in 1969–70, and I am sure that figure is higher today. Many of the students met the admission requirements for the U.S. medical schools but were not admitted because of insufficient numbers of places. Some of these students receive a medical education which is comparable to that in the United States. However, all too many of the students are receiving a less than adequate education. This problem is clearly illustrated by the fact that United States citizens who graduate from foreign medical schools perform as poorly as FMG's on qualifying examinations for residency training and licensing.

SPECIALTY DISTRIBUTION

It was originally thought that increasing the aggregate supply of physicians would assure an appropriate distribution by specialty to meet the nation's health care needs. A variety of forces have been at work that have produced a very different result: serious shortages of primary care physicians; excess numbers of surgical specialists, such as general surgeons and neurosurgeons; disproportionate reimbursement for surgical services as opposed to primary care and large numbers of physicians performing surgery who have not had adequate surgical training. The fee for service system in the United States, combined with the growth of private health insurance and publicly supported medical care programs, has resulted in more and more emphasis on high cost, inpatient hospital care. During the hearing on the health policy and planning legislation last year, Dr. Paul Elwood of Minneapolis noted that 64 percent of the medical

Digitized by Google

care dollar is spent on illnesses costing $1,000 or more. All of this has been a stimulus to specialization.

Because of the steady decline in the number of general practitioners in the past 40 years and the gradual increase in other primary care physicians, the United States has a relatively low ratio of primary care physicians to population. In 1931, there were 90 general practitioners per 100,000 population. Thirty-two years later this ratio had declined to 37/100,000 population. Between 1963 and 1971 the absolute numbers of general practitioners declined by almost 20,000 and the ratio fell to 24 general practitioners per 100,000 population in 1971. In this same period general internists increased from 3,567 in 1931 (a ratio of 3/100,000 population) to 21,144 in 1961 to 23,829 in 1971 (a ratio of 12/100,000 population). General pediatricians increased even more slowly from 1,396 in 1931 to 9,255 in 1963 to 10,742 in 1971 (5/100,000 population). Combining these three provides a ratio of 41 primary care physicians per 100,000. A study by Dr. Robert Huntley of the Georgetown School of Medicine indicated that in 1970 there were 41.2 office-based patient care physicians whose practices were devoted largely to primary care for every 100,000 population (13). Even when we add the 60 percent of the 12,000 osteopathic physicians engaged in primary care, the shortage is evident. In terms of percentages, primary care physicians, including obstetrician-gynecologists constitute 45 percent of all physicians, but only 39 percent of physicians in training (Table 5).

These statistics do not prove a physician shortage, but they are consistent with the view that there is a shortage of primary care physicians.

In addition to the factors already noted, the manner in which medical education, particularly graduate education, is governed is important. Professor Rosemary Stevens of Yale University has described the problem:

"The structure of medical education, training, and development has changed from one based on a geenral undergraduate training and general practice to a complex array of specialists, each with his own training and examination system. Medicine, as no other profession, is now functionally fractional and internally stratified. The change is largely the product of the last 30 years.

"Not only has the march of specialism lengthened the training of the medical student to the present eight or nine years, it also has created an unwieldy superstructure of specialty board examinations, a crisis in graduate medical education, a haphazard assignment of educational and training responsibility, and acute manpower problems." (21)

At the present time, a medical school graduate has almost no restrictions on his specialty selection decision. A number of studies have attempted to sort out why certain specialties are more attractive than others, but the problem is complex and multi-dimensional. One often cited factor is the exclusive availability of the subspecialist role model: that is, the student does not see primary care practitioners, even in pediatrics and medicine, and hence is not aware that primary care practice is an alternative. A related factor is the present system of residency and fellowship training which exposes the physician in training to only specialty or subspecialty care experiences. Even in the subspecialty area he may have very little idea of what his professional practice will encompass.

In any event primary care practice seems to connote several things to the young physician: a lack of intellectual challenge equal to that of many specialties, longer and more unpredictable working hours, less peer support and the reality of having to deal with a number of patients who are not "really sick" and have a poor response to the usual curative therapies.

Another problem which underlies many decisions to seek subspecialty training is influenced by the explosion of new knowledge in medicine. Medical facts learned by the third year student are often out dated by the time residency training is completed. One way to deal with this problem is to pick a circumscribed field and learn "all there is to know" in that area. The primary practitioner on the other hand must know a little about many different fields. The "jack of many trades, but master of none" appears to be applied often to the primary practitioner. Though it is seldom stated and over-simplified here, we believe this is an influential factor in avoiding primary care practice.

Senator Edward Kennedy, in remarks to students and faculty at the Yale University Medical Center, summed up the dilemma:

"Perhaps the nature of medicine has changed so dramatically, and the knowledge explosion has been so staggering, that primary care is simply not a viable alternative to specialization by our young physicians. But the function of the

Digitized by Google

primary physician is as important to our people today as it ever was. Perhaps we need to develop new kinds of institutions, training different kinds of professionals to fulfill that function.

"But is it not equally possible that the current structure of our medical center predetermines the specialization of its students? Is it not possible that modification of that orientation could alter the values and goals of medical graduates?" (16).

The adequacy of the present supply of primary care physicians has been the subject of dispute. The problem is compounded by the geographic maldistribution of physicians and physician directed services, the influx of foreign medical graduates who have helped meet some of the needs for primary care physicians, and the fact that most physicians, including surgeons and a variety of surgical and medical subspecialists provide some primary care.

Estimates of the number of physicians needed to provide primary care vary widely. In a widely cited study, Schonfeld, Heston and Falk estimated that the optimal number of physicians needed to provide primary care was 133 per 100,000 population. (26). This is almost three times estimates of the current national average. In contrast to the optimal number of primary care physicians estimated by Schonfeld the average primary physician/population ratio for the United States and general practitioners in England was estimated to be 40 per 100,000 population in 1971. In contrast to the primary care physician in the United States, the England general practitioner usually limits himself to home and office based care, referring all patients requiring specialty consultation or inpatient care to hospital based specialists. In addition the British general practitioner has better organized home nursing and other social services to meet the needs of his patients. One can only speculate on how different systems of care and means of remunerating physicians affect the general practitioners ability to meet the needs of the population for primary medical care.

Even with prepaid group practices the ratio of primary physicians to population varies widely. The range extends from Group Health in Washington, D.C. with a ratio of one primary care physician per 1540 persons enrolled (or approximately 65 physicians per 100,000 people) in the plan, to the Permanente Medical Group in Portland with a ratio of 1:3020 or 33 primary care physicians per 100,000 people. (Table 7).

The question of how many primary care providers are needed cannot be answered exclusively by statistics on physicians because of the important role that can be played by nurse practitioners and physicians' assistants. In the 1960s a number of programs were initiated to train nurse practitioners and physicians' assistants. Their purpose was to serve as physician extenders by assuming responsibility for routine health maintenance, preventive medicine, well baby and child care, diagnosis and treatment of common minor illnesses and the long term care of patients with chronic disease.

The response of patients, parents and consumer groups to both physicians' assistants and nurse practitioners has been excellent, but the response of many physicians still are less than enthusiastic. Although the response of patients demonstrates an interesting aspect of the consumer provider interaction, and that is, solving the problem or dealing with it in a compassionate and competent manner is more important than the credentials of the person providing the service, it does not assure a place for these practitioners. Economic barriers, legal restrictions in many states and jurisdictional disputes add to the conservative attitudes of physicians to limit the future value of nurse practitioners and physicians' assistants in meeting primary medical care needs.

Because post graduate medical education now emphasizes specialty and subspecialty training, the development of an adequate corps of primary care physicians requires a major shift in medical education, including both medical schools and residency programs. Until this occurs, and students are presented with different ideas about primary care practice, the actual rate of change will be limited and slow.

Projecting current trends in residency training programs results in a continuing relative shortage of active primary care physicians and a relative excess in a number of specialties.

Dr. Gerald Weber of the University of California, San Francisco, has done an excellent review of the distribution among specialists. He used only general practitioners, internists, and pediatricians in his estimates of primary care providers and he noted that these providers increased from 103,000 to 104,000 in the two

Digitized by Google

decades between 1950 and 1970. There was an increase of only 12,000 in other medical specialists as compared to increases of 56,000 in other specialties such as laboratory medicine, pathology, and radiology. He also found that there had been an increase of 41,000 on the various surgical specialties during the same period. (31)

The trend of the 1950's to 1970's in terms of excess production of specialists, particularly surgeons, and an inadequate output of primary care physicians is evident in future projections based on residency training. Professor Weber observed that if the average physician practices 30 years, it will require 3.5 residents in training to eventually replace every 100 physicians in a particular specialty. In 1970, general surgery had 12.2 new trainees for each 100 physicians, while the combined primary care specialties of general practice, internal medicine, and pediatrics had only 4.5 physicians in training for every 100 in practice. The recent projections by DHEW indicate a decline in the percent of physicians in primary care sepcialties from 44.2 percent in 1970 to 41.2 percent in 1980 and 39.3 percent in 1990. Even with revised supply projections, with a large increase in the number of future family physicians, DHEW projects a decline in the percentage of primary care physicians from 44 percent in 1970 to 42 percent in 1990. (10)

At the present time, approximately 35 percent of all residencies that are filled are in the primary care specialties, including general practice, pediatrics, internal medicine, and obstetrics and gynecology. These residences currently number about 16,000. The American Medical Association has recommended an increase to 50 percent of all residencies in these fields. I full support the recommendation. This shift cannot occur overnight, but in view of the fact that there has been an increase of 10,000 in the total number of residencies available in the past 5 years, it should be possible to increase primary care residencies by at least 5,000 in the next 5 years while reducing surgical residencies by an equal amount or more.

The failure of existing medical specialties, particularly pediatrics and internal medicine, to deal effectively with the problems of primary care and the decline of general practice in the United States during the past 30 years has resulted in the emergence of family practice as a rapidly growing primary care specialty.

To date, more than half of the 108 medical schools in the United States have departments or other academic units teaching family medicine and/or family practice. Many of the residency programs are in university affiliated hospitals, but few have developed in university medical centers. Although the number of family practice residency programs has grown rapidly in recent years it still represents less than two percent of the 50,000 residency positions available.

Internists and pediatricians in the United States both consider primary care to be one of their principal responsibilities. Training programs do not, however, reflect the realities of practice. Several years ago the American Board of Internal Medicine initiated a new evaluation procedure that reflected the pressure toward subspecialization and the decreased stature of a career in general internal medicine. It is estimated that 70 percent of the present internal medicine trainees plan to qualify in a subspecialty. This will aggravate the present overemphasis on subspecialty training as opposed to general internal medicine and may result in more physicians moving toward family practice or a shift of primary care responsibilities to nurse practitioners and physicians' assistants. In pediatrics the present situation is somewhat different, but pediatrics appears to be following the pattern of internal medicine with the training of more and more subspecialists.

The university medical center as it is presently structured does not provide a suitable setting for delivery of primary medical care. It is argued pursuasively by Alpert and Charney that the setting of the primary care program, the care facilities, the organization of the staff and its relationship to the secondary and tertiary care system and to its patient population are crucial to its success. Without the basic structure which is representative of modern medical practice, the content of primary care is not easily learned. (3)

The major content areas of primary care education have been identified by Alpert and Charney and divided into three broad chronological categories:

—Short term (one day to one month)—emergencies, common infections, acute hospitalization and minor surgery;

—Intermediate (two weeks to three months)—initial phases of chronic illness, behavorial problems, observation of practice, health education and peer review;

Digitized by Google

—Long term (two months to years)—the family management of chronic illness, growth and development, team work, work with consumers and patient care research.

It is clear from the Alpert-Charney analysis that the present short term rotations for medical students in clinical clerkships are suitable for only some of the problems in primary care. The same is true of residency rotations, particularly the low priority accorded ambulatory care experiences and the opportunity to follow patients longitudinally. Model practice settings provide additional opportunities to improve the medical students' and residents' experience. Better organization of existing programs, even in traditional hospital settings can, however, significantly enhance the opportunity for improved training in primary care.

GEOGRAPHIC MALDISTRIBUTION

Although the development of policies to improve the distribution of physicians among specialties seems achievable, locating health professionals where they are needed geographically has been a problem without a solution. Geographic maldistribution is a long standing problem. As time passes, differentials between urban and rural areas and between areas of physician scarcity and surplus are increasing.

The ratios of physicians with patient care as their primary activity per 100,000 population illustrate the geographic maldistribution problem only in very gross terms. The recently published DHEW figures reveal a national average of 156 physicians per 100,000, with regional variations from 133 in the South to 195 in the Northeast.

Variations in physician to population ratios are also seen in the ratios of dentists and nurses to the population. The East-South Central states region has only about half as many physicians, dentists and nurses relative to its population as the Middle Atlantic states or the New England states (Table 4).

The variation between states is even greater than the regional variations, with the high of 236 physicians per 100,000 population in New York and the low of 89 physicians per 100,000 population in Mississippi. The District of Columbia has a ratio of physicians to population even higher than New York State. The states with the highest ratios of all active physicians to population also tend to have the highest ratios of primary care physicians to population.

It was originally thought by many that merely increasing the supply of health professionals would create, through competition, an appropriate distribution of health professionals both geographically and by specialty. Since the traditional laws of supply and demand do not operate efficiently in the health care system, the maldistribution problem has become magnified by the increases in numbers of providers encouraged by federal support.

The problems of specialty maldistribution and geographic distribution are linked, but the solution of one problem will not necessarily solve the other. Although no agreement has been reached on the causality of the linkages between location decisions and specialty choice, the existence of an interrelationship between them is obvious. The linkage is further expanded by the fact that the problem of specialty maldistribution basically relates to a lack of primary medical care.

Neither regional nor state figures reveal the maldistribution between urban and rural areas in almost every state. California is a good example. As of December 31, 1973, there were 38,749 active non-federal physicians in California or a ratio of 185.9 physicians/100,000 population. The ratios ranged from 203.8/100,000 in the major metropolitan areas to 82.8/100,000 in the isolated rural areas. The variation between counties is even more extreme, from a high of 530.9 physicians/100,000 population in San Francisco to zero/100,000 in rural Alpine County with no physicians serving a population of 650 people. The lowest physician/population ratio, aside from Alpine, was in Modoc County, where two physicians serving 8,475 persons represented a ratio of 23.6/100,000 (18). In general, the counties with the poorest ratios of physicians to population are those with the poorest ratios of primary care physicians to population. There are some exceptions. For example, in some states, such as Idaho and Wyoming, with very low total physician to population ratios we find that they rank 14th or 15th nationally in their ratios of primary care physicians to population (Table 6).

The ratios illustrate rather extreme differences between geographic areas, but it must be remembered that in some urban areas there is a high percentage of the aged, the chronically ill and the poor who require more medical care.

Digitized by Google

San Francisco represents a special case because it is both a regional referral center for most of Northern California for highly specialized services and it is the major center for the training of residents.

The degree of geographic maldistribution between states would be intolerable if it were not for the fact that the variation in the ratios of primary care physicians to population is not nearly as great. The range appears to be from a high 62 primary care physicians/100,000 in the Pacific Region to a low of 40 in the East South Central Region.

It is not enough to look at gross ratios in order to determine the nature or extent of the problems created by specialty and geographic maldistribution. It has been pointed out in a study by the Southern Regional Council that although the South is generally short of physicians, some counties are seriously short of primary care physicians or have no doctors at all. The report pointed out that of 75 Arkansas counties, five have no internist and 62 have no pediatrician and 59 no obstetrician/gynecologist. Of Alabama's 67 counties, 41 are without an internist, 45 without an obstetrician/gynecologist and 44 without a pediatrician.

In cities such as Boston, Detroit, and Chicago physicians have been moving from the inner city to the suburbs and clustering their offices in downtown commercial districts or adjacent to community hospitals, while increased numbers of poor blacks move into the central cities to be served by hospital out-patient clinics and emergency rooms.

The lack of primary care providers is the core of the geographic maldistribution problem. People can often travel for specialty consultations and when required, hospitalization and surgery. These services require a larger population base than many communities offer. At the same time, these communities need direct access to providers who can care for a major proportion of their health problems or properly refer them for specialized care, when necessary. These health professionals are primary care providers whose location in underserved areas could go a long way toward alleviating the maldistribution problem.

Specialization complicates the problem of geographic maldistribution because specialists tend to settle in areas of large population concentrations. The choice of location is apparently related to two forces: the overall tendency of all physicians to locate their practices in medium and large communities and the specialists' need to have access to large numbers of patients who require specialized services. Although general practitioners and family practitioners are attracted to towns of 1,000 to 10,000 population, they are not attracted to rural communities of less than 1,000 people.

The tendency of internists, pediatricians, and obstetricians, all of whom may be providers of primary medical care, to settle in the metropolitan areas is illustrated by the data from California (Table 8). General practitioners, in contrast, are much better distributed in relation to the population in metropolitan, adjacent, isolated semirural and isolated rural areas (Table 8).

A variety of studies have been conducted concerning factors which influence location decisions of health professionals. There appear to be five major factors that influence physician choice:

(1) Environmental factors—quality of life in the community, non-professional attractions;

(2) Prior exposure (medical school, residency, native to area);

(3) Professional relationships—consultants, university affiliation;

(4) Economic factors;

(5) Demand determinants—need for services.

The development of policies to influence location decisions must also consider the problems associated with practice in underserved areas. One cannot assume that the populations of these areas will ever be able to attract or support more than one (or several) family physicians and other health professionals. Under the existing structure of the health care system, the practice of health professionals in underserved areas is dramatically different from the exposure one receives in training. Third party reimbursement is often limited, in many cases, to specialty procedures. The provider is isolated from frequent peer contact and opportunities for continuing education. There is the need to rely on less technical equipment since facilities may be too far away for routine procedures, and available equipment may be less sophisticated. Exacerbating these problems is the fact that, if there is no one to replace him or her, the provider is on call twenty-four hours a day.

Digitized by Google

Physicians in underserved areas spend longer hours in practice than their colleagues in well doctored areas; they employ more auxiliary personnel, they see more patients per hour and they see more patients annually. This greater patient load can help to make up for the shortages, but one must wonder about the quality of medical care that can be provided under such circumstances.

Knowledge of these variables has had significant impact on the location decisions of physicians up to the present.

The additional factors concerning lifestyle in underserved areas (especially rural areas) must be considered as well. Individuals have differing levels of needs and preferences regarding the variety of cultural and social activities and amenities offered by a community. Through exposure, some persons develop an appreciation for lifestyles very different from their past experiences. It is questionable, however, how many of those who have remained in underserved areas were predisposed in some way toward the lifestyle and how many were converts.

A variety of projects to encourage location in geographically underserved areas were supported under the Comprehensive Health Manpower Training Act of 1971. These included Area Health Education Centers, projects to improve the geographic distribution of physicians, training programs for physician assistants and projects providing experience in the team approach to medical care. Each activity supported affects primarily health professional students. Part of the basis for these programs is to provide an experience for students which could eventually become a significant factor in location decisions. Such an experience is either one of learning certain skills which are required of health professionals practicing in underserved areas (often in primary care) or being directly exposed to the practice environment in an urban or rural underserved area. It is recognized that the training of health professionals (including interns and residents) to provide care in these areas requires a reorientation away from traditional hospital based experiences.

The current distribution of residents places the majority in larger teaching hospitals which provide secondary and tertiary care in metropolitan areas which are in geographic proximity of a medical school. This is due, in part, to the fact that the minimum population base needed to support a medical school is estimated at 600,000 people.

Area Health Education Centers (AHEC's) have provided the opportunity to take health professions students and interns and residents out of the traditional training environment and into a community program in an underserved area. The AHEC program develops linkages among medical schools and community health care resources (clinical teaching centers, community colleges, public health agencies, individual practitioners). It provides community-based exposure for health professional students. At the same time, it increases peer contact for providers in the area and offers continuing education opportunities. These last two factors can be of major significance in the ability of an underserved area to attract and retain health professionals.

The National Health Service Corps (NHSC) began as a Congressional action and has been modestly supported since it began in 1971. This program is directed toward graduates of health professions schools. It provides scholarships to students who, in turn, agree to provide services in a designated underserved area for a specified period of time after graduation. Since that time the NHSC has approved 397 sites and placed 240 physicians in 183 communities. By the end of 1974 it was expected to have assigned 405 health professionals, including 264 physicians to 275 communities. By 1976, it is projected that the NHSC will have 902 physicians in the field, staffing 452 new sites. The objective is not merely to place a federally employed physician in a community for two years, but to have the community retain the physician and have a self sufficient program within a few years.

In addition to the National Health Service Corps, financial incentives to provide service are also offered under the student financial assistance program. Repayment obligations for student loans can be cancelled through service in underserved areas (one year of service for each year of loans received). The effectiveness of loan forgiveness provisions in placing health professionals in underserved areas has been seriously questioned. This issue was the subject of two evaluation studies which were submitted for the public record of the 1974 health

Digitized by Google

manpower training hearings before the Subcommittee on Public Health and Environment:

—General Accounting Office: *Congressional Objectives of Federal Loans and Scholarships to Health Professions Students Not Being Met* (9).

—CONSAD Research Corporation: "An Evaluation of the Effectiveness of Loan Forgiveness as an Incentive for Health Practitioners to Locate in Medically Underserved Areas." (19).

The GAO questioned recipients of Health Professions Student Assistance Program (HPSAP) loans and scholarships for 1972–73. Eighty-eight percent of these students did not know of the program when they applied to or enrolled in school. Sixty-three percent of the recipients came from families with an annual income above the highest level considered to be low income for the program. Although the legislation mandated that loans and scholarships go to students with financial need, the awards for this support have been "inconsistent and arbitrary," resulting in benefits not reaching the proper recipients.

The GAO study went on to document the negligible impact of loan forgiveness provisions on the graduate's location decision. Most students did not learn of the provision before graduation. At that time, few found the offer attractive enough to change their plans. From 1965 to 1972, 30,000 out of 93,800 medical and dental students received assistance from HPSAP. Of those, only 86 physicians and 133 dentists took advantage of the loan forgiveness option. Eighty-two percent of these stated that they would have chosen the same practice location regardless of the option.

Lack of information regarding the loan forgiveness option was considered to be a significant factor influencing the effectiveness of the provision.

The conclusions of the CONSAD study, which looks closely at state loan programs, support the GAO findings. Moreover, the study points out that the Health Professions Educational Assistance Act loans (with their forgiveness provision) have not displaced state programs which require the student to agree to provide service before receiving the loan (similar to the NHSC). This suggests that medical students may assign a higher utility to the availability of a loan during medical school than to forgiveness of the loan after medical school.

The findings of these studies indicate that programs like the National Health Service Corps which require the student to agree to provide service at the time he or she receives financial assistance have a much greater potential for meeting their objective of placing graduates in underserved areas.

This assumption is substantiated by comparing the response to loan forgiveness provisions over a seven year period with 1973 applications for scholarships tied to service obligations:

NHSC—1,000 applications for 345 scholarships.

Armed Forces—5,100 applications; 2,911 funded.

Physician Shortage Scholarship Program—1,000 plus applicants for 395 scholarships

Loan Forgiveness 1965–72—option chosen by 219 of 30,000 recipients.

Another approach was adopted by the State of Indiana and it is attracting widespread attention by states, particularly those that were losing the majority of their medical school graduates to other states. The program was a multifaceted one which began by an effort to develop a statewide coordinated plan and which gave initial priority to the development of internship and residency programs in community hospitals that previously were without such programs.

The state's only medical school played a key role in the development and implementation of the plan with the medical profession, community hospitals, community groups and the state government. The results have been impressive.

Before the program was initiated in 1967, there were 428 interns and residents in hospitals in two cities in Indiana. During the academic year 1973–74 there were 697 interns and residents (over 90 percent of the available positions filled by graduates of U.S. medical schools) in seven cities throughout the state.

A statewide biomedical communications system has been established involving 150 community libraries, 50 community hospitals and 11 university campuses.

The medical school curriculum has been modified and senior medical students take elective courses in 56 community hospitals as well as in over 140 private physicians offices. In recent years, over 90 percent of the senior medical students have elected to spend at least two months in one of these programs and in the past year 60 percent of the class spent over six months involved in these programs away from the main medical center campus.

Digitized by Google

The results are beginning to show. The improved geographic distribution of teaching hospitals and the participation of 140 physicians in their own offices has exposed students to opportunities they have not perceived at the medical center. In each of the four years before 1974, 55 percent of the Indiana University Medical School graduates remained in the state for graduate training. In the past year the figure rose to 62 percent. Among the 700 interns and residents in Indiana, 92 percent are graduates of U.S. medical schools. This is in striking contrast to many other midwestern and eastern states. In addition, the number of physicians practicing in Indiana has risen by 10 percent in the past four years while the population increased by only three percent.

Finally, because of the expansion of graduate and continuing education programs and the development of basic sciences for first year medical students in selected universities throughout the state it has been possible for the medical school to increase freshman (and eventually medical school) enrollment by more than 20 percent.

One final note should be added regarding the number of health professionals needed to provide service in underserved areas. Questions of numbers are not unique to the problem of specialty maldistribution. The numbers game can be played with geographic maldistribution with similar results. How many health professionals and in what combinations will be required to meet the needs of underserved areas? How many students can be expected to remain in underserved areas? Will proposed programs have a permanent effect on geographic distribution patterns or will they all provide primarily temporary relief? The answers to some of these questions will be more statistically accurate than others, but a substantial gray area of doubt remains which must somehow be addressed in the development of policies directed toward a more equitable geographic distribution of health professionals.

NURSE TRAINING

I would like to spend a few minutes discussing the companion legislation which covers nursing manpower. There are now approximately 1,128,000 registered nurses in the United States. 70% or 795,000 of these are employed as nurses. 300,000 nurses are presently not working today for various reasons ranging from lack of available child care to poor work incentives. In addition, there are 344,000 licensed practical nurses, 79% of whom are employed. Licensed practical nurses work almost exclusively in the hospital setting. In nursing, like medicine, the result of earlier federal programs has been a rapid increase in the numbers of new nurses. In the past 10 years the number of registered nurses has increased by 230,000 or by one-third. The increase in licensed practical nurses is even more dramatic, almost 80%.

Nurses, however, are not well distributed geographically. A few states have almost three times as many registered nurses per capita as some others. It is interesting that those states with fewer registered nurses tend to have a better per capita ratio of licensed practical nurses. However, ten states have significantly poorer per capita ratios of all trained nursing personnel, as well as medical personnel.

The distribution of nurses and their motivations for practice are another area which needs to be studied. Unlike medicine, there is in nursing a significant underutilized manpower pool. Educators must continue to research effective ways of attracting these nurses and maintaining the special knowledge of this group.

We must also look at ways to achieve more equitable geographic distribution of nurses. If the legislation clearly addresses these issues, then I do not believe the continued mandatory expansion of nursing schools required by capitation will be necessary.

If the authorized monies are all appropriated, I believe the present level of payments at 16% is adequate. Loan forgiveness for shortage area practice should be continued and expanded. Nurse traineeship recipients are another manpower source that might be considered for shortage area service.

The nursing leaders who spoke before this committee at the May, 1974 Health Manpower hearings spoke clearly to the need for more advanced training opportunities for nurses. The legislation addresses this problem quite well. However, I would like to mention a few of the problems in primary care where changes in the legislation might have greater impact.

First, the demands of primary care practice today require a team effort. Most often mentioned teams include small groups of physicians or groups of physicians

Digitized by Google

and physician extenders (nurse practitioners and physician assistants) working together. I believe that nurse practitioners can make a valuable contribution through their specialized knowledge of well child care, health education and understanding the impact of chronic illness on the individual. Nurse practitioners are being trained in areas of medicine which have not received adequate attention: particularly pregnant women, young children and the aged. If health teams are to be successful, the training of primary care physicians and physician extenders (both physician assistants and nurse practitioners) must be jointly undertaken. This is an important area for nursing schools and medical schools to work closely together, and for the legislation to have a consistent approach.

Equally as important as joint training experience is consideration as to where practitioner programs are located. Like residency programs, nurse practitioner programs should be distributed geographically to meet the health care needs of the people. A successful family nurse practitioner program in northern California is now re-training nurses from underserved rural communities. All of this program's graduates have remained in these communities. This program also illustrates the value of retraining experienced nurses who are already settled in their communities. The commitment to primary care practice is an important consideration for nurse practitioners as well as physicians. I am including for the Record a recent article by Ms. Fenley and Dr. Andurs who direct the above mentioned program (Appendix Four).

Recently there has been much discussion as to the slow physician response to utilizing physician extenders in practice. Three reasons for this problem can be identified: previous physician experience, legal constraints, and reimbursement for physician extenders. I have discussed the need for joint physician-nurse practitioner training programs. The legal constraints are under the authority of the states. The Congress, however, does have the power to legislate changes in the reimbursement mechanism for services rendered under Medicare and Medicaid. This would enable physicians to employ more nurse practitioners and extend the services of the practice by as much as 50%. I strongly urge the committee to look at the possibility of paying directly for the services of nurse practitioners and physicians assistants who are graduates of recognized programs and are working with primary care physicians.

Another way that the expertise of nursing might be utilized is in the legislation dealing with Area Health Education Centers. These programs are now mandatorily tied to medical schools. Now the inclusion of nursing groups is variable. By strengthening this relationship, the opportunity to train nurses in geographically remote sites improves. Retraining and continuing education opportunities for nurses already settled in these areas could also be increased.

TABLE 6.—COMPARISON OF RANK ORDER OF STATES BY RATIO OF PHYSICIANS TO POPULATION FOR TOTAL PHYSICIANS (A) AND FOR PRIMARY HEALTH CARE PHYSICIANS (B) UNITED STATES, 1971

State [1]	(A) Total physicians [2]			(B) Primary health care physicians [3]					
	Number	Ratio [4]	Rank order	General practitioners	Internists	Pediatricians	Total number	Ratio [4]	Rank order
11 highest ratio States:									
District of Columbia	2,501	344	1	165	269	76	510	70.2	1
New York	36,370	198	2	4,409	3,530	1,466	9,405	51.2	3
Massachusetts	9,825	171	3	1,281	906	381	2,568	44.8	12
California	33,010	166	4	6,388	3,376	1,422	11,186	56.3	2
Connecticut	4,985	163	5	588	547	245	1,380	45.0	11
Maryland	6,167	157	6	720	556	255	1,531	38.9	25
Colorado	3,318	148	7	575	296	173	1,044	46.6	8
Vermont	666	145	8	129	75	28	232	50.7	4
Rhode Island	1,318	142	9	183	136	71	390	42.1	17
Hawaii	1,009	137	10	182	105	76	363	49.2	5
Pennsylvania	15,646	132	11	3,029	1,241	518	4,788	40.4	20
11 lowest ratio States:									
Indiana	4,738	90	41	1,518	312	156	1,986	37.7	31
Wyoming	301	89	42	120	23	6	149	44.2	15
Oklahoma	2,277	88	43	575	197	91	863	33.5	44
Idaho	625	86	44	248	49	28	325	44.6	14
North Dakota	521	85	45	171	49	20	240	39.2	23
South Carolina	2,160	85	46	620	149	96	865	33.9	43
Arkansas	1,589	82	47	556	111	49	716	37.0	34
Alabama	2,747	80	48	680	227	136	1,043	30.2	51
Alaska	214	75	49	72	20	15	107	37.5	32
Mississippi	1,652	75	50	539	106	77	722	32.7	47
South Dakota	484	73	51	187	35	19	241	36.4	37
Total United States	261,335	128		49,528	23,829	10,742	84,099	41.2	

[1] 50 States plus Washington, D.C. included.
[2] Non-Federal physicians in patient care.
[3] Non-Federal, office-based general practitioners, general internists, general pediatricians.
[4] Number of physicians per 100,000 population.

APPENDIX TWO

SUMMARY OF THE FOREIGN MEDICAL GRADUATE SITUATION IN THE UNITED STATES [1]

The attached charts provide a numerical summary of the foreign medical graduate situation in the United States. They include:

1—Foreign Physicians Admitted to the United States in Comparison with the Number of U.S. Medical Graduates, 1962–1973.

2—Number of Physicians Admitted to the United States Each Year, 1969–1973, by Visa Status at the Time of Admission.

3—Number of Foreign-Trained Physicians in the United States, by Geographic Region of Graduation: December 31, 1970.

4—Physicians Admitted to the United States as Immigrants, 1965 and 1972, by Region of Last Permanent Residence.

5—Occupancy of AMA Approved Internships and Residencies, 1950–51 to 1972–73.

6—Trend in Supply of Total Physicians in the United States, by Country of Graduation: Selected Years, December 31, 1959–72.

7—Supply of Active Foreign Trained Physicians: Actual and Projected 1975–90.

8—Number of Active Physicians, by Major Professional Activity and Country of Graduation: December 31, 1970.

9—Percent Distribution of Active Physicians and of First Year Residents, by Specialty and Country of Graduation from Medical School: 1970.

10—Number of Physicians by Location and Country of Graduation: December 31, 1970.

11—Foreign Medical Graduates in Metropolitan and Nonmetropolitan Areas of the United States, by Region of Origin, 1970.

12—Medical Underground: Physician Manpower in the United States, 1971.

13—Estimated Number of Immigrant Physicians Unknown to AMA by Year of Admission to U.S.

TABLE 1.—FOREIGN PHYSICIANS ADMITTED TO THE UNITED STATES IN COMPARISON WITH NUMBER OF U.S MEDICAL GRADUATES, 1962-73 [1 2]

Fiscal year	U.S. medical graduates	Foreign physicians [3]			
		Total	Immigrants	Nonimmigrant exchange visitors	Other nonimmigrants
Total	97,809	101,066	43,089	55,360	2,617
1962	7,168	5,767	1,977	3,970	(4)
1963	7,264	6,730	2,093	4,637	(4)
1964	7,336	6,767	2,249	4,518	(4)
1965	7,409	6,172	2,012	4,160	(4)
1966	7,574	6,922	2,552	4,370	(4)
1967	7,743	8,897	3,326	5,204	367
1968	7,973	9,125	3,128	5,701	296
1969	8,059	7,515	2,756	4,460	299
1970	8,367	8,523	3,158	5,008	357
1971	8,974	10,947	5,756	4,784	407
1972	9,551	11,416	7,143	3,935	338
1973	10,391	12,285	7,119	4,613	553

TABLE 7.—SUPPLY OF ACTIVE FOREIGN TRAINED PHYSICIANS, USING BASIC METHODOLOGY AND ALTERNATIVE ASSUMPTIONS: ACTUAL 1970; PROJECTED 1975–90 [1]

Projection series	1970	1975	1980	1985	1990
Number of active foreign trained physicians:[2]					
Basic methodology	60,000	86,000	112,000	138,000	164,000
Alternatives:					
Low	60,000	80,000	99,000	118,000	137,000
High	60,000	92,000	125,000	158,000	191,000
Rate per 100,000 population:[3]					
Basic methodology	29.4	40.0	49.3	57.7	65.4
Alternatives:					
Low	29.4	37.4	43.8	49.5	54.8
High	29.4	42.6	54.9	65.8	76.0

[1] From: DHEW, ibid., p. 53.
[2] Includes Canadian trained physicians.
[3] Resident population as of July 1 for 50 States and the District of Columbia.

Note: DHEW health manpower projections, 1970–90. Basic projection: Based on assumption that the active 1970 base of FMG's would experience a net yearly increase of 5,200 through 1990 (including Canadians). High projection: Based on assumption that the active FMG base (including Canadians) of 59,966 in 1970 would increase by 5,200 in 1971 (as it actually did) but would then rise subsequently by an arbitrarily chosen increment of 6,600 a year through 1990. Low projection: Based on assumption that the supply of foreign trained physicians would increase by the same average yearly net increment observed in 1963–70. The active FMG's (including Canadians) in 1970 would therefore increase by the already achieved 5,200 increment of 1971 but thereafter would increase by only 3,800 a year through 1990.

Source: 1970 foreign trained physicians: Haug, J. N., and Martin, B. C., Foreign Medical Graduates in the United States, 1970. Chicago, American Medical Association, 1971. Population: U.S. Bureau of the Census. Current Population Reports, Series P–25, Nos. 468, 477, and 483.

TABLE 8.—NUMBER OF ACTIVE PHYSICIANS (M.D.), BY MAJOR PROFESSIONAL ACTIVITY AND COUNTRY OF GRADUATION: DEC. 31, 1970 [1]

Major professional activity	Number of active physicians by country of graduation			Percent distribution		
	United States	Foreign	Canada	United States	Foreign	Canada
All activities	251,240	54,420	5,550	100.0	100.0	100.0
Patient care	225,620	48,190	4,720	89.8	88.6	85.0
Office based	167,950	20,980	3,510	66.8	38.6	63.2

TABLE 12

Medical Underground:
Physician manpower in the United States, 1971.

The data for FMGs are based on analysis of the 1971 AMA file and include 6,446 graduates of Canadian medical schools. Data for USMGs were obtained by subtracting the FMG data from total numbers published by the AMA, and assuming the number of unlicensed USMGs not in approved training programs is negligible.

[a] The question marks indicate unlicensed FMGs working in the health field, but unknown to the AMA data base.

APPENDIX THREE

MAJOR FEDERAL LEGISLATION AFFECTING HEALTH PROFESSIONS TRAINING, 1930–71

Year	Title	Summary of provisions
1930	Ransdell Act	Consolidated Federal biomedical research activities under the National Institute of Health.
1937	National Cancer Act	Authorized the new National Cancer Institute to "conduct and foster" research on cancer, and to provide fellowships for cancer researchers.
1943	Nurse Training Act (Public Law 78–74)	Established Cadet Nurse Corps.
1944	Public Health Service Act	Public health activities consolidated into 1 act. NIH received legislative authority to conduct a broad program of biomedical research. Represented conscious policy choice to use universities as a base for the advancement of biomed cal knowledge.
1946	National Mental Health Act (Public Law 79–487).	Authorized the training of personnel to provide mental health services.
1948	National Heart Act	Authorized the National Heart Institute to establish fellowships and provide grants for training and instruction related to heart disease.
1956	Health Amendments Act of 1956	Title II provided for professional nurse traineeships.
1963	Health Professions Educational Assistance Act (Public Law 88–129).	Authorized matching grants for construction and renovation of teaching facilities in eight categories of health professional schools. Authorized loans for students in medical, dental, and osteopathic schools.
1964	Nurse Training Act (Public Law 88–581)	Authorized construction and renovation grants for teaching facilities in nursing schools, limited capitation grants for diploma schools, special projects grants for upgrading nursing education, special traineeship program, and student loan programs.
1965	Health Professions Educational Assistance Amendments of 1965 (Public Law 88–290).	Authorized basic and special improvement grants to 5 types of health professional schools for increased enrollment. Provided for loans to low-income students to continue their education in health professional schools.
1965	Medicare and Medicaid (titles XVIII and XIX of the Social Security Act).	Through Federal support of medical care costs for the aged and indigent, provided financial relief to health professional institutions through 3rd-party payments, which unified the rate structure and permitted salaries of house staff to increase.
1966	Veterinary Medical Education Act (Public Law 88–709).	Extended provisions of Health Professions Educational Assistance Act of 1963 to schools of veterinary medicine.
1968	Health Manpower Act of 1968 (Public Law 90–490).	Extended provisions of Health Professions Educational Assistance Act of 1963 and the Nurse Training Act of 1964. Bonuses provided for increased enrollment. Special project grant authority expanded to include awards for financial distress.
1970	Health Training Improvement Act of 1970 (Public Law 91–519).	Authorized special funds for medical and dental schools in financial distress. Modified the institutional grant provisions to be responsive to new schools.
1971	Comprehensive Health Manpower Training Act of 1971 (Public Law 92–157).	Authorized capitation grants for health professional schools; initiative awards to alleviate manpower shortages in underserved areas; special project grants to expand or improve training; increased loans and scholarships; traineeship and fellowship grants in family medicine.
1971	Nurse Training Act of 1971 (Public Law 92–158).	Extended most of provisions of Public Law 92–157 to schools of nursing.

APPENDIX FOUR

Special Article—Assistants to Primary Physicians in California

Len Hughes Andrus, M.D., and Mary Fenley, F.N.P., M.S., (Davis, California)

Presented in part at the 1974 Family Practice Refresher Course, sponsored by the Department of Family Practice and Postgraduate Medicine, University of California, Davis, School of Medicine.

This work and the Family Nurse Practitioner Program at the University of California, Davis, are supported by a grant from the Robert Woods Johnson Foundation.

Reprint requests to: L. H. Andrus, MD, Department of Family Practice, University of California, Davis, School of Medicine, Davis, CA 95616.

The mid-level practitioner movement is no longer experimental; nurse practitioners and physicians' assistants in California have proved to fill a necessary and viable professional role in the delivery of primary health care. The physician's assistant law (AB2109) and the Experimental Manpower Act (AB1503) have facilitated the training and functioning of these new health care professionals; more comprehensive laws are still needed to permit optimal utilization. National agen-

Digitized by Google

cies for approval of teaching programs and testing of individual graduates will play an increasing role in the accreditation and certification procedures. Professional role difficulties, issues of sex and questions of delegation of responsibility are being resolved and it is hoped that a more equitable and patient-oriented system is evolving.

Any survey of health care in California or in this nation shows that we are still plagued by a deficit in primary health care.[1-3] The mid-level practitioner movement is essentially the explosive response to this need.[4,5]

Deficit of Primary Physicians

The lack of health care is easily visible in the poorer states, yet even in wealthy California, in spite of our eight growing medical schools (the University of California's five and three private ones) and in spite of the influx of physicians into California from elsewhere (two thirds of California's physicians come from outside California), the deficit is still major.[6-8]

Part of the problem is a maldistribution of specialties. Surveys using "ideal" physician to population ratios in Northern California [9] and the entire state [10] show that there is a general geographic deficit of primary care physicians and surplus of some specialities such as general surgeons. Whether it is a rural area, such as Glenn County with its one physician to every 2,200 people, or a large city, like San Francisco with one doctor to every 204 people,[10] all sectors of the population, and particularly the lower economic groups, suffer from an unavailability of sufficient numbers of primary health care professionals.[11-13]

This shortage has its historical beginnings in the Flexner report of 1910 [14] which scorned the preceptor method of medical education and which, inspired by the explosion of medical knowledge, encouraged increased specialization among physicians. The military's World War II deferment policies for residents in specialty training and preferential ranking of drafted specialists furthered the drift from primary care practice. Progressive tightening of hospital privileges also made the general practitioner a second class citizen. These factors precipitously decreased the numbers of primary care physicians.

A CHANGE OF EMPHASIS TO PRIMARY CARE

Fortunately, over the last ten years there has been an awakening to the need to provide more comprehensive health care to greater numbers of people.[15-18]

The American Board of Family Practice, incorporated in 1969, finally established a specialty in primary care, and today 203 approved family practice residencies are training some 2,500 residents across the United States and turning away many applicants.[19] These programs continue to grow in numbers and respectability.

MID-LEVEL PRACTITIONERS, PART OF THE ANSWER

Even with more physicians, however, it has become obvious that the delivery of primary care solely by physicians is inappropriate. First, overburdened primary care doctors often have needed help as they find themselves buried in episodic care. Furthermore, many patient needs such as health education, health maintenance, diagnosis and therapy of common diseases and the whole gamut of socioeconomic factors can be just as expertly handled by nonphysicians whose educations focus on these areas.[4] Thus the mid-level practitioner movement has grown in order to supply these auxiliary and supplementary health care professionals.[20-25]

Within this group of mid-level practitioners, two general names have emerged in California: the nurse practitioner and the physician's assistant. We feel the distinction between the two is arbitrary and the political more than functonal. As the California Nurses' Association explains, the physician's assistant may be said to extend the medical services provided by the physician, while the nurse practitioner provides, in addition, a different and complementary dimension to the care process based on prior background in nursing.[26] Physicians express different preferences which we feel are more often emotional than rational.

The breadth and depth of capabilities and responsibilities of these mid-level practitioners bridge that traditional gap between physicians on the one hand and registered nurses, licensed vocational nurses and health aides on the other.

This is not new ground, of course. For centuries there have been people who functioned in this area. In Russia, feldshers date back to the 15th century and have had established schools for over 100 years.[27] Busy physicians have always worked with nurses and office assistants who, formally trained or not, performed tasks that by law should have been done only by an MD. The mid-level practitioner movement, then, in addition to being a response to society's needs, is an effort to legitimize these mid-level responsibilities through the establishment of educational curricula, certification and back-up legislation.

THE UCD FAMILY NURSE PRACTITIONER PROGRAM

The Family Nurse Practitioner Program in the Department of Family Practice at the University of California, Davis, is one of the pioneering programs in the nation in the development and preparation of nurse practitioners. It began in 1969 as a Master in Public Health program for baccalaureate degree nurses, initially at the School of Public Health in Berkeley. After one year of operation, the program moved to the Davis campus.

It is an 18-month program which includes one year of didactic instruction and clinical practice, followed by a six-month internship. The curriculum consists of specified units in medical history taking; physical examination; pathophysiology; diagnosis and treatment of common problems; clinical management of selected,

stable, chronic diseases and preventive medicine. Each student must demonstrate understanding of the subject matter and competence of clinical skills in these units to be certified.

Students are selected for the program so as to include nurses most apt to practice in areas of need. Primary care providers in rural areas, particularly family physicians, are asked to identify candidates for the program. Original requirements as to the type of registered nurse (RN) degree received—whether diploma, Associate in Arts (AA) or Bachelor of Science (BS)—have been dropped. Students with baccalaureate degrees may pursue a master's degree through extra course work, and non-baccalaureate nurses receive university credit which may be applied to a bachelor's degree.

While the program primarily trains students from California and southern Oregon, some selected students are being trained to become the core faculty for similar programs in other states. Presently we have two black nurses in training for a rural program in Tuskeegee, Alabama.

In order not to interrupt the delivery of care in the areas from which these (California) candidates are selected, the program has developed a work and learn teaching program in which, with University direction, community physicians teach the students. One day a week the students travel by car or chartered plane to the Davis campus for intensive didactic instruction by the full-time University faculty. Their physician preceptors, all members of the clinical faculty of the Department of Family Practice at Davis, supervise their acquisition of clinical skills while working with them in their private offices the rest of the week.

The program is currently involved in further decentralization of the educational program into rural areas through the development of satellite training sites, strategically located in medical centers in rural areas. The first such program is in Santa Rosa, where nine nurses from coastal rural areas of California visit for their once-a-week lectures rather than going to Davis. Their professors are physicians and nurse practitioners who live and work in Santa Rosa. The curriculum is the same as that delivered in Davis.

The work and learn method in decentralized areas is an attempt to guarantee better distribution of skilled health care professionals, improve primary health care in rural areas, and increase the relevancy of the curricular material. In addition it provides excellent experimental models of health care systems which are being studied. For example, we have analyzed the comparative academic success of nurses with varying educational backgrounds and found no significant difference between baccalaureate and non-baccalaureate RNs in the grades they received. It appears that motivation and on-the-job training are much more important than academic degree in determining how well the student does in class.

ARE MID-LEVEL PRACTITIONERS LEGAL NOW?

The history of establishing the legal status of nurse practitioners and other physician extenders in California has been a rather slow and tortuous process with much debate over territorial rights.[28] In California, as elsewhere, the Board of Medical Examiners administrates the activities of the practice of medicine, and the Board of Nursing Education and Nurse Registration regulates nursing activities. These mid-level practitioners, bridging the gap between the two professions, do not clearly come under either group's jurisdiction, although legislation is underway to establish the authority.

PHYSICIAN'S ASSISTANT LEGISLATION

For the non-RN mid-level practitioner, the physician's assistant law (AB2109, Duffy), which was passed in 1970, established the regulatory authority as the California State Board of Medical Examiners. It covers physician's assistants and medex, who are graduates of a two-year college program and generally not RNs, although many have military corpsman backgrounds. The legislation sets the precedent for limiting the numbers of such assistants to two per physician and requires that the physician be approved as a supervisor.

Physician's assistants are limited in the scope of tasks permitted; for example, pelvic and endoscopic examinations are prohibited. The law requires that the physician be present with the physician's assistant under most circumstances.

Digitized by Google

There are five training programs for physician's assistants in California, three of them in primary care (at Stanford, at the Charles Drew Center in Watts of the University of California at Los Angeles and at the University of Southern California).

EXPERIMENTAL MANPOWER LEGISLATION

Legislation covering mid-level practitioners with RN degrees has been even slower to emerge, possibly because the RN was already a licensed health care professional. In 1972, AB1503 (Duffy), now Chapter 1350 of the California Health and Safety Code, established a mechanism for the approval of allied health personnel training programs under the Experimental Manpower Act. Most nurse practitioner programs in California are now operating under this law. Our program at Davis was the first to be approved under this act, and since then some 33 programs throughout California have been accepted.[29] As of December 1973, there were 120 graduates or prospective graduates of family nurse practitioner programs in California.[30]

The statute establishes the legality of a physician's delegating tasks to a nurse practitioner trainee, as long as the physician is "immediately available for consultation either personally or through electronic means." This permission to include the telephone or two-way radio allows the nurse practitioner much greater geographic independence than the physician's assistant has. It is a more permissive law in that it provides for greater breadth of function.

MODIFICATION OF THE NURSE PRACTICE ACT

A bill amending the Nurse Practice Act of 1939 (AB3124, Duff) was signed into law in June 1974. It gives clear authority for those functions and procedures which have had common acceptance and usage, as well as setting the stage for the expanded medical role of the RN. AB2879 (Duffy), which also has been signed by the governor, includes more precise definitions of "common acceptance." Yet neither bill specifically recognizes the nurse practitioner, nor do they cover the more specialized roles of the highly trained family nurse practitioner, pediatric nurse practitioner, adult nurse practitioner, obstetric-gynecologic nurse practitioner and psychiatric mental health nurse practitioner.[31]

NURSE PRACTITIONER LEGISLATION

AB3187, another bill introduced by Assemblyman Duffy (February 1974), was the most definitive attempt to date to formalize the identity of the nurse practitioner. It proposed the establishment of a Council of Nurse Practitioners under the Department of Consumer Affairs, rather than under either the nursing or medical boards of the state. It provided for curriculum requirements and accreditation of training programs, licensure of nurse practitioners who were RNs or licensed vocational nurses (LVN) graduated from these training programs, and disciplinary proceedings. Membership of the council was to be seven members. One RN, one LVN, one MD, one RN who was director of a nurse practitioner program, one RN with advanced clinical training, one MD on a medical school faculty and one public member.

Unfortunately, AB3187 was defeated. Territorial disputes threatened it since its conception. The California Nurses' Association formally testified against this bill in March before the Assembly Health Committee[31] on the grounds that it would have given authority over nursing practice to an independent regulatory agency. Proponents of the bill argued that the separate council it proposed would have been a more representative group. We agreed with this stand because we believed the council would have provided a prototype for future health science boards of examiners with much-needed broad representation of various kinds of providers as well as consumers.

While some people feel that the expansion of the Nurse Practice Act under AB3124 is sufficient, we feel there is still great urgency for legislation which will regulate standardized, competency-based educational programs and licensure and certification specifically for mid-level practitioners.

From various points of view, some legislation is desperately needed. To the consumer of health services, laws are essential to guarantee the public that these mid-level practitioners have specific skills and knowledge, as well as to encourage the production of these much needed primary health care providers. For the physician, legislation granting certain authority to the mid-level practitioner will permit the delegation of many time-consuming tasks and the extension of new health care services. And for the mid-level practitioner who is presently in training or who enters such a program in the future, the certification is needed to afford formal recognition of training, capabilities and financial worth.

NATIONAL STANDARDS FOR MID-LEVEL PRACTITIONERS

The National Board of Medical Examiners now has an examination for assistants to the primary physician which will undoubtedly play an increasingly important role in the training and certification of these professionals. Physicians who pass National Board examinations find this acceptable in almost every state in lieu of board examinations for state licensure,[32] and many medical schools use the national examination instead of their own finals or as an additional requirement for graduation. All states recognize national specialty board testing. This, trend, if applied to nurse practitioners, will certainly simplify the process and permit greater mobility of professionals.

In December 1973, the National Board of Medical Examiners conducted the first such certifying examination for assistants to the primary physician. Of the 880 candidates who took the test, 68 percent received their training in physician's assistant programs and 9 percent in nurse practitioner programs. The mean standard score was 494 points, the standard deviation 84. The minimum score for passing was 400; 85.5 percent passed. Fourteen graduates of our Family Nurse Practitioner Program took the examination; they all passed, with a mean standard score of 536.[33]

The analysis of test scores by the Board showed (as did our own experience with baccalaureate and non-baccalaureate nurses) that educational background is not the essential ingredient. No significant differences in scores were found among examinees trained in physician's assistant, medex and nurse practitioner programs. Those with clinical experience acquired after graduation, however, scored higher than those without this experience. The Board saw this result as evidence of the relevance of the examination, since it appeared to measure knowledge and skills actually used and improved in the clinical environment.[33]

WHO CERTIFIES PROGRAMS NATIONALLY?

The only national standards for mid-level practitioner programs are those adopted by the American Medical Association's House of Delegates in late 1971, and set out in *The Essentials of an Approved Educational Program for the Assistant to the Primary Care Physician*.[34] This was the collaborative effort of the American Academy of Family Physicians, the American Academy of Pediatrics, the American College of Physicians and the American Society of International Medicine, all of which sponsor the Joint Review Committee on Educational Programs for the Assistant to the Primary Care Physician. The Committee evaluates applications for accreditation, and the American Medical Association's Council on Medical Education, upon the Committee's recommendations, accredits programs.[35] The Council on Medical Education was recognized in February 1974 by the United States Office of Education as the national accrediting agency for these programs.

In March, the Council on Medical Education approved our Davis program, actually the first and, to date, the only nurse practitioner program to be approved by this group. The only other program in California that has received the Council's approval is the medex program of the Charles Drew Postgraduate Medical School, University of California at Los Angeles. As of June 1974, a total of 43 programs for assistants to the primary care physician had been approved nationally.

ACCEPTANCE OF MID-LEVEL PRACTITIONERS

Patient acceptance of nurse practitioners and physician's assistants has been so favorable that it is no longer an issue; various studies show that when the role of the med-level practitioner is properly introduced to the patient there is uniform acceptance.[36,37] Furthermore, their contribution to improved and more comprehensive health care is well established.[38]

The major deterrent to wider use of the mid-level practitioner has been the lack of acceptance by physicians.[39] Often doctors in greatest need of help and in areas of greatest care deficit are the ones most threatened by the formally trained mid-level practitioner. Fortunately, as the usefulness and competence of these professions become more widely known, physician acceptance is following. We have been impressed by our own preceptors' overwhelming enthusiasm for their mid-level colleagues once they have had a chance to work with them.

CHANGING ROLES

Physicians have traditionally been selected for being self-reliant, competitive individuals, not for their ability to work cooperatively with others, especially others with less formal education. Their medical school training has always encouraged their authoritarian qualities. Yet today, as all our institutions are doing, medicine is undergoing change.

The historical authority of the physician, due to his education and legal responsibility, is breaking down because of various factors. Health care providers are organizing; health care is thought of more and more as a public right; payment systems are beginning to emphasize payment for total care rather than for specific physician services. In short, health care is becoming less provider oriented and more consumer oriented.

Realistically, in office relations the physician is still the employer, the boss in the sense of legal and medical responsibility. This dominance is particularly evident in the physician's reluctance to delegate tasks.[40] The nurse, traditionally taught to take orders, frequently finds it difficult to take the aggressive role needed to make decisions.[40] On the other hand, there is a trend in the nursing profession to seek freedom from physician dominance and to demand more independent status.[41]

BATTLE OF THE SEXES

Role conflicts are exaggerated by traditional male and female images: the *male* doctor, physician's assistant and medex; the *female* nurse and nurse practitioner.[42] It is true that at present women are restricted to defined roles within the health care delivery system.[42] Yet we have had experience working with men and women filling all ranges of professional roles; we have found that the roles are inevitably determined much more by the setting in which they work than by sex or prejudicial images. We have men and women in our Family Nurse Practitioner Program, and women are joining the traditionally male medex programs in increasing numbers. There is an obvious trend in medical schools to accept more women. Fortunately the stereotypes are breaking down as sex lines are crossed. When roles are finally defined by patient oriented functions, rather than traditional professional images, many of these problems will be resolved.

DEPENDENCE, INDEPENDENCE AND INTERDEPENDENCE

The degree of dependence or independence of the mid-level practitioner with respect to the physician is a balance between legal limitations and capabilities. Ideally it is determined by the specific competencies of the persons involved.

In practice, mid-level practitioners have proved to be competent and capable of handling many patient problems alone, within the prescribed protocols worked out by the physician. Our Family Nurse Practitioner graduates reported that in 70 percent of patient visits, they were the only professional the patient saw.[43] All patient contact activities were under the general supervision of the physician, of course, and most patients seen on a continuing basis or with complications also saw the physician. Others have also reported on the increasing ability of mid-level practitioners to extend physician services in a fairly independent manner.[40,45]

What we see as the ideal is the physician and mid-level practitioner as colleagues who work together as members of a larger primary health care team.[25,44,45] Our plea is for greater interdependence of all members of the team.

COMMUNICATION AND SUPERVISION

An essential for safe and effective utilization of the nurse practitioner, as well as for good office relations, is satisfactory communication between the mid-level practitioner and the physician. Delegation of tasks, whether directly or through protocols and consultation, should include sufficient supervision to assure that the nurse practitioner collects pertinent data, accurately interprets the data and recognizes deviations from the normal and understands his or her limitations in diagnosis and therapy.[30]

HOW ARE MID-LEVEL PRACTITIONERS PAID?

Most mid-level practitioners are paid a straight salary by a physician or institution. Few data are available on the size of salaries in California, but a limited survey done in the summer of 1974 showed that in 19 private practices in Northeastern California the mean annual salary received by mid-level practitioners was $12,390; four reported salaries below $12,000, and the maximum was $18,000.[46] A national study by Scheffler and Stinson showed a mean of $9,869 and a range of $4,599 to $21,362; women physician's assistants at that time started at salaries averaging $2,200 less than men physician's assistants, and after two years' experience the gap widened to a difference of $4,550.[47] An American Medical Association study of 1973 salaries across the nation showed a mean annual rate of $11,560 and a range of $7,200 to $22,500; however, there was still an average difference of $2,040 between salaries of men and women physician's assistants.[48] We may conclude that although sex discrimination in salaries is disappearing slowly, the upward trend of salaries in general signifies increasing recognition of the utility of mid-level practitioners.

Some physicians have worked out salaries for various allied health workers as a percentage of volume or by profit-sharing arrangements based on the team's or the individual member's performance. A few physicians share risks of loss and profit with all the professionals in the office.

Unfortunately, to date the performance of mid-level practitioners, like that of physicians, has usually been gauged by traditional fee-for-service financing, under which preventive medical measures are either not included or poorly remunerated. One of the greatest challenges facing the health care system is the development of financial incentive systems that reward quality of care and emphasize preventive medicine and patient education.

Summary and Recommendations

Health professions training

The major health manpower issues to which I have referred in my testimony include:

(1) the need to insure the financial stability of health professions schools and increases the aggregate supply of health manpower
(2) geographic maldistribution
(3) specialty maldistribution
(4) foreign medical graduates
(5) the need for physician's assistants, nurse practitioners and other intermediate health practitioners
(6) the need for allied health personnel
(7) the need for public health and health administration personnel
(8) the need to provide educational opportunities in health professions schools for socioeconomically disadvantaged students
(9) the need for the Department of Health, Education, and Welfare to properly implement the health manpower legislation

In the testimony, I have chosen to emphasize:

(1) the need to provide primary medical care as the most important health care problem facing the country
(2) the impact of federal health-related programs on the demand for medical care
(3) problems of data and lack of adequate information
(4) aggregate supply of health manpower
(5) geographic maldistribution
(6) specialty maldistribution
(7) foreign medical graduates

I have also briefly discussed problems related to nurse training and nursing services.

The policy alternatives for resolving these issues fall under a variety of categories, each of which impacts on a different aspect of training or practice:

(1) financial incentives for students
(2) financial incentives for providers
(3) medical education and training
(4) professional environment in the community
(5) general environment in the community
(6) legal requirements, sanctions and controls

Digitized by Google

In my recommendations I will focus on specific measures which fall under several of these categories. Before any specifics are mentioned, however as a first priority it is incumbent upon the Congress to establish a clear federal health manpower policy including an explicit recognition of the role of the federal government in health manpower developments, including the direct support for education costs in health professions schools. That policy might begin with the statement that all citizens have the right to adequate health care and that it is the responsibility of the federal government to assure access by providing core support for the development and deployment of manpower in the major health professions in cooperation with state and local governments and the private sector.

The federal government has the responsibility to maintain the integrity of the institutions which educate health professionals as well as assuring adequate levels of high quality health professionals. The problems of geographic and specialty maldistribution can be most effectively addressed at the residency level and through appropriate incentives to practitioners.

Nurse practitioners and physician's assistants are essential elements of the health team. They can increase the productivity of a physician and extend the geographic reach and scope of services. Physicians and intermediate health practitioners should be considered interdependent rather than independent providers of care. The most effective ways of meeting the future needs for an adequate number of primary care physicians is to sustain the output of United States medical schools, expand the programs to train nurse practitioners and physicians assistants and increase the number of approved residences in primary care while decreasing them in surgical and other specialties where excess supplies are already evident.

Foreign medical graduates have contributed little to resolving the problems of geographic and specialty maldistribution in the United States. The double standard which has been applied to FMG's makes it incumbent upon federal policy makers to develop an appropriate policy for addressing this problem. Equal educational opportunities must be open to women and minorities. Accomplishing this goal must be given equal weight with resolving the other major health manpower issues which I have discussed.

The evidence presented to the committee last year would indicate that the present level of capitation support—or 20 percent of net education expenditures—is the minimum level needed to sustain current and projected enrollment through the 1980's. In order to receive this support, schools must comply with the Civil Rights Act in offering equal educational opportunities to women and minorities. Although there has been significant progress in this area, equal opportunity is not a fact of life in every health professions school in the United States.

Capitation payments equal to 20 percent of net education expenditures would be considered basic institutional support for health professions schools. The committee should then seriously consider raising the payments to the level recommended by the Institute of Medicine—up to one-third of net education expenditures—for those schools which engage in projects of national significance. Including such projects under capitation grants relieves schools from continuously having to fill out applications for individual special projects. It would be to everyone's advantage to eliminate this wasted effort.

The activities for which schools would receive an increased level of capitation payments should include:

(1) improving distribution of residency positions among specialties so that at least 50 percent of the residency training programs in the medical school and its affiliated teaching hospitals are in primary care (general medicine, general pediatrics, family practice, and obstetrics-gynecology).

(2) establishment of family practice residency programs which offer at least 12 first year positions annually.

(3) offering students the opportunity for exposure to practice outside of the medical center through service in public hospitals, community health centers, clinics in underserved areas and preceptorships such as those offered by the University of Wisconsin and the University of Indiana.

(4) development of new programs in Area Health Education Centers or hospitals in underserved areas, particularly residencies in primary care specialties. The actual development and expansion of Area Health Education Centers should remain one of a few separate special projects.

Digitized by Google

(5) projects which encourage and support the development training programs for nurse practitioners, physician's assistants, nurse midwives, and other intermediate health practitioners. These should be created in conjunction with primary care training programs in order for students to learn to function effectively as members of an interdisciplinary health team.

The activities mentioned to this point will have direct or indirect effects on both geographic and specialty maldistribution. The interrelationship between the two problems makes it difficult to propose a solution to one which will not, in some way, affect the other. In addition to those directed toward specialty and geographic maldistribution, two final projects should be included in the list of those qualifying for increased capitation support:

(1) increased support should be given to schools to admit students from underserved areas and from socioeconomically disadvantaged groups whose medical care needs have not been adequately met by those traditionally admitted. This would mean the admission of more women, minority and rural students. Although student loans and scholarships would be covered under separate provisions, it should be noted that there must be adequate support available through those means which are not specifically tied to service commitments so that disadvantaged students can be assured of completing their training while not being forced to provide service in underserved areas in return, unless they choose to do so.

(2) schools would also be supported for projects to train physicians in the appropriate use of prescription drugs. Such programs would utilize clinical pharmacologists and clinical pharmacists, trained in pharmacy schools, for instruction on either the undergraduate or graduate level.

Although changes in undergraduate medical education are necessary to meet the need for an improved distribution of health profesionals, both geographically and by specialty, significant changes will be required in graduate medical education if these and other critical health manpower issues are to be resolved.

SPECIALTY DISTRIBUTION

Policies to correct specialty maldistribution should focus on the absolute numbers and distribution among specialties of residency positions. The committee is faced wth three choices:

(1) do nothing regarding residency training.

(2) mandate that professional organizations in the private sector take responsibility for establishing the total number of residency positions to be available on a national and regional basis and the specialty distribution among residencies.

(3) mandate an expanded role for the Department of Health, Education, and Welfare in establishing, approving, and financing residency programs.

Since the federal government pays a major portion of stipends for residents through the Medicare and Medicaid programs, I believe that the only effective way to address the problem is to give HEW a larger role in setting the total number of residency positions and determining the distribution of those positions both geographically and by specialty.

The number of first year residency positions should not exceed 110 percent of graduates from United States medical schools in a given year. Based upon annual recommendations of the Coordinating Council on Medical Education, the Secretary of HEW should be authorized to establish the number of residency positions which would be eligible for reimbursement under federal health insurance programs and assign the number of positions to the various specialties and among geographic regions. At least 50 percent of residency positions should be in primary care (general medicine, general pediatrics, family practice, and obstetrics-gynecology).

LOCATION OF HEALTH PROFESSIONALS IN GEOGRAPHIC AREAS WHERE THEY ARE NEEDED

No single solution has been found for the problem of geographic maldistribution. The issue must be addressed with multiple actions. These include the Area Health Education Center program, decentralization of medical education (particularly residency programs), loan and scholarship forgiveness for service in underserved areas and the National Health Service Corps.

Of all of these efforts, the best solution currently available is a vastly expanded National Health Service Corps program. The National Health Service Corps

Digitized by Google

should develop effective linkages with the Neighborhood Health Center Program, Maternal and Infant Care Program and other organized activities designed to provide adequate access to care in underserved areas.

Loan and Scholarship programs should continue to offer loan forgiveness in return for service. Since the lack of response to loan forgiveness options has been related to the absence of information to students regarding such provisions, these programs should be required to provide a written notification to every applicant for student assistance of the loan forgiveness option.

FOREIGN MEDICAL GRADUATES

An adequate supply of United States trained medical school graduates is essential to provide the necessary number of phyicians needed in the United States. I believe that enrollment increases currently projected by United States medical schools will achieve first year enrollments of close to 15,500 by 1980–81 and 16,000 by 1983–84 if federal financial assistance is maintained. With increased federal support, first year enrollments could be increased by at least an additional 1,000 students by 1979–80 and by an additional 2,000 students by 1983–84. I do not think that these additional places will be required to meet the nation's health manpower needs, but that is a decision to be made jointly by Congress and the states in funding programs and by the medical schools in responding to national needs.

Even if the supply of foreign medical graduates stabilizes at present levels for the next several years and then declines to not more than 10 percent of the total U.S. supply, the ratio of physicians to population would remain close to the 1975 ratio. As Professor Rashi Fein of Harvard has cautioned, immigration laws should not be based upon physician shortages since the preceived shortage is, to a great extent, a problem of maldistribution.

The approach I recommend to Congress for resolving the problems associated with FMG's is a multidimensional one including the following actions:

(1) The Department of Labor should be urged to re-examine the health manpower situation to declare that there is no longer an overall physician shortage in order that the Department of State will no longer be able to authorize visas of foreign medical graduates without Department of Labor clearance.

(2) The 1965 Amendment to the Immigration Act of 1952 should be amended to assure that foreign medical graduates whose primary activity is office or hospital based patient care no longer be given preferential immigration status under the two preference categories:

—members of professions or persons with exceptional abilities in science and art

—persons with skills which are in short supply in the United States

The type of provision recommended here would continue to give entry preference to physicians engaged in needed biomedical research but it would limit the ability of foreign medical graduates to enter the United States in numbers which are in excess of the nation's needs or demands. If the committee wishes, I will be happy to provide specific language for such an amendment.

(3) To assure the American public an adequate standard of care, I recommend, as a minimum, that all physicians be required to pass, at an acceptable level, either the National Board Examination (Parts I, II, and III) or the FLEX examination. The examination given by the Education Council for Foreign Medical Graduates (ECFMG) should be eliminated.

(4) Support should be provided for the development of programs to allow those United States citizens who were qualified to study in American medical schools, but because of space restrictions, were forced to go abroad for medical education to return to the United States for their third and fourth years of medical school. Special remedial programs should be provided for students from this group whose foreign medical education did not adequately prepare them to enter the third year of training in a United States medical school.

THE NEED FOR INFORMATION

Data problems and lack of information regarding current and future supply and distribution of health professionals are recognized by everyone. I believe

Digitized by Google

that the types of proposed studies regarding physician distribution and the National Health Service Corps are essential to intelligent policy development. I would recommend that the committee take one further step and establish a national health professions personnel data base. The Secretary of HEW should be authorized to make grants to states for the development of a uniform reporting system to include data on all health professionals. This data base would provide consistent information for evaluating and projecting the supply, specialties and geographic distribution of health professionals.

NURSE TRAINING

1. There is an acute need for studies of the following problems in nursing manpower.

A. Incentives and motivations of nurses to settle in certain geographic areas.

B. Mechanisms which are effective in bringing the 300,000 unemployed nurses back into the work force.

2. Capitation eligibility for schools to maintain enrollment rather than expand enrollment. Enrollment expansion might be considered a special project.

3. Loan forgiveness for shortage area service in primary care should be expanded and possibly considered as a requirement for certain traineeships which are available to nurse practitioner students.

4. Nurse practitioner programs should be closely affiliated with primary care physician residency programs.

Equal attention should be given to the location of these programs in relation to the unmet need for health care.

5. Reimbursement for physician extender Medicare and Medicaid should be authorized.

Mr. ROGERS. Thank you very much for a very helpful and excellent statement. The committee and staff will go over your statement and recommendations in detail.

Mr. Hefner?

Mr. HEFNER. I have no questions.

Mr. ROGERS. Dr. Carter?

Mr. CARTER. Thank you, Mr. Chairman. This is certainly an excellent presentation. I enjoyed it thoroughly. However, you presented several problems I don't know that the solutions are also there. Dr. Lee.

How would you manage geographic distribution?

Dr. LEE. I think I would give the first priority to expansion of the National Health Services Corps and the National Health Service Corps scholarship program. I do not think poor students, in order to go to school, should have to sign up for one of those scholarships. Alternative sources of scholarship funds should be available for the first year or two. Once they know they will make it through school they can start taking out loans.

I don't believe we should require poor students to join the National Health Service Corps in order to obtain financial aid. That should be open equally to everyone, it should be voluntary and it must be adequately funded. At the local level the National Health Service Corps should be integrated with area health education centers, community hospitals, neighborhood health centers, and the number of the other programs developed to reach out to underserved areas. It has to be linked with a system of care. You just can't put graduates out there to practice without an adequate support system. They are making significant efforts now to do that.

Digitized by Google

Second, increasing the number of area health education centers to improve the geographic distribution of residency training programs; and three, the development of primary medical care residency programs, particularly in the family practice, because physicians in family practice will be more likely to move into underserved geographic areas.

We have to have physicians trained with the appropriate kind of skills. We need to modify the admission policies in our medical schools to select more students from underserved areas not just underserved populations, such as minority groups.

While increasing the number of women admitted, we are still proportionately low on the number of students from small towns and rural areas, particularly low-income white students from those areas.

Mr. SCHEUER. Do you find that when you educate and train a low-income student from a rural area, he is more likely to go back to the area after his training is complete?

Dr. LEE. For many it is not a low-income area, it is home and they will earn a very good income.

Mr. SCHEUER. Does he find it more congenial going back there and is he more apt to go back than someone looking for a new experience?

Dr. LEE. Evidence indicates he—or she—is more likely to go back particularly if he—or she—has had his residency training in an adjacent area and if he—or she—had some undergraduate medical training there.

The student from New York City is not likely to go to Wyoming to practice. The student who comes from Caspar or Laramie, Wyo., if he goes to the University of Colorado and has the opportunity to go back home for a residency, is more likely to go back there to practice. The data is not very solid, but it certainly seems to be the case.

Mr. CARTER. How would you control specialty distribution?

Dr. LEE. I think first of all you have to set a limit on the number of residencies in the United States. There are an excessive number of positions now. I would limit the number of first year residencies to 110 percent of the graduates of American Medical Schools. Next, the unfilled positions should be eliminated. Congress must also create a mechanism that can allocate the residency positions by specialty; and I think that the process proposed in the legislation could accomplish that. As a minimum and immediate objective, at least 50 percent of the residency positions should be allocated to primary care specialties; internal medicine, pediatrics, family practice, and general practice. I also support the committee recommendation of last year that there should be an additional 7 percent in OB/GYN, bringing the total to 57 percent.

Mr. CARTER. Would you consider OB/GYN in primary care?

Dr. LEE. Yes, I would. I think about 20 percent of their practice is referral or consulting practice. Most of their practice is in the primary care of women of child-bearing age and older, who keep returning for continuing care.

Mr. CARTER. I have one question, how again would you manage FMG's?

Digitized by Google

Dr. LEE. First of all there needs to be a change in the immigration laws. Congress or the State Department should eliminate the preference which is now given to physicians to immigrate into this country. We do not have a shortage of physicians. We have a maldistribution by specialty and geographic area. We do not have a shortage. The rationale for the original legislation permitting the influx was because there was shortage in physicians in the United States. I think that should be changed.

There should be changes which would permit somebody who comes in on an exchange visitor visa for training. They should not be allowed to immigrate while they are in the United States, which thousands are doing at the present time.

Foreign medical graduates should be required to pass the same examination that the graduates of an American medical schools must pass in order to enter a residency training program. This change would probably drop the number of FMG's in half or maybe down to 20 or 30 percent of its present level as soon as that examination was instituted, provided a sufficiently high standard was set on the score they had to make on the examination.

I think those things would help to deal with the problem of FMG's. I think eliminating the excessive number of residencies—which is really the thing that brings them here—will go a long way to reducing the numbers.

Mr. CARTER. Thank you for a most helpful presentation.

Mr. ROGERS. Mr. Preyer?

Mr. PREYER. I agree with Dr. Carter, this is very helpful and useful. I just have one question. Did I understand you to say there would be more foreign medical graduates entering medical practice in this country in the last 4 years than the United States trained physicians?

Dr. LEE. Yes, sir, if you look at table 1, appendix 2 you can see the exact figures.

Mr. SCHEUER. Is there a page on that?

Dr. LEE. It is in appendix 2, table 1.

In 1970 the number of U.S. graduates was 8,367. The number of foreign physicians admitted to the United States in that year was 8,523. In 1971 and 1972 and 1973 the number of foreign medical graduates, if you look at that table, exceeded the number of graduates of U.S. medical schools.

The most significant factor in the last 3 years was in the immigrant category, not in the nonimmigrant exchange visitors, where those numbers increased most dramatically—more than doubled since 1970.

Mr. PREYER. Well, the Secretary this morning seemed to say that we shouldn't try through any sort of arbitrary ways to restrict the number of foreign medical graduates, although he would agree with your suggestion about requiring the same examinations but he seemed to say there was something morally wrong with it, that it conflicted with the ideals of our country to attempt to restrict free immigration in that way. Isn't there also something fundamentally wrong, morally or ideally, or some other way with a country this size and with our facilities taking more than half of its graduates, half of its people in the medical practice from foreign graduates?

Dr. LEE. We permit physicians to enter out of proportion to other people from the countries from which they come—from the Philippines, Korea, Thailand, Indonesia, and a number of other countries—

Digitized by Google

because of the present laws that permit the physicians to be in a special status because they are in an occupation which is declared to be in short supply in the United States, or because they have special skills.

Under both those categories FMG's are permitted to enter more easily than anybody else who might want to immigrate. We have made them unequal to the other citizens from those countries.

Mr. PREYER. The law, as far as democratic ideals go, it is discriminatory to the other citizens.

Dr. LEE. One alternative would be to open immigration totally—which I don't think the Secretary favors although he will have to speak to that—but this proposal is just to equalize it.

Mr. PREYER. Thank you, Dr. Lee, I appreciate your testimony very much.

Mr. ROGERS. Mr. Scheuer.

Mr. SCHEUER I was very stimulated by your testimony, Dr. Lee, as I am sure we all have been for the years in which you have been giving us topflight leadership.

I have very little to add in reference to your testimony, it has been thoroughly covered.

I would like to ask you in connection with the discussion of family planning yesterday, since you played such a significant role in the development of family planning services in the Federal Government what would your view from the mountaintop be on how that program worked, how it served the constituent group and how it ought to be funded, whether it ought to be expanded, how the delivery of services should be organized, should the plan be furnished by the cities and States as the Secretary said yesterday?

Dr. LEE. I think the program worked very well. It provided access to millions of women to a very much needed service which they have sought on a voluntary basis and to which they clearly had inadequate access earlier. As you know, in the middle 1960's I was not particularly in favor of a categorical approach to family planning.

Mr. SCHEUER. I had forgotten that.

Dr. Lee. Generally that worked, and I think eventually the family planning services need to be integrated into more comprehensive services. The needs are so critical, the benefits of those services are so significant to the patients receiving them that I think it is essential to continue a categorical program until at least the underserved populations have the same access to services that the average middle class person has in the population.

That is not yet true and I think it would be a great mistake to turn the financing and policy guidance over to the States through revenue sharing or any other means.

Mr. SCHEUER. States and cities?

Dr. LEE. Yes. It didn't work before and clearly it will not work now. I think it would be a very, very serious setback. I think we would see adverse impacts in relation to infant mortality and in maternal and child health that would be clearly demonstrable if Congress backed away from the approach taken in 1970. It is clearly too soon to do that. 1980, maybe, but not 1975.

Mr. SCHEUER. Can you give us a percentage of the group to be reached, the total number of women in child bearing years who depend on this service and who are not being reached?

Digitized by Google

Dr. LEE. I don't have the figures in my head.
Mr. ROGERS. Maybe you could supply this for the record.
Dr. LEE. Yes, I will supply that for the record.
[The following letter was received for the record:]

UNIVERSITY OF CALIFORNIA, SAN FRANCISCO,
SCHOOL OF MEDICINE,
San Francisco, Calif., March 19, 1975.

Hon. PAUL ROGERS,
U.S. House of Representatives,
Rayburn House Office Building,
Washington, D.C.

DEAR CONGRESSMAN ROGERS: During the recent hearings on health manpower I was asked by Congressman Scheuer, "Regarding family planning programs, can you give us a percentage of the group to be reached, the total number of women of child bearing age that depend on this service and are not being reached?"

In the initial estimates that were made in the mid 1960's, it was estimated that there were approximately 5 million women who would fit this description and by the early 1970's less than half of these women were receiving needed services. Revised estimates add significantly to the numbers of persons in need of subsidized family planning services. The best estimates from the Planned Parenthood Federation of America indicate that that number is now nearer 11 million than 5 million.

They estimate that there are about 9.2 million low and marginal income women aged 15–44 at risk of unwanted pregnancy (defining "low and marginal income" as below twice the official poverty level). In FY 1974, about 2.8 million of them were served in organized clinics and an estimated 2.8 million were served by private physicians. The total served, then, was about 5.6 million, or about 60% of those in need.

Thus, about 3.6 million low and marginal income remain unserved. In addition, there are about 1.7 million sexually active teenagers in families with incomes above twice the property level in need of services, and it is doubtful in more than 300,000—400 are receiving *them*.

I'm deeply concerned regarding the proposals that family planning programs be moved from categorical financial support to revenue sharing. Studies currently underway by the Southern Regional Council indicate very clearly that revenue sharing funds do not go for social services of this type. The funds have gone for the construction of facilities and they are now going primarily to offset inflationary increases in salaries of police, firemen, and other municipal, county, and state employees. In my opinion it would be a disaster to transfer family planning services, which mean so much to the health and well-being of the individuals served, to a non-categorical revenue sharing approach and I hope that these services will be provided through revenue sharing.

I hope this information will be helpful.

Sincerely yours,

PHILIP R. LEE, M.D.,
Professor of Social Medicine.

Mr. ROGERS. Any further questions? For the record, I would like your thinking on what should be done for the malpractice situation.

Dr. LEE. I might ask my father, who has become very much interested in that problem and has developed some ideas, to write you directly about that and I will discuss with my colleagues, Lew Butler, Mike Parker and others you know and we will give you our ideas.

[The following information was received for the record:]

MALPRACTICE, A RATIONAL SOLUTION

It is not necessary to reiterate that the situation brought about by the tremendous awards in malpractice suits is a serious one. Nor is any useful purpose served by attempting to place the blame. Essentially the miraculous achievements of modern medicine have led the public to believe that any condition can be cured by one of the new wonderful drugs, so there is almost universal over-expectation as to the possible results. Also, it is almost always true that

Digitized by Google

any drug, or indeed any other treatment modality, is dangerous almost in proportion to its potential efficacy. So there have been many drug reactions and also many side effects of surgery which have been seriously damaging to patients. From this has developed the attorney who specializes in such cases and, human nature being what it is, at times instigates such actions. Then, too, the juries assuming that the insurance company will pay and swayed by the lawyers who have acquired much skill in this field, award enormous judgments. To pay these the insurance companies must increase premiums until now the burden has become almost more than can be borne.

All recognize the bad state of affairs. The diagnosis is clear enough. A cure is what is needed.

And a cure can be found. The example furnished by industrial accident insurance in which Wisconsin led the way but which has been brought to a very high point of efficiency in California furnishes the guide. The old "adversary" system should go. Also, the fiction that a jury can, with any amount of coaching by lawyers, be competent to judge whether in fact malpractice has been committed and then what the award should be, recognized and a new approach found.

Allegations of malpractice should all be referred to and judged by a board of experts. This board should be composed of physicians and laymen who are especially trained just as are the boards that judge industrial accidents. The facts should be laid before this board (which should be an established state agency) without emotionalism or forensic oratory, and the board would then determine whether there had been actual malpractice. Then the board should determine the extent of the injury and what the proper award should be. This award should be paid from the funds of a state malpractice insurance agency. The funds would be derived from fees paid into it by every participating physician. These fees or, if one prefers, these insurance premiums, should be determined by the actuarial experience, and because there would be no legal fees and no insurance company profits to pay, would consequently be much less than today. The elimination of capricious, frivolous and actually fraudulant claims would insure that a just figure would be arrived at.

An additional benefit which is now lacking would be the determination if the physicians were really at fault, or were poorly trained or incompetent, and if this was found to be the case, appropriate action could be taken by the board. This action should be revocation of license to practice, curtailment of activities in which the physician might be permitted to engage, or the imposition of a requirement for additional training if indicated. Now we have the preposterous situation where a physician may be assessed a million dollar malpractice verdict and goes on practicing just as he did before. This is palpably absurd.

This solution calls for legislative action to set up a state malpractice insurance fund, a state malpractice board of experts, and the requirement that all physicians contribute to the fund enough to meet all demands on it. By this means the injured patient will be justly awarded damages, the guilty physician will be punished, and all the present con game features will be eliminated.

RUSSEL V. LEE, M.D.,
Palo Alto Medical Clinic, Palo Alto, Calif.

Mr. ROGERS. If we limit FMG's through residencies and so forth, do you think it would be too traumatic a change, over the next 3 years, to bring about a reduction from the 200 percent that we have now down to a 125 percent—I know you said you would recommend 110—but I am thinking not only of the training but also the impact on the delivery of care. In other words, I think we need to look at what happens in delivery at the same time we are thinking about training.

Dr. LEE. I agree and in some States, for example New Jersey, New York, Rhode Island, you can't turn it off like that. I agree with that.

Mr. ROGERS. If you could let us have something specific on that.

Dr. LEE. On the timing of the reduction?

Mr. SCHEUER. Would you also address yourself to a distinction that I think exists between the use of FMG's in for profit hospitals and in voluntary hospitals and if you could give us some insight into how some restrictions on the entry of new FMG's into this country would open up places in our medical services delivery system for young

Digitized by Google

Americans who would very much like to have a career in health services, but who are now denied that possibility because there simply is not the opportunity for them to serve.

Dr. LEE. All right.

Mr. ROGERS. You might give us a figure such as whether we should phase it in in increments of say 135, 125.

Dr. LEE. All right [see below].

Mr. ROGERS. As I understand it, you feel off-campus training is a good procedure?

Dr. LEE. I do. I think it is essential for quality medical education.

Mr. ROGERS. Should every medical student participate in off-campus training?

Dr. LEE. If you have a university hospital I think it is essential to provide undergraduate students with other experiences in public hospitals, neighborhood health centers, private physician offices, a variety of other settings in which medical care takes place. The university teaching hospital is largely focused on tertiary care so we can't provide the range of services.

Mr. SCHEUER. Would you provide the student experience working with nurse practitioners and assistants and so on?

Dr. LEE. Yes, they are better able to work with them after they are in practice if they worked with them in training.

Mr. ROGERS. Do you think it is essential to maintain Federal support of our medical schools and universities?

Dr. LEE. Yes, sir. I think that the present level of support, according to the evidence which you have accumulated, is adequate to prevent financial distress. I think the only question is how many requirements do you want to make in exchange for that amount of support for the educational costs.

Mr. ROGERS. Thank you very much. Your testimony has been most helpful and we may be back in touch with you for other advice.

Dr. LEE. It is always a pleasure.

Mr. ROGERS. Thank you, we appreciate your being here.

[The following answers to specific questions were received for the record:]

ANSWERS TO SPECIFIC QUESTIONS ASKED BY CHAIRMAN ROGERS

(1) Could you provide studies to the committee which show that under the appropriate conditions, nurse practitioners could do as good a job as physicians?

The following studies demonstrate that under appropriate conditions nurse practitioners perform as well as physicians in the delivery of primary health care. The article by Dr. Lewis contains a more extensive review of the literature on the subject. The other studies demonstrate that nurse practitioners, as well as physician assistants, can perform effectively in a variety of practice settings and with several types of physicians, including family practitioners, pediatricians and internists. I am attaching copies of these articles for your information.[1]

(1) Duncan, Morris; Smith, Ann; and Silver, Henry. "Comparison of the Physical Assessment of Children by Pediatric Nurse Practitioners and Pediatricians." *American Journal of Public Health*. Vol. 61:1170–1176 (June 1971).

(2) Lairson, Paul; Record, Jane; and James, Julia. "Physicians Assistants at Kaiser: Distinctive Patterns of Practice." *Inquiry* 11:207–219 (September, 1974).

(3) Lewis, Charles. "Evaluating the Performance of Intermediate Level Health Workers." in *Intermediate Level Health Practitioners*. Lippard and Purcell (ed.) Josiah Macy Fdn. Baltimore: Port City Press, 1973.

(4) Spitzer, Walter; Sackett, David; Sibley, John; Roberts, Robin; Gent, Michael; Kergin, Dorothy; Hackett; Brenda; and Olynich, Anthony. "The Bur-

[1] The articles may be found in the committee files.

Digitized by Google

lington Randomized Trial of the Nurse Practitioner," *New England Journal of Medicine* 290:251–256 (January 31, 1974).

(2) If residencies are limited, is it too traumatic to reduce from 200 percent to 125 percent in three years? What should be the timing of the reduction (how many years and the amounts to be reduced in each phase)?

I believe that a reduction from the present level of first year residencies to 125 percent of the graduates of U.S. medical schools in a three-year period is too rapid a reduction. Assuming that the 200 percent figure is correct, I would suggest a 15 percent annual reduction in the number of residencies. The first year reduction would then be to 185 percent, the second year (1977) to 170 percent, the third year (1978) to 155 percent, and the fourth year (1979) to 140 percent. The fixed level of 125 percent would be reached by 1980. This would provide ample time to make the transition in a fair and equitable manner. It would also provide time for a review by the Congress to determine the appropriateness of the reduced level.

(3) Is there a distinction between the use of Foreign Medical Graduates in for-profit and their use in voluntary hospitals?

I have found no evidence in the literature to indicate that there is a difference.

(4) Would restrictions on entry of Foreign Medical Graduates open up places in our health care delivery system for Americans who want a career in this area, but are now denied that because there is not the opportunity to serve?

The opportunities are already available for physicians, so it is not likely that this would increase the opportunities for medical graduates. It would, however, increase the opportunities for nurse practitioners, psychiatric nurses, physicians' assistants, and other physician extenders who have the skills to perform many of the services now performed by foreign medical graduates. In a number of hospitals, residency positions that are filled by foreign medical graduates could, in fact, be filled by well-trained physicians' assistants, whether these were orthopedic assistants, neurosurgical assistants, or intensive care nurses. These are a few examples of the kinds of hospital activities that nurses or physicians' assistants could assume in place of foreign medical graduates.

Mr. ROGERS. The next witness is Dr. James E. Bates, president of the Pennsylvania College of Podiatric Medicine and vice chairman of the Federation of Associations of Schools of the Health Professions. You may be joined by colleagues.

We would welcome them at the table if they desire. Would you identify them and introduce them to the committee and for the reporter's benefit?

Doctor, we welcome you and your colleagues to the committee, and we will be pleased to receive your statements.

STATEMENT OF JAMES E. BATES, D.P.M., PRESIDENT, PENNSYLVANIA COLLEGE OF PODIATRIC MEDICINE AND VICE CHAIRMAN OF THE FEDERATION OF ASSOCIATIONS OF SCHOOLS OF THE HEALTH PROFESSIONS, ACCOMPANIED BY NORMAN E. WALLIS, O.D., ASSOCIATION OF SCHOOLS OF COLLEGES OF OPTOMETRY; RAYMOND D. COTTON, ASSOCIATION OF SCHOOLS OF PUBLIC HEALTH; HOWARD OAKS, D.D.S., AMERICAN ASSOCIATION OF DENTAL SCHOOLS, VICE PRESIDENT FOR HEALTH SCIENCES, STATE UNIVERSITY OF NEW YORK AT STONY BROOK; GARY L. FILERMAN, PH. D., ASSOCIATION OF UNIVERSITY PROGRAMS IN HEALTH ADMINISTRATION; AND MABEL A. WANDELT, NATIONAL LEAGUE FOR NURSING

Dr. BATES. Thank you, Mr. Chairman, gentlemen. My name is James E. Bates, President of the Pennsylvania College of Podiatric Medicine. I am the vice chairman of the Federation of Associations of Schools

Digitized by Google

of the Health Professions and it is in that capacity that I am presenting testimony today. The Federation is comprised of the following eleven associations: American Association of Colleges of Osteopathic Medicine; American Association of Colleges of Pharmacy; American Association of Colleges of Podiatric Medicine; American Association of Dental Schools; American Society of Allied Health Professions; Association of American Medical Colleges; Association of American Veterinary Medical Colleges; Association of Schools and Colleges of Optometry; Association of Schools of Public Health; Association of University Programs in Health Administration; and National League for Nursing.

Those who would like to identify themselves at the table, please do so for the record.

Dr. WALLIS. Norman E. Wallis, Association of Schools and Colleges of Optometry.

Mr. COTTON. Raymond D. Cotton, Association of Schools of Public Health.

Dr. OAKS. Howard Oaks, American Association of Dental Schools, Vice President for Health Sciences, State University of New York at Stony Brook.

Dr. FILERMAN. Gary L. Filerman, Association of University Programs in Health Administration.

Ms. WANDELT. Mabel A. Wandelt, National League for Nursing.

Mr. ROGERS We welcome all of you to the committee. We appreciate your presence and, if you have statements, they will be accepted in full and made a part of the record.

Dr. BATES. There are other people in the room who are bashful and don't want to sit at the table.

Mr. ROGERS. If they have statements they would like to have made a part of the record, we will accept those in full and they will be included at the proper point in the record [see p. 447].

Mr. SCHEUER. Is Dr. John Cooper in this group?

Mr. ROGERS. No, he will be on next.

Dr. BATES. We urge speedy enactment of this legislation, that would continue the Federal investment in programs that are essential to the provision of adequate numbers of well-qualified health manpower.

ACCOMPLISHMENTS

First of all, I would like to pay tribute to the Congress for its leadership in providing the legislative authorities needed to expand and maintain our health manpower training capacity. We have witnessed an unprecedented expansion in our resources for the training of health manpower.

Since 1958, when institutional support—based upon a formula which took into account the total number of enrolled students—first became available for schools of public health, the number of accredited schools has gone from 11 to 18. At the same time, the number of graduates has more than quintupled.

Since 1963, when the Health Professions Educational Assistance Act was signed into law, the number of graduates in the professions covered by that Act have increased by two-thirds.

Digitized by Google

Since 1964, when the Nurse Training Act was enacted, the number of graduates in nursing have increased by four-fifths. [See table 1.]

TABLE 1.—NUMBER OF GRADUATES, 1963–64 AND 1972–73, FOR THE HEALTH PROFESSIONS PARTICIPATING IN HPEA AND NTA

Profession	Number of graduates	
	1963–64	1972–73
Total	49, 625	82, 246
Medicine	7, 336	10, 391
Osteopathic medicine	355	649
Dentistry	3, 213	4, 230
Optometry	336	688
Pharmacy	2, 195	5, 331
Podiatric medicine	97	259
Veterinary medicine	834	1, 271
Nursing	33, 259	59, 427

Source: Public Health Service.

Progress also has been achieved since the enactment of the Allied Health Professions Personnel Training Act in 1966, but attention in the training of allied health personnel has been focused on the advanced training of leadership personnel and improvements in the quality of training rather than an increase in the number of graduates.

FUTURE NEEDS

More than a decade has elapsed since the enactment of the Health Professions Educational Assistance Act and the Nurse Training Act. The Allied Health Professions Personnel Training Act dates to 1966. Legislation supporting schools of public health has been on the books for 17 years.

Provisions should be made for the continued growth of our health manpower training capacity, but the rate of growth over the past decade should be significantly diminished unless new modes of health care are necessitated by national health insurance. Future needs are summarized in Attachments A and B, that excerpt findings of two recent publications of the Federal Government: (1) "The Supply of Health Manpower 1970, 1970 Profiles and Projections to 1990," DHEW Publication No. (HRA) 75–38, December 1974; and (2) "Occupational Manpower and Training Needs," revised 1974, Bulletin 1824, U.S. Department of Labor, Bureau of Labor Statistics.

These pubications predict the growth of practitioners in the health professions based on past experience, the continuation of present levels of Federal support, and other assumptions which are set forth in the attachments.

The supply of health manpower is not merely a matter of the numbers game. In the field of medicine, and to a lesser extent in nursing, for example, we are relying too extensively at present on graduates of foreign schools who are inadequately prepared in comparison with graduates of schools in this country.

We hope that the health manpower legislation approved by the Congress will recognize that priority should be given to maintaining the current levels of enrollment and enhancing the quality of training as opposed to continuing the present rate of growth.

Digitized by Google

We recognize that the geographic distribution of health manpower is a pressing problem and we pledge full cooperation to the solution of this problem. It should be alleviated, at least in some degree, by the implementation of the health planning and health resources development program. The provisions of H.R. 2958 that continue the National Health Service Corps will also assist in bringing health services to geographic areas that are underserved.

Although the 1975 budget for HEW proposes no funding for public health training or allied health manpower, and extremely limited nurse training funds in 1975, the grant cycle is underway and application forms are being processed. No recission papers have yet been transmitted to the Congresss as required by the Budget Reform Act. It is, of course, extremely difficult for the affected schools to plan ahead with respect to meeting their educational responsibilities. The funds made available for health manpower by the continuing resolution for 1975 have not been allocated.

Our recommendations are as follows:

(1) FASHP strongly recommends that the legislation provide for a transitional year of authorities in 1976 and implementation of new authorities in the years 1977 through 1979. We understand that the continuing resolution on appropriations that expires February 28, 1975, will be extended to June 30, 1975 prior to the end of this month.

(2) FASHP recommends that adequate provision be made for scholarships to assist in the enrollment of disadvantaged students in all of the health and allied health professions covered by the Health Professions Educational Assistance Act, the Nurse Training Act and the Allied Health Professions Personnel Training Act.

(3) FASHP recommends that institutional support based on educational costs be awarded to maintain the existing level of enrollments and quality of training and that financial incentives be provided to meet special needs in the areas of expanded enrollment, geographic distribution or type of employment/specialty.

(4) FASHP recommends that the term full-time students be defined as full-time equivalent students in the case of schools of public health with appropriate adjustments of appropriation levels.

(5) FASHP recommends that institutional support should provide for the increased educational costs of schools that have converted from 4- to 3-year programs, and

(6) FASHP recommends that the authorization for appropriations for institutional grants for graduate programs under the proposed section 791 of the PHS Act be increased to a minimum of $3 million.

In concluding, let me again express our appreciation for your leadership and assistance in the enactment of legislation to increase our supply of health manpower.

Representatives of the organizations that comprise the membership of the Federation are here to answer questions.

TABLE 5.—SUPPLY OF ALL ACTIVE HEALTH PROFESSIONALS, USING BASIC METHODOLOGY: ACTUAL 1960 AND 1970; PROJECTED 1980 AND 1990

Year	All health professions	Physicians (M.D. and D.O.)	Dentists	Registered nurses	Optometrists	Pharmacists	Podiatrists	Veterinarians
				Number active				
1960	1,029,620	251,900	90,120	527,000	16,100	117,800	7,000	19,700
1970	1,329,120	323,200	102,220	723,000	18,400	129,300	7,100	25,900
1980	1,885,370	446,800	126,170	1,099,600	21,800	146,100	8,500	36,400
1990	2,484,410	593,800	154,910	1,466,700	28,000	179,900	13,000	48,100
				Percent distribution				
1960	100.0	24.5	8.8	51.2	1.6	11.4	0.7	1.9
1970	100.0	24.3	7.7	54.4	1.4	9.7	0.5	1.9
1980	100.0	23.7	6.7	58.3	1.2	7.9	0.4	1.9
1990	100.0	23.9	6.2	59.0	1.1	7.2	0.5	1.9
				Rate per 100,000 population [1]				
1960	572.1	140.0	50.1	292.8	8.9	65.5	3.9	10.9
1970	652.1	158.6	50.2	354.7	9.0	63.4	3.5	12.7
1980	830.8	196.9	55.6	484.5	9.6	64.4	3.8	16.0
1990	991.3	236.9	61.8	585.2	11.2	71.8	5.2	19.2

[1] Resident population as of July 1.

Note: Figures may not add to totals due to independent rounding.

Source: For sources of manpower data in this table, see tables in chapters on each profession.

Assumption 1. Upon expiration in FY 1974 of the Comprehensive Health Manpower Training Act of 1971, aggregate public and private funding will be adequate to at least maintain (though not necessarily to increase) the productive capacity of professional schools needed to ensure the continuation of enrollments at the level resulting from this Act. This assumption accounts in part for the projection of a slightly lower rise in physician supply for the 1980's. Since the current legislation concerns itself with enrollment increases through academic year 1974–75, the impact of the legislation (unless altered) upon the Nation's supply of M.D.'s and D.O.'s will be felt through the latter 1970's. Enrollment increases upon expiration of the current legislation are still assumed to occur, but at a reduced pace. The assumed enrollment growth for the remainder of the projection period, consequently, results in a silghtly slower expansion of the M.D. and D.O. pool in the 1980–90 period.

Under the basic methodology, consequently, first-year enrollment in U.S. medical schools is projected to grow from 11,348 in academic year 1970–71 to 14,339 in 1974–75; 15,321 in 1979–80; and 16,811 in 1986–87. With assumptions about attrition among students (See Chapter 3), the projections of first-year enrollment result in a total graduate input of approximately 270,000 M.D.'s over the next two decades. The number of M.D.'s graduating is projected to rise from 8,979 in 1970–71 to 15,920 in 1989–90, an increase of 77 percent. This compares with an increase of 28 percent between academic years 1960–61 and 1970–71. Similar increases for osteopathic graduates are also projected for the next 20 years.

Assumption 2. U.S. medical and osteopathic schools will be financially able to maintain the projected output of graduates. Projections for first-year enrollments and subsequently for graduates become meaningful only to the extent that existing and assumed new schools remain financially able to accommodate these numbers. Compared to that for most health professions however, private and non-Federal public funding for medical and osteopathic schools promise to represent a presence that will be most supportive to educating and producing future streams of physicians into the existing pool.

Digitized by Google

In recent years there has been a substantial increase in the number of young people expressing interest, and actively seeking careers, in health occupations. The pressure this exerted on enrollment in health professions and allied educational programs, specifically in the area of physicians, is likely to be forceful. For example, applications for admission to medical school now approximate three times the number of first-year places available. In addition, the whole set of dynamics surrounding the increased role of the female and racial-ethnic minorities in the functioning of our society provides a strong forcing function to encourage continued and perhaps sharply increased non-Federal financial support to medical education.

Assumption 3. Foreign trained M.D.'s will continue to increase the U.S. supply annually in approximately the same numbers as they did in 1970–71. If so, the projected growth in their number would account for slightly less than two-fifths of the total growth in physician supply over the 1970–90 period, similar to the substantial input accounted for by foreign medical graduates (FMG's) during the 1960's. This means that foreign trained physicians (including the Canadian trained),[1] would represent almost one-third of all active physicians in 1990, compared to about one-fifth in 1970.

More specifically, the supply of active U.S. trained physicians alone is projected to increase by 166,600 or by over 60 percent, over the projection period—from 263,200 in 1970 to 429,800 in 1990. In contrast, the supply of all active FMG's in the United States is projected to nearly triple by 1990, growing from about 60,000 in 1970 to 164,000 in 1990. This rapid growth among the FMG population represents an average yearly gain of about 8 percent (compounded), corresponding quite closely to the 9 percent yearly increase registered during the 1963–70 period.

Assumption 4. The supply flow will be generally unaffected by any significant changes in the health care delivery system.

ATTACHMENT B

1972 EMPLOYMENT AND PROJECTED 1985 REQUIREMENTS FOR SELECTED HEALTH PROFESSIONS

Profession	1972 employment	1985 requirements
Dentist	105,000	140,000
Dental assistant	115,000	155,000
Dental hygienist	17,000	50,000
Optometrist	18,700	23,300
Physician [1]	330,000	485,000
Veterinarian	26,000	37,000
Nurse	748,000	1,050,000
Physical therapist	18,000	32,000
Dietitian	33,000	44,000
Hospital administrator	17,000	26,600
Pharmacist	131,000	163,000
Podiatrist	7,300	8,400

[1] Includes medical and osteopathic physicians.

Mr. PREYER [presiding]. Thank you very much.

Mr. Scheuer?

Mr. SCHEUER. Thank you, Mr. Chairman.

Dr. Bates, on page 3 in the third paragraph, you say that we ought to diminish significantly the rate of growth of our health manpower training capacity unless new modes of health care are necessitated by national health insurance. Could you elaborate on that?

[1] Ideally, it would be most desirable if this document could present throughout separate data on U.S. trained physicians and medical graduates from foreign schools, including Canadian schools. This would be consistent with the legislative mandate of the Bureau of Health Resources Development (BHRD) for funding professional education only in U.S. schools. Unfortunately, such separation cannot be fully achieved because certain published data on physicians, such as internship and residency statistics, often combine statistics on U.S. trained M.D.'s with counterpart data on graduates of Canadian schools. In these instances, it is not possible to separate out the relevant information for U.S. trained M.D.'s alone.

Digitized by Google

Dr. BATES. I suspect we might find some division on this.

I think the concern on the part of most institutions is the requirements for expanded enrollments every year. The schools were being forced to accommodate more students than they had the space or the ability to provide a quality education for. I think that is part of the problem. It becomes a concern to all the professions.

Someone else may want to speak to that.

Mr. SCHEUER. Don't you think there is an answer for that other than diminishing the rate of growth? It is not written in the stars that you have to diminish the quality of your health education. There is nothing in the Federal regulations saying you have to diminish the quality of the education.

Dr. BATES. It is appearing to go hand in hand.

Mr. SCHEUER. With what?

Dr. BATES. If you have a facility—this is not a good example—a facility that holds 100 students and each year you are required to take 10 percent more students, you divide into two sections to accommodate the 110.

Mr. SCHEUER. How do they require you to take more students?

Dr. BATES. The current legislation requires it. We are suggesting that the legislation should not mandate additional increases each year as a prerequisite for being part of the program.

Mr. SCHEUER. If they mandate it, they should mandate the funds to build the facilities and provide the services so you are maintaining if not improving the quality of education.

Dr. OAKS. I am representing the American Association of Dental Schools. There has been a significant expansion in the numbers of students enrolled in American medical schools. It varies from profession to profession due to factors you can all understand. The concern about the services that could be demanded under national health schemes leads us to have a reservation on that. The influx of dental students has been almost 50 percent. We are not sure it should continue to increase by 50 percent in the next decade.

Mr. SCHEUER. What is the base you use for increasing dental personnel?

Dr. OAKS. One is the ratio of practitioners to population.

Mr. SCHEUR. We are still getting kids who come to the military services by draft or by volunteering who have never seen a dentist. Their mouths are so bad they can't even eat a piece of red meat.

Dr. OAKS. Thank you for the example. I am sure all of you realize there is a tremendous need for services and demand for care. All evidence indicates the two factors leading to that——

Mr. SCHEUER. You have to distinguish between care and effective care. The guy with the buck in hand can get effective care. You have to distinguish.

Dr. OAKS. The demand for care would rise very sharply if the ability to pay for care and the accessibility and availability to pay for care and the accessibility and availability of the care were there to meet it.

Mr. SCHEUER. The whole point some of our witnesses seem to be missing—and that I personally feel Secretary Weinberger is also missing—is that unless all three of us and the other members of this committee are hit by a single truck in the next year or two we are

Digitized by Google

going to be reporting out to the House and the House presumably is going to pass and the President is going to sign some kind of national health care program. It is going to be funded, whether by insurance or general revenues, who knows, God in his wisdom couldn't tell us now.

But I think as sure as night follows day we are going to have a national health program. When that happens you are going to create a funding mechanism for the health care everybody wants and needs equally distributed as Secretary Weinberger says. If we don't have the personnel to deliver that care and an institutional system that delivers it with some kind of rationale we are going to be in a heck of a fix in this country and it seems to me what all of you ought to be doing is addressing yourselves in part to what level of health care training we ought to have in terms of numbers—assuming that we are funding a program to provide health care for all Americans.

Dr. OAKS. I would agree and I don't believe the dental profession could currently meet the demand by erasing the difference between need and demand. That is why we have a reservation with this particular recommendation.

Mr. SCHEUER. It is really the same question on page 4, your second full paragraph, "Priority should be given to maintaining the current levels of enrollment and enhancing the quality of training as opposed to continuing the present rate of growth."

I don't believe those things are mutually exclusive. If the American public wants a national health care program, they have to create the institutions and health care to deliver it. It is perfectly silly for us to say we are going to work very hard for the next year creating a funding mechanism and for us not all to be addressing ourselves to creating the systems to distribute the care and the people to provide it. I don't believe at all that enhancing the quality of training is inconsistent with present rates of growth or what I believe we need is considerably enhanced rates of growth in the volume of medical care professionals and nonprofessionals that we should be turning out.

Ms. WANDELT. I would like to speak to that. The comments by the Secretary this morning referred to downgrading the support for undergraduate training versus graduate training. The attention, as far as nursing is concerned, has focused on graduate preparation in nursing. It seems to me that we are talking about graduate level preparation and the training of nursing practitioners who have been used really in terms of an extension of the physician and the aspect of care that he provides for people.

But there is another aspect of care that nursing provides for people. I think that if we are talking about quality education, expanded health insurance, and our concern in relation to care for the aging, we must recognize the people for whom life is being prolonged are going to need continuing nursing care. We must be concerned with nursing care in nursing homes where you have so little professional nursing care and where you have the nurse who could be providing the primary care and the recognition of when there is need for medical care.

In all of these kinds of nursing care the education takes place at the undergraduate level and I think that it would be a mistake to focus support only on graduate education as far as nursing is concerned.

Mr. SCHEUER. Thank you very much, Mr. Chairman.

Digitized by Google

Mr. ROGERS. I must say I agree with that. I don't think we will have any idea of the real need for nurses until we look at some of these nursing homes. I know in my own area they simply cannot get enough nurses. The VA hospital in Miami, which I recently visited, has a terrible shortage of nurses.

Mr. SCHEUER. I recall to you the Secretary's testimony this morning that we have unemployment among nurses.

Ms. WANDELT. If we are thinking in terms of quality of care, we cannot talk only in terms of numbers. If you talk about nursing personnel, then indeed you have a large number. But there have been studies that demonstrate the quality of care is related to the ratio of professional nurses to nonprofessional nursing personnel, in other words, related to the quality that you have.

Mr. SCHEUER. Mr. Chairman, I just want to say how much on point you are on one item I don't think we recognize enough. As we extend life we extend the need, almost in geometric proportion, for health services. I spent a day talking to the British Public Health Service and or Dr. Stevens of the British Medical Association, I said, "Is there any way we could quantify a national health program?" He said, "No, because since you extend life you have an absolutely unquantified number of people who wouldn't be around if you didn't extend life. As you give them more years, they have arthritis, head colds, broken hips and all the ailments human beings are subject to which they wouldn't have if you hadn't extended their life in the first place."

So it will be an exploding need for medical and health services of all kinds if we are successful in prolonging human life, which you and your conferees will tell us we are capable of doing.

Ms. WANDELT. Prolonging life isn't only prolonging life in terms of the aged. It is prolonging life in terms of the infant or the victim of a motorcycle accident and other things.

Mr. SCHEUER. When you save a life then you have a full life time that will require nursing care from time to time.

Mr. COTTON. I would like to pick up on a word that Congressman Scheuer used in describing one element of the administration's testimony, that was bizarre. I don't think there is anything more bizarre than that statement with respect to nonsupport of schools of public health. When you talk of HMO's, PRO's, whatever, you are going to need people to collect data, the nuts and bolts technicians of those systems as well as the primary care deliveries and these are the people that schools of public health produce.

Now in the one hand the administration, even the administration proposes various enhancements of health care delivery programs and on the other hand proposes the elimination of support to schools of public health.

One other—we have a written statement which we will submit for the record [see p. 459]—but the schools of public health have enjoyed the longest history of institutional support of any of the health professions schools in the country, over 17 years. Rightly or wrongly schools have built this funding into their support.

There are only a few schools in the country. Three are in one State, but only 15 States have schools of public health. It seems a serious question to a lot of people whether the other States should invest in

Digitized by Google

schools of public health or whether the appropriate funding mechanism is indeed the Federal Government. We believe that your bill, Mr. Chairman, is the appropriate way to go and we support it very, very strongly.

Dr. OAKS. As you know, the American Association of Dental Schools supported your bill in the last session of Congress. We are prepared to do so now, with the usual concern to Mr. Scheuer's question, that capitation not to be tied directly to an enrollment increase unless there are suitable provisions for waiver of those schools that would be unable to meet it without losing credit.

Mr. ROGERS. We provide a waiver clause as well as options in return for capitation.

Dr. OAKS. If we may we will submit a written statement [see p. 454]. I think we have only one reservation with the remote site training question which has been a prominent feature relating to osteopathy and dentistry.

The maldistribution problem is at least as severe in dentistry as in the other fields. We are concerned if a portion of the capitation must be spent for offsite training. This would, in fact, serve to dilute the effect of institutional education.

Mr. ROGERS. Now we have found that the practitioners almost universally subscribe to off-campus training.

Dr. OAKS. I think that all of us in dental education believe offsite training is very valuable. The majority of schools require it. It is typically done by hospitals. Our only question has to do with spending money beyond what is already being done. We are for the principle but not for the restraint.

Mr. ROGERS. What about the level of support for optometry, is there any problem with that?

Dr. WALLIS. Thank you for bringing that concern up. We have serious concern for the support of optometry. We are rather unique in that 50 percent of our schools are free standing independent institutions not State related. At my own college we receive minimal State support but several of our other institutions receive none. Wyoming receives only about $185 a year for support per student. Dr. Bates' institution is in a similar situation. The interesting thing is that two proposed new schools have been deferred, one in Birmingham and one at the State University of New York. They have found in projecting their costs of education at a conservative level that it is around $15,000 per student a year.

Unfortunately, the IOM study of optometry has some big problems and what we consider our costs for the future and what we consider comparable costs in terms of our education with dentistry are not adequate in terms of the capitation level. We would respectfully request the committee to consider elevating the capitation support for optometery from $700 per student to $1,500.

The cost of that would be approximately 0.7 percent of the 1974 appropriated amount and I think the benefits would be significantly——

Dr. FILERMAN. You raised a question about the level of authorization.

Mr. ROGERS. I knew I shouldn't have brought up the issue of capitation.

Digitized by Google

Dr. FILERMAN. I want to call your attention to the sixth recommendation in the federation testimony, the last one that refers to section 791, the provision referring health administration. Since the last time we talked with the committee, you passed a planning bill which we estimate is going to generate a need for 5 or 6,000 new planning agency professionals. I am sure you remember from the discussions in the testimony relevant to that bill that major concern has been the quality of staffing available to those agencies and the competency of those agencies to deliver the task which that piece of legislation places on their shoulder.

Under 314(c), the authority of last year, there was Federal support for planning education. That is now terminated. The only Federal authority for any support for either planning or administration is that small authorization that is currently in your bill which is an historical breakthrough in the sense that it is the first time there has been any such authorization in any bill.

We are very grateful for that and think it is an excellent start. But we think that that appropriation is inadequate. Even if fully funded, it will only lead to support at a level of about $55,000 per school which really isn't going to help them do much particularly in terms of adding what we think are going to be incredible demands for community level technical assistance to planning agencies, HMOs and other delivery organizations.

So we are asking that the authorization level be increased from $1.75 to $3 million which we think is very modest but very realistic.

Mr. ROGERS. Thank you very much.

Gentlemen, thank you and I thank the nurses for being here. We appreciate this testimony. It has been most helpful. Any statements will be received for the record for the next five days.

[Testimony resumes on p. 465.]

[The following statements and letter were received for the record:]

STATEMENT OF THE AMERICAN ASSOCIATION OF COLLEGES OF PHARMACY

In 1971, the Congress started a revolution in health manpower education. Pharmacy schools were mandated to "emphasize clinical pharmacy, drug use and abuse, and clinical pharmacology" in their educational programs. The revolution has brought many improvements in health care to thousands of Americans because pharmacy students are now involved in the care of individual patients. Physicians are still responsible for the total health care of the individual patient. But clinical education has taught both pharmacists and physicians that there are limits to their abilities to single-handedly solve every health problem. Where drugs are concerned, pharmacists and physicians are beginning to learn that they can do a better and less expensive job if they work as a team.

The Association wants the educational process which is responsible for this revolution to continue. Better and less expensive health care has long been sought after by the Congress. The pharmacy programs—capitation grants tied to requirements for clinical education, special project grants, loans and scholarships for students, and construction grants—fashioned by Congress in 1971 have made these improvements possible. The programs deserve continued support.

This year pharmacy schools have enrolled 29,436 students in professional programs which makes the student or school eligible for Federal support. Over 7,080 pharmacy students will graduate in 1975.

Great uncertainties in Federal funding caused by illegal impoundments, rescission proposals, and total elimination of new health profession scholarships, have caused traditionally reliable student population forecasting methods to become obscure. Based on the schools' total capacity, subject to new space being developed, it is estimated that pharmacy schools will enroll these numbers:

Digitized by Google

School year:	Total number of students
1975–76	30,600
1976–77	31,800
1977–78	32,400
1978–79	33,000
1979–80	33,300

Authorization amounts for pharmacy schools should be large enough to equitably apportion various program funds so that the final net amount received by each school is enough to make a difference.

The Institute of Medicine Cost Study provided an equitable approach for the allocation of capitation grant funds which the Subcommittee rejected last year. A reconsideration of that cost study or an updated one is in order. The Subcommittee may want to make future authorization levels dependent on the outcome of future cost studies so that the level of Federal funding can be established to permit Congressional priorities to receive proper attention.

What are the specific improvements and accomplishments being made in pharmacy schools? Look at last year's statement submitted to this Subcommittee [1] or make a phone call to a Dean of a pharmacy school in your state, or to one in a neighboring state (only 44 states, the District of Columbia and Puerto Rico have pharmacy schools). The Subcommittee will be pleased at the progress.

The values of these programs should also be made available to practicing pharmacists in the form of extended continuing education seminars. Re-educating persons in the field will speed the benefits to the public.

The Association has recently reorganized its internal structure to make it more responsive and more representative of faculty, deans, students and teaching specialists. As a part of this process, the Association has begun to adopt policy statements to guide the Association's relations with others.

A policy statement on health manpower is attached to this submission. It states that pharmacy schools want to be full participants in solving the nation's health problems. It points out how health care can be made better and less expensive if pharmacy schools can do what they are capable of doing. Programs in health communications, product selection, patient information, therapeutic management, clinical pharmacy, drug distribution systems, and information systems are all drug related educational components which the pharmacy schools want to improve or strengthen so that drug-related health care can be made better and less expensive.

Pharmacy has its detractors because some people have been exposed to bad pharmacy practice or no pharmacy practice. Some of these detractors are administration staff people who have consistently eliminated pharmacy schools from major health manpower support reforms.

Deciding the role of the Federal government in supporting pharmacy schools is a challenge to professional politicians in a time of inflation, recession and burgeoning Federal deficits. The Association once submitted a proposal to the Department of Health, Education and Welfare which would have broken even at a five (5) percent level of efficiency. Had the program been funded, and 100 percent effective as it was in its pilot stage, a mere $2 million investment would have saved $80 million in Medicaid hospital and drug costs, while immeasurably improving the health and general well-being of close to 10,000 aging persons in nursing homes. Choosing not to fund a program with such great potential for success is a political decision. The Association believes that decision was a mistake.

Those kinds of costs savings are possible in a number of different ways if today's pharmacists are properly utilized in health care. The Association knows the Congress will not ignore any ideas to make health care better and less expensive.

The Association knows that tough political decisions have to be made if the American economy is to be improved. The Association knows that state government budgets are being pared to the bone. State university asking budgets hardly cover increased fuel costs and three (3) percent salary increases in many cases, but even these are being cut by state legislators. The Federal govern-

Digitized by Google

ment's taxing power and resources are the only sources of stable support for a health care revolution, which was started by the Congress. The Association asks the Congress to keep this in mind when the members draft and vote on the Health Manpower Act of 1975.

A POLICY STATEMENT ON HEALTH MANPOWER LEGISLATION—AMERICAN ASSOCIATION OF COLLEGES OF PHARMACY

The American Association of Colleges of Pharmacy is a nonprofit educational society representing the 73 accredited colleges of pharmacy in the U.S. AACP has adopted a positive approach to the nation's health services problems and recognizes the academic privilege to address problems theoretically through basic research, but it also accepts and endorses the need to take pragmatic and immediate action to relieve the problems at hand. While limiting its advocacy to the needs of its own constituency, the Association recognizes that its aspirations can only be achieved by working cooperatively with the other health professions.

Manpower Supply: In recent years, colleges of pharmacy have undergone significant enrollment increases. These have come in response to federal incentives and as a product of the labor market. AACP believes that the supply of professionally educated pharmacists is at, or very near, the level required to effectively serve the current demand for traditional pharmaceutical services. The output of pharmacy education may be characterized as the geographically *most well deployed*, and certainly the *most accessible*, of all health professions in relation to the needs of patients-consumers. The Association endorses keeping the pharmacist close to primary health care needs and endorses in principle those proposals which encourage recent graduates to serve in areas of greatest need. (See Appendix I)

Colleges of pharmacy are still in the midst of a dramatic transition in their professional academic programs. Essentially, the change can be characterized as an increased emphasis on direct patient care, as well as consultative services to other health professions. On an institutional level, the transformation involves a move from traditional didactic and laboratory methods toward an improved and more effective educational experience such as clinical instruction and the group, personalized modalities. This approach which can best be developed in an interprofessional environment, provides improved patient care but also leads to higher educational costs. To have the reorientation in pharmaceutical education fully impact on the health care of Americans, it must influence the 130,000 pharmacy practitioners as well as students. It is reasoned that it is more cost/effective to upgrade and better utilize existing health professionals than to create whole new categories of specialized personnel. The situation demands a retraining as well as a training component.

The key to pharmacy's potential contribution as a national resource for health care lies not only in its numbers, accessibility and consumer acceptance, but also in the fact that its practitioners are especially well prepared to address one of the most important of the nation's health problems—drug utilization. Evidence abounds that Americans misuse, over use, under use and inappropriately use drugs. The difficulties arise at both the practitioner and the patient level. The outcomes adversely affect therapy, as well as costs. The following sequence of events from the drug use process are offered to demonstrate the role or potential role of the pharmacist:

Health Communications: Being in the most visible and accessible of health professions, the pharmacist is in an ideal position to provide information on a wide variety of health information topics. His role can easily extend beyond that of a generalist, to that of a triage function which would direct potential health problems to the most appropriate component of the health care system. (Appendix II)

Product Selection: Presently there is great concern over the costs, relative quality and effectiveness of drug products. The pharmacist can, and in many cases already does, select the appropriate drug product after the prescriber has written an order. Even before the product selection decision, the pharmacist should be prepared to advise the prescriber on therapy and to refer therapeutic problems and potential problems to them after treatment has been initiated. Drug allergies, adverse drug reactions, drug interactions, are included among the problems to be addressed. The pharmacist's awareness of multiple prescribers and patient use of non-prescription drugs allows him to serve uniquely as a monitoring agent. (Appendix III)

Digitized by Google

Patient Information: Even when drugs are properly prescribed, there is ample evidence that patients do not properly utilize their medication. A properly informed pharmacist with good communication skills is required to instruct patients in correct drug use and to insure that proper utilization is implemented. It should be noted the failure of the patient to correctly follow their plan of therapy (non-compliance), is an important factor in the overloading of the health care system and this contributes to escalating costs.

Therapeutic Managament: For many persons, drug use is not an irregular occurrence, but a continuing activity. This is true for many chronic conditions, which are forming an increasing portion of the total health care needs. Pharmacists can carefully monitor therapy and this includes inquiries concerning effectiveness and potential problems. In some cases, these roles would include the evaluation of therapy and the initiation of adjustments (with proper referral), the ordering of laboratory work and the evaluation of results, and the involvement in interprofessional decisionmaking that would serve as a physician extender resource. (Appendix V)

In order to prepare future pharmacists and provide appropriate continuing education and technical support for those already in practice, it is essential that colleges of pharmacy receive federal support to assist in improving the quality and effectiveness of education. The changing nature of pharmacy education, the need to improve the efficiency of education in the biomedical sciences, the desire to integrate education with practice, are all positive motivating factors in the request for such support. While every effort will be expended to develop intrainstitutional support, it is recognized that the economic constraints being placed upon the enterprise of higher education are such that only limited advances are foreseen for the near future. This fact, of course, increases incentives to develop outside resources. Some specific needs which require support are outlined:

Faculty Expansion: New clinical education programs require for lower student/faculty ratios than have been traditional in colleges of pharmacy. Moreover, the transition in pharmacy education requires more than the addition of the qualified pharmacist-practitioner-teacher to faculties. Experts must be added not only in the disciplines of pharmaceutical education but also through solo and/or joint appointments in such areas as clinical pharmacology, pathology, medicine, nursing, and health care organization.

Clinical Pharmacy Programs: The clinical concept is basic in the proposed advance of pharmacy education. It is essential that clinical orientation pervade the total development and it is important that colleges continue to develop advanced education and practice model roles to supplement the basic undergraduate program and to spearhead advances into new service areas. Such programs improve educational quality that lead to long-range progress.

Clinical Teaching Facilities: A number of colleges of pharmacy require new or refurbished physical plants. However, most colleges possess a basic building suitable for the conduct of the program. At the same time a number of colleges with adequate physical plants are located on campuses without academic centers. Some of these colleges will require construction funds to facilitate a move and new physical facilities at a health center side. Others remain on campus but will move a portion of their program to sattelite patient care settings. These institutions will require funds for developing physical facilities and communications linkages at an appropriate site.

Drug Distribution Systems: Some of the outstanding advances in pharmaceutical technology have been in the packaging and distribution systems developed for service in hospitals, extended care facilities and now being proposed for ambulatory services. The results of implementing these services is such that GAO is demanding their inclusion in federally financed drug programs. Teaching one to use these systems requires something more than a didactic presentation. Experience with a working system is required and the appropriate equipment and instruction personnel must be added to the resources of pharmaceutical education.

Information Systems: The provision of patient information requires that students and practitioners not only develop subject matter oriented knowledge, but also a knowledge of information sources and their use. On-hands experience with working systems and a general knowledge of information technology are required. In many cases these resources are not available to the colleges and must be purchased from outside suppliers for use in institutions which may be formally affiliated with the teaching program.

Digitized by Google

Educational Research and Development: The trend toward increasing clinical instruction, the demands to reach a widely dispersed practitioner population and the need to economize on basic science curriculum without losing scientific competence, calls for the greater application of education technology. Efforts must be undertaken to develop education systems directed toward competency based education objectives. It would be foolhardy to advance upon any of the proposed changes in pharmacy education without carefully evaluating each step. A continuing research program is required to aid in focusing upon optimum educational objectives and in quantifying progress (or the lack of it) and in measuring outcomes.

In summary, American Association of Colleges of Pharmacy has adapted progressive, and patient-oriented posture toward its academic programs and toward the role which its graduates fill in serving society. It does not shrink away from significant innovation in teaching, research, and/or the reorganization and third-party financing of services. On the contrary, it accepts the challenge and welcomes the opportunity to participate fully in these developments.

The following series of brief technical appendices to the Health Manpower Policy Statement are available on request from the American Association of Colleges of Pharmacy:

Topic	Author
I. Manpower	Christopher A. Rodowskas, Jr., Ph.D., Director, Pharmacy Manpower Information Project, American Association of Colleges of Pharmacy.

STATEMENT OF AMERICAN ASSOCIATION OF COLLEGES OF PODIATRIC MEDICINE

The American Association of Colleges of Podiatric Medicine respectfully calls attention to its testimony presented to this Subcommittee at its health manpower hearing on May 23, 1974. Rather than repeat that entire statement, the Association here wishes to update some of that information and comment specifically about H.R. 2956, the health manpower bill currently under consideration by the Subcommittee.

Last year when we testified, we supported the concept of capitation authorization amounts being based on a uniform percentage of net education expenditures for the respective professions as determined by the Institute of Medicine (IOM) of the National Academy of Sciences in its study "Costs of Education in the Health Professions." Subsequently the Subcommittee decided not to base capitation on IOM figures but rather to group the professions in various categories for the purpose of capitation authorization.

That new approach caused this Association to seek equitability for podiatric medicine by other means. Since the Subcommittee in its mark-up session decided on three groupings of professions for capitation amounts, the full Committee on Interstate and Foreign Commerce, to improve equitability, agreed to advance podiatric medicine from the lowest category to the middle category. This change, also reflected in H.R. 2956 which is before you, satisfactorily establishes equitability for the profession in capitation authorization.

The Association was extremely careful in selecting data to offer in support of podiatric medicine's case. For example, we could have used the "constructed cost" approach, documenting our case with an amount we determined through a study conducted by an independent research firm but commissioned by the Association. Although that figure is much higher, and we feel that it is supportable, it also tends to be self-serving since the Association paid for the study.

We decided to utilize IOM figures which represent historical facts rather than constructed figures of "what should be." The attached table from the IOM study clearly indicates that podiatric medicine was inequitably funded under the expired 1971 Act. Moreover, since the net education expenditures for podiatric medicine were closer to those of veterinary medicine than to either optometry or pharmacy, podiatric medicine and veterinary medicine should be grouped together.

We are pleased that the Committee recognized the logic and fairness of the amendment placing podiatric medicine at the $1,500 level for capitation, grouping it with veterinary medicine and public health. (Schools of public health were not included in the original IOM study; supplementary, more cursory report for these schools was submitted to the Subcommittee at the Chairman's request.)

RELATIONSHIP OF CAPITATION FUNDING TO NET EDUCATION EXPENDITURES, 1972–1973[1]

Profession	Net education expenditures per student	Average capitation grant	
		Amount	Percent
Medicine	9,700	1,961	20
Dentistry	7,400	1,982	27
Osteopathy	7,000	1,346	19
Veterinary medicine	5,550	753	14
Podiatry	4,900	403	8
Optometry	3,100	333	11
Pharmacy	3,050	386	13

[1] From Institute of Medicine Report on "Costs of Education in the Health Professions."

We feel, however, that a table on page 23 of the Committee Report (No. 93–1509) summarizing capitation in the bill reported out of full Committee (the same as H.R. 2956) contains some invalid comparisons. IOM net education expenditures for 1972–73 in the table are compared with authorization levels in the bill for 1974–75 and subsequent years. Comparisons are made of costs in one year to proposed funding for other years. Only if those net education expenditures for each profession remained the same in later years or changed in the same proportion (highly unlikely, we feel) would the percentages provide valid comparisons. Moreover, because of podiatric medicine's enormous efforts to improve quality of education in recent years, which also would be reflected

Digitized by Google

in costs, we believe the percentage for podiatric medicine identified in the table is an inflated figure.

Summary Table from Committee Report 93–1509, Page 23.

TABLE 10.—CAPITATION FISCAL DATA

School	Cost per student per 10M study [1]	Fiscal year 1974 obligation		1975 budget request		H.R. 17084	
		Per student	Percent 10M [2]	Per student	Percent 10M [2]	Per student	Percent 10M [2]
Medicine	$9,700	[3] 1,878	19	1,500	15	2,100	[4] 22
Osteopathy	7,000	[3] 1,942	28	1,500	21	2,100	[4] 30
Dentistry	7,400	[3] 1,935	26	1,500	20	2,100	[4] 28
Public health	9,800	[5] 1,530	16	0	----------	1,500	15
Veterinary medicine	5,550	1,495	27	900	16	1,500	27
Podiatry	4,900	684	14	400	8	1,500	31
Optometry	3,100	684	22	400	13	700	23
Pharmacy	3,050	684	22	0	----------	700	23

[1] Institute of Medicine cost study.
[2] Rounded to nearest percent.
[3] Reflects $4,000 capitation award for graduating students.
[4] Based on fiscal year 1975 and fiscal year 1976 authorized amounts, fiscal year 1977 award for those schools is $2,000 per student and the percent of costs for medicine, osteopathy and dentistry for fiscal year 1977 will be 21, 29, and 27 percent respectively.
[5] Based on sec. 309 formula grants to schools of public health divided by full time enrollment in 1973–74 school year.

We believe that the level of capitation for podiatric medicine in H.R. 2956 is justified and fair. We appreciate the consideration we enjoyed by the Committee in adopting that change in the 93rd Congress. We urge the Subcommittee to retain the same authorization amounts for capitation in new legislation.

It should be noted that even if such a potential increase in capitation is funded, colleges of podiatric medicine remain severely short of funding to meet a moral obligation to educate students commensurate with their scope of practice as professionals. This Association therefore is actively seeking other means of funding to augment Federal sources. We believe it to be in the national interest to develop additional sources of revenue. Moreover, we think other professions may be able to benefit from the studies we are now conducting.

Of concern to the Association is financial assistance for students of podiatric medicine. Students today find themselves under enormous financial pressures. The attached table shows the situation at one college of podiatric medicine, typical of the problem facing students at all the colleges. Notice that in the face of documented need which increased 110% in four years, Federal student aid decreased 21% during the same period, resulting in an enormous unmet need for financial assistance. Some students are to the point in need that they are unsure whether they can complete their professional education although they may already have completed one, two, or even three years. Dropping out for financial reasons would be tragic not only for the students themselves but also for the nation which has invested in their education and which sorely needs their professional services.

A 4-YEAR COMPARISON OF THE FEDERALLY FUNDED FINANCIAL AID PROGRAMS

[A sample]

	School year		Percent increase/ (decrease)
	1971–72	1974–75	
Students requesting aid	90	203	+125
Average identified need per student	$2,040	$4,300	+110
Approximate Federal aid available [1]	170,000	134,000	−(21)
Federal aid available per student	1,890	890	−(112)
Average per student unmet need	150	[2] 3,410	+2,200

[1] Programs include health professions scholarships, loans and college work/study. The Federal Government phased out the health professions scholarship program ($31,400 in 1971). The health profession loan program decreased from $97,400 (distributed among 90 students) in 1971, to $93,000 (distributed among 150 students) in 1974. The result: students requesting health professions aid received $.25 on $1.00 demonstrated need after deducting $2,500 from every student's total unmet need. This year's work/study allocation of $25,000 was $47.00 less than it was 4 years ago.
[2] Adding State Guaranteed Loans will reduce this figure approximately $1,500.

Digitized by Google

Colleges of podiatric medicine, being so financially strained themselves, cannot provide substantive student aid.

A particular problem relating to student aid involves scholarships. Although authorized under the expired Act, health professions student scholarships are being phased out, only already established recipients of Federal scholarship support being eligible to receive continued scholarship funding. In the face of this dilemma, colleges are urged to recruit minority students so as to improve their representation within the professions upon graduation. Most potential students representing minorities, however, come from financially deprived homes. Even if adequate student loans were available to them, therefore, many potential minority students would not enter a college when financial obligations not only are foreign but also provide a feeling of insecurity.

Legislation before the Subcommittee would increase the authorization for National Health Service Corps scholarships. The AACPM supports this approach to a voluntary effort of amelioration of geographic maldistribution. The legislation, however, would continue authority in the Secretary of HEW to determine the professions for which to obligate the scholarship funds. Judging from past experience and recognizing a limitation in funding for this purpose, it appears unlikely under the proposed legislation that students of podiatric medicine would have this assistance made available to them. We therefore urge the Subcommittee to devise some mechanism which will provide some Federal scholarship support for students whose professions are not selected for assistance under the National Health Service Corps.

The AACPM is very grateful to this Subcommittee and, indeed, the entire Congress for its efforts in developing Federal programs for the health professions generally and podiatric medicine specifically. We also appreciate your efforts to expedite health manpower legislation so as to eliminate uncertainties under which we currently exist. If additional questions arise, the Association would be pleased to respond to them.

We respectfully request that this statement be made part of the written record of these hearings.

Statement of The American Association of Dental Schools

The American Association of Dental Schools appreciates the opportunity to present the Association's views on H.R. 2956 and H.R. 2958 for the consideration of the Subcommittee on Public Health & Environmental. Although we have been unable to obtain copies of either bill, it is our understanding that the provisions of the two bills, in combination, are essentially the same as those contained in the bill passed last year by the House of Representatives. Because we testified extensively in the hearings last year, this statement will be limited to a summary of our Association's current views with respect to specific major provisions of the bills.

CAPITAL SUPPORT

The AADS supports the extension of the existing authorities for grants, guaranteed loans and interest subsidies to assist in the contruction of teaching facilities for health professions schools.

We welcome the proposal to establish a uniform level of federal participation in construction costs, since as we understand it, this provision would allow schools requiring new or remodeled facilities to compete for the maximum level of federal participation without the need for the "major" enrollment increase specified under previous legislation.

However, unless the authorization levels specified in the bill can be substantially increased, we would favor a lower level of maximum participation so that a larger number of schools might be assured of at least some measure of support for the renovation and rehabilitation of their physical facilities.

We would suggest, too, that projects to construct dental schools in any of the 19 states now without schools be given the same assurances of maximum federal participation and priority that are provided for medical school projects of a similar nature.

INSTITUTIONAL ASSISTANCE

Capitation Grants. Our Association fully accepts the philosophy embodied in H.R. 2956 that health professional schools are a national resource and that as

Digitized by Google

such, they not only are appropriate objects of federal financial assistance but they also bear a special responsibility to address the major health manpower problems of the nation. In our opinion, however, these problems can be most successfully addressed through use of the project grant mechanism, which provides the flexibility needed to accommodate the widely varying capabilities of individual schools. We remain convinced that capitation support should be contingent upon only two conditions, maintenance of first-year enrollments and maintenance of non-federal support levels, and that its principal objective should be to assist the schools to become the financially viable institutions they must be if they are to meet the nation's manpower needs.

The requirement that schools either expand first-year enrollment or offer a program for the training of expanded function dental auxiliaries in order to qualify for capitation grants will pose difficult and frequently insoluble problems for those schools that are operating with impacted facilities. That dental schools are offered the option of doing one or the other will not necessarily help, since an over-crowded dental school that is unable to increase the size of its first-year class will find it equally impossible to expand its dental auxiliary training programs.

Although the bill provides for the waiver of this requirement when a school cannot meet either condition without lowering the quality of education it provides, a similarly worded provision in the previous law was so rigidly interpreted by DHEW that a number of schools were forced to accept additional students in the face of warnings that these increases threatened their continued accreditation. In light of this, we urge a change in the wording to require the issuance of a waiver in those situations in which an official accrediting body has determined that the acceptance of additional students would so affect the quality of education as to lower the school's accreditation status.

The second requirement that, beginning in the second year, each school use 25% of its capitation grant for the training of dental students and expanded duty dental auxiliaries in areas geographically removed from the main site of training, will undoubtedly further objectives which we all agree are desirable; unfortunately, it will also seriously dilute the amount of support available for the basic operations of the school itself.

We would reiterate our position: The capitation grant should be an entitlement grant designed solely to strengthen the basic financial position of the school. Enrollment increases and remote-site training, while both necessary and desirable in themselves, can best be funded on their own merits using discretionary monies.

The Association would also like to comment on the provision requiring payback of capitation support by students in the years immediately following completion of their training. Instead of reimbursing the Treasury, we would favor having each student reimburse his school on a year-for-year basis for the capitation support received by the school because of his enrollment. The fund so established could then be restricted and replenished as necessary by the federal government to compensate the schools for losses to the fund resulting either from defaults or from the cancellation of the pay-back obligation of students who elect to serve in a shortage area. Once the fund so established reached a plateau, the amount of new federal support needed annually would be minimal. Although dental schools are willing to serve as agents of the government in securing students' assurances to practice in shortage areas, they would strongly resist any move to make them responsible for policing these agreements.

Although we are on record as recommending that capitation for dental schools be set at 40% of the average net education cost per dental student as determined in the IOM study of educational costs, the Association now believes this recommendation to have been premature. We have become concerned about the small number of dental schools included in the sample and, therefore, about the validity of some of the findings as they relate to all dental schools. We now believe that further study is needed and that uniform cost analysis methodologies need to be developed and used by all health professions schools in order that capitation can eventually be based on the net educational costs of individual schools. Meanwhile, a continuation of parity payments to all MOD schools as provided for in the current bill presents the most equitable approach to capitation support.

We would urge that the capitation amounts for dental and expanded function dental auxiliaries students be not less than the levels of the last three years. Further, we recommend that for schools establishing or enlarging existing expanded function dental auxiliary training programs, the capitation amount for

Digitized by Google

each additional student enrolled be set at half the amount specified for dental student capitation.

Judging by past experience, it is entirely possible that the amounts appropriated for capitation support will be considerably less than the amounts authorized. The Association recommends that a new provision be added to the bill which would permit a proportionate decrease in any enrollment assurances required as a condition for receiving capitation support.

Finally, we would like to point out that those schools which responded to the incentives in the present law to convert to an accelerated three-year curriculum have just begun to receive the sums authorized in support of this effort. Since the new authority would base capitation solely on enrollments, we believe that the federal commitment to schools which adopted the three-year curriculum should be honored by setting the capitation amount for their presently enrolled students at four-thirds of the basic capitation figure.

Financial Distress Grants. We believe the elimination of the authority for financial distress grants would contribute to the overall objective of financial stability by encouraging schools not only to develop good management practices but also to seek firm and stable bases of non-federal support.

Special Project and Contract Support. As we noted earlier, the AADS acknowledges the responsibility of dental schools to work for the solution of the dental manpower and service problems that confront the nation, but we are convinced that project grants and contracts, targeted to the solution of these problems, is the best mechanism for supporting the schools' efforts to meet those responsibilities.

With respect to the needed increase in aggregate supply, we feel that project grants could be used to support the expansion of enrollment in those schools which have the capability for such an undertaking without encumbering other schools with responsibilities which they cannot adequately meet.

We believe that the special project mechanism should also be available to support the development and implementation of programs to provide training for undergraduates in underserved areas removed from their main training site. Stipend support should be provided to meet the students' living expenses, if needed, and funds should be available to pay travel and other expenses incurred by faculty and students. Also, grants for this purpose should permit the payment of travel and other necessary expenses in programs in which private practitioners serve as preceptors.

We recommend, too, that the authority contained in the bill for support of area health education centers be modified to provide for dental sponsorship of AHEC's in situations where such sponsorship is appropriate. We believe that the AHEC could serve as an effective instrument for dealing with the maldistribution of dental personnel.

Although dentistry still has an equitable balance between primary and specialty care, so many more dental graduates are seeking specialty training that this balance could soon disappear. For this reason, we are particularly pleased that the family medicine residency program is broadened in the current bill to include support for residencies in general dental practice.

The Association supports the proposed extension and amendment of the authority to provide assistance to individuals from disadvantaged backgrounds. However, We believe that programs supported under this authority would be considerably more effective if stipend support were available to meet the living expenses of students who could not otherwise accept the opportunities afforded them.

STUDENT ASSISTANCE

The Association supports the extension of both the scholarship and the direct loan and guaranteed loan authorities as modified in the current bills, although we do have some reservations about the guaranteed loan program, since students most in need of financial assistance have great difficulty in obtaining loans, notwithstanding the federal guarantee. We would like to recommend one change in the loan repayment authority. We suggest that this authority be modified to permit full repayment of educational loans—60% repayment for two years of service in a shortage area, 80% for three years, and 100% for four years of service.

Statement of the Association of American Veterinary Medical Colleges (AAVMC)

I. AMERICA NEEDS ANIMALS

Our nation is blessed with many natural resources. One of the major resources which has been developed and which the nation enjoys in many different ways is its animals. This situation obtains in great measure because of the natural resources and because there has been the human intelligence, ingenuity, and willingness to foster and encourage this development.

Animals in the American life-style play many different and important roles. Their part in the diet of the average American is common knowledge and nearly every page of newsprint carries something related to human nutrition either on a local or on a global level. Animal fiber, for purposes other than nutrition, plays a less prominent role, but in light of the world energy situation bodes to assume the importance it once occupied as natural fibers require much less energy to put them in a condition for human use than do synthetic fibers. The statement "Food is fundamental" is not a cliché but is and always has been a fundamental maxim that will become increasingly important and evident to our nation—and to the world—as the human population continues to grow. The ability and capacity to produce food is the single most important asset that the United States has today among the nations of the world. While this nation can't produce enough to feed the world, its own production capacity coupled with its technological talents and the sociological sensitivities of the contemporary world population portend ways to cope realistically, and hopefully successfully, with the human population/food-and-fiber-need complex. It is not enough that animal protein production be adequate quantitatively. It must also be available to the consumer in a condition that will not cause sickness. Thus attention must be paid from conception to consumption and the chain has many links which require veterinary medical input.

Laboratory Animals, which include any and all appropriate species for a given problem, will continue to assume ever greater importance in the days ahead. As the need and desire continue to supply safe and effective biological and pharmaceutical products for use in both humans and animals, the need for testing in animals will continue to grow. Animal models of human disease are a well recognized and accepted scientific route to the elucidation of many human ailments. Currently there are over 100 such models and this aspect of comparative medicine, which involves veterinarians and many other health scientists, has made great contributions to the health, well-being, and increased life expectancy of the nation's citizenry, and its contributions are only beginning.

Companion animals, whether for recreational purposes or for more intimate companionship have always held a significant position in American family life. These creatures serve a great variety of needs and their numbers are increasing at a significant rate. In addition to the role they play as close companions, the smaller species (primarily dogs, cats, and pet birds) account for approximately 4 billion dollars annually in the nation's economy. The role of the dog and the cat as role-models for growing young Americans in experiencing first-hand such things as responsibility, compassion, growth, disease, death, and other similar emotions and biological processes is indeed important but impossible to assess in quantitative terms. Small companion animals are finding an ever-expanding role in the rehabilitation and amelioration of problems of the emotionally disturbed. With an ever-increasing number of older citizens in our population the role of these small companion animals in providing tangible and meaningful associations for these people is real and significant.

Wildlife and zoo animals are of extreme importance as recreational and educational resources in our society. Survival and maintenance of these animals becomes increasingly difficult in a changing American ecology but they must be preserved! Health management is paramount in this survival and this means veterinary medical expertise.

II. VETERINARY MEDICAL EDUCATIONAL RESOURCES

There are currently 19 functional educational programs leading to the D.V.M./V.M.D. degree in the United States. These are located in 18 different states with two (2) in the State of Alabama (Auburn University and Tuskegee Institute). All but two (2), Tuskegee Institute and the University of Pennsylvania, are a part of state supported universities and were implemented primarily to provide veterinary medical manpower for their respective states. As the need for veterinary medical manpower is a national need these schools/colleges must provide for this need and thus in the truest sense are *national resources*. Under these circumstances it is most logical that in meeting this national need some reasonable portion of funding for the ongoing maintenance and operation of the programs be underwritten at the national level. This did in fact come about in 1970 and in the intervening five years federal funds have been made available for those schools/colleges able and willing to increase enrollments. First-year enrollments have increased by approximately 20 percent over this period with correspondinng increases in the number of veterinarians graduated once the four-year educational cycle was completed. These increases, if maintained along with the anticipated new schools being planned at the University of Florida, the University of Tennessee, Mississippi State University and Virginia Polytechnic Institute, will go a long way toward meeting the veterinary medical manpower needs cited in the National Academy of Sciences' 1972 publication, "*New Horizons for Veterinary Medicine.*"[1] Without this sustained financial assistance many schools/colleges will be forced to reduce enrollments and the source of most of such reductions would be among out-of-state applicants.

Many if not all of the schools have reached upper enrollment limits based on physical facilities, including equipment, and faculty and support-man-power needs. To require additional enrollment increases at this time to maintain eligibility for assistance would be unrealistic and very likely counter productive since, as indicated above, many of the schools would need to reduce the size of their programs both in the number of students admitted and the number of faculty and support personnel, if the financial assistance is reduced.

There certainly is no lack of interest in veterinary medicine among the youth of the nation. Data for the year 1973–74 show that the percent of applicants admitted varied from 8 percent at the University of Illinois (1,124 applied and 86 were admitted) to 28 percent at Louisiana State University (128 applied and 36 were admitted) which accepted its first class that year. Thus on the average only one in every seven who apply can be accommodated and this ratio continues on an upward trend. To have to reduce the number of admissions in the face of the need for veterinary medical manpower and the tremendous interest in the profession on the part of aspiring young Americans would seem to fly in the face of good judgment and rationality.

III. THE NEEDS OF VETERINARY MEDICAL EDUCATION

A. *Construction.*—There continues to be a need for additional facilities and for the upgrading and modernization of current facilities. Provision should be made to provide 80 percent of the construction costs for teaching facilities for educating veterinarians in a state which has no such facilities.

B. *Student Assistance.*—This program in the past has served a vital need and continues and will continue to do so. It is believed most appropriate to have such a program administered through the respective universities and colleges as contrasted with dealing directly with the individual student.

C. *Capitation Grants.*—Enrollment increases have been effected through this mechanism and as indicated earlier first year classes have increased in size by over 20 percent since 1970. Faculty and supporting staff are being employed with support from this source to accommodate the enrollment increases which now exist throughout the curriculum. Without some such support many schools will find it necessary to reduce enrollments as staff support cannot be provided to manage the programs. Based on cost analysis of educational programs in veterinary medicine recently completed under the auspices of the Department of Health, Education, and Welfare, $1,500 for each full time student enrolled each year is the minimum that should be considered. For reasonable planning purposes and to effect maximum benefit from this program there needs to be a strong indication of continuing commitment.

---

[1] *New Horizons For Veterinary Medicine.* National Academy of Sciences, Washington, D.C. 1972.

Digitized by Google

D. *Special Projects.*—These have served a useful purpose and have permitted significant developments in several areas which otherwise would have gone untouched. Provision for their continuance is important with reasonable criteria for eligibility to compete. It is, of course, appropriate to include in this category special means to engage individuals from disadvantaged backgrounds in all of the health professions' educational programs, but these grants should not be restricted to this purpose.

E. *Start Up Grants.*—A number of new schools of veterinary medicine are in the formative stages (University of Florida, University of Tennessee, Mississippi State University, Virginia Polytechnic Institute and State University). Support should be made available to enable such institutions to participate in a start-up program when the financial problems of operation are the greatest.

F. *Traineeships.*—Post D.V.M. traineeships are vital to the profession and the areas that it serves. Emphasis on increased student enrollments, the increase in the number of schools, and the need for ever increasing numbers of speciality trained people in the ecological/environmental concerns of our society have combined to cause some very serious manpower shortages in many of the speciality areas. This is a critical matter now and will need significant support over the next ten years if the tasks confronting the profession and the society are to be reasonably met.

STATEMENT OF DR. LESTER BRESLOW, PRESIDENT, ASSOCIATION OF SCHOOLS OF PUBLIC HEALTH

INTRODUCTION

Mr. Chairman and distinguished members of the Committee, the Association of Schools of Public Health greatly appreciates this opportunity to submit its views on H.R. 2956, the Health Manpower Act of 1975. For the record, my name is Dr. Lestor Breslow and I am Dean of the School of Public Health at UCLA and President of the Association of Schools of Public Health.

The Association of Schools of Public Health counts among its membership the 18 accredited public health schools in the United States, one school that is close to accreditation (University of Massachusetts), and, as an affiliate organizational member, the Association of Teachers of Preventive Medicine. For your information, we have attached a list of our member Schools.

We are extremely pleased to state that our views, in general are supported by the American Public Health Association, an organization we are proud to be associated with on a professional basis. In addition, the APHA may be submitting their own complete written statement for the record.

Mr. Chairman, we submit this statement today in an attempt to offer our advice regarding what this Committee can do to help support, foster, and improve professional public health education in this country. We know, Mr. Chairman, from your recent statements at the University of North Carolina School of Public Health and elsewhere that you are a friend and supporter of public health education. Furthermore, we are cognizant of the support that schools of public health enjoy from other members of this Committee as they themselves expressed during the hearings on H.R. 9341 last July 24th and 25th (see "hearings on H.R. 9341" Serial #93-57 [1974]).

The need to recognize and solve the health problems which occur in a group and community environment requires education by a faculty comprising professionals skilled in various disciplines, including social and natural sciences, interpersonal relationships, and administrative management working together in an interdisciplinary setting. As far back as 1958 the United States Congress realized that the breath of resources necessary to develop a quality school of public health would make it difficult and inefficient for each state to have its own school. Thus, the 18 existing schools constitute a national resource serving all 50 states, the Commonwealth of Puerto Rico, the overseas territories, and our international commitments.

The 1958 Congressional action was taken, in part, because financial constraints were making it extremely difficult for the then 11 accredited schools to meet the needs for graduates or to accept more than a reduced percentage of qualified applicants. Funds derived from tuition payments and from state appropriations or endowment funds were quite inadequate to meet the educational needs at that time. Then, as now, the situation was aggravated by the increasing number of applicants stimulated by Federal and state programs designed to expand governmental health programs.

Digitized by Google

The Federal support program that began in Fiscal Year 1959 was designed to help the schools accept more of the steadily increasing number of applicants, chiefly by supplying the extra funds needed for teaching faculty and teaching support. Existing schools responded promptly to the Federal request by expanding student bodies. In addition, new schools were opened.

In 1958, there were 1,230 students enrolled and 772 graduates (11 schools), while in 1971–1972 there were 2,159 graduates (17 schools), (Table I) almost three times the number 14 years earlier. Since 1969, as personnel needs of local, state and Federal agencies have mounted, the enrollment has increased even more sharply.

In the Fall Term of 1969, in the then 16 schools (the University of Washington began admitting students in 1970 and Illinois in 1972) the enrollment was 3,438. In contrast, the Fall Term enrollment in 1972 was 5,320, an increase of 50% in the three years (Table I). This increase, at a time when many other university graduate schools were remaining level or had decreasing numbers of applicants, was clearly related to expanding public interest in health care, and expanding demand for the graduates of our Schools.

During the 17 years this program of Federal support for schools of public health has been in effect, the schools have changed substantially to keep pace with demands for new and different kinds of personnel. With the mounting problems of aging, for example, more attention has been given to non-infectious and chronic diseases. With the growing complexity of industrial processes and occupational disease, greater emphasis has been placed on environmental and occupational health. With lower death rates in infancy and childhood, more work has been done in family and population planning, although there is yet much to be done!

At the same time long-standing public health programs, such as control of communicable diseases, protection of food and water supplies and protection of maternal and child health, are still vitally important in the community. One has only to read of instances like the recent recurrence of typhoid fever in Florida and diphtheria in Texas and Seattle, the detection of dangerous foci and poliomyelitis in inner city areas, the disturbingly high rates of venereal diseases, the reports of food poisoning outbreaks and the failure to apply uniformly advances in knowledge of maternal and child health, to realize that neglect of traditional public health programs presage as severe dangers to the public as neglect of fire protection might.

In more recent years, there have been great changes in still other direction. Passage of major health legislation expanding personal health services, health planning, the program of bloc grants as well as project grants to state health agencies and the development of neighborhood health centers, has required much larger numbers of administrators, managers and new types of support personnel who understand that health prevention and restoration cannot be approached purely as a market phenomenon. The need will be further increased by any advances in the national health insurance area, by the growing numbers of HMO's by PSRO, and by the tremendous research efforts in Cancer and heart disease.

All of the schools of public health have adapted their teaching programs well beyond previously traditional areas to prepare their graduates for new and expanded responsibilities at all levels of government and private (usually non-profit) agencies. These personnel, administrators, planners and specialists from almost every discipline in the natural and social sciences, are prepared to work in such areas as: comprehensive health planning; organization and delivery of health services; family and population planning; nutrition; health problems of the aging; drug abuse and alcoholism; control of quality of health facilities; health education of the public.

Regardless of what agency of government may have responsibility for environmental protection, the very fact that popular attention has shifted to non-health aspects of our natural resources—air, water, land—make it vital that the human health aspects of the environment not be neglected.

Moreover, passage of the Occupational Safety and Health Act has imposed an even greater government responsibility for worker health. Schools of public health will need to meet expanded demand for industrial hygienists, industrial nurses, air pollution control experts and administrators of occupational health programs.

Much of the greatest current public concern in regard to health has been over the high costs of medical and hospital care. Thus, schools of public health have given priority to preparing personnel capable of attacking these problems. Cer-

Digitized by Google

tainly by primary attention to better methods of prevention and by better planning and organization of curative and rehabilitative services high costs can be contained.

An approach which is purely an "indemnity-insurance" solution may succeed in spreading costs but will not succeed in taking advantage for society of available knowledge which can lower health costs by helping prevent people from getting sick in the first place.

CURRENT NEED FOR PERSONNEL

In former years, information could be readily obtained from the Public Health Service on vacant budgeted positions in health departments, as one measure of personnel need. The last full scale study on this, carried out for the Third National Conference on Public Health Training 1967, indicated that vacant *budgeted* positions, just in state and local official health agencies (not even including nonprofit community agencies), for which the post description required one year of graduate training in public health, far exceeded available or anticipated supply. With growing population and expansion of programs like Medicare and Medicaid, and the introduction of new ones like PSRO, the ratio of unfilled positions to available graduates is probably even higher today.

Since the 1967 study, there have been no national scientific studies to establish accurately the precise shortages. Nevertheless, studies carried out in a number of states, such as that carried out by a Legislative Study Commission in North Carolina have established needs for personnel far in excess of graduates available.

As part of a study of where graduates of schools of public health are now working and of a series of facts relating to their training, a table has been prepared of the place of employment of the 1962–72 graduates. (Table II). This Table was constructed by coding addresses of graduates from which the employment category could be deduced. The data will, of course, need to be corrected when the questionnaires are returned and analyzed, but even this rough assumption gives an idea of the order of magnitude of the various categories.

What is most striking is the wide variety of employment these graduates have in government, universities and other forms of public service throughout the health care system.

In addition to tabulated data available, another practical measure of need is the number of requests that come to educational institutions for graduates in a particular field. At the University of Michigan, for example, the largest school of public health in the country, every program of study reports more job inquiries and more requests for graduates than are available. As one example, last year there were 50 urgent requests for Masters of Public Health who had specialized in Industrial Hygiene, yet there were only 5 graduates in that field that year.

Decentralization of services to state and local levels will require that these units of government directly engage the services of many new people skilled at planning, developing, implementing, and evaluating health service programs. Guidelines and supervision previously provided at the national level must now be prepared and implemented at every local level of government. This emphasis has been recommended by the Administration in several of their budget messages. It is an endeavor which will not conserve public health manpower; it will require vastly increased numbers. In the long run this increase in personnel and their increased emphasis at the local level, may bring enormous benefits to the people served by health agencies and programs. But the personnel to implement this concept are simply not now available.

LEGISLATIVE SITUATION

In 1972, when testifying on a Senate bill to extend Sections 306 and 309, Assistant Secretary DuVal, speaking for the Administration, raised no questions about the validity of Federal aid to professional education in public health. He did ask that the legislation be extended for one year to allow these sections to be considered in conjunction with other expiring legislation. Furthermore, the President indicated concretely his support for the program by proposing, in his original 1972–1973 budget, increases in levels of support—almost 7% for Section 306, student support, and almost 20% for Section 309, institutional support. On the basis of hearings and testimony, the Congress further increased these levels, indicating that both the executive and legislative branches were aware of increasing need for trained health personnel.

Digitized by Google

The 1973–1974 budget, submitted on January 29, 1973, proposed a complete reversal of previous policy, calling for no extension of the legislation and for complete termination of all aid under Sections 306 and 309 as of June 20, 1973. In its wisdom, the Congress did indeed extend these Sections for one year. Funds were appropriated by the Congress and included by the Congress in HEW FY 1974 budget. Since July 1, 1974, 306 and 309 have been extended by repeated Continuing Resolutions. Unfortunately, the Administration is again requesting the elimination of support programs for schools of public health and their students.

H.R. 2956: HEALTH MANPOWER ACT OF 1975

Mr. Chairman, we now wish to turn our attention to the above mentioned bill which was introduced by you and other members of this Subcommittee.

In general, we think this is a superb piece of legislation and one that all of the schools of public health will want to support. We believe that this bill encourages the finest aspects of the health manpower production system while at the same time seeking to change—by evolution rather than revolution—those aspects of the system that need improvement. We applaud this approach and we will do what we can to assist in its implementation should it be enacted into law.

We begin our specific comments with Title III of the bill. We believe that Section 303 of the bill (p. 18) is correct in concept. However, we note with disappointment that there is no room for growth in the appropriations sections. We would recommend, therefore, appropriations for FY 1975, 1976 and 1977, $8 million, $10 million and $12 million. This, we believe, would be consistent with the growth in student population now taking place.

In regard to Title IV, Grants for Health Professions Schools, we should like to reiterate once more our general support for the approach taken by H.R. 2956. We do, however, have a number of specific questions and for your convenience we enumerate them below:

(1) We believe that Section 770(a)(3) (p. 55) should be amended to read "$2000 per each full-time *equivalent* student enrolled in such school." We request the higher capitation level based upon the fact that the average cost per year for educating a student in a school of public health is approximately $12–13 thousand, as determined by the Institute of Medicine study which you, Mr. Chairman, requested. Were the Federal government to seek a level of support equal to 30% of the cost of education, the amount for capitation would be $3000. We believe that our request, under the circumstances, is modest indeed. Should the Congress accept this higher level, the authorization section (770[f][2]) should be adjusted accordingly.

In addition, we are recommending that this Subsection take note of the fact that an increasing amount of the education in schools of public health is done on a part-time basis. By providing such educational opportunities for persons who are working full or part-time, each school of public health better serves its region. Our request here is that the legislation take note of this significant activity on the part of schools of public health.

(2) In regard to the apportionment of appropriations (Section 770[c], as amended, [page 39]), we wish to note that we disagree in principle with this concept. At this point in history we think that all of the schools of the health professions and certainly the schools of public health need a higher degree of certainty for their fiscal operations. We believe that it is absolutely necessary for appropriate planning that the schools know as closely as possible how much financial support to expect from the Federal government. Therefore, we think that the capitation section ought to be written as an entitlement. The fact that your bill, Mr. Chairman, has carefully sought to adjust the capitation levels in accordance with the actual levels you feel are necessary, supports our position in this matter.

(3) Regarding the definition of "full-time students" on pages 57 and 58 of the bill (Section 770[d][2], as amended), we wish to address ourselves to the phrase "graduate degree in public health or equivalent degree." We hope this Committee will make it clear in the report on the final bill that the 18 schools of public health offer a rich variety of programs in more than a score of areas of public health. We hope that in the implementation of this section the Administration will not attempt to exclude such programs as biostatistics, epidemiology, maternal and child health, etc., which together are the building blocks of public health.

(4) With regard to Section 791(c)(2)(B) (p. 100, lines 3–6), we wish to comment upon the accreditation requirement called for by that section. The Association of Schools of Public Health and the Association of University Programs in Hospital Administration have agreed that eligible for assistance under Section

Digitized by Google

791 should be defined as: "institutions other than schools of public health that offer graduate education for public health professionals *and are accredited by an organization recognized for that purpose by the Commissioner of Education.*" ASPH does not believe it wise to lock program (as opposed to "school" or "university") accreditation into law.

CONCLUSION

Mr. Chairman and members of the Committee, we represent institutions whose raison d'etre is to serve the public welfare. In that respect our goals coincide with the goals of the members of this Committee. Our students and our faculty members have chosen to devote their lives to improving public health both here in the United States and throughout the world.

Through our Association and through other mechanisms, the schools of public health constantly reexamine what they are doing in light of how they perceive the needs of this country. We make no claim that all wisdom resides in the schools of public health. Indeed, we welcome the suggestions of all interested parties to help us adjust our activities to better serve the public good. We look forward to indepth interaction with the Congress of the United States and the Executive Branch.

We gratefully appreciate this opportunity to offer our views to the members of this distinguished Subcommittee regarding the legislation that is now before you.

Thank you.

TABLE I.—ENROLLMENT AND GRADUATES, U.S. SCHOOLS OF PUBLIC HEALTH, 1958-72

	Students enrolled	Degrees granted
Fiscal year ending:		
1958	1,230	772
1963	1,848	798
1968	3,363	1,337
1969	3,525	1,548
1970	3,483	1,735
1971	4,131	1,782
1972	4,802	2,159

• • •

TABLE II.—ESTIMATED DISTRIBUTION BY EMPLOYMENT IN 1972 OF PUBLIC HEALTH GRADUATES FROM 1962-72

Employment category	Number	Subtotal percent	Total percent
Federal			14.1
Directly related to public health (HEW, HSMHA, UPSHS, etc.)	876	6.1	
Other Federal, not directly related to public health (State Department, Trust Territories, AID, FCC, AEC, etc.)	158	1.1	
Peace Corps	29	0.2	
Veterans Administration	43	0.3	
Armed Forces (includes armed forces hospitals)	919	6.4	
State	1,408		9.8
Local (includes RMP, CHP, city, municipal)	1,652		11.5
Foreign (includes nonpublic health, e.g. Ministry of Education	1,063		7.4
Extranational (WHO, UN, OAS, NATO, SEATO, etc.)	230		1.6
Hospitals and ambulatory care facilities (except university hospitals, USPHS and armed forces hospitals)	3,348		23.3
Universities			25.4
Schools of public health	1,149	8.0	
Medical and nursing schools and hospitals where teaching is primary activity	1,379	9.6	
Other university	1,121	7.8	
Industry (includes profitmaking organizations, e.g. engineering, pharmaceutics, communications)	359		2.5
Health-industry (includes public health directed profitmaking organizations, e.g. insurance and casualty firms	57		0.4
Foundations	417		2.9
Professional organizations	29		0.2
Nonprofit organizations (Kaiser Permanente, Blue Cross, etc.)	86		0.6
Labor unions	0		0.0
Self-employed	43		0.3
Total	14,366		100.0

Source: Personal communication from Dr. Arthur H. Richardson, project director, ASPH-BHME contract study. Estimates are based on a weighted extrapolation of the distribution by employment of 5,771 graduates who had codable addresses. The remaining 8,595 graduates (14,366 in all during the 1962-72 period) were either listed by home addresses or had addresses not codable by employment category.

SCHOOLS OF PUBLIC HEALTH IN THE UNITED STATES

Below is a listing of the names, deans, addresses and phone numbers of the Schools of Public Health in the United States and Puerto Rico.

University of California at Berkeley: Dean Warren Winkelstein, Jr., Dean and Professor of Epidemiology, 19 Earl Warren Hall, School of Public Health*, Berkeley, California 94720, 415/642-2523.

University of California at Los Angeles: Dean Lester Breslow, School of Public Health*, Center for the Health Sciences, Los Angeles, California 90024, 213/825-6381.

Columbia University: Dean John Bryant, School of Public Health*, 600 West 168th Street, New York, New York 10032, 212/579-3929.

Harvard University: Dean Howard Hiatt, School of Public Health*, 677 Huntington Avenue, Boston, Massachusetts 02115, 617/734-3300 (Ext. 501/502).

University of Hawaii: Dean Jerrold Michael, School of Public Health*, 1940 East-West Road, Honolulu, Hawaii 96822, 808/948-8491.

University of Illinois: Dean Paul Q. Peterson, School of Public Health, at the Medical Centers*, P.O. Box #6998, Chicago, Illinois 60680, 312/996-6620.

The Johns Hopkins University: Dean John C. Hume, School of Hygiene and Public Health*, 615 North Wolfe Street, Baltimore, Maryland 21205, 301/955-3540.

University of Loma Linda: Dean Mervyn G. Hardinge, School of Public Health*, Loma Linda, California 92354, 714/796-7311 (Ext. 3711).

University of Michigan: Dean Richard Remington, School of Public Health*, Ann Arbor, Michigan 48104, 313/764-5424.

University of Minnesota: Dean Lee D. Stauffer, School of Public Health*, 1325 Mayo Memorial Building, Minneapolis, Minnesota 55455, 612/373-8065.

University of North Carolina: Dean Bernard G. Greenberg, School of Public Health*, Chapel Hill, North Carolina 27514, 919/966-1113.

University of Oklahoma: Dean Philip E. Smith, College of Health*, 624 Northeast 15th Street, Oklahoma City, Oklahoma 73190, 405/271-4688.

University of Pittsburgh: Dean Herschel E. Griffin, Graduate School of Public Health*, 111 Parran Hall, Pittsburgh, Pennsylvania 15261, 412/624-3000.

University of Puerto Rico: Dean Jose Nine-Curt, School of Public Health*, G.P.O. Box #5067, Medical Sciences Campus, San Juan, Puerto Rico 00936, 809/765-3991.

University of Texas: Dean Reuel A. Stallones, The School of Public Health*, Health Science Center at Houston, P.O. Box #20186, Houston, Texas 77025, 713/792-4425.

Tulane University: Acting Dean Frank Moore, School of Public Health and Tropical Medicine*, 1430 Tulane Avenue, New Orleans, Louisiana 70112, 504/588-5397.

University of Washington: Dean Robert W. Day, School of Public Health and Community Medicine, SC-30*, Seattle, Washington 98195, 206/543-1144.

Yale University: Dean Robert W. McCollum, Department of Epidemiology and Public Health, School of Medicine*, 60 College Street, New Haven, Connecticut 06510, 203/436-3280.

Associate Member—University of Massachusetts: Dean William A. Darity, School of Health Sciences**, Amherst, Massachusetts 01002, 413/545-0460.

ASSOCIATION OF UNIVERSITY PROGRAMS IN HEALTH ADMINISTRATION,
Washington, D.C., February 20, 1975.

Hon. PAUL G. ROGERS,
House of Representatives,
Washington, D.C.

DEAR MR. ROGERS: By its recognition of the need to improve health administration schools, your health manpower bill moves toward another major contribution by you to the public health of this country. The field of health administration recognizes this major step and appreciates your efforts and those of the Committee.

---

*Fully accredited as a School of Public Health.
**Not yet accredited as a School of Public Health.

Digitized by Google

We recommend the following adjustments in the bill as introduced which will help insure the accomplishment of its objectives:

The appropriations level for health administration programs is very low and will not produce the results you are seeking. Solid projections indicate that full funding at the authorized level will provide only about $50,000 per program next year. To provide the services, particularly technical assistance to planning agencies and HMO's which is needed at the community level, a higher level of support should be provided. We recommend a minimum level of $3,000,000 for the first year.

We recommend the inclusion of health administration students in the loan program of the National Health Service Corps, as they are included in the scholarship program.

Third, we would like to ask, to avoid ambiguity later on, that health administration be specifically named among the fields participating in the minority project grant program.

We thank you for your consideration.

Sincerely yours,

GARY L. FILERMAN, Ph. D.,
Executive Director.

Mr. ROGERS. The next witness will be Dr. John A. D. Cooper who is President of the Association of American Medical Colleges, accompanied by Dr. John Sherman and Mr. Charles Fentress. We welcome all of you and will be pleased to receive your testimony.

Your statement will be made a part of the record.

STATEMENT OF JOHN A. D. COOPER, M.D., PRESIDENT, ASSOCIATION OF AMERICAN MEDICAL COLLEGES, ACCOMPANIED BY JOHN SHERMAN, M.D., AND CHARLES FENTRESS

Dr. COOPER. Thank you.

The Association of American Medical Colleges is grateful for the opportunity to comment on legislation to modify and extend the Federal role in the education of health professionals. Federal assistance is vital if medical schools are to continue providing health professionals to meet the Nation's health needs, particularly because of the increasing difficulty institutions are finding in meeting rapidly rising costs.

The association is the national organization of institutions engaged in the formal education of M.D.'s at the undergraduate and graduate levels. It is comprised of all of the 114 medical schools in operation in the United States, 400 of the major teaching hospitals, and 58 academic societies, which encompass the teaching and research faculties of academic medical centers.

In hearings conducted by the subcommittee during the last session of Congress, the association presented a lengthy statement on Federal support for educational programs in the Nation's medical schools. The proposals made at that time have been modified on the basis of a report by the AAMC Task Force on Health Manpower which was adopted by the executive council at its meeting on January 16, 1975. The new recommendations by the association are incorporated in H.R. 3279, introduced by Chairman Rogers.

I might add almost all the recommendations given by Dr. Lee in his testimony are in H.R. 3279.

We earnestly hope that its provisions are incorporated in the legislation adopted by the Congress.

The association has two general concerns with the reconsideration of health manpower legislation. It recommends: (1) early enactment of

Digitized by Google

legislation; and (2) a 4-year bill providing a simple 1-year extension of the Comprehensive Health Manpower Training Act of 1971 for fiscal year 1975 and new provisions for the subsequent 3 fiscal years.

Early enactment is critical to permit continuity of effort by health professional schools. Adequate time for planning by both students and institutions is required if objectives of the legislation are to be met and Federal funds are to be used efficiently and effectively.

The principal reason for requesting a 1-year extension of previous programs is to assure that badly needed funds will flow to the medical schools during the current fiscal year. Administrative requirements seriously delay implementation of programs enacted by the Congress and signed into law. After enactment of the 1971 health manpower legislation, the required publication of regulations in the Federal Register and development of application procedures required 7 months.

If this situation prevails with this legislation, the medical schools would not be able to receive support under it during fiscal year 1975. An extension of the Comprehensive Health Manpower Training Act of 1971 for the current fiscal year would permit current regulations and administrative processes to be used and thus reduce the delay in the flow of funds. Although funds for some manpower programs are available through the appropriations continuing resolution, it is not clear what level of support can be provided through this mechanism. Unless the language in a new continuing resolution is modified, it is possible that capitation grants to medical schools should be reduced from the average level of $2,000 provided last year to a level of $1,200 per student.

Such a sharp drop coming on short notice and during a period of high inflation rates and general economic uncertainty would have a very serious impact on the medical schools. A more orderly process would be for the provision of funds in fiscal year 1975 through a supplemental appropriations bill for the programs authorized in an extension of the recently expired act H.R. 3279 extends the authorities of Public Law 92–157 for 1 year.

The association recognizes that problems in health care are centered in part, around the aggregate supply of physicians and other health professionals, the distribution of physicians geographically and by specialty, and the quality of services provided—and that medical schools can contribute to their solution. The association also believes that diversity is a strength of American medical education and that each school can make its greatest contribution to the solution of these problems in different ways, depending on its particular characteristics.

Capitation is recommended in the bill as the fundamental form of institutional support for medical schools. The level of support is based on the net educational costs as determined by the method developed by the Institution of Medicine in a study mandated by the Congress.

One-half of the capitation grant would be given to help maintain the ongoing programs of the medical schools.

The other half of the capitation grant would be given to schools that undertake additional activities directed toward increasing the aggregate supply of physicians or physician extenders, and modifying the geographic and specialty distribution of physicians.

Continuing Federal capitation support for educational programs

Digitized by Google

is critical during these times of severe financial stress on the medical schools.

This is particularly so if we are to maintain the high quality of medical education about which Dr. Philip Lee spoke so eloquently.

I would like to introduce some information we received from Dr. Mueller of Johns Hopkins of the pressure being put on these institutions. He reports on the cost of oil, gas, and electricity for Johns Hopkins University. In 1972–73, those costs were $667,685. They are estimating $1.8 million for 1976.

In a 3-year period there has been practically a tripling of the costs. Similar experiences have been noted in the costs of chemicals and other materials necessary to carry on quality medical education.

We do not agree with Secretary Weinberger that this is the time to reduce the level of support to medical schools. The results would be really disastrous.

I would also point out that one State in the Union, California, is now considering the closing of one of the State medical schools. The board of regents has determined that it may be impossible for them to provide the level of support that would be required to maintain the number of schools which they now have.

Mr. ROGERS. How large is that student body?

Dr. COOPER. I can't tell you, but the entering class would probably be in the neighborhood of 100.

As a result of initiatives taken by medical schools with the assistance of Federal funds, the number of physicians and new health professionals will increase dramatically. The physician population ratio will increase from 140 per 100,000 in 1970 to over 200 per 100,000 in the 1980's, even if the influx of foreign medical graduates is severely curtailed. This increase is the result of the great expansion in medical school class size which began in 1968. The results of this increase in class size are now appearing as physicians enter independent practice after completing their training.

The main thrust to obtain a better distribution of physicians and other health professionals recommended in the bill is through the expansion and strengthening of the National Health Service Corps. The association is convinced that any realistic assessment of need in shortage areas can be adequately met through voluntary approaches if adequate incentives are provided. The provisions in H.R. 3279 will make it possible to meet these goals. We are very pleased Dr. Lee agrees with that approach.

The association recommends that an increase in the umber of primary care psysicians be effected by two means: providing support for training programs in family medicine, general internal medicine, general pediatrics, and obstetrics-gynecology; giving the Secretary of the Department of Health, Education, and Welfare, with the approval of an advisory group, authority to designate the number and type of accredited residency positions eligible for support through reimbursement for health care. These authorities are provided in H.R. 3279.

The association believes that the problems associated with the large influx of foreign medical graduates into the United States can most effectively be handled by regulating their immigration by removing special reference visas for alien physicians. H.R. 3279 would accomplish this goal.

Digitized by Google

We recommend, in addition, that the legislation be further strengthened through additional provisions which would give better assurances that the foreign physician is adequately prepared professionally and has the required command of the English language, which would restrict the institutions at which he could receive training to those properly qualified to meet his needs, and which would reimpose former requirements for the conversion of student exchange visas to permanent immigration visas.

The details of the additional language we would recommend in the legislation are given in the written statement we have.

I think that concludes our presentation. We will be happy to answer any questions.

[Testimony resumes on p. 475.]

[The attachment to Dr. Cooper's statement follows:]

COMMENTS AND RECOMMENDATIONS—H.R. 3279 PROVISIONS

CAPITAL SUPPORT

Construction

Grants and guaranteed loans with interest subsidies are continued.

Maximum grant assistance is 80 percent.

Emphasis for assistance: ambulatory facilities for primary care teaching; replacement or modernization of existing teaching facilities; new construction required for enrollment increases.

Grant authorization is $100 million annually.

Guaranteed-loan interest subsidy authorization is $1–$2–$3 million.

Comments

The Association feels strongly that the appropriateness of a federal role in the construction and maintenance of medical school facilities parallels the federal role in the support of undergraduate medical education. And, as in the case of undergraduate medical education, the cost of capital expansion also is shared by the federal government, State and local governments, and the institution itself, and various private and other outside sources.

The recommendations of the AAMC include continued grant support because teaching facilities are inherently cost-generating rather than income-producing. As a result, income from the operation of such facilities is not available to amortize the cost of the facility. Thus debt financing for such facilities is totally inappropriate. At the same time, other types of facilities, such as ambulatory care centers, are potentially income-generating, and thus could produce funds which could be applied to offset some debt financing. For that reason, the Association also recommended continuing the program of loan guarantees and interest subsidies. The recommended funding levels are based on a professional judgment of an appropriate federal share of the cost of maintaining the existing physical plant of the schools, plus an allowance for new construction of ambulatory care facilities needed for the expanding number of primary care programs being established by academic medical centers.

STUDENT ASSISTANCE

National Health Service Corps Scholarships

Year-for-year service requirement, minimum two years' service, in the Corps or elsewhere at the discretion of the Secretary.

Private practice option, with federal guarantee of Corps salary.

Penalty for failure to serve is twice the amount of outstanding assistance.

Recruitment bonus of $15,000 for previous nonparticipants who agree to serve at least two years in a shortage area and who have completed residency training.

Re-enlistment incentives are to be provided through the uniformed services special pay structure as enacted in PL 93–274 (up to $13,500 per year).

Extension bonus for participants agreeing to remain in shortage area as private practitioners of $12,500 for one-year extension, $25,000 for two years or more, such funds to be available for equipment, renovation of facilities, and certain operating expenses.

Digitized by Google

Period of service is to begin at the completion of residency training for participants engaged in training in family medicine, general internal medicine, general pediatrics, or obstetrics-gynecology, or such other fields as are determined by the Secretary through his annual report on health personnel needs to be in short supply, and at the end of the second post-M.D. year for other participants unless deferred by the Secretary.

Authorization is $50–$100–$150 million.

Health Professions Loans

Mandatory notification of loan forgiveness.

Loan ceiling is tuition plus $3,000.

Assistance available only to students with exceptional financial need.

25 percent forgiveness per year of any educational loan for practice in a shortage area designated under section 329.

Interest rate is increased from 3 to 5 percent.

Authorization is $30–$30–$30 million.

Health Professions Scholarships

Scholarship ceiling is tuition plus $3,500.

Assistance available only for first- and second-year students of exceptional financial need.

Authorization is $30–$22.5–$15 million.

Shortage Areas Scholarships

To be phased out, with only previously assisted students eligible for financial aid.

Authorization is such sums as may be necessary.

Loans, Scholarships for United States FMG's

To be repealed.

Comments

The Association is committed to the goal that there should be equality of opportunity for students wishing to attend medical school. A major barrier denying equal opportunity is the high cost of medical education that must be borne directly by the student. To help offset the cost, the health professions loan program and the health professions scholarship program were created and have come to constitute a major source of student aid for medical students. Since their implementation, the medical profession has been enriched by the addition of students with a greater diversity of socioeconomic backgrounds.

The Association now recommends a package of student assistance programs which places major emphasis on service-commitment scholarships while retaining unconditional health professions loans and scholarships for the initial years of the student's education. The Association firmly believes that previous experience with oversubscription for National Health Service Corps scholarships will continue and will result in large numbers of applicants for an expanded program. Funded at the levels recommended by the Association, the National Health Service Corps scholarship program should provide a substantial number of health professions students—approximately 2,500 annually at current scholarship rates—obligated to serve in the presently designated 547 shortage areas. Newly proposed recruitment bonuses could be used to attract physicians to these areas almost immediately in contrast to the time required by other provisions of the proposed legislation. At the same time, unconditional student aid has been retained for those students with truly exceptional financial needs. This approach is designed to permit continued broadening of the socioeconomic mix of health professions students without subjecting them to an undue national service burden.

INSTITUTIONAL ASSISTANCE

Capitation

Up to ⅓ of medical schools' net education expenditures as determined by a procedure developed in a study by the Institute of Medicine under 1971 health manpower legislation. (Current determination is $3,250.)

$1,000 for physicians' assistants.

Authorization for undergraduates (M & O) is $186–$194–$201 million.

Authorization for physicians' assistants (M & O) is $2–$3–$4 million.

Digitized by Google

Authorization for phasing out enrollment bonus students in such sums as may be necessary.

Conditions for Capitation

Eligibility for first-half of capitation payment requires maintenance of enrollment and maintenance for non-federal financial support.

Eligibility for second-half of capitation payment requires, in addition, assurances of carrying out at least one project in each of any two of the following areas:

1. *Aggregate supply*—

(a) Increase first-year medical student enrollment by the greater of 5 percent or 10 students over a base year, provided that a school may offer an equivalent number of advanced standing places to students otherwise eligible for admission who previously were enrolled in non-M.D. programs or in schools outside the United States; or

(b) Establish a physician assistant or nurse practitioner training program of at least 25 students, or expand an existing program by at least 25 percent.

2. *Geographic distribution*—

(a) Increase first-year enrollment of students from shortage areas as determined by section 329 by 10 students over a base year; or

(b) Establish or expand a program satisfactory to the Secretary of undergraduate and/or graduate training at an off-campus site serving a shortage area. Such a program may be an area health education center, support of an NHSC Health Care Delivery Unit, or a remote-site care experience.

3. *Specialty distribution*—

(a) Increase annually primary care residency positions (defined to be family practice, general internal medicine, general pediatrics, and obstetrics-gynecology) in affiliated general hospitals (including university hospitals) by at least 5 percent of all residencies in all such hospitals, so long as the percentage of such positions is less than 50 percent; or

(b) Maintain primary care residency positions in affiliated general hospitals (including university hospitals) at 50 percent or more of all such positions; or

(c) Establish or expand one or more undergraduate programs satisfactory to the Secretary devoted to education in primary care in an ambulatory care setting. Conditions are to become effective beginning in the 1976–77 academic year.

Start-up, Conversion

To be phased out, with only previously assisted schools eligible for aid. Authorization is such sums as may be necessary.

Deficit Sharing

Authorization is $20 million annually.

Comments

Undergraduate medical education is composed of interacting elements integral to a unified process leading to the M.D. degree. The elements of this process are the instructional activities covering the imparting of disciplinary and interdisciplinary subject matter through lectures, seminars and laboratory exercises; participation in the care and management of patients; and training in research methods for the solution of problems in health. The cost of the elements is high, and in the past has been shared by the federal government, state and local governments, medical schools themselves through tuition and endowment income, private foundations and others. The federal role has been justified because of the national mobility of physicians, because of the unequal ability of states to maintain uniformly high quality medical schools, and because of an underallocation of resources to medical education by other public and private sources of support.

Since 1971, federal support of the education activities of health professions schools has been provided through a capitation grant. Through this device, the government acknowledged the legitimate public interest at the national level in the continuity and integrity of health professions educational institutions. The capitation grants have enabled the schools to respond to national needs. In doing so, the schools have expanded their facilities and have made commitments to new

Digitized by Google

faculty and new programs which now must be sustained if the objectives are to be achieved. In addition, through the device of capitation, the government recognized the value of the establishment of a creative partnership between itself and the academic health centers for the purpose of permitting leverage through which national purposes could be achieved.

The Association is now proposing to continue the creative partnership in a modified form which combines pure and conditional capitation. Furthermore, the Association is proposing to deal with the vexing problem of capitation levels by relying specifically—in detailed legislative language—on a procedure for determining net educational expenditures developed in a study by the Institute of Medicine of the National Academy of Sciences as mandated by the Congress.

Providing a portion of the capitation support essentially without requirements other than maintenance of effort and normal financial accountability continues the federal responsibility for meeting some part of basic undergraduate medical education costs. This is a concept originally recommended by the Carnegie Commission on Higher Education, endorsed by the Administration, and supported by the Association. It is a concept also supported by the Institute of Medicine to (in its words): "help assure the stability of both the public and private institutions and the maintenance of proportionate levels of state assistance, tuition, and the philanthropy."

Coupling a portion of the capitation support to compliance with certain conditions acknowledges the schools' responsibility to contribute improvements to the nation's health care particularly with respect to aggregate personnel supply, geographic distribution, and specialty distribution. The responsibility of the schools goes beyond mere numbers of M.D. graduates; it includes the kinds of training experiences available for medical students and the kinds of health care delivery systems being developed to provide needed health services. The Association is confident that past achievements can be sustained and that new achievements can be recorded under its proposed capitation system in assisting the development of new kinds of physicians and improved methods of delivery.

GEOGRAPHIC DISTRIBUTION IMPROVEMENT ASSISTANCE

Health Manpower Education Initiative Awards

Revised to support area health education centers which are to be used for remote-site undergraduate and graduate training in primary care, for continuing medical education of local health personnel, for general health education of the public, provided that each such center be located in an underserved area and include participation by a medical school.

Authorization is $40–$70–$75 million.

Shortage Area Support

Provide project-grant assistance for academic medical centers to provide professional support and backup services for health care personnel or organizations, such as NHSC Health Care Delivery Units, in underserved areas designated under Section 329.

Authorization is $10–$20–$30 million.

SPECIALTY DISTRIBUTION IMPROVEMENT ASSISTANCE

Primary Care Residencies

Authorization is $40–$50–$60 million.

Primary Care Training

Provide project-grant assistance for undergraduate training in primary care in ambulatory settings.

Authorization is $10–$15–$20 million.

Comments

The Association believes there is a useful role for the project-grant approach to financing selected activities in health professions schools. This approach recognizes the incremental cost to the school of such a project and clearly separates the financial support for the project from the general pool of financial support for the basic undergraduate medical education program. Special projects serve as a vehicle for the health professions schools to participate in constructive change in the interest of improving the health and health professions education of the

Digitized by Google

nation. Competitive rather than formula awards strengthen the entire health professions education system by ensuring heterogeneity; homogeneity would produce rigidity and resistance to any change. Competitive awards also allow research and demonstrations without total system involvement.

This set of programs, some of them new and some old, is proposed as a supplemental to the recommended optional capitation conditions also dealing with geographic distribution and specialty distribution. The two sets of proposals are completely independent and yet could be used by schools in a complementary fashion. The independence of the two sets of proposals means that a school electing a geographic distribution project as a capitation activity, for example, has no automatic claim to geographic distribution improvement assistance and may not even choose to apply for any, although it could. The complementarity of the two sets of proposals could be demonstrated by a school which bypassed a geographic distribution capitation activity in one year while receiving geographic distribution improvement assistance, and which at a later time elected a geographic tion capitation project based on new capability established through the earlier assistance award.

OTHER SPECIALIZED ASSISTANCE

Special Projects

Continue present project categories, and add the following new categories:

Improve sensitivity of health care personnel to cultural attitudes toward health of persons with limited English-speaking ability;

Improve sensitivity of health care personnel to health problems of females;

Increased emphasis on rehabilitation medicine and sensitivity to health problems of handicapped persons;

Increased emphasis on the aging process and sensitivity to health problems of aged persons;

Encourage experienced health care personnel to locate in underserved areas.

Authorization is $75 million annually.

Recruitment of Disadvantaged Students

Provide project-grant assistance for recruitment of disadvantaged students.

Authorization is $20 million annually.

Bilingual Training Centers

Provide project-grant assistance for up to four bilingual health training clinical centers in affiliation with academic medical centers.

Authorization is $2.5 million annually.

General Health Education

Provide project-grant support for projects to educate the public about health.

Authorization is $5–$10–$15 million.

Comments

This series of programs provides project-grant support for efforts to deal with a range of other important national health problems. Again, some of the programs are new and some old. They are grouped by the Association separately from programs dealing with geographic and specialty distribution because they deal with different, and separate, sets of issues. The issues are important, but medical schools have differing capabilities for dealing with them. Unlike geographic and specialty distribution, which are nationwide problems requiring nationwide remedial efforts, these problems may be dealt with effectively on a school-by-school basis. Thus they are not suggested as optional capitation activities.

OTHER PROVISIONS

National Advisory Council Membership

Revise the composition of the 20 appointed members to be 12 representatives of health professions schools, including at least six persons experienced in academic health center administration; two full-time health professions students; and six members of the general public.

FMG Immigration

Amend the Immigration and Nationality Act to remove special preference visas for alien physicians.

Graduate Medical Training

Designate the Liaison Committee on Graduate Medical Education as the agency

Digitized by Google

responsible for accrediting graduate medical education programs. Authorize the Secretary with approval of a special advisory group to designate the number of accredited residency positions which are to be eligible for third-party reimbursement.

Health Manpower Report

The Secretary with approval of a special advisory commission is directed to report annually to the Congress on national health personnel needs by professions, by specialty, and by geographic region. The advisory commission shall consist of 10 persons appointed by the Secretary who by their training and experience are eminently qualified to assess health personnel needs, provided that no member of the group shall be an employee of the federal government.

National Health Service Corps

Provide that Corps delivery of health services is to be through 4–5 physician Health Care Delivery Units, comprised of physicians and appropriate other health personnel.

Application for a Unit would be by an underserved area or group of areas, after consultation with the appropriate medical society, which can provide assurances of sharing the cost of providing and equiping adequate facilities for a Unit provided that the Secretary may waive the cost-sharing requirement if a community is financially unable to meet it.

Underserved areas in remote locations with populations unable to support a Unit may enter agreement with an existing Unit to provide services on a circuit-rider basis.

Underserved areas covering large distances may enter federal cost-sharing agreements to provide appropriate communications and transportation systems.

Health Care Delivery Units may enter agreements with academic medical centers to provide backup for activities and develop appropriate referral patterns for patient requiring specialized care; to provide technical assistance in the development of appropriate communication and transportation networks; to provide continuing education for Corps personnel; to provide education for the public on health.

Authorization is $25–$35–$50 million.

These recommendations have been grouped together because each has an important—perhaps critical—contribution to make to solving national health personnel problems, and none involves Federal assistance to health professions schools. Three of the recommendations deal with the overarching national problems of geographic distribution, specialty distribution and foreign medical graduates.

In the 1974 debate over improving geographic distribution, there was agreement that the National Health Service Corps was the best available method for providing personnel for underserved areas. Little attention was paid in the debate to the Corps health care delivery methods. Since then, the Association has looked more closely at those methods and has developed some important recommendations for change. The present health services delivery methods used by the Corps and the presently required community involvement in, and support of, Corps activities should be revised. Instead of assigning individuals to underserved areas, the Secretary should assign NHSC Health Care Delivery Units. Such a unit would be composed of 4–5 physicians and appropriate numbers of other health personnel, including physicians' assistants and nurse practitioners. Instead of passively requesting Corps personnel, an underserved area (or group of areas) would be required to share with the Federal Government the cost of providing and equipping adequate facilities for a health care delivery unit. (This requirement could be waived by the Secretary when its imposition was beyond the financial resources of the applying area or group of areas.) Shortage areas, or groups of such areas, eligible for a health care delivery unit should have sufficiently large numbers of people to support such a unit. A circuit-riding option should be available for isolated areas, which would be served by personnel from the closest health care delivery unit. Appropriate communications and transportation systems would be provided, at shared government-community expense, in areas covering large distances. Health care delivery units could charge on a fee-for-service or prepayment basis. Such a proposed reorganization of NHSC services delivery would allow continued peer communication and time-off coverage, would help to diminish cultural shock for Corps personnel, would help to provide for quailty assurance through peer audit, journal clubs, etc., would provide a services delivery nucleus large enough to permit the assignment of undergradu-

Digitized by Google

ate and graduate medical training experiences, and would improve the utilization of new health professionals within the Corps.

In the 1974 debate over improving specialty distribution, there was agreement that some national group should be charged with supervision of graduate training positions. The reasons were to insure a close matching of residency positions and numbers of U.S. medical school graduates, and to distribute specialty training according to national needs. Opinions differed as to whether the national group should be Federal or non-Federal. Now the Association is proposing a mechanism that incorporates both Federal and non-Federal elements. The Federal element is the HEW Secretary: the non-Federal element is a special advisory panel composed largely of experts and others from outside the government. Together they would carry out the previously agreed-upon purposes. It seems clear that at present there is an excess number of residency positions. In 1972, for example, of the 20,000 first-year positions offered, 60 percent were filled by U.S. graduates; the rest were filled with foreign graduates or were vacant. There also seems to be general agreement that at present there are too few primary care physicians—in family practice, general internal medicine, general pediatrics, and obstetrics and gynecology—and too many surgeons. These twin problems of residency numbers and distribution are the ones that the Secretary and the Advisory Panel would work together to correct. Their principal tool would be money: only accredited positions designated by them would be eligible for third-part reimbursement. The Association is confident this recommendation would be effective. Once in place and functioning, it should work to reinforce and to support similar efforts by the schools at improving specialty distribution carried out as capitation activities or special projects.

Foreign medical graduates comprise an excessively large proportion of physicians in the United States. For example, in 1972, one-fifth of all physicians in the United States were graduates of foreign medical schools; one-third of all residents in U.S. hospitals were graduates of foreign medical schools, and nearly half of all physicians newly licensed to practice were graduates of foreign medical schools. Fifteen years earlier, less than 6 percent of all physicians in the United States were graduates of foreign medical schools. Many FMG's come to the United States for graduate medical training, and thus efforts to more closely match residency positions and U.S. medical school graduates will have some effect on training opportunities for FMG's. Some FMG's come to the United States and find positions with various public health care institutions; thus availability of graduate training positions has little effect on these FMG's. The Association's recommendation requires alien physicians who are applying for permanent residence to pass the same examination that American students must take and to demonstrate competence in English and provides that their admission be contingent on a finding by the HEW Secretary that the admission will not lead to a surplus of practitioners in a specialty or geographic area in which there is no present or projected need. It is estimated that the Association's proposal covers some 6,000 of the 7,000 alien physicians who entered the United States as immigrants in fiscal 1973. In essence, the FMG problem is an immigration issue and it is best dealt with through immigration laws.

The Association recommends that the provisions of H.R. 3279 be strengthened with regard to the immigration of foreign medical graduates by adding the following provisions:

1. Commencing July 1, 1976, the sponsorship of FMG's coming to the United States for graduate medical education as exchange visitor physicians should be limited only to accredited U.S. medical schools or to other accredited schools of the health professions;

2. The U.S. Government should enter into agreements with the governments of other countries in which the U.S. medical education system agrees to provide specific types of graduate medical education for individual physicians who have been designated to fill key educational, governmental or other professional posts in that country. Within the framework of government agreements, individual educational institutions in this country should make appropriate agreements with recognized educational agencies and institutions in other countries. Candidates selected for such educational experience in the United States would be required before entering into such training to meet standards of professional preparation established by the U.S. educational institutions and accrediting agencies; would be committed to return to their home countries on the completion of the agreed upon educational program; and would be assured of previously specified academic,

Digitized by Google

governmental or other professional appointments on their return to their home country.

3. The issuance of an exchange visitor visa should be contingent upon each FMG applicant submitting to the U.S. sponsoring educational institution acceptable evidence that he meets its standards of educational attainment; has demonstrated the potential to adapt to the cultural milieu in which he will be studying in the United States, as well as an effective mastery of the English language; and, if his educational experience is to include training at the level of hospital residency, that he has met a minimally acceptable standard of professional competence for assuming responsibility for patient care under supervision;

4. The duration of graduate medical education in the United States of all exchange visitor physicians should be specified in advance of entering into such training; be limited in general to two years or less; and be subject to extension only on the request initiated by their governmental and institutional or agency sponsors, assuring them of employment on completion of the extended training period;

5. Amendments enacted in 1970 to the Immigration and Naturalization Act that permit exchange visitors to convert a temporary visa granted for educational and cultural exchange purposes to permanent immigrant status should be repealed; and

6. The granting of H–1 temporary visas to FMGs should be restricted to foreign nationals of "distinguished merit and ability" who have been invited by universities and other appropriate institutions and agencies to teach and to conduct research.

These Association recommendations would apply to the approximately 5,000 exchange visitor physicians who annually enter the United States. They presumably come to the United States for medical training unavailable in their countries, intending to return to their countries and practice. In fact, under authority of the 1970 immigration law amendments, many exchange visitor physicians seek to change their status to permanent immigrant, thus denying their home countries their newly acquired medical services. In many cases, exchange visitor physicians come from countries with severe physician shortages, and with poor records of personal health of the population. Again, this is essentially an immigration issue, and thus is best dealt with through immigration laws.

Mr. ROGERS. Thank you for your excellent statement and for providing us with the thinking of the association.

Mr. SCHEUER. No questions.

Mr. ROGERS. Dr. Carter?

Mr. CARTER. It is good to hear from the good doctor again. No. questions.

Mr. ROGERS. Do you agree there should be a limitation on residencies?

Dr. COOPER. Yes, we would propose, however, as I think you suggested in your discussion with Dr. Lee, that an advisory body working with the Secretary determine the rate at which a limitation in the number of residencies could be effected.

We have done a survey of some of the major teaching hospitals associated with medical schools. In some cases it will be difficult to shift very rapidly the distribution of residency slots. This can be in part remedied by providing an adequate number of other health professionals to help carry out some of the functions which residents now carry out.

We think this problem which is now being studied by the Institute of Medicine should be given to the Secretary and an advisory group to make certain they develop the most effective and rational plan in reducing the numbers and redistributing the number of slots among the various specialties.

Mr. ROGERS. The Secretary doesn't want the ball.

Digitized by Google

Dr. COOPER. I think you ought to give it to him and see. This is one I think he can't regionalize, either.

Mr. ROGERS. I think it would be well for you to let us have your thinking as to how this should be done, over what time period, what steps should be taken. And what the impact on the provision of services might be.

[The information requested was not available to the committee at the time of printing.]

Mr. ROGERS. As I recall, you feel that one-half of capitation should be unattached and that it simply should be turned over to the school?

Dr. COOPER. Yes, sir; because as we have tried to point out, the schools are under extreme financial pressure and just to maintain the level of their ongoing programs, they are going to have to have support.

In addition to that, we think—and I could give you my assurance—that most, if not all, of the institutions will carry out the various requirements for the additional amount of capitation that is provided.

I think one of the things we must remember is that the appropriations process never meets the authorization levels granted by a committee; and that even with the levels that we have suggested, we really anticipate a substantially smaller level of capitation with no strings tied to it than the schools are now receiving.

Mr. ROGERS. But you would agree that we still want to accomplish certain goals?

Dr. COOPER. No question about it.

Mr. ROGERS. I would think that the American people would want some assurance that the Federal support would be used to accomplish nationally perceived goals.

Dr. COOPER. Our proposal is that some of the support be provided to institutions to help them stay open, so that we can meet national goals by maintaining what we already have. In addition to that, that schools should be provided with funds which would enable them to expand and extend the programs which they are already engaged in for meeting some of the problems of geographic and specialty distribution and aggregate supply.

Mr. ROGERS. I wonder if any studies have been done as to the actual need for the medical services provided by each of our institutions in relation to the base populations served?

Dr. COOPER. Yes; but unfortunately they are not coordinated programs. There have been a number of studies carried out by schools on physician needs. The State of Washington carried out such a study as have other States.

There is a very extensive study, apparently, underway by the National Center for Health Statistics which may be available, as I understand it, next year. It will report on a national survey of health care needs and the way in which those needs can be met by health professionals.

Mr. ROGERS. What I am thinking about, we still are using the very antiquated method of saying how many physicians we should produce or how many we need simply by 200 or 100,000 which doesn't really mean anything.

Maybe the 100,000, that particular 100,000 in that locality with the environmental setting and so forth, and the particular problems of the

Digitized by Google

area they may need 5,000 physicians for 100,000 to give proper care. This committee is under a handicap and in fact the whole medical community is, in trying to project needs when we go simply on a basis of numbers. Often many of those that they list as practicing are not really practicing or they may not be taking any new people at all as exists often in my area; many doctors simply have a full load and they are not going to take any more even though your population increases.

Dr. COOPER. As you and I have discussed on previous occasions, the significantly increased output of the medical schools, which began in 1968, is just now appearing. These physicians are just now entering into independent practice, and the numbers of physicians in relationship to the population will continue to increase. We really have had no experience with what is going to happen with this substantially larger number of physicians.

We have maintained a physician population ratio of 130 to 140 per 100,000 for a great number of years. Now this is going up and will continue to go up very rapidly during the next two decades. I think it will continue for as far ahead as we can see. And we still don't know what effect the increased output that has been supported by these Federal funds is going to have, either on geographic distribution or on specialty distribution.

We do agree that other methods for trying to solve geographic and specialty distribution are needed. Nevertheless, a physician-population ratio of 200 per 100,000 we have never had any experience with.

Mr. ROGERS. Other nations have.

Dr. COOPER. Well, relatively few. The U.S.S.R. has 230.

Mr. ROGERS. Austria, Israel, there are a few.

Mr. SCHEUER. Scandinavian countries, I would think.

Dr. COOPER. No; they are lower. Great Britain, lower. Canada, lower. There are only three health professionals per physician in the U.S.S.R. In this country we have 10 health professionals to each physician.

Mr. ROGERS. They probably don't have as many foreign medical graduates, do they?

Dr. COOPER. No; although they have a fair number, I don't think they stay. They train a fair number of medical students from Africa and have a large medical school devoted to these students.

Mr. ROGERS. They don't stay?

Dr. COOPER. No.

Mr. SCHEUER. They have a better distribution of their talents, they have ways of telling people where to go that we don't have.

Dr. COOPER. They still have problems, though, and in parts of Siberia, there are still no fully qualified physicians. They do assign students for a period of 5 years after graduation and after that time they have some opportunities to move around. It is a much more efficient system than hopefully we will ever have in this country.

Mr. ROGERS. I assume your 200 per 100,000 includes foreign medical students?

Dr. COOPER. No; it includes the foreign medical graduates in the country now. Even if we were to reduce emigration we would still have those foreign-trained physicians. The ratio of physicians to population would be much higher, around 220 to 225 per 100,000, with con-

Digitized by Google

tinued immigration of FM60 at the level of the average of the last 5 years.

Mr. ROGERS. Tell me this, how have faculties increased within the last 10 years; has there been any increase in faculties?

Dr. COOPER. There has been a substantial increase in the number of faculty members.

Mr. ROGERS. Shouldn't we have held them at a certain level just as you think we should hold practicing physicians? If we have 200 per 100,000, maybe we should hold faculty at 20 per 500 or something. I just wonder if that should be equated, or hasn't there been a comparable increase?

Dr. COOPER. In 1963, basic science and clinical faculty totaled 13,671; in 1973, it was 33,550. During this period, the basic science faculty doubled, the clinical faculty, about two and a half times.

I would point out that through both the interests of society and also some of the actions of the Congress, considerably more demands have been placed on the academic medical center. New faculty has not been added just to educate medical students.

Mr. ROGERS. Many have. As I recall, instructors increased 4 to 1. I saw some figures about a year ago, comparing the faculty increase to the student body. It was rather a dramatic increase. I was just making the point that I am not sure that the figure of 200 per 100,000, which seems to be large to you—in view of the change in society, and the change of demands, and with national health insurance—could be equated any better than maybe the dramatic increase in faculty to the student body.

Dr. COOPER. This is like saying——

Mr. ROGERS. I presume the quality has been improved?

Dr. COOPER. That the total number of employees of General Motors divided them by the number of people involved in Cadillac production, would be the ratio of workers to the number of Cadillacs produced, which is not true.

Mr. ROGERS. I don't think you use a mechanized system in medical education. I don't think you have a line that everybody just stamps something on the student; it is a more personalized thing.

What was the basis for your increased faculty?

Dr. COOPER. The major increase in faculty has come about because of noneducational programs which the medical centers are now involved in.

In addition, the number of other students for whom a major part of the education involve the medical school faculty have increased much more dramatically than the number of medical students. The full-time equivalent in the last 5 or 6 years has gone up from 76,000 to 109,000. Thus, there has been a substantial increase in the number of other kinds of students. Affiliated hospitals are delivering more than 25 percent of all inpatient care in the country and a rapidly increasing proportion of all of the outpatient care. With the development of medical practice by the faculty——

Mr. ROGERS. The care that those facilities are delivering is not all being done by medical school facilities, though. Don't your residents deliver much of that care?

Digitized by Google

Dr. COOPER. Right; the number of residents has gone up but residency programs require supervising physicians and instructors.

Mr. ROGERS. That is what I am saying. You have dramatically increased all of this teaching paraphernalia compared to the student bodies.

Any other questions?

Thank you so much. Your testimony has been most helpful and we will be in touch, I am sure, to get your views and help as the committee acts on this bill further.

This concludes the hearings for this afternoon. We appreciate your patience.

We will adjourn until 10 tomorrow morning.

The committee stands adjourned.

[Whereupon at 4:50 p.m., the subcommittee adjourned to reconvene at 10 a.m., Friday, February 21, 1975.]

HEALTH MANPOWER PROGRAMS

FRIDAY, FEBRUARY 21, 1975

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE ON HEALTH AND THE ENVIRONMENT,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
Washington, D.C.

The subcommittee met at 10 a.m. pursuant to notice, in room 2322, Rayburn House Office Building, Hon. Paul G. Rogers, chairman, presiding.

Mr. ROGERS. The subcommittee will come to order, please.

This morning we are continuing our hearings on health manpower legislation.

The problems of geographic maldistribution, specialty maldistribution, and the influx of foreign medical graduates are of great concern to this subcommittee. One of the principal reasons for these problems in the lack of coordination of medical residency training programs in the United States.

The total number of residency positions in the United States far exceeds the total number of graduates of U.S. medical schools available to fill them. The excess amounted to over 21,000 positions last year. As a result over 33 percent of the residency positions in this country are filled with foreign medical graduates. Moreover, the balance among the positions is badly skewed away from primary care specialties toward the medical subspecialties, surgery and the nonpatient care specialties, despite a demonstrated need in this country for more primary care. Also, most residency training is located within large urban areas which demonstrate little if any need for more physicians.

The ability of our subcommittee to develop legislation designed to influence residency training has been greatly facilitated by the formation of the Coordinating Council on Medical Education. The CCME, which is comprised of representatives of the American Medical Association, the American Hospital Association, the Association of American Medical Colleges, the American Board of Medical Specialties, and the Council of Medical Specialty Societies, constitutes a recognition by the profession of its responsibility to influence graduate medical education in order to be responsive to the health needs of this country.

The legislation on which we are conducting hearings is intentionally designed to afford the profession, as represented by the CCME, to perform the difficult but necessary task of designating medical residency programs in the United States.

We are delighted that our first witnesses this morning are a panel representing the CCME.

Digitized by Google

We welcome to the witness table Dr. William D. Holden, American Board of Medical Specialties; Dr. Leo Gehrig, vice president, American Hospital Association; Dr. Tom Nesbitt, Speaker, House of Delegates, American Medical Association; Dr. John Cooper, president, Association of American Medical Colleges; and Dr. C. Rollins Hanlon, president, Council of Medical Specialty Societies.

We welcome you gentlemen to the committee. Your statements will be made a part of the record in full if you wish to summarize and you may proceed as you desire.

STATEMENTS OF A PANEL REPRESENTING THE COORDINATING COUNCIL ON MEDICAL EDUCATION:

WILLIAM D. HOLDEN, M.D., IMMEDIATE PAST PRESIDENT, AMERICAN BOARD OF MEDICAL SPECIALTIES AND CHAIRMAN, COMMITTEE ON PHYSICIAN DISTRIBUTION, CCME;

LEO J. GEHRIG, M.D., VICE PRESIDENT, AMERICAN HOSPITAL ASSOCIATION;

TOM E. NESBITT, M.D., SPEAKER, HOUSE OF DELEGATES, AMERICAN MEDICAL ASSOCIATION; ACCOMPANIED BY C. H. WILLIAM RUHE, M.D., DIRECTOR, DIVISION OF MEDICAL EDUCATION, AMA AND SECRETARY, CCME; AND LEONARD D. FENNINGER, M.D., SECRETARY, ADVISORY COMMITTEE ON GRADUATE MEDICAL EDUCATION, COMMITTEE ON EDUCATION;

JOHN A. D. COOPER, M.D., PRESIDENT, ASSOCIATION OF AMERICAN MEDICAL COLLEGES; AND

C. ROLLINS HANLON, M.D., F.A.C.S., PRESIDENT, COUNCIL OF MEDICAL SPECIALTY SOCIETIES

Dr. HOLDEN. Mr. Rogers, with your permission, we would like to each make a statement and then respond to any questions that the committee would like to present to us.

Mr. ROGERS. That will be excellent.

For the reporter, it might be well if you would identify everyone in their positions at the table.

Dr. HOLDEN. At my far right is Dr. Hanlon; at my right is Dr. Cooper; to the far left Dr. Nesbitt, and to my immediate left, Dr. Gehrig.

Mr. Chairman and members of the committee, I am Dr. William D. Holden, immediate past president of the American Board of Medical Specialties, director of the Department of Surgery at Case Western Reserve University School of Medicine, member of the liaison committee on graduate medical education, and chairman of the committee on physician distribution of the coordinating council on medical education.

I am here today as a representative of the American Board of Medical Specialties. It is my understanding that the purpose of the committee's invitation to testify today is to elicit comments on proposed legislation affecting health manpower and that the proposals restate

Digitized by Google

those contained in the Health Manpower Act of 1974, H.R. 17084, title XIV. I am pleased to have the opportunity to discuss the proposed legislation.

Section 1401 (a)1A of H.R. 17084 designates that after calendar year 1977, the number of first year positions in any accredited medical residency shall not exceed the number prescribed by an agency approved by the Secretary of Department of Health, Education, and Welfare and that the number of first year positions may not exceed 125 percent of the estimated number of graduates from accredited medical schools in the preceding year.

The intent of this proposal appears twofold, one, to identify a voluntary agency that will designate the number of residencies in each specialty in order to achieve a greater output of primary care or family oriented physicians and to reduce the number of specialists being educated where an existing or projected excess can be identified; Two, to introduce a mechanism to reduce stringently the number of foreign medical graduates entering approved graduate programs in this country.

The emphasis on first year positions in accredited residencies will not in any obligatory fashion increase the number of primary care physicians who are classified as general internists and general pediatricians since a progressively larger number of medical and pediatric residents who complete the requirements for the American Boards Internal Medicine and Pediatrics proceed to complete residencies or fellowships in the subspecialties of medicine and pediatrics. There are 12 such subspecialty categories that provide board certification. Examples of the 12 are cardiology, rheumatology, gastroenterology, and nephrology.

If the whole structure of graduate medical education is to be manipulated to produce more primary care physicians, attention should be directed to the numbers of physicians completing residencies and fellowships rather than the number entering general residencies.

The ceiling of 125 percent of the preceding year's U.S. medical graduates will indeed limit the number of foreign medical graduates who can compete successfully for residency positions in this country. With approximately 15,000 U.S. medical graduates in 1977, the maximum number of foreign medical graduates who could enter U.S. residencies would be 3,750. Presumably these would be well or reasonably qualified to accept positions in this country.

This will not solve the principal problem of permitting unqualified foreign medical graduates to enter into the patient care setting in this country. Unless attention is directed to both immigration policies and licensing procedures, there will continue to be a large influx of foreign medical graduates into the so-called underground, a complex and amorphous situation where the opportunity for monitoring the quality of care provided is essentially nonexistent.

It should also be noted that establishing national quotas for the annual production of specialists of all types will not in itself solve the problem of the adequate delivery of comprehensive medical services to all people.

House Report 93-1382, entitled National Health Policy, Planning and Resources Development Act of 1974, which is now law, established

Digitized by Google

a complex system of planning for the effective utilization of health care resources on a regional basis—a geographic area with a defined population for which all required resources can be made available. Among those resources should be physicians of all specialty categories as well as all other health providers. The total number of physicians and the mix of specialists will vary significantly from one region to another depending upon the cultural and economic characteristics of the population as well as upon such indirectly related factors as concentration of people, industrial characteristics, adequacy of housing, education facilities, and many others.

The needs for the region's physician population will not only vary because of these factors but should be determined by the regional agency responsible for the planning and distribution of resources. Regulation of the number of specialists produced, whether by federal legislation or by the assumption of this responsibility by organized medicine, will have to be responsive to regional quotas and needs.

Section 1403(a)(2), referring to the designation of the number of first year positions in residencies by an agency, states: "in determining the number of such positions in any such accredited program the designated or established agency shall (a) take into consideration the report made with respect to the study conducted under section 15(c) of the act of December 31, 1973 (P.L. 93-233) and the report made with respect to the study conducted under section 801 of the Health Manpower Act of 1974."

There is an implication in the statement that the designated agency in making its decisions should attend only to these reports, whereas many excellent studies already completed provide a mass of information about the specialty and geographic distribution of physicians. An example is "The Study of Surgical Services for the United States" conducted by the American Surgical Association and the American College of Surgeons. It will be published this spring.

If the statement in 1403(a)1(A) contained an insert, the agency would have more freedom to examine all data and information relevant to physician manpower. The statement might read "the established agency shall take into consideration the reports made with respect to studies of medical services and manpower including the study conducted under 15(c), et cetera."

When the Committee on Physician Distribution of the CCME was established in March 1973, its members were aware of the need for a comprehensive analysis and solution of the physician manpower problem. The committee felt that its most compelling responsibility was to do its utmost to change the environment within medical schools, teaching hospitals, and specialty boards so that more graduating medical students would be attracted to careers of primary care in family medicine, general internal medicine, and general pediatrics.

This report has been accepted by the parent bodies of the CCME and is now being distributed to all persons and agencies concerned and is being published. Many of the convictions held by the Committee on Physician Distribution and the CCME expressed in this report became widely known while the report was being developed. They have already influenced significant changes in schools of medicine, university hospitals, and the specialty boards. Dr. Nesbitt will refer to these a little later.

Digitized by Google

The committee in approaching the ultimate task of recommending policy for the specialty and geographic distribution of physicians appreciated that no valid projections of specialty needs could be made without addressing the question of the role of foreign medical graduates in the health care delivery system. Accordingly, the second effort of the committee was to produce a report on the foreign medical graduate. This report is the most comprehensive document on the subject and contains 44 recommendations addressed to multiple private agencies concerned with medical education and health care as well as several departments of the Federal Government and State legislatures.

The CCME has approved the report, as have two of the five parent bodies, including the American Board of Medical Specialties. All five have approved the establishment of an invitational conference in April 1975 sponsored by the CCME. Representatives from all private and governmental agencies are being invited and the agenda will consist principally of the CCME's report on the foreign medical graduate. It is the intent of the CCME's planning committee for this conference to arrive at a consensus about the implementation of the report's recommendations that are accepted or modified in order to permit the medical educational institutions in this country to assist only in the education of those FMG's who are unequivocally qualified to participate and benefit from such experience.

The third report that the Committee on Physician Distribution is preparing at the present concerns the actual distribution of physicians by specialty and geography. It is assisted in this task by the availability of all the information on physicians contained in the files of the American Medical Association. This is the most complete bank of information on physicians in the country.

The committee is also assisted by the availability of multiple reports of studies done by many specialty organizations. Some have already projected the production of excessive numbers of certain specialists and have recommended that a mechanism be created within organized medicine that will assure a better distribution of specialists in the future.

There are unequivocal changes taking place spontaneously in medical education that will lead to a more effective national distribution of physicians, and many feel that these changes will meet manpower needs in the foreseeable future. Others feel that a variety of policies devised and announciated with conviction by organized medicine can accelerate the spontaneous changes for improvement already occurring. Still others feel that some form of arbitarary regulation with or without the introduction of appropriate incentives is the only way in which the physician manpower problem will be resolved.

It is almost an axiom that young physicians will select and compete for desirable options but will not engage in the type of medical practice that conflicts with their personality requirements, or if they do, the practice is conducted without their full commitment.

The stipulation in the legislation that the Coordinating Council on Medical Education and the Liaison Committee on Graduate Medical Education be given the first opportunity for recognition by the Secretary for the specific purposes enumerated in the legislation is appropriate only if it is accepted that these voluntary agencies, established for specific purposes by organized medicine, become arms of the Fed-

Digitized by Google

eral Government and subject to whatever requirements the Secretary may wish to impose upon them.

The many segments of organized medicine with their fragmented authorities have already disposed of many of their vested interests in uniting behind the LCCME as the single accrediting agency for graduate medical education and identifying the CCME as a body within which all major national policy affecting medical education will be approved.

The CCME is intentionally engaged in attempting to devise policies for the educational establishment that will bring the best of medical services to all people without creating an environment of adversity in the process. It recognizes the responsibility and indeed obligation of the Congress to see that the people's needs are met with an adequate supply and distribution of qualified physicians.

Legislation that identified the responsibility of appropriate medical organizations to accomplish stated goals and the required monitoring of the organizations' productivity by the Secretary without introducing specifications would provide additional incentive and challenge for the medical profession to establish such mechanisms, procedures, and agencies as are required to meet the needs of the people.

It is my personal belief that organized medicine is highly sensitive to the problem of physician manpower and the various aspects of maldistribution. It has already formally taken a firm stand on the need for more primary care physicians. It has stated that 50 percent of the graduates of American medical schools should be entering and graduating from primary care residencies.

There is also a realization that this change must be accomplished within the next 2 to 4 years, not in 1985. These premises inevitably lead to the adoption of whatever mechanisms are required to accomplish the goal.

The CCME's report and conference in April 1975 should resolve the problem of foreign medical graduates, if several departments of the Federal and State governments are responsive to the recommendations. There is no question about the several segments of organized medicine desiring immediate resolution of this problem.

The problems of specialty maldistribution are already in the process of being resolved voluntarily and require little more than the annunciation of a strong national policy by organized medicine and more deliberate direction and attention to the process of accreditation.

Geographic distribution will only be resolved on a regional basis within broad and permissive national policies directed to total numbers and the mix of specialists.

The resolution of these issues requires the attention of both the Federal Government and organized medicine. The actual manipulation of the educational process should, and in fact will have to be, accomplished by the medical profession. The assistance and challenge of the Federal Government can appropriately augment the efforts of medicine.

It has been a privilege for me to appear before this committee and I am grateful for the opportunity.

Mr. ROGERS. Thank you, Dr. Holden, for your statement.

The next panelist, Dr. Gehrig.

Digitized by Google

STATEMENT OF LEO J. GEHRIG, M.D.

Dr. GEHRIG. I am Dr. Leo Gehrig, vice president of the American Hospital Association. Our association represents more than 7,000 member institutions—including most of the hospitals in the country, numerous extended and long-term care institutions, mental health facilities, hospital schools of nursing—and over 20,000 personal members. We welcome the opportunity to testify before this subcommittee on the important subject of health manpower.

I have a full statement that addresses H.R. 2957, the Nurse Training Act of 1975; H.R. 2956, the Health Manpower Act of 1975; and H.R. 2958, the National Health Service Corps program.

In the interest of time, I will summarize a few points of our testimony and request that you put the full statement in the record [see p. 491].

Our interest in health manpower relates not only to the utilization of personnel for the delivery of high-quality care in our institutions, but also to the critical role of many hospitals in training health workers.

At present, some 64,000 nursing students are enrolled in hospital schools of nursing, and most of the nursing students trained primarily in academic settings receive their clinical education in hospitals. Moreover, some 11,160 interns, 45,000 residents, and a large number of allied health trainees are receiving all or significant portions of their education in hospitals.

I would like with your permission, Mr. Chairman, now to draw attention to the Nurse Training Act.

The hospitals of this country, as of October 1974, operated approximately 462 diploma schools of nursing. Last year, approximately 32 percent of all nursing students graduated from these diploma schools.

I cite these statistics to point out that diploma schools of nursing continue to be a vital resource for the education of nurses in this country.

Mr. ROGERS. What was the percentage graduated?

Dr. GEHRIG. Thirty-two percent of those graduated came from diploma schools.

We want to emphasize to you our belief that we must utilize fully every available educational resource if we are to meet our nursing needs. We are firmly convinced that a program of adequate Federal support for all nursing education programs is essential.

The chairman is well aware of the difficulty of getting statistics about shortages, but in the interest of shedding some further light on it, the AHA during recent months surveyed the chief executives of each of the State hospital associations in order to determine the nursing situation in these States. Granted, this is a qualitative sort of analysis, but you may be interested to know 36, or 72 percent, of the States reported shortages of registered nurses that appeared relatively statewide. That left 14 who viewed no overall statewide shortages but these indicated that they had serious shortages in certain areas, especially in rural and low-income population areas.

This indicates to us the shortage of registered nurses is real, despite reports from some quarters to the contrary. Moreover, hospitals have made concerted efforts in the interest of patient care to broadly expand their recruitment programs, to provide increased pay and fringe bene-

Digitized by Google

fits to their nursing staffs, to retrain nurses who have left the workforce, to expand the use of licensed practical nurses wherever possible, and have attempted to recruit trained nurses from foreign countries.

Yet, despite all of these efforts, the shortage of nurses for the health-delivery system remains a serious problem. It has necessitated, in shortage areas, a decrease in some needed hospital services, or in some instances their elimination; and it has inevitably lowered the quality of nursing care. These circumstances, we believe, underscore our contention that nursing education programs must be supported.

Mr. ROGERS. I want to commend the American Hospital Association for making this survey because, as you say, we get so many contrary reports and I think this is pretty up to date. This was done in the last month?

Dr. GEHRIG. Yes, sir.

Mr. ROGERS. Which indicates 36 States report an overall shortage throughout the State, and 14 say there is no overall statewide shortage but there are many areas where there would be shortages.

Dr. GEHRIG. A majority of those 14 said they had a location in which they had serious shortages.

Mr. ROGERS. Thank you.

Dr. GEHRIG. An important effort toward meeting the need for institutional support is recognized, Mr. Chairman, in your bill, H.R. 2957, in its section providing for extension of the capitation grant authority. Such capitation funds are important to diploma schools, since these institutions typically receive little or no financial support from State and local government.

H.R. 2957 provides for the continuation of annual capitation grants for schools of nursing. The dollar amount provided, however, represents but one-sixth of the net average annual expenditure for schools of nursing as determined in the IOM study. We believe that these levels are too low and we would recommend that capitation assistance be authorized at one-third of the net annual educational expenditures.

Another issue in the capitation grant program is the requirement, which would be continued under the terms of H.R. 2957, for enrollment increases as a condition of receiving such grants.

Many schools which have received capitation grants in the past and have expanded their enrollments accordingly, are now unable to expand further. They would therefore be ineligible for capitation grants because of the requirement for continued enrollment increases, despite the fact that they will carry previously added students until graduation and hopefully maintain this increased class size.

We energetically supported that in terms of the earlier legislation; but I must say, Mr. Chairman, this is a problem now. Many of the schools who have received capitation grants in the past have increased their enrollments accordingly and are now in the situation of being unable to expand further. The reasons are many—lack of facilities, the lack of faculty, a host of these things.

If you have a requirement for continued increase, it means that these schools which have increased their enrollment—and we hope will maintain this increase in the quality of education—will have very real difficulty in obtaining the capitation support that your bill provides.

We would certainly like to recommend, Mr. Chairman, the elimination of the enrollment increase requirement. We would urge, however,

Digitized by Google

the continuation of the requirement that all schools maintain at least their present level of training.

I would like to move briefly to the loans and scholarships. Again, your bill extends authority for nursing student loans and scholarships. We do not agree with the administration's position that these programs should be transferred or phased out.

We are convinced that these loans and scholarships are essential in assisting many nursing students who cannot otherwise meet the financial requirements of enrollment in schools of nursing.

In summary, Mr. Chairman, the American Hospital Association commends the committee for its action and endorses the provisions of H.R. 2957, the Nurse Training Act of 1975. We believe that its enactment with the recommended modifications is basic to meeting present and future needs for this important segment of health manpower.

I might add, Mr. Chairman, I am sure Miss Connie Holleran would support that statement 100 percent.

Mr. ROGERS. I expect Connie might.

Dr. GEHRIG. I would now like to turn to the health professions training bill briefly. H.R. 2956 would include in the Public Health Service Act a new title XVII which would establish a program directed at the problem of physician-specialty maldistribution.

This new authority would establish (in section 1702) procedures for the Secretary of HEW to designate or establish an agency to accredit medical residency training programs in this country. If legislation is necessary in this area, we would support a provision that would permit the liaison committee on graduate medical education to be the agency designated for this task.

This new title XVII would also provide authority for the Secretary to designate or establish an agency to certify the number of first-year positions in accredited residency training programs which may be made available in any calendar year beginning after calendar year 1977.

The AHA, Mr. Chairman, testified before this committee with many of the same gentlemen at the table today, and in testifying indicated then, as we do now, that we do not believe that there should be Federal legislative intervention in this area, but that incentives and voluntary action such as has been carried out by CCME continue.

However, if a process for certifying medical residency programs is to be established in legislation—and we are really not proposing such to be done now—the AHA strongly recommends some specific changes in H.R. 2956 to imporve the development of the proposed certifying process, the details of which are spelled out in my longer statement.

Mr. ROGERS. In other words, you would have a phased-in program, more than at the end of 3 years?

Dr. GEHRIG. There are two basic elements in our statement. One is the timing of it. The second is the mechanics of its operation, and here we have tried to detail it in our statement.

If legislative action is taken in this area, we must be concerned with the immediate effect of such actions on the direct delivery of medical services in many teaching hospitals.

We are concerned that the direct delivery of medical services in teaching hospitals not be disrupted or reduced by enactment of this legislation.

Digitized by Google

There is no doubt that a diminution of numbers of residents in medical specialties will have an impact on physician services to patients in many teaching hospitals. A considerable amount of patient care is provided by residents in specialties that cannot be provided by primary care physicians-in-training or by physician extenders.

This problem is particularly true in many major teaching hospitals located in urban centers and on which large segments of low-income residents of inner cities depend for their care.

Before such changes are introduced, careful analysis should be made of their impact on patient care. Further, when changes appear indicated, adequate time must be provided for necessary adjustments to meet the needs of service.

It must be recognized also that necessary adjustments for service delivery, where adjustments are possible, often will necessitate the addition of full-time professionals and that this will have an increased cost implication.

The need to recruit full-time professionals, moreover, will often pose serious problems because of the lack of available individuals willing to work full-time in such a capacity. And we do not know the answer to this problem. We are certainly looking into the situation but today this is the fact, and I would like to underline this need in the delivery system as we look to the matter of manpower, its distribution and other problems.

If I could touch on one other subject, that is, of the alien physicians. We are aware you introduced H.R. 3279, a proposal of the Association of American Medical Colleges. Section 602 of that bill provides for amendment of the Immigration and Nationality Act and also includes other requirements on alien physicians.

In this connection I would like to call your attention again to the fact that alien physicians are providing essential services to patients in some areas and institutions in our country and they are providing a service as individuals that is very difficult to replace in some localities by an American-trained physician.

Such needs for alien physicians are a fact. They exist now and they probably will exist for a period in the future. We believe there should be included, should legislation be enacted here—and we are not proposing it—an appropriate waiver provision which would work to meet the needs of areas in trouble, and we feel this would be justified in hardship situations.

If this committee adopts the AAMC recommendation, we strongly recommend this waiver.

Mr. CARTER. Mr. Chairman, I happen to be familiar with some of the alien physicians. Some of them are fine and well-educated people, some are not so good. I can refer specifically to one particular hospital in a town in Dr. Nesbitt's State, euphemistically called "Bloody Bucket." The hospital is staffed principally by alien physicians. Years ago I had a very fine old friend who had a stroke caused by periarterio infiltration around an artery. He had this stroke and he recovered. Not too long ago I regretfully heard that he had passed away after surgery, which I believe was not indicated.

In another case, a friend of mine called me and said they wanted to do a laparotomy—an exploratory operation—at the "Bloody Bucket."

Digitized by Google

After I referred her to a specialist, I was told that she only had a mild case of hemorrhoids.

This has been some of my experience with some of our alien physicians.

Other alien physicians fill our State psychiatric institutions. In some States 100 percent of the medical staff are FMG's. The irony is that psychiatry is based in great part on communication between physician and patient; in most cases such communications is utterly impossible—I myself have had difficulty in communicating with them about patients.

The FMG problem is greater than we might realize, and I think that they should pass the same examination required of physicians in our country—and, also, that they should be required to pass an English test, too, because if they are functional illiterates we cannot expect them to function as physicians.

So I differ somewhat from what you say, Dr. Gehrig, although I respect your statement that there is need in some areas.

Dr. GEHRIG. I don't believe we are differing because I can agree with your comment, but I think there needs to be a real awareness, as you pointed out in your comments, that there are some that do an excellent job. And we do have some areas of extreme difficulty. We are not suggesting that we want second-rate medicine practiced.

Mr. Chairman, in conclusion, ours is a highly labor-intensive industry. Typically, in fact, more than half of a general hospital's budget, as you know, is allocated for labor costs. To provide needed health care to patients we must continue to work to develop the quantity and quality of health professionals to do the job and to face the increased demands for care in the future.

The efforts of this committee are very important to the task ahead. We believe the bills you have introduced, if they might be modified in some areas that we have highlighted, are essential and we support them.

I thank you for this opportunity.

[Testimony resumes on p. 499.]

[Dr. Gehrig's prepared statement follows:]

STATEMENT OF LEO J. GEHRIG, M.D.

Mr. Chairman, I am Leo J. Gehrig, M.D., Vice President of the American Hospital Association. Our Association represents more than 7,000 member institutions (including most of the hospitals in the country; numerous extended and long-term care institutions; mental health facilities; and hospital schools of nursing) and over 20,000 personal members. We welcome the opportunity to testify before this Subcommittee on the important subject of health manpower. I will address my remarks to H.R. 2957, the Nurse Training Act of 1975; H.R. 2956, the Health Manpower Act of 1975; and H.R. 2958, the National Health Service Corps Program.

The hospital field is greatly concerned about the health manpower shortages that exist in some areas and the maldistribution of health care personnel throughout the nation. The urgency and seriousness of these problems is evident when one considers the increasing complexity of many types of health services today, the need for increased accessibility and availability of services in urban and rural poverty areas, the demands for more comprehensive health care services for all, and the present efforts of Congress to develop a national health insuarnce program to meet these problems. On the other hand, when we look at our resources for the training of needed health manpower, we see programs that are facing

Digitized by Google

tremendous financial difficulties—difficulties such as inadequate funds for institutional support and for student assistance.

Our interest in health manpower relates not only to the utilization of personnel for the delivery of high quality care in our institutions, but also to the critical role of many hospitals in training health workers. At present, some 64,000 nursing students are enrolled in hospital schools of nursing, and most of the nursing students trained primarily in academic settings receive their clinical education in hospitals. Moreover, some 11,160 interns, 45,000 residents, and a large number of allied health trainees are receiving all or significant portions of their education in hospitals.

NURSE TRAINING

The hospitals of this country as of October, 1974, operated approximately 462 diploma schools of nursing with an enrollment of some 64,000 nursing students. Last year, approximately 32 percent of all nursing students graduated from these diploma schools. I cite this statistic to point out that although there have been substantial increases in other types of nursing programs, diploma schools of nursing continue to be a vital resource for the education of nurses in this country. We want to emphasize to you our belief that we must utilize fully every available educational resource if we are to continue to meet our nursing needs. We are firmly convinced that a program of adequate federal support for all nursing education programs is essential.

In an effort to evalaute the extent of the shortage of registered nurses, the American Hospital Association surveyed the chief executive officers of all of the 50 state hospital associations in order to determine the situation in each of the states. As a result of this review, the following were indicated:

—There is a shortage of registered nurses today in health care facilities in 36, or 72 percent, of all of the states; and

—Of 14 states in which no overall statewide shortage was apparent, a majority indicated serious shortages of available registered nurses in certain areas, especially areas of rural and low-income populations.

This review certainly indicates that the shortage of registered nurses is real, despite reports from some quarters to the contrary. Moreover, hospitals have made concerted efforts to broadly expand their recruitment programs, to provide increased pay and fringe benefits to their nursing staffs, to expand the use of licensed practical nurses in the place of registered nurses, and have attempted to recruit trained nurses from foreign nations. Yet, despite all of these efforts, the shortage of nurses for the health delivery system remains a serious problem in many areas. It has necessitated in shortage areas a decrease in some needed hospital services, or in some instances their elimination; and it has inevitably lowered the quality of nursing care. These circumstances, we believe, underscore our contention that nursing education programs must be supported.

Construction Assistance

H.R. 2957 provides for the extension of the existing authority to assist in the construction of new nurse training facilities and the replacement or rehabilitation of existing facilities. The bill would assign a new priority under this program to projects which expand a school's capacity to provide graduate training.

AHA's recommendation.—That Title I of H.R. 2957, providing for extension of the construction grant program, be supported.

Capitation Assistance

An important effort toward meeting the need for institutional support is recognized, Mr. Chairman, in your bill, H.R. 2957, in its section providing for extension of the capitation grant authority. Such capitation funds are especially important to diploma schools, since these institutions typically receive little or no financial support from state and local government. As you know, the Institute of Medicine (IOM) of the National Academy of Sciences completed a major study of "Costs of Education in the Health Professions" which determined that the average annual net educational expenditures per student in baccalaureate degree programs in nursing was $2,450; in associate degree programs, $1,650; and in the diploma programs, $1,500. While the average annual educational cost per diploma program student was $3,300, there was a $1,800 offset for reimbursed service. The IOM study then further went on to make the following recommendations:

"(1) The study group endorses a capitation grant program as an appropriate federal undertaking to provide a stable source of financial support for health professional schools.

Digitized by Google

"(2) The study group is of the opinion that capitation grants ranging between 25 and 40 percent of net educational expenditures would contribute to the financial stability of public and private health professional schools and would be an appropriate complement to income from tuition and gifts and support by state governments, all of which should be maintained as nearly as possible in their present proportions."

H.R. 2957 provides for the continuation of annual capitation grants for schools of nursing at the following levels: baccalaureate, $400 per student enrolled in the last two years of such schools; associate, $275 per student enrolled in the last year of the program; and diploma, $250 per full-time student. These figures represent just one-sixth of the net average annual expenditure for schools of nursing. We believe that these levels are too low, and we would recommend that capitation assistance be authorized at twice these levels, or one-third of the net annual education expenditures.

Another problem with the capitation grant program is the requirement, which would be continued under the terms of H.R. 2957, for enrollment increases as a condition of receiving capitation grants. This requirement has existed since the 1971 legislation became law and has worked a hardship for many schools. When, for reasons other than financial, a school is unable to expand its physical space, or the size of the clinical facilities available, or the number of its faculty members, that school is not eligible for capitation grants. Moreover, many schools which have received capitation grants in the past and have expanded their enrollments accordingly, are now unable to expand fourther. They are now ineligible for capitation grants because of the requirement for continued enrollment increases, despite the fact that they will carry previously added students until graduation and hopefully maintain this increased class size. We feel that the continued requirement for enrollment increases is a barrier to participation in the capitation program and will prevent many schools from continuing to produce nursing graduates in the numbers and of the quality that have been produced in the past. While H.R. 2957 does include waiver provisions, we would recommend, instead, the elimination of the enrollment increase requirement.

AHA's recommendation.—That the capitation grant program be continued, but at a substantially higher authorization level and without the requirement for enrollment increases.

Special Project And Financial Distress Grants

H.R. 2957 recommends the extension and modification of the existing authority for special project grants and contracts, and continuation of the authority for financial distress grants.

AHA's recommendation.—That the provisions in H.R. 2957 for continuation of the Special Project and Financial Distress Programs be supported.

Traineeships

The existing program of traineeships for graduate-level training of nurses is aimed at developing larger numbers of well-qualified teachers, clinical nurse specialists, administrators, and supervisors. In 1973, some 2,600 nurses received long-term traineeship aid, while another 900 benefited from short-term courses. Assistance of this type is acknowledged throughout the health industry to be one of the most beneficial and important programs funded by the federal government. Therefore, we enthusiastically support its proposed continuation under H.R. 2597.

AHA's recommendation.—That the nurse traineeship program be continued.

Loans And Scholarships.

The Administration has proposed to end the special program of nursing scholarships and to phase out the federal contribution to the nursing student direct loan program. It has maintained that the scholarship program can be replaced by making Basic Opportunity Grants available to undergraduate nursing students. The fact is, however, that the Office of Education-administered Basic Opportunity Grants averaged about $250 in 1973, while the typical nursing scholarship was closer to $600. Moreover, the BOGs were available only to freshmen and sophomores, while the nursing scholarships have no such limitation. Thus, if the limited BOG grants continue at or near the $250 level, the BOG program would by no means be an adequate replacement for the nurse scholarship program.

Similarly, the Administration has contended that the nursing direct loan program can be continued through reliance on federal capital contributions already made and on repaid loans. However, it is evident that if the proposed phase-out is completed, there will be insufficient funds in the institutions' loan programs to

Digitized by Google

continue direct loans at a level even close to that of the present program, and either the number or amount of nursing student loans will have to be sharply reduced. We are therefore pleased to see that H.R. 2957 proposes the extension of the nursing student loan program.

A very large number of students are financially unable to pay for the full costs of their education, and a study of nursing students shows that over 50 percent come from families whose annual incomes are less than $10,000. Inasmuch as very real efforts are being made to recruit candidates into the nursing profession from the lower income groups, it is readily apparent that programs of assistance to nursing students through both loan and scholarship efforts are necessary to the success of the Nurse Training Program. In FY '74, the amounts requested under the Nursing Student Loan program totalled over $62 million, a figure significantly above that which was appropriated and obligated. The higher authorization levels contained in H.R. 2957 would permit more students to enter the program.

H.R. 2957 would also extend the present nurse scholarship program. While nursing students would also be eligible for National Health Service Corps scholarships under the provisions of H.R. 2956 and H.R. 2958, we agree that the existing program of scholarships just for needy nursing students should be retained.

AHA's recommendation.—That the provisions in H.R. 2957 calling for extension of the existing loan and scholarship programs for nurse training be supported.

In summary, Mr. Chairman, the American Hospital Association generally endorses the provisions of H.R. 2957, the Nurse Training Act of 1975, and believes that its enactment with the recommended modifications is basic to meeting present and future needs for this important segment of health manpower.

HEALTH PROFESSIONS TRAINING

Mr. Chairman, I would now like to turn to the non-nursing aspects of the health manpower issue.

National Health Service Corps

H.R. 2956 contains provisions (introduced separately as H.R. 2958) to revise and extend the authority for the National Health Service Corps and to assist individuals who express a desire to join the Corps to complete their educational requirements. The American Hospital Association supports these provisions.

Scholarship funds are important mechanisms in attracting physicians, dentists, nurse practitioners, and other health professionals to provide health care to medically underserved populations. We support the authorization of adequate educational subsidies for health professionals who participate in the Corps. Appropriation of such funds should be made sufficiently in advance of Corps service to allow prospective candidates a timely option for Corps participation and, thus, facilitate stable planning and recruitment for the program.

Salaries for Corps members should be established at an adequate level to allow the Corps to compete realistically in the recruitment process for health professionals. Successful recruitment requires that the monthly rate of pay available for Corps personnel be competitive with that provided health professionals with equivalent training in established practices.

The American Hospital Association supports deferment of periods of obligated Corps service following completion of basic academic training for doctors of medicine, osteopathy, or dentistry, as well as for nurses and other selected professional personnel when those professionals wish to pursue an additional educational program deemed to be of value to the Corps. In line with the goal of this program to assist areas which have shortages of health manpower to obtain such manpower, postgraduate training should be encouraged to further develop the skills required to meet community needs.

We note membership on the National Advisory Council on the National Health Service Corps of three persons representing the "medical, dental, and other health professions and health teaching professions." Due to the significant role played by institutional providers in supporting activities of the Corps, the Association recommends includsion of representation by institutional health care providers on the Council. Similarly, the important role of nurse practitioners in Corps service makes appropriate inclusion of the nursing profession on the Council.

Digitized by Google

AHA's recommendation.—That the role of the National Health Service Corps and the scholarship assistance necessary to assist in obtaining health personnel to serve in the Corps be continued and expanded.

Area Health Education Centers

H.R. 2956 contains authority to establish "Area Health Education Centers." Such centers were first authorized in the 1971 legislation under the more general program of Health Manpower Education Initiative Awards.

The Association favors the continued support of area health education centers whose purpose is the improvement of quality and quantity of health personnel and of the health delivery system, as well as the encouragement of regionalization of educational responsibilities. Operating examples of area health education centers are just beginning to appear, with some preliminary evidence that they are having a positive impact on the training, placement, and effective utilization of health workers in underserved areas. This is being accomplished through the regionalization of medical schools, nursing, and allied health programs, and through the integration of curricula to permit people trained at one level to receive additional education to function at a higher level.

AHA's recommendation.—That funds continue to be provided to area health education centers and that more such centers be developed.

Grants For Health Professions Schools

Mr. Chairman, we are pleased to note the inclusion in your bill, H.R. 2956, of a capitation support program for schools of the health professions. We are convinced of the need for such capitation assistance if these schools are to continue to produce an adequate supply of well-trained health professionals to staff our nation's developing health care system.

We applaud your decision to include, for the first time, Schools of Public Health among the educational institutions eligible for capitation assistance. However, most programs of health care administration are not located at schools of Public Health. We believe that institutional grant support at comparable levels should be provided these accredited programs which are not located in Schools of Public Health.

There is a large and growing need in this country for well-trained health administrators and Public Health specialists. The changing patterns in the delivery of health services, including the anticipated growth of health maintenance organizations (HMOs) and the likelihood of a national health insurance program, will necessitate a larger number of health management specialists, both in and out of government. Moreover, the educational preparation of health administrators should be enhanced, thereby increasing the quality and the cost-effectiveness of programs increasingly funded by government.

H.R. 2956 would provide for specific kinds of special project grants, and we support this emphasis on projects aimed at expanding the use of computer technology in health care programs, increasing the numbers of students from disadvantaged backgrounds, and encouraging training in emergency medical services.

Similarly, we also support the provisions in H.R. 2956 calling for continuation of programs for direct loans to students of the health professions, including students of Public Health. As we have previously indicated concerning other areas, we urge that students in accredited programs in health care administration not located in Schools of Public Health also be included.

AHA's recommendation.—That programs of assistance to schools and students of the health professions be continued. In addition, all accredited programs in health care administration should be included in the institutional, special project, and student assistance support programs.

Allied Health Peresonnel

Mr. Chairman, I would like to comment on the proposed new Part H which would revise and extend the program of Allied Health Training. Ours is a labor-intensive industry in which the skills provided for through this program are important for efficient and effective delivery of health services, and, thus, are of substantial interest to hospitals.

We are pleased to note in H.R. 2956 the proposed continuation of a separate program for the support of allied health manpower training. The bill authorizes a program of project grants and contracts with respect to planning, developing, and coordinating activities in this field. We feel this is extremely important since many hospitals are active partners in the education of allied health personnel.

Digitized by Google

At the present time, approximately 1,100 hospitals provide clinical facilities for 7,083 allied health programs in educational institutions. For most hospitals, the costs of training allied health personnel cannot be completely offset by payments for the health services rendered. In fact, third-party payors such as Blue Cross have placed limitations on hospital payments for education. It is important, then, that the awards of funds for grants and contracts under the allied health manpower legislation include provision for hospitals to receive financial reimbursement for costs related to special projects authorized by H.R. 2956.

The proposed continuation and revision of the Allied Health Traineeship program certainly receives our endorsement. The bill would continue to authorize advanced training of allied health educators and of administrative and supervisory personnel in the allied health field. We feel that this type of student assistance is greatly needed to enhance both the quality of allied health education and the effectiveness of health delivery systems utilizing allied health personnel. Such training of needed teachers and administrators in the allied health field seems to us a very appropriate federal function.

MEDICAL RESIDENCY TRAINING PROGRAMS

The American Hospital Association is concerned that many urban and rural areas lack physicians for the appropriate medical care of the population in these areas, and recognizes especially the need for physicians to provide primary care.

The AHA believes that there are potentials for corrective action through some of the current legislative proposals. However, redirection of choice of specialty by medical students and residents cannot be accomplished within a brief span of years, nor can the needed and desirable changes be wisely accomplished through a crash program for the designation of numbers of specialists to be trained and their location and relocation enforced through a punitive payment policy.

A look back on the legislative and financing programs which provided for the expansion of our medical manpower through creation of new medical schools and expansion of existing schools demonstrates that carefully designed incentives can produce dramatic results. So, as we approach the design for change to create better distribution of physicians and more adequate numbers of physicians providing primary care, creative legislation combined with adequate financial incentives must be used.

We support the approach taken by Section 781 of H.R. 2956 calling for a $40 million per year program of grants to hospitals to develop training programs in family medicine and to provide financial assistance to students and physicians who participate in such programs. We also support Section 788 providing for grants to medical and osteopathic schools to establish academic units for clinical instruction in family medicine.

And, as we have already indicated, we endorse the proposed expansion of the role of the National Health Service Corps in providing direct medical care to underserved populations; allowing full or partial payback of capitation assistance through service in the Corps or medically underserved areas; and authorizing support for Area Health Education Centers which will establish programs to improve the delivery of health services to medically underserved areas.

The American Hospital Association is engaged in the efforts of the Coordinating Council on Medical Education (CCME)[1] and its Committee on Physician Distribution which is currently studying physician geographic and specialty maldistribution. As you know, in mid-1974 the Committee produced a report on the primary care physician. We would also note that Public Law 93-223, an amendment to the Social Security Act passed by Congress last year, has authorized and supported extensive study under the Institute of Medicine, National Academy of Sciences, which in its various aspects bears on these same issues. The results of such studies should yield valuable information which will be useful in resolving the dual maldistribution problem.

Toward the same end, H.R. 2956 would include in the Public Health Service Act a new Title XVII which would establish a program directed at solving the critical problem of physician specialty maldistribution. This new authority

[1] The CCME consists of representatives of the American Hospital Association, the American Medical Association, the Association of American Medical Colleges, the American Board of Medical Specialties, the Council of Specialty Societies, plus representatives of various levels of government.

Digitized by Google

would establish (in section 1702) procedures for the Secretary of HEW to designate or establish an agency to accredit medical residency training programs in this country. We would support this provision that would permit the Liaison Committee on Graduate Medical Education of the Coordinating Council on Medical Education to be the agency designated for this task.

This new Title XVII would also provide authority for the Secretary to designate or establish an agency to certify the number of first year positions in accredited residency training programs which may be made available in any calendar year beginning after calendar year 1977. In establishing such training positions, the agency would be required to take into special consideration the geographical distribution of programs, their relationship to area health education centers, and the need for residency training in primary care specialties. Section 1701 limits the number of positions to a maximum of 125 percent of the estimated number of graduates from accredited schools of medicine in the preceding calendar year. Section 1703 provides procedures for application by entities for designation as the certifying agency, and names the CCME as a potential designee. The American Hospital Association recommends several changes in the proposed Title XVII of the Public Health Service Act, as included in H.R. 2956. If a process for certifying medical residency programs is to be established in legislation, and we are not proposing here that it should be, the AHA strongly recommends specific changes in H.R. 2956 to improve the development of the proposed certifying process.

AHA's recommendations.—(1) That the proposed deadline dates for implementation of new Title XVII be revised to allow a reasonable phase-in period for adjustment of training programs and compliance by teaching institutions, a revision that is necessary because the dates established in this bill were predicated on the assumption that the bill would have been enacted last year;

(2) That the Secretary of HEW, with the approval of an agency established by him, should be responsible for the certification of medical residency programs; and,

(3) That the Secretary should establish the agency for the certifying process to be composed of the following: the Assistant Secretary for Health and the Administrator of the Health Resources Administration of HEW, the chief medical director of the Veterans Administration, and the President of the Uniformed Services University of the Health Sciences, all ex officio, non-voting members, and 19 members appointed by the Secretary of whom (A) ten shall be appointed from lists of nominees submitted by the American Medical Association, the American Hospital Association, the Association of American Medical Colleges, the American Board of Medical Specialties, and the Council on Medical Specialty Societies, each such list to contain four or more nominees and two appointees to be appointed from each such list; (B) one each shall be appointed from lists of two or more nominees submitted by the American Osteopathic Association and the American Association of Colleges of Osteopathic Medicine; (C) six, none of whom may be providers of health care, shall be representatives of consumers of health care; and (D) one shall be in a full-time medical residency position.

We strongly recommend these changes in new Title XVII because they would establish appropriate governmental responsibility for the designation of residency training programs and provides effective nongovernmental, professional advice to the Secretary for this critical process.
